The first four experiments produced but little effect on her; during the fifth, her speech returned, but left her immediately on being demesmerised; the sixth accomplished the complete restoration of her voice, which she still retains, with every appearance of permanent benefit. Should a relapse occur at any time, Mr. Davey gives it as his firm opinion that the application of Magnetism would be attended with the same happy results.

Shaldon, June 25. W. B. B.

ORIGINAL CONTRIBUTIONS.

THE KINGS OF THE SOIL.

Black sin will nestle below a crest,
And crime below a crown,
As good hearts beat 'neath a fustian vest,
As under a golden gown.
Shall tales be told of the chiefs who sold
Their sinews to crush and kill,
And never a word be sung or heard
Of the men who reap and till?
I bow in thanks to the sturdy throng
Who greet the young morn with toil,
And the burden I give my earnest song
Shall be this—The Kings of the soil!
Then sing for the kings who have no crown,
But the blue sky o'er their head;
Never sultan or dey had such power as they
To withhold or to offer bread!

Proud ships may hold both silver and gold,
The wealth of a distant strand,
But ships would rot and be valued not
Were there none to till the land.
The wildest heath, the wildest brake,
Are rich as the richest fleet,
For they feed the glad birds when they wake,
And give the beasts to eat.
And with willing hand, and spade, and plough,
The gladdening hour shall come,
When that which is called the "waste land" now
Shall ring with the "Harvest home."
Then sing for the kings who have no crown
But the blue sky o'er their head;
Never sultan or dey had such power as they
To withhold or to offer bread!

I envy him whose feet can tread
By the corn his hand hath sown;
When he hears the stir of the yellow reed,
It is *more* than music's tone.
There are prophet sounds that stir the grain
When its golden stalks shoot up,
Voices that tell how a world of men
Shall daily dine and sup.
Then shame, oh shame, on the miser creed,
That *doles* out praise or pay
To the men whose hand makes rich the land,
For who earn it more than they?
Then sing for the kings who have no crown
But the blue sky o'er their head;
Never sultan or dey had such power as they
To withhold or to offer bread!

The poet hath gladdened with song the past,
And still does he strike the string,
But a brighter light on him is cast
Who can plough as well as sing.
The wand of Burns had a double power
To soften the common heart;
Since with harp and spade, in a double trade,
He shared a common part.
Rome lavished fame on the yeoman's name*
Who banished her deep distress,
But had he ne'er quitted the field or plough,
His mission had not been less.
Then sing for the kings who are missioned all
To a toil that is rife with good;
Never sultan or dey had such power as they
To withhold or to offer food!

Bridgwater. E. H. BURRINGTON.

ADVERTISEMENTS.

The following is the moderate scale of charges for Advertisements adopted by THE CRITIC.

For 6 lines and under..... 5s.
For every three lines above ..... 1s.

The volumes of THE CRITIC *neatly half-bound, as completed, for 4s. 6d. each, if the numbers be forwarded to the office. The stamped edition may be sent by post with the ends open, and a letter of advice should contain directions how it is to be returned.*

A portfolio, on a novel and convenient plan, for preserving the numbers of the current volume of THE CRITIC *may be had at the office, or by order, of any bookseller in the country, price 4s. 6d.*

THE CRITIC *may also be had in monthly parts, sewed in a wrapper price 1s. 6d. each.*

* Cincinnatus.

To Readers and Correspondents.

INQUIRER.—*The metaphysical works of Locke, Reid, Stewart, Kant, and Whateley, though those authors differ in their views, are to be recommended, and should be attentively read by all who apply themselves to this abstruse science. The other question is too general.*

E. M. R.—*The* serenade, *though creditable, is not sufficiently* marked *for insertion.*

J. C. Southampton.—*Is the poem (sent in type) intended for insertion? We conclude it has appeared in some provincial journal.*

TURTLE, Monmouth.—*The proper person to whom such a question should be addressed is a bookseller.*

C. B. LIDNEY.—*Simpson's Euclid.*

A SUBSCRIBER.—*The remark of the child was a shrewd one. We believe all the early painters, like the moderns, observed the rule objected to.*

A FREQUENT READER, Glasgow.—*Thanks for the able communication forwarded. It arrived too late for this number, but will duly appear in the next.*

ERRATUM.

In the report of a case of amputation of the hand without pain, in last week's number, it is erroneously stated that the operation took place at *Shaldon*; it should have been *Torquay*.

BOOKSELLERS' CIRCULAR.

THERE is no incident of interest in the literary world. Publishing is still slack, and so will continue until the railway mania has somewhat subsided. It will be observed that we continue to receive from keepers of circulating libraries very interesting statements of their experiences of the books most in request in their several localities. A large collection of such facts will be extremely valuable, and we hope the example will be extensively followed. A correspondent has suggested the publication of a series of the best foreign novels and travels in small pocket volumes at one shilling each, similar in size and shape to those in which they find such enormous circulations upon the continent. What is the opinion of our experienced readers among the booksellers as to the probability of success for such an enterprise?

OPINIONS ON THE CRITIC.

TO THE EDITOR OF THE CRITIC.

SIR,—In compliance with the request urged for some weeks past in THE CRITIC to ascertain the books most in request by the different library keepers, a novel idea, which cannot but greatly enhance your importance as a bookseller's guide, I will gladly furnish you with the result of my own experience. My readers are chiefly among the agricultural classes and tradespeople, and I find the works of Dickens, Cooper, Marryatt, James, and Lever very popular; Scott, before Cadell's cheap edition commenced, eclipsed every other, except Hogg, for whose works, especially his *Browney of Bodsbeck*, there is such a run, that from New Year's Day till New Year's Day it scarcely ever rests in the library. A novel by an unfortunate young man of this place, written before he was eighteen, entitled, *Douglas, or the Field of Otterburn*, has also a similar run. Ferrier, Galt, Hall, and Carlton are much sought after. Wilson's *Tales of the Borders*, when publishing in weekly numbers, sold immensely, but have fallen off greatly since they came into the library. Fashionable novels, even Hook's, adhere tenaciously to the shelves. Histories and Travels are also in fair demand, but Novels are the favourites beyond all measure.

I agree with Mr. Hough, that the cheap editions by the various publishers he mentions hurt the library, but improve the trade, in the mean time at least; though I fear the Novel Newspaper, in bringing down from a guinea and a half to a shilling, will do but little for the trade a few years hence; yet if it circulate knowledge and amusement, the chief aim of all writers of fiction, more extensively, we must submit, as we have reaped a plentiful harvest from most of its series already.

I am yours truly,
Dumfries, Jan. 29, 1845. DUGALD CAMERON.

TO THE EDITOR OF THE CRITIC.

SIR,—The very efficient and impartial manner in which THE CRITIC has been conducted renders it incumbent on me to express my approval of a work so justly meriting the encouragement and commendation of every one.

The extracts are so useful, and the criticisms so appropriate and instructive, that I feel assured they cannot possibly fail of proving truly beneficial to the librarian, bookseller, and others of its numerous readers—indeed, its worth is so appreciated by

me, that I would make choice of it in preference to any other publication, and consider that no library should be without it.

I am, &c.

Gloucester, June 30, 1845. FRED. BOND.

LITERARY INTELLIGENCE.

THE LATE THOMAS HOOD.—We are glad to observe that the example of Manchester, in starting a local subscription in aid of the Hood Fund, is being followed in other large towns, and that the provincial journals are beginning to call public attention in their respective districts to this excellent object. A paragraph in the *Bath Chronicle* of Thursday last announces the opening of a subscription in that city and its neighbourhood; the result of which will, we doubt not, be such as to place Bath on a line with Manchester for liberality, and for an intelligent appreciation of literary genius. These unsolicited efforts on behalf of the deceased poet's family, occurring spontaneously in districts so widely remote, and among classes of such diverse interests and pursuits, bear witness to the general estimation in which Mr. Hood's versatile powers were held, and give something of a national character to the demonstration now making in his honour.

The French journals give accounts from Lyons of three mosaics discovered at Anse, in addition to the fine one found there in 1844. These later ones are only partly uncovered as yet; but sufficiently so to indicate their entire design to a commission of *savans* and artists who visited them from Lyons some days ago. The lateral mosaics consist of geometrical ornaments, composed of cubes in black and white marble, and exhibiting remarkable variety and elegance of forms. The central mosaic was the object of great admiration. The utmost luxury of decoration—colours of extreme beauty and designs infinitely varied—have been expended on it. Figures of fishes, birds of many kinds, dolphins, fruits, vases of antique form, &c. are multiplied over its surface, and "might serve," it is observed, "as magnificent models for the ornamental painters" of France. Sketches of some of these ornaments were made, for the purpose of being transmitted to the Minister whose department has charge of the arts and monuments of the kingdom.—*Athenæum.*

At the annual meeting of the French Academy of Moral and Political Sciences, M. de Rémusat presiding. M. Mignet, perpetual secretary, read a "Historical Notice of the Life and Labours of M. de Sismondi." Of all the prizes offered, by its different sections, for essays and memoirs on various subjects, one only was awarded—to the author, viz. of a "Memoir on the German Philosophy." The subjects for future competition were announced, among which we may mention that, for the quinquennial prize of 5,000f. founded by the Baron Félix de Beaujour, to be determined in 1848, the Academy proposes the following subject:—"A Critical Examination of Pestalozzi's System of Instruction and Education, considered chiefly in its relations to the well-being and morality of the poorer classes."

The Royal Society of the Antiquaries of France, at its sitting of the 9th ult., filled up four vacancies in the ranks of its resident members with the following names:—MM. Lenormand and Lebas, Members of the Institute; Jules Quicherat, and Léon Renier.

The committee appointed by the *Académie Française* to decide on the subject of the famous prize of 10,000f. offered for the best five-act tragedy or comedy written within the last ten years, has made its report, and that M. Ponsard is the chosen laureate, in right of his tragedy of *Lucrèce.*

REGISTER OF NEW PUBLICATIONS,

From June 28 to July 5.

NOTICE TO BOOKSELLERS.

A Register lies at THE CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* THE CRITIC, *and no charge will be made either for registration or for publication in* THE CRITIC. *Particulars forwarded by letter will be duly inserted.*

LIST OF NEW BOOKS.

Anecdotes of Archery, &c. by A. E. Hargrove, 8vo. 7s. 6d. cl.—Architectural History of Canterbury Cathedral, by the Rev. R. Willis, M.A. 8vo. 10s. 6d. cl.—Anstey's Six Lectures on the Laws and Constitutions of England, royal 12mo. 12s. bds.

Carter's (C. B.) Account of the Church of St. John the Baptist, at Bishopstone, plates, 4to. 10s. 6d. hf-bd.; ditto, large India paper, 18s. hf-bd.—Carter's (C. B.) Series of Ancient Painted Glass of Winchester Cathedral, 4to. coloured plates, 1*l.* 16s. hf-bd.—Chambers' Edinburgh Journal, Vol. III. royal 8vo. 4s. 6d. cl.—Ciocci's Narrative of Iniquities and Barbarities at Rome, 5th ed. 18mo. 2s. 6d. cl.

Diprose's Comic Song Book, edited by Mr. R. Glindon, 32mo. 1s. 6d. cl.

Elements of Euclid, from the Text of Robt. Simson, M.D. Symbolical Edition, by R. Blakelock, 18mo. 6s. cl.—Eöthen, 4th edit. new plates and numerous corrections, 8vo. 12s. cl.—Ewald's (Rev. F. C.) Journal of Missionary Labours in the city of Jerusalem, during the Years 1842-3-4, fc. 8vo. 4s. 6d. cl.

Fitzgerald's (Rev. A. O.) Short Lectures on the Church Catechism, fc. 8vo. 6s. cl.

Hints to a Soldier on Service, by W. H. Maxwell, esq. author of "Stories of Waterloo," 2 vols. post 8vo. 1*l.* 1s. cl.

Improved Moveable Planisphere, by J. Aspin, with book of directions, 10s. 6d. on bds.

James's (G. P. R.) Works, Vol. V. "Philip Augustus," 8vo. 8s. cl.

Key to the Second and Third Parts of Ellis's Exercises, 12mo. 3s. shp.

Letters from the Mountains, by Mrs. Grant, of Laggan, 6th edition, edited by J. P. Grant, esq. 2 vols. post 8vo. 1*l.* 1s. cl.

Magic Goblet, a Swedish Tale, by Emilie Carlen, imp. 32mo. 2s. sd. (Clarke's Cabinet Series.)—Mayo on Cold-Water Cure, fc. 8vo. 2s. 6d. cl.—Memoirs of Lady Hester Stanhope, as related by Herself, 3 vols. post 8vo. with illustrations, 1*l.* 11s. 6d. cl.—Memoirs of the Pretenders and their Adherents, by J. H. Jesse, esq. 2 vols. 8vo. 1*l.* 8s. cl.—Memoirs of Silvio Pellico, or, My Prisons, imp. 32mo. (Clarke's Cabinet Edition), 1s. 6d. sd.—Musical Treasury, Vol. II. imp. 4to. 16s. bd. gilt edges.

Nelson's Dispatches, edited by Sir Harris Nicolas, Vol. III. 8vo. 15s. cl.—Notes, Historical and Architectural, on the Church of St. John the Evangelist, Slymbridge, Gloucestershire, royal 8vo. 7s. 6d. sd.

Owen's (Mrs.) Hand-Book of Knitting, 12mo. 1s. sd.

Popular Lectures on Romanism, by the Rev. E. T. Thompson, post 8vo. 6s. 6d. cl.—Punch; or, the London Charivari, Vol. VIII. 4to. 8s. cl.

Religion at Home, by the author of "Meditations for Every Day in the Year," 32mo. 2s. 6d. cl.

Sermons on the Church, by the Rev. E. Hoare, M.A. 18mo. 2s. cl.—Servia; the Youngest Member of the European Family, or Residence in Belgrade, by A. A. Paton, Esq. post 8vo. 12s. cl.—Suckling's (Rev. A.) Memorials of the Antiquities, Architecture, History, and Heraldry of the County of Essex, 4to. plates and woodcuts, 1*l.* 8s. hf.-bd.; ditto, large paper, 2*l.* 2s. hf.-bd.—Suckling's (Rev. A.) Memorials of the Antiquities of the County of Suffolk, Part I. 4to. 10s. swd. to be completed in Twelve Parts.

Thiers's Consulate and the Empire translated (Whittaker's Popular Library Edition), Part III. royal 8vo. 2s. 6d. swd.—Tom Cringle's Log, by Michael Scott, new ed. complete, 1 vol. 12mo. 4s. 6d. cl.—Torrington Hall; or Two Days at an Asylum for the Insane, by Arthur Wallbridge, fc. 8vo. 2s. 6d. swd.

Village Sermons, by Arthur Roberts, M.A. Vol. VI. 12mo. 4s. 6d. cl.

Woman's Influence, a Novel, by Mrs. Brereton, 3 vols. post 8vo. 1*l.* 11s. 6d. bds.

BOOKS WANTED TO PURCHASE.

No charge is made for insertion in this list. Apply to the Publisher or THE CRITIC, stating prices.

Shakspere, diamond edition, Pickering, 1823. Nos. 5, 8, 10, 11, 14, 18, 20, 32, 35.

The Athenæum, for the year 1831, and for the years 1836 to 1844, both inclusive.

GLEANINGS,

ORIGINAL AND SELECT.

Dr. Thompson, who was a celebrated physician in his day, was remarkable for two things,—viz. the slovenliness of his person and his dislike to muffins, which he always reprobated as being unwholesome. Breakfasting one morning at Lord Melcomb's when Garrick was present, a plate of muffins was introduced, upon which the doctor became furious, and vehemently exclaimed, "Take away the muffins." "No, no," said Garrick, seizing the plate, and looking at the doctor significantly, "take away the *ragamuffins!*"

A Yankee captain once sung out in a squall, to a raw hand, newly shipped on board his craft, "Let go the jib, there! let go that jib!" "I an't a touchin it!" squalled out the simple down-easter, in return.

ROOK PIE.—Draw and skin as many young birds as will fill the dish; set them in cold water, with a little salt, for two hours; then remove the back-bones, season with pepper, salt, a little cayenne, and two or three cloves pounded fine; lay them closely in a pie-dish, adding some good gravy, with some pats of butter upon the top; cover the whole with a coarse flour-and-water paste, and bake it for an hour and a half. Next day, remove the coarse paste, replace it with a puff paste, and bake it over again till done; before serving, pour into the dish some highly-seasoned gravy. Some add the yolk of eggs and a steak at the bottom, as in a pigeon pie.

A rich Fellow of a college in Cambridge, after favouring Sir Isaac Pennington with a list of his maladies, inquired what he should take. "I should recommend you to take advice," was the reply.

THE CRITIC,

And Journal of Literature.

SATURDAY, JULY 12, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

ADVERTISING.

A RESPECTABLY circulated paper is the *Britannia*, and therefore a good medium for advertisements addressed to the better classes. Of a like character is the *Atlas*. Its circulation is small in amount, but it goes almost exclusively among the educated, its patrons being for the most part the higher grades of the middle classes. The charges of both are moderate.

We believe we have now named all of the weekly *general* newspapers that may be deemed to have a fair claim upon the attention of an advertiser who desires to exercise a choice, and not to advertise indiscriminately. Let us turn now to those which belong to classes; such as the commercial, the scientific, the literary journals. The professional papers have been already noticed.

There are three literary journals. Ranged according to age. they are the *Literary Gazette*, the *Athenæum*, and *The Critic*. But the *Athenæum* has far outstripped its elder brother in circulation and influence, the price of the *Gazette* (which is eightpence for a sheet not so large as *The Critic*) limiting it to a very small circle of readers, attached to it from long habit and acquaintance.

Of course, for all advertisements relating to literature and art, resort would be had in the first instance to the literary journals. If the advertiser can afford only one advertisement, undoubtedly he ought to send it to the *Athenæum;* if two, it is, we believe, a question even now which would have the best claim, the *Literary Gazette* or *The Critic*. It is impossible to ascertain precisely the circulation of journals that publish unstamped editions; but the booksellers and newsmen say that they sell more of *The Critic* than of the *Literary Gazette*. There is, moreover, another consideration of no small importance, which might be thrown into the scale in case of doubt. *The Critic* has a very extensive circulation, now amounting to more than 700, among the country booksellers, the circulating library keepers, and the book-clubs, to whom it offers certain advantages, for the avowed purpose of giving to it influence in the quarters where it may be most effective, that is to say, with those who are the principal book-*buyers*. In consequence of this peculiar branch of its circulation, advertisements are brought by *The Critic* more immediately under the notice of book-*buyers* than they could be by any other means, not even excepting the *Athenæum*, which circulates among those who read books rather than among those who supply them. Taking these circumstances into consideration, it is a matter for individual opinion which should have the *second* advertisement; but if there be a doubt, we would advise the advertiser to resolve it by giving the preference to long standing and undoubted respectability, and preferring the *Literary Gazette*. A *third* advertisement would, as a matter of course, be sent to *The Critic*, as the only remaining literary journal, before the advertiser proceeded further.

If, however, he should wish to advertise a literary announcement beyond its proper place in the literary journals, the same question will arise as before—what shall he do? We reply, as before; if you desire it *not* to be seen, sink your money in the mighty maze of a *Times* supplement. Prefer an evening to a morning paper. Be guided by the class of persons whom your subject-matter is likely to interest as to what journals, daily or weekly, you shall adopt, observing the information we have already given as to the nature of the circulation and the prices of each.

The charges of the three literary journals vary immensely. The *Athenæum* is extravagantly high—ruinously so to booksellers, and of itself shewed the necessity for a new medium whereby the announcements of the trade might be circulated at a more reasonable cost. Some idea may be formed of the *Athenæum* charges from this, that a few weeks since we paid *ten shillings* for the insertion of *five* lines! ! The *Literary Gazette* is moderate. The scale of *The Critic* has been framed at much below the average of the newspapers generally, purposely to try the experiment whether the booksellers will make it their circular, performing as it does for them a double function, namely, that of an announcement to the trade and the libraries, and that of an advertisement to the reading public. No other journal could offer to them this double advantage, for no other has *both* a trade circulation *and* a general circulation. The trial of an experiment so new is necessarily a work of time, and no judgment can be formed of its ultimate success until the design is thoroughly understood, and those who avail themselves of it have practically felt its advantages in the results. We are prepared to wait patiently, confident that it needs but to be comprehended to be unanimously supported.

But there is one class of advertisements for which THE CRITIC is the only existing medium—we allude to those especially addressed to the trade; such as businesses for sale, situations or assistants wanted, and so forth. For all such THE CRITIC is peculiarly adapted, and, indeed, there is no other journal by which the *trade*, in town and country, *can* be so extensively addressed.

We have endeavoured in these remarks to present a fair statement, exaggerating nothing and concealing nothing. An *opinion* upon a matter in which we have a personal interest we should not have ventured; but these are simply *matters of fact*, capable of proof, and which anybody who makes inquiry may ascertain.

JOURNAL OF ENGLISH LITERATURE.

PHILOSOPHY.

Wienholt's Seven Lectures on Somnambulism.
(SECOND NOTICE.)

WIENHOLT commences his lectures with a denunciation of the mechanical psychology so prevalent in his day; meaning by this term the attempt to measure mind by the same natural laws as muscle, and the consequent tendency of philosophers to dispute every fact which tends to prove that the spiritual and the material portions of our mixed human nature are, in truth, governed by very different laws; they endeavour, in short, to dictate to nature their own theories, instead of humbly inquiring of nature to find out what truth, as yet undiscovered, might be lurking under her ample robes.

The lecturer then proceeds to define the object of his investigation. "I am now," he says, "going to speak of the NATURAL SOMNAMBULISM, or NOCTAMBULISM, as it frequently occurs in persons otherwise apparently healthy, especially in children during their sleep, as also as a symptom in serious nervous diseases, and not of similar states, which, as is well known, have been produced in recent times by artificial means."

These lectures, therefore, are entirely independent of Mesmerism. Their purpose is to inquire into a series of singular phenomena, the existence of which nobody denies, and the importance of which will not be disputed.

It exhibits a man in a totally different situation towards the external world; displays the thinking and sentient principle as a differently acting being, which relapses again into its ordinary state as soon as the curtain falls. Here we find a different distribution of the vital power, and, at the same time, many pheno-

mena present themselves, which are quite out of harmony with all that we, at other times, observe in man.

In the first lecture he limits himself to one of the peculiarities only, the *closed eyes* of the somnambulist. This is the general description of

THE PHENOMENA OF SLEEP-WALKING.

The sleep-walker, when otherwise healthy, falls, at a particular period, into a common sleep, which cannot be distinguished from the natural state of repose. After a longer or shorter time, he rises from his couch and walks about the room—sometimes about the house. He frequently goes out into the open air, walks upon known or unknown paths as quickly, and with as much activity and confidence as in his waking state, avoids all obstacles which may stand, or have been designedly placed on his route, and makes his way along rugged paths, and climbs dangerous heights, which he would never have thought of attempting when awake. He reads printed and written papers, writes as well and as correctly as in his waking state, and performs many other operations requiring light and the natural use of the eyes. All these actions, however, are performed by the somnambulist in complete darkness as well as when awake, and generally with his eyes firmly closed. I shall afterwards speak of the exceptions, in which these persons have their eyes open. When the period of his somnambulism has elapsed, he returns to his bed, falls back again into his natural sleep, awakes at his usual time, and, in most instances, knows nothing of what he had done in the *sleep-waking* state.

The lecturer has collected some of the best-authenticated cases of somnambulism, from which we select two or three of the most curious.

The first we take is inserted by MEINERS in his collection.

The patient was a female of sixteen years of age. The paroxysm generally attacked her in the morning, and consisted of a profound sleep. In this state, she would jump, with astonishing activity, upon tables and chairs, run, when permitted, and with great rapidity, out of the house,—generally to a particular place in the neighbourhood; and when she did not awake, she would return immediately, but sometimes by a different road, and in a different direction. She not unfrequently left the high road, and ran straight through the fields. She never fell, nor injured herself, however rough her path might be, or however fast she might run; and her speed was sometimes so great, that her much stronger and more active brother could not keep pace with her. She frequently mounted upon the garden-wall, upon the uneven top of which she continued to run; nay, she even went upon the edge of the house-roof, without once stumbling, much less falling. During all these hazardous operations, her eyes were fast closed, and she appeared to be deprived of all her other senses.

The next was related to the lecturer by Dr. SCHULZ, a distinguished physician of Hamburgh:—

It was that of a girl between twelve and thirteen years of age, belonging to a family of some distinction, who was afflicted with a violent nervous complaint, in which strong convulsive motions alternated with catalepsy and syncope. Besides, she frequently had paroxysms, during which she conversed with much liveliness and ingenuity. In this state she distinguished, without difficulty, all colours that were presented to her, recognised the numbers of cards, and the stripes upon those which were variegated. She described the colour of the binding of books when shewn to her; she wrote in the same manner as usual, and cut figures in paper, as she was accustomed to do, for pastime, in her waking state. Her eyes at this time were firmly closed; but, in order to be assured that she made no use of them, a bandage was placed over them on the approach of the paroxysm.

The *Breslaw Medical Collections* report another case equally remarkable:—

It relates to a rope-maker, who was frequently overtaken by sleep, even in the day-time, and in the midst of his usual occupations. While in this state, he sometimes recommenced doing all that he had been engaged in during the previous part of the day; at other times, he would continue the work in which he happened to be engaged at the commencement of the paroxysm, and finished his business with as great ease and success as when awake. When the fit overtook him in travelling, he proceeded on his journey with the same facility, and almost faster, than when awake, without missing the road or stumbling over any thing. In this manner he repeatedly went from Naumburgh to Weimar. Upon one of these occasions he came into a narrow lane, where there lay some timber. He passed over it regularly, without injury, and with equal caution and dexterity he avoided the horses and carriages which came in his way. At another time he was overtaken by sleep just as he was about to set out for Weimar on horseback. He rode through the river Ilne, allowed his horse to drink, and drew up his legs to prevent them from getting wet; then passed through several streets, crossed the market-place (which was at that time full of people, carts, and booths), and arrived in safety at the house of an acquaintance, where he awoke. These, and many similar facts, requiring the use of the eyes, he performed in darkness, as well as by day-light. His eyes, however, were firmly closed, and he could not see when they were forced open, and stimulated by light brought near them. His other senses appeared to be equally dormant as were his eyes. He could not smell even the most volatile spirit; he felt nothing when pinched, pricked, or struck; he heard nothing when called by his name, or even when a pistol was discharged close beside him.

One other case, reported by the Archbishop of Bourdeaux, in the French Cyclopædia, must not be omitted:—

It is the case of a young ecclesiastic in the same seminary with the Archbishop, who was in the habit of getting up during the night, in a state of somnambulism, of going to his room, taking pen, ink, and paper, and composing and writing sermons. When he had finished one page of the paper on which he was writing, he would read over what he had written and correct it. Upon one occasion he had made use of the expression: *Ce divin enfant*. In reading over the passage, he changed the adjective *divin* into *adorable*. Perceiving, however, that the pronoun *ce* could not stand before the word *adorable*, he added to the former the letter *t*.

In order to ascertain whether the somnambulist made any use of his eyes, the Archbishop held a piece of pasteboard under his chin, to prevent him from seeing the paper upon which he was writing; but he continued to write on, without appearing to be incommoded in the slightest degree. The paper upon which he was writing was taken away, and other paper laid before him; but the somnambulist immediately perceived the change.

He wrote pieces of music while in this state, and in the same manner, *with his eyes closed*. The words were placed under the musical notes. It happened, upon one occasion, that the words were written in too large a character, and did not stand precisely under the corresponding notes. He soon perceived the error, blotted out the part, and wrote it over again with great exactness.

In the second lecture WIENHOLT proceeds to consider whether in sleep-walking the eyes only *appear* to be closed, or whether they are *really* shut. He reviews the various explanations that have been attempted by medical and other philosophers, all of which resolve themselves into this, that the sleep-walker is in a waking dream, and his imagination presents images of known objects as vividly as if they were realities. But this entirely fails to explain how it happens that the idea in the imagination should coincide precisely with the external fact; and how the representations of places where the patient has never been, as the roofs of houses, or of obstacles unexpectedly lying in the way, come to be painted upon his mind. The lecturer appeals to the experience of all who have ever played blindman's buff for testimony how difficult it is to advance even a few steps straightforward with the eyes completely closed; much less to make way through intricate paths. Having shewn the fallacy of previous explanations, he proceeds to suggest his own.

He introduces his explanation with a review of the phenomena of ordinary sleep. In this the external senses, especially that of sight, are shut up, and the deeper the sleep the more completely is the excitability of the nerves by the usual *stimuli* abolished. In somnambulism we have all the phenomena of natural sleep with an addition. It is, in fact, merely a peculiar occurrence during sleep, the latter never being interrupted by the former.

In somnambulism, however, the mind receives sensible impressions; there is activity in some part of the system that usually sleeps; the connection between the mind and the muscles, broken in ordinary sleep, is restored in somnambulism. May it not be, ask some, that the eye is not completely closed, or that it opens at times to receive the necessary impressions?

But a small opening would not enable the sleep-walker to see the objects he is known to perceive, and that it is not produced by an occasional opening is shewn by the fact that he continually acts just as he would do if he possessed the complete use of his eyes. But *the fact* is otherwise, as the most careful observation has proved. It has been ascertained beyond doubt that the eye of the somnambulist is wholly insensible; "that in him the condition of the eye and the inactivity of the

optic nerve, are the same as in an individual affected with amaurosis," and its principal functions are temporarily abolished. In proof of this many cases are adduced in the third lecture, but which we cannot pause to cite.

The fourth lecture is devoted to a reply to the objection so incessantly urged, that if it be possible to see without the eye, of what use are the eyes—why was so curious and admirable a structure provided? But the question is too important to be dismissed in a sentence, so we will defer the consideration of it until next week.

HISTORY.

The History of the Volunteers of 1782. By THOMAS McNEVIN, Esq. Barrister-at-law. Dublin: Duffy.

THE little volume before us is the first of a contemplated library for the people, evidently projected for the purpose of disseminating the opinions of a powerful party in Ireland; many persons, consequently, will be thereby induced to view suspiciously, if not to prejudge unfavourably, the whole series, few taking the trouble to consider that the respective libraries of Messrs. KNIGHT and BURNS are, in fact, party publications, and the organs of particular systems of education.

What are the shilling Weekly Volumes—with their information on the most dissimilar subjects—their volumes of biography, travel, poetry, and spinning-jennies—but a continuation, on certainly an extended scale, of the original project of the Useful Knowledge Society? What, also, are the pretty fanciful *tomes* of the "Fireside Library," with their careful selection of our old ballad poesy, their specimens of German romance—(from the ideal, not metaphysical, portion of that huge mass of imaginative fiction)—their original and selected tales, all redolent with the purest religious—not party religious—feeling, but a carrying out of church principles of education?

And what but to propagate a peculiar political creed has occasioned the issue of the present specimen of "Duffy's Monthly Volumes"—volumes that are intended to furnish the Irish people with a popular history of their country; to tell of her struggles and contests for liberty, the deeds and sufferings of her patriots and demagogues—all doubtless tending to the establishment of the principal article in their political belief—Repeal. That such is the object of the series is certain, and it would be ridiculous to shut our eyes to or pretend ignorance of the fact; yet, all political feeling being laid aside, there remains but little room to doubt that a few well-written books on Irish history would be very beneficial, and we believe equally acceptable to ourselves as to our neighbours; always a proviso being made, that the authors—among whom are to be included the writers of the capital ballads in the *Spirit of the Nation*—can contrive to keep in the background a little of their hatred of the "Saxon." This, and this only, will prevent their obtaining a general English circulation.

The Irish Volunteers, whose history forms the first number of the series, have been and still are remembered by the Irish nation with pride and satisfaction. They rose at a time when Ireland was ruled by one of the worst governments, and, unhappily, she has not had few such, that ever country was fated to endure.

It was a time when England's glory had been tarnished, and her struggle with America had proved unsuccessful, and when the vessels of the exulting French swept the English and Irish seas. A descent on Ireland was meditated by the French, and England, either unwilling or incapable of succouring the sister isle, left her with but a few troopers to guard her unprotected shores. To the city of Belfast belongs the honour of first rousing her sons to form battalions to resist the expected attack of the enemy; though many (and we fear the conduct of our own country to her neighbour partially justified them) were doubtful whether the French were their natural foes. The example of Belfast was quickly followed by other cities, and a powerful and well-disciplined force was soon organized. The English government was aroused by the martial bearing of so large an armed body, and, fearful lest the recent example of her revolted children in America might be followed in another dependency, whose mismanagement had provoked such general disaffection, refused to legalize their proceedings; and as she had foreseen, the fear of invasion having passed away, the Volunteers, instead of disbanding, applied themselves to considering the state of the country, and attempting to settle her commerce on a firmer footing. The determination of the Volunteers not to consume foreign exports, and to use only Irish manufactures, which was acquiesced in by the majority of the nation, produced benefit to her trade.

They did not stop here; but their hopes rising with their numbers, they now turned their minds to the furtherance of constitutional liberty, and, lending their aid to the liberal minority of the Irish House of Commons, obtained many concessions from the ministry of Lord NORTH.

But if their rise was sudden and extraordinary, their decline and fall was no less rapid. Mr. M'NEVIN inclines to attribute it to the narrow-minded bigotry of many of the Volunteers, and more especially of the patriot HENRY FLOOD, and their Commander-in-Chief, the Earl of CHARLEMONT, both of whom refused to admit the Catholics to the exercise of the elective franchise, thereby losing the confidence of that large and powerful body. Prejudice, however, had not yet worn away, nor was the age prepared for such a step. A more likely cause of the downfal of the Volunteer force might be found in the heterogeneous masses which composed it. Lord CHARLEMONT and HENRY GRATTAN; FLOOD and the Hon. ROBERT STEWART; the Duke of LEINSTER and fighting GEORGE FITZGERALD; the mitred Earl of BRISTOL, who rivalled in ability and profligacy the celebrated, or rather notorious, GEORGE VILLIERS, and Sir JONAH BARRINGTON, of facetious memory, are specimens of the ill-assorted spirits enrolled among its numbers.

POETRY.

Sketches and Specimens from the Minor Poems of Schiller. By GEORGE C. SWAYNE, M. A. Bristol, 1845.

THIS very little book is intended to encourage the growing taste of our countrymen for the study of continental literature, by exhibiting a few specimens of the wealth of poetry to be found in SCHILLER; and doubtless, if these should find a reception that will justify a larger enterprise, Mr. SWAYNE will hereafter give to the world a complete translation of the poetical works from which such fine passages have been gleaned. Even if no opportunity had been afforded for judging by proofs, we should have felt satisfied of Mr. SWAYNE's fitness for such a task from his introductory chapter, wherein he exhibits an accurate understanding of the *spirit* of German poetry, tinged as it is by the hues of its philosophy. This essay is, indeed, by no means a common-place production. It is full of thought, and displays a power to write well, which the author should exercise in a larger sphere. He remarks, that the Teutonic race stands at length where Providence intended it should stand, at the head of progressive society. Of that race, England and Germany claim the pre-eminence—both possessing the same intellectual energies, but turned into different channels by the tendencies of institutions and forms of government.

As it is, the English mind is generally objective, the German subjective—the English practical, the German theoretical—the English restless, enterprising, rapid, mechanical, materializing, utilitarian; the German, on the contrary, dreamy, sedate, meditative, deficient in mechanical address, spiritualizing, wrapt in the contemplation and realization of the Beautiful, rather than devoted to the production of the Useful. And this difference, as might be expected, pervades the respective languages and literature. The characteristic of the British tongue is its exact fitness for business and rapid action (take the slang of the sea as an example); it is short, sharp, strong, terse, and to the point, as if it had much to say and little time to say it in; the German is precise in its grammatical constructions, curious in its combinations, harmonious in its conception rather than its sound, grappling with the idea more closely than the English, though not so off-hand in expression, and on the whole better calculated to express thoughts than things. This difference of character in the literature of the two countries is nowhere more discernible than in their respective poetry. German poetry is essentially contemplative and spiritual; English is rather dramatic, active, practical—at least, if we take Schiller and Shakspere as types of the genius of each.

SCHILLER is the most thoroughly German of the German poets, and therefore is deemed by Mr. SWAYNE to deserve especial attention, and of his poetical works, his Gedichte, or

Minor Poems, are the most instinct with the spirit of his country's mind.

It is with hope to interest English readers in such a poet that Mr. SWAYNE has selected some of the best specimens of his lyrics, and especially such as were the most characteristic, and translated them with vigour and fidelity, and strung them together with a running commentary illustrative of the history or design of each, so as to make it more intelligible to the reader who may not be acquainted with the original.

Here, for instance is a translation and the note by which it is introduced. Both must greatly please the readers of THE CRITIC.

"Die Erwartung," or "Expectation," is a pretty love-poem. It reminds one of the opening lines of "Parisina." The lover is listening for the approach of his fair one; he is deceived by one sound after another—the wind whistling in the poplars, the bird fluttering from the thicket, the swan stirring the water, the falling of fruit—and he mistakes the glistening of a pillar through waving yews for the floating of a white robe. In the intervals of these mistakes he describes in glowing terms the happiness of his situation.

EXPECTATION.

Did I not hear the door creak?
And the click'd latch suddenly jar?
No! 'tis only the winds that speak
In the poplars plaining afar.

Attire thee bravely, verdure-prankt alcove,
To bear the brunt of beauty's searching splendour;
Ye boughs, spread out your canopy above,
Green night's mysterious mellowness engender;
Wake, wanton airs, to fawn upon my love,
And, dallying with her rosy cheeks, attend her:
While her bright-glancing foot, with sinuous grace
Bears its sweet burden to the trysting-place.

Ah! heard I not something rustle,
Bounding in haste through the brakes?
Peace! 'tis a frightened throstle,
Whose flutter the thicket shakes.

O Day, this moment quench thy bright flambeau;
Weird Night, befriend me with thy mute collusion,
Weave o'er us boughs of labyrinthine flow,
Shed round us purple gloaming's soft suffusion.
Eaves-dropping Nature Love accounts his foe,
Likes not one sacrilegious beam's intrusion;
Sage Hesperus alone his trust allows
Serenely gazing down, to bless his vows.

But heard I not echoes waking
Of a distant voice that spake?
No! 'twas but the cygnet breaking
Into circles the silver lake.

Bewildering harmonies swarm on my ear,
The fountain welcomes with its warbling water,
Low droops the blossom, zephyr's kiss comes near,
And every creature seems delight to barter,
The masquing grape, with deftly winking leer
Hails through the leaves the peachtree's buxom daughter.
Each gust, in flower-aromas bathing low,
From mine impassioned cheek drinks out the glow.

But a footstep approaches and stops!
And the laurel it brushed on its road!
No! 'tis but a nectarine drops,
Slain with its own rich load.

Lo! Day at length withdraws his eye of blaze;
In languid death his motley colour passes,
Now boldly open, for they shunned the rays,
Flower-bells, that might be fairies' drinking-glasses,
The full moon mounts as blanching with amaze,
The world melts down in huge reposing masses,
The girdle falls from every form that's fair,
And Nature's breast of beauty glistens bare.

But what was that quiver of whiteness,
Like flickering silk as it flew?
Naught but the column's brightness
That blinked from the sable yew.

My longing heart, must thou beguile me still
With sweet imaginations void of being?
In vain I stretch the arm her form should fill;
Avaunt, ye phantom-joys, my parch'd lips fleeing!
But come, sweet Life, my dearth of soul to kill,
Let thy bland touch convince me I am seeing.
The merest shade that from her mantle streams
Would change to substance all my hollow dreams.

And soft, as the shade that divided
In heaven my dial of bliss,
To my side she had stealthily glided,
And banished the trance with a kiss.

The translator, in conclusion, remarks, that "a more general study of German literature would be highly beneficial to English taste. It would be a set-off against the too material and mechanical tendencies of the time." In this we heartily concur; and therefore it is that a distinct department of THE CRITIC has been specially dedicated to the diffusion of the literary intelligence of Germany, and in this we should be glad to have the aid of so able and sound-thoughted a writer as Mr. SWAYNE.

EDUCATION.

Geography in Verse. London: Sharpe.

ALL experience proves that the memory of names is much aided by linking them with the associations of metre and rhyme. To this day do we recal the months, the order of the kings and queens, and divers other slightly connected facts, by repeating some barbarous rhyme learned at school, in which they are set forth. Acting upon this lesson of experience, we are here presented with a geography in rhyme, England and Wales being the theme. The verse is far better than we are wont to see in productions of this class, and we doubt not that it might be made a useful and effective agent in the work of education.

PERIODICALS AND SERIALS.

ANOTHER heap of periodicals having accumulated, we propose to clear the table with a brief notice of their various claims upon the attention of the reading world.

But one novelty appears among them. It is entitled *The Traveller's Magazine*, and a portion of its design is somewhat similar to that of the department of "The Tourist," in THE CRITIC, namely, to gather the information of travellers everywhere; but a magazine cannot pass by the post, and therefore will not circulate so largely abroad as a journal; hence THE CRITIC will be enabled to effect the object much more completely and speedily; the latter being an important consideration. The magazine before us contains some amusing articles. "The First Pilgrimage and Last Tour" of the editor, is pleasantly written, and promises well for the good taste with which the publication will be conducted. Mr. JOHNSTON'S "Voyage along the Eastern Coast of Arabia" is another amusing paper. To our taste, one of the most attractive articles is that on "Life and Sports in the Wild Bush of Australia." This adventure has at least the recommendation of novelty; it is evidently well conducted, and it stands a fair chance of success, if, indeed, any new magazine *can* succeed, which long-headed men deny.

The Church of England Quarterly Review has just issued a number which contains many papers of more than usual merit. "Scriptural Geology," from a pen not difficult to be traced, appears at a season when the fierce controversy that has been waged in the columns of *The Times* by philosophers and anti-philosophers, has brought the science of geology prominently under public notice. This article, for its own merits, deserves perusal. "The movement in Germany" is a paper appropriate to its place, as it follows succinctly the progress of the religious revival that has occurred in Germany. The fourth article, on "The Natural Limits of Subscription," deals cautiously with a trying and difficult question, in handling which it is almost impossible to avoid imputations from one side or the other. "The Prospects of the English Church" is another article extremely appropriate to this review, and it is written with commendable calmness and liberality. "Jesuits and Jesuitry" is a powerful and eloquent exposure of the movements of that body, which is again spreading dissension among the Christian world, and growing in strength every day. "The Maynooth Question" is elaborately reviewed, and severe strictures are passed on the more prominent personages who took part in the debates. SOUTHEY'S lumbering "Life of Bell," is abstracted at some length, and there are other articles on Church topics which must recommend this review to churchmen of all classes.

Wade's London Review proceeds with energy and ability. The July number commences a new volume, and romance and poetry have been added to the contents, to make them more generally attractive. But the editor must be careful not too much to sacrifice the substantial to the showy.

Another number, the eighth, of *Mores Catholici*, has come to hand. It is as stuffed with learning, and displays as much enthusiasm for the antique in manners and emotions, as did its predecessors.

Dolman's Magazine is dedicated to the service of the Roman Catholics, although not exclusively so, for there is much in it that would interest the general reader. Such is, "An Adventure in the Pacific," "The Popular Author," and the "Peep at all Things and a Few Others," which prove that clever heads are engaged upon its pages.

Simmonds's Colonial Magazine for June and July is certainly by far the best of the magazines devoted to our colonial empire. It not only contains the largest collection of news from the

colonies, but original articles of great value and importance, which will form a library of reference on colonial subjects.

Douglas Jerrold's Shilling Magazine for July offers nothing that claims special notice. The best article is still the editor's novel, "St. Giles's and St. James's."

The subjects of *the* illustration of *George Cruikshank's Table-Book* for the present month are "the Bear and the Lion" of a fashionable party. These, as usual, are the best portion of the work,—that alone which could obtain for it public patronage.

The Classical Museum for July contains a number of articles calculated to attract the lover of the classics. The most remarkable of them are an essay on "Baalbec, Palmyra, and the Extreme North-Eastern Bounds of the Land assigned to the Israelites," by the Rev. W. EWING, and Mr. DYER'S able strictures on "The Antigone of Sophocles and the Quarterly Review." Professor BERGH, "On the Age of Babrius," will reward perusal for the vast research and erudition it displays.

The July number of the *Dublin University Magazine* opens a new volume with more than the usual variety of topic, but still with the fault we have already noticed, of introducing too many reviews. Here, for instance, are no less than five, while the original articles are only four, exclusive of poetry. These latter are a "Narrative of a remarkable Trial for Witchcraft," curious and amusing; another number of the series entitled "Anthologia Germanica," which has so frequently adorned this magazine with admirable translations of the best lyrics of Germany; a continuation of the series of essays on the Italian poets, TASSO being still the never-tiring theme, and a political article. The poetry of the number possesses a special claim upon our attention, inasmuch as it contains a composition by COLERIDGE, not before made public, and bearing traces of his genius. A gem of such value must be extracted.

A STRANGER MINSTREL.

BY S. T. COLERIDGE.

Not published in any edition of his works.
Written to Mrs. Bobinson a few days before her death.

As late on Skiddaw mount I lay supine
Midway the ascent, in that repose divine
When the soul, centred in the heart's recess,
Hath quaffed its fill of Nature's loveliness,
Yet still beside the fountain's marge will stay,
And fain would thirst again, again to quaff;
Then when the tear, slow travelling on its way,
Fills up the wrinkle of a silent laugh;
In that sweet mood of sad and humorous thought,
A form within me rose, within me wrought
With such strong magic, that I cried aloud,
"Thou ancient Skiddaw! by thy helm of cloud,
And by thy many-coloured chasms so deep,
And by their shadows that for ever sleep—
By yon small flaky mists that love to creep
Along the edges of those spots of light,
Those sunshine islands on thy smooth green height—
And by yon shepherds with their sheep,
And dogs and boys, a gladsome crowd
That rush even now with clamour loud
Sudden from forth thy topmost cloud—
And by this laugh, and by this tear,
I would, old Skiddaw! she were here!
A lady of sweet song is she—
Her soft blue eye was made for thee!
Oh, ancient Skiddaw! by this tear
I would, I would, that she were here!"

Then ancient Skiddaw, stern and proud,
In sullen majesty replying,
Thus spake from out his helm of cloud—
(His voice was like an echo dying)—
"She dwells, belike, by scenes more fair,
And scorns a mount so bleak and bare!"
I only sighed when this I heard,
Such mournful thoughts within me stirred
That all my heart was faint and weak,
So sorely was I troubled!
No laughter wrinkled now my cheek,
But, oh! the tears were doubled.

But ancient Skiddaw, green and high,
Heard and understood my sigh;
And now, in tones less stern and rude,
As if he wished to end the feud,
Spake he, the proud response renewing—
(His voice was like a monarch wooing)—
"Nay, but thou dost not know her might—
The pinions of her soul how strong!
But many a stranger in my height
Hath sung to me her magic song,
Sending forth his ecstasy
In her divinest melody.
And hence I know her soul is free—
She is where'er she wills to be,
Unfettered by mortality!
Now to the 'haunted beech' can fly,
Beside the threshold scourged with waves;
Now to the maniac while he raves,
'*Pale moon! thou spectre of the sky.*'
No wind that hurries o'er my height
Can travel with so swift a flight.
I too, methinks, might merit
The presence of her spirit!
To me, too, might belong
The honour of her song,
And witching melody
Which most resembles me,
Soft, various, and sublime,
Exempt from wrongs of Time!"

Thus spake the mighty mount, and I
Made answer with a deep-drawn sigh—
"Thou ancient Skiddaw, by this tear,
I would, I would, that she were here!"

Sealy's Western Miscellany is a little monthly magazine published at Bristol, and containing some very respectable productions both in prose and poetry. Mr. TOLFREY'S "Mop Squeezers of the Metropolis" abounds in humour and in truth; and "The Ghost of the Jew," from the pen of the Editor, is a tale in verse worthy of INGOLDSBY.

The seventh part of the *Modern Orator* contains a portion of the speeches of SHERIDAN. We have already commended the design of this publication, and suggested some improvements; and, as it proceeds, we discover nothing to change our opinion of the justice of the one, or the propriety of the other.

The sixth part of the *Lectures addressed chiefly to the Working Classes*, by W. J. FOX, completes the first volume, and contains three discourses on the "Reciprocal Duties of Members of Parliament, Electors, and Non-Electors." There are few volumes in our language which comprise so much truth so eloquently uttered as does this; and it can prefer the rare boast that all its teachings are practical, and addressed to the daily duties and needs of every man.

Knight's Political Dictionary will be a useful work when completed, just such a one as is required by the man of business and the politician. The articles are not overlaboured, and they convey the most material facts in a form readily intelligible. The cost, too, will be very trifling, so that it may be added to every library. The sixth part, now before us, ranges from the word "Copyright" to the word "Divorce," and comprises the articles, "Corn-Laws," "Corporation," "Cortes," "Cotton," "County-rate," "Court-Martial," "Credit," "Customs," "Debenture," "Demand and Supply," "Democracy," "Distress," "Employments," &c. &c.

The fifth part of Dr. YOUNG'S *Lectures on Natural Philosophy* treats, in his perspicuous manner, of "Harmonics, Musical Instruments, the Theory of Optics, Optical Instruments, and Physical Optics." As in the previous parts, the text is accompanied by numerous engravings on steel.

The Art Union for June and July exhibits the same steady progress of improvement which has distinguished it from its commencement. Articles on the decorative and ornamental arts have been introduced, with good effect, and the proprietor is most liberal in graphic illustrations, each number being adorned with one or more steel engravings and many wood-cuts. The subjects treated of are various. For instance, in the number for June are articles on "Head Coverings in England," a chapter on hats, with some fifteen illustrations; "The Exhibition of the Louvre," with no less than eleven large woodcuts of the most remarkable pictures there; notices of all the galleries, and every kind of intelligence relative to art. The July number is chiefly occupied with a minute description of the League Bazaar, illustrated with a multitude of woodcuts. But in addition to this it has pictorial extracts from HOW'S superb *Book of British Song*; a steel engraving of "The Chocolate Girl," from PAYNE'S *Universum*; and accounts of the progress of Art in the continental states. The success of this periodical will not surprise, when the manner of its getting up is considered. Its cheapness is as extraordinary as its beauty.

RELIGION.

Churches, their Structure, Arrangement, and Decoration. By the Rev. GEO. A. POOLE, M.A. London, 1845. Burns. THIS pretty little book is No. 6, in "Burns' Fireside Library." It is a reprint, with considerable additions and alterations, from two previously published lectures on the appropriate character of ecclesiastical architecture, delivered at the Leeds library. Although it has not the pretensions of PUGIN'S or BRITTON'S works upon the same subject, or even those of the more popular treatises of BLOXAM and BARR, it will be found a very useful guide to those who are entering upon the threshold of a knowledge of church architecture. Within the last few years popular attention has been largely directed to such subjects, and with the most beneficial effect. The unsightly edifices which contented the miserable taste of the last generation, and which are unworthy of Him to whose service they are dedicated, and a disgrace to those who were concerned in their erection, are now no longer tolerated; a better taste begins to prevail, and

religious feeling, as in other days, seems asserting her right to be the mother of arts the most refined and exalted. Mr. POOLE comments and discourses upon every part of a Gothic church, its general design, its furniture, its ornaments, and its symbolical teaching, in a very pleasing and interesting manner. Not the least of the praise belonging to him is, that there is not a word in his book to offend the prejudices or irritate the sensitiveness of any class of religionists, in the one extreme or in the other. Even the great iconoclast, Mr. CLOSE, of Cheltenham, could scarcely find any thing to censure. We cannot do otherwise than recommend Mr. POOLE's little book to all who are ignorant, all who know a little, and all who know much of church architecture. Each will find something to interest him. The volume is worthy of the rest of this interesting series.

MISCELLANEOUS.

Essays, Letters from Abroad, Translations, and Fragments. By PERCY BYSSHE SHELLEY. Edited by Mrs. SHELLEY. A new Edition. London, 1845. Moxon.

A NEW and cheap edition of a book would usually need but a short notice, announcing the changes in its external form, and its peculiar claims upon the patronage of the wider circle to whom it is introduced; but occasions sometimes offer when a departure from this wonted rule will be excused by the readers of THE CRITIC, provided those exceptions be limited to works of more than common interest, which, having been originally published before THE CRITIC was established, have never been reviewed in its columns.

Such an excepted work is that before us; not alone because of its intrinsic worth, but on account of the name of him whose fragmentary compositions, letters and journals, it has collected under the editorship of the poet's widow, herself a writer of no ordinary genius.

Mr. MOXON has added it to his series of cheap editions, and it appears accordingly compressed into a volume of moderate size, and sold at a very trifling price. But nothing has been sacrificed in the way of paper or print, for both are of the finest, and the latter so clear and readable that even the old may enjoy it.

The contents of the volume are extremely miscellaneous, and as various in merit as in subject. They prove the vast range of SHELLEY's busy mind, and its tendency to the speculative rather than to the practical. His philosophy is a trifle too much tinged with poetry, and his essays, especially the "Defence of Poetry," are too much like the themes of a schoolboy. They are common-place, and in thought and style unworthy the author. They do indeed contain passages that mark the presence of genius; flashes here and there dazzling us with their glare, which are the salvation of the treatise. But they are few, too few to permit us to dwell upon those portions of the volume, especially when there is so much beside of beauty and interest to engage attention.

The first essay, entitled "A Defence of Poetry," is the only entirely finished prose work SHELLEY left. It proves that poetry was his mission, and that in the devotion with which he followed it he but pursued the natural bent of his genius. In this essay he rebukes the utilitarian tendencies of the age, and utters this remarkable prophecy of their results, the truth of which we daily see more and more established. "Whilst the mechanist abridges," he says, "and the political economist combines labour, let them beware that their speculations, for want of correspondence with those first principles which belong to the imagination, do not tend, as they have in modern England, to exasperate at once the extremes of luxury and want." This is the philosophy of Young England put into expressive shape, and indicates the tendency of SHELLEY's mind.

A short fragment "On the Literature, Arts, and Manners of the Athenians," is too brief even to indicate the design. "The Banquet of Plato," is translated with singular elegance, yet with minute fidelity. Some comments on "Love" are a burst of genuine poetry.

WHAT IS LOVE?

Thou demandest what is love? It is that powerful attraction towards all that we conceive, or fear, or hope beyond ourselves, when we find within our own thoughts the chasm of an insufficient void, and seek to awaken in all things that are, a community with what we experience within ourselves. If we reason, we would be understood; if we imagine, we would that the airy children of our brain were born anew within another's; if we feel, we would that another's nerves should vibrate to our own, that the beams of their eyes should kindle at once and mix and melt into our own; that lips of motionless ice should not reply to lips quivering and burning with the heart's best blood. This is Love. This is the bond and the sanction which connects not only man with man, but with every thing which exists. We are born into the world, and there is something within us which, from the instant that we live, more and more thirsts after its likeness. It is probably in correspondence with this law that the infant drains milk from the bosom of its mother; this propensity develops itself with the development of our nature. We dimly see within our intellectual nature a miniature as it were of our entire self, yet deprived of all that we condemn or despise, the ideal prototype of every thing excellent or lovely that we are capable of conceiving as belonging to the nature of man. Not only the portrait of our external being, but an assemblage of the minutest particles of which our nature is composed; a mirror whose surface reflects only the forms of purity and brightness; a soul within our soul that describes a circle around its proper paradise, which pain, and sorrow, and evil dare not overleap. To this we eagerly refer all sensations, thirsting that they should resemble or correspond with it. The discovery of its antitype; the meeting with an understanding capable of clearly estimating our own; an imagination which should enter into and seize upon the subtle and delicate peculiarities which we have delighted to cherish and unfold in secret; with a frame whose nerves, like the chords of two exquisite lyres, strung to the accompaniment of one delightful voice, vibrate with the vibrations of our own; and of a combination of all these in such proportion as the type within demands; this is the invisible and unattainable point to which Love tends; and to attain which, it urges forth the powers of man to arrest the faintest shadow of that, without the possession of which there is no rest nor respite to the heart over which it rules. Hence in solitude, or in that deserted state when we are surrounded by human beings, and yet they sympathise not with us, we love the flowers, the grass, and the waters, and the sky. In the motion of the very leaves of spring, in the blue air, there is then found a secret correspondence with our heart. There is eloquence in the tongueless wind, and a melody in the flowing brooks and the rustling of the reeds beside them, which by their inconceivable relation to something within the soul, awaken the spirits to a dance of breathless rapture, and bring tears of mysterious tenderness to the eyes, like the enthusiasm of patriotic success, or the voice of one beloved singing to you alone. Sterne says that, if he were in a desert, he would love some cypress. So soon as this want or power is dead, man becomes the living sepulchre of himself, and what yet survives is the mere husk of what once he was.

Two fragments of romances, one entitled "The Coliseum," the other, "The Assassins," exhibit much pomp of words, but do not advance either story sufficiently to engage the reader's interest. Papers on the "Punishment of Death," which he denounces, and on a "Future State," of which he appears dubious (he had not witnessed Mesmerism) are succeeded by speculations on Metaphysics and on Morals; the former being a collection of notes evidently jotted down for after use. Among these he notes a curious incident in his own life. It runs thus:—

A MYSTERY.

But the most remarkable event of this nature, which ever occurred to me, happened five years ago at Oxford. I was walking with a friend, in the neighbourhood of that city, engaged in earnest and interesting conversation. We suddenly turned the corner of a lane, and the view, which its high banks and hedges had concealed, presented itself. The view consisted of a windmill, standing in one among many plashy meadows, inclosed with stone walls; the irregular and broken ground, between the wall and the road on which we stood; a long low hill behind the windmill, and a grey covering of uniform cloud spread over the evening sky. It was that season when the last leaf had just fallen from the scant and stunted ash. The scene surely was a common scene; the season and the hour little calculated to kindle lawless thought; it was a tame uninteresting assemblage of objects, such as would drive the imagination for refuge in serious and sober talk, to the evening fire-side, and the dessert of winter fruits and wine. The effect which it produced on me was not such as could have been expected. I suddenly remembered to have seen that exact scene in some dream of long——

Mrs. SHELLEY adds in a note, that this strange fragment was concluded with this memorandum: "Here I was obliged to leave off, overcome by thrilling horror;" and that he came to her from writing it, pale and agitated with fearful emotions.

Other translations from PLATO follow, and then we arrive at the portion of the volume which contains the matter of the most general interest—a tour—a few scraps from his journal, and his letters from Italy. In all these, the man and the poet are beheld in their natural form, and individuality, always attractive, is stamped upon every page. It is over this portion of the volume that we shall chiefly linger, and that, not so much by way of commentary as in the shape of extract, the language of such a man as SHELLEY being in itself a luxury not often to be found even in the wide researches of a literary journal.

The Tour was one of six weeks through France, Switzerland, Germany, and Holland, and being the first introduction of the young poet to foreign scenery and manners, it is instinct with the enthusiasm of delight that makes such an event one of the very brightest in the history of a life. The journal is evidently real; a record kept for private reference, and written with no purpose of publication. It is therefore brief and unstudied in expression, but not the less a graphic picture of the impressions of external objects upon the tourist's mind. In the letters this is more especially displayed, and in these latter his pen indulges in more minute description, and occasionally in reflections that were stirred in his deep heart by the objects he beheld. From these we will take indiscriminately the passages that struck us, on perusal, as deserving special attention, from the interest of their themes or the beauty of the telling.

Here is a ludicrous anecdote.

A RHINE BOATMAN.

The last part of this voyage was performed close under land, as the wind was so violently against us, that, even with all the force of a rapid current in our favour, we were hardly permitted to proceed. We were told (and not without reason) that we ought to congratulate ourselves on having exchanged our canoe for this boat, as the river was now of considerable width, and tossed by the wind into large waves. The same morning a boat, containing fifteen persons, in attempting to cross the water, had upset in the middle of the river, and every one in it perished. We saw the boat turned over, floating down the stream. This was a melancholy sight, yet ludicrously commented on by the *batelier;* almost the whole stock of whose French consisted in the word *seulement*. When we asked him what had happened, he answered, laying particular emphasis on this favourite dissyllable, *C'est seulement un bateau, qui était seulement renversé, et tous les peuples sont seulement noyés.*

A poet's hand is visible in this picture of

MOUNTAIN TRAVEL.

The next morning we proceeded, still ascending among the ravines and valleys of the mountain. The scenery perpetually grows more wonderful and sublime: pine forests of impenetrable thickness and untrodden, nay, inaccessible expanse, spread on every side. Sometimes the dark woods descending, follow the route into the valleys, the distorted trees struggling with knotted roots between the most barren clefts; sometimes the road winds high into the regions of frost, and then the forests become scattered, and the branches of the trees are loaded with snow, and half of the enormous pines themselves buried in the wavy drifts.

The spring, as the inhabitants informed us, was unusually late, and indeed the cold was excessive; as we ascended the mountains, the same clouds which rained on us in the valleys poured forth large flakes of snow thick and fast. The sun occasionally shone through these showers, and illuminated the magnificent ravines of the mountains, whose gigantic pines were some laden with snow, some wreathed round by the lines of scattered and lingering vapour; others darting their spires into the sunny sky, brilliantly clear and azure.

At Geneva he records

AN INCIDENT.

On returning to the village, we sat on a wall beside the lake, looking at some children who were playing at a game like ninepins. The children here appeared in an extraordinary way deformed and diseased. Most of them were crooked, and with enlarged throats; but one little boy had such exquisite grace in his mien and motions, as I never before saw equalled in a child. His countenance was beautiful for the expression with which it overflowed. There was a mixture of pride and gentleness in his eyes and lips, the indications of sensibility, which his education will probably pervert to misery or seduce to crime; but there was more of gentleness than of pride, and it seemed that the pride was tamed from its original wildness by the habitual exercise of milder feelings. My companion gave him a piece of money, which he took without speaking, with a sweet smile of easy thankfulness, and then with an unembarrassed air turned to his play. All this might scarcely be; but the imagination surely could not forbear to breathe into the most inanimate forms, some likeness of its own visions, on such a serene and glowing evening, in this remote and romantic village, beside the calm lake that bore us hither.

Very eloquent is the description of the poet's

FIRST VIEW OF MONT BLANC.

Mont Blanc was before us—the Alps, with their innumerable glaciers on high all around, closing in the complicated windings of the single vale—forests inexpressibly beautiful, but majestic in their beauty—intermingled beech and pine, and oak, overshadowed our road, or receded, whilst lawns of such verdure as I have never seen before, occupied these openings, and gradually became darker in their recesses. Mont Blanc was before us, but it was covered with cloud; its base, furrowed with dreadful gaps, was seen above. Pinnacles of snow intolerably bright, part of the chain connected with Mont Blanc, shone through the clouds at intervals on high. I never knew—I never imagined—what mountains were before. The immensity of these aerial summits excited, when they suddenly burst upon the sight, a sentiment of ecstatic wonder, not unallied to madness. And remember this was all one scene, it all pressed home to our regard and our imagination. Though it embraced a vast extent of space, the snowy pyramids which shot into the bright blue sky seemed to overhang our path; the ravine, clothed with gigantic pines, and black with its depth below, so deep that the very roaring of the untameable Arve, which rolled through it, could not be heard above—all was as much our own, as if we had been the creators of such impressions in the minds of others as now occupied our own. Nature was the poet, whose harmony held our spirits more breathless than that of the divinest.

And also of

THE MER DE GLACE.

On all sides precipitous mountains, the abodes of unrelenting frost, surround this vale: their sides are banked up with ice and snow, broken, heaped high, and exhibiting terrific chasms. The summits are sharp and naked pinnacles, whose overhanging steepness will not even permit snow to rest upon them. Lines of dazzling ice occupy here and there their perpendicular rifts, and shine through the driving vapours with inexpressible brilliance: they pierce the clouds like things not belonging to this earth. The vale itself is filled with a mass of undulating ice, and has an ascent sufficiently gradual even to the remotest abysses of these horrible deserts. It is only half a league (about two miles) in breadth, and seems much less. It exhibits an appearance as if frost had suddenly bound up the waves and whirlpools of a mighty torrent. We walked some distance upon its surface. The waves are elevated about twelve or fifteen feet from the surface of the mass, which is intersected by long gaps of unfathomable depth, the ice of whose sides is more beautifully azure than the sky. In these regions every thing changes, and is in motion. This vast mass of ice has one general progress, which ceases neither day nor night; it breaks and bursts for ever: some undulations sink while others rise; it is never the same. The echo of rocks, or of the ice and snow which fall from their overhanging precipices, or roll from their aerial summits, scarcely ceases for one moment. One would think that Mont Blanc, like the god of the Stoics, was a vast animal, and that the frozen blood for ever circulated through his stony veins.

(*To be continued.*)

Music in England, Ireland, Wales, and Scotland, from the earliest ages to the present time. London: Cradock and Co.

THIS is one of the series of the *New Library of Useful Knowledge*, designed to be more general in its aim than its predecessor. It is a brief but interesting history of music in the British isles, tracing it from the ancient Britons through the Saxons, the Normans, and thence downwards to the present day. There are few subjects of which so little is known even by those who call themselves educated and are accounted readers, as the history of music, and of the multitudes who profess enthusiasm for the art, very few have cared to acquaint themselves with its rise and progress. Ignorance such as this is inexcusable; at all events it will be so for the future, when for sixpence the lover of music will be enabled to inform himself of its history in such a pleasantly written essay as this, from which no material fact appears to have been omitted.

JOURNAL OF FRENCH LITERATURE.

Antonia. By the Baron de BAZANCOURT. 2 vols. 1845.

THIS is one of the few French novels to be met with in which the author has entirely given himself up to his story, without

indulging in a digression of any kind. The tale is skilfully put together, and evidently related *con amore*. The characters are thoroughly individualized, and the action is highly dramatic. We took up the work with considerable indifference, for the scene is laid in Spain, and we confess that we are not amateurs of Spanish novels, having long relinquished the hope of meeting a second *Don Quixote*. Moreover we prefer the French novelists upon their own ground, for they seldom attempt to transport their actors into other lands, without committing solecisms both of costume and feeling which serve to divest the fable itself of all interest, by constant sinning against reason and probability. In this case we were speedily delivered from all such apprehension. *Antonia* is evidently the production of an individual perfectly conversant not only with the places to which he conducts his readers, but also with the national characteristics which he undertakes to portray.

The scene opens upon a night of rain, wind, and darkness, on a highway, near the miserable village of Guadarama, about two leagues distant from the Escurial. In the midst of the storm—for the fierce flashing of lightning is not spared to the travellers, a *galera*, or tilted waggon, slowly crawls along the stony and dangerous road. The vehicle contains the young Marquis de Villefranche, travelling by the desire of his widowed mother, before he establishes himself on his estates; and his tutor, M. Bernardin, whose mingled querulousness and nice sense of honour, cowardice in small things and heroism in difficulties, all made subservient to his devoted affection for his pupil, presents, perhaps, the best-drawn character in the book. Drenched by the rain, which has penetrated the awning of the *galera*, and wetted them to the skin; their joints half dislocated by the rolling and pitching of the waggon over the precipitous road; hungry, thirsty, and weary, our travellers at length reach Guadarama, and the mayoral (driver) pulls up at the door of

A SPANISH VENTA.

"What do you wish, Excellency?" asked a man who appeared at the threshold.

"Supper and a bed, if possible," said the marquis, who spoke Spanish.

"Neither one nor the other is possible, Excellency," quietly answered the proprietor of the inn. "There is no more room," he repeated, without moving a step either backward or forward; "all the *venta* is occupied by the travellers, whom you may hear singing up stairs."

"But in this horrible weather," said the young Frenchman, "we cannot pursue our journey. Surely you have some corner in which we could lie down for the rest of the night; we have provisions with us."

"There is the stable," replied the Spaniard, as coolly as before. "There are two stalls in it, and only one mule."

"We will be content with the stable," said the marquis, slipping a piece of money into the hand of the host.

From this uninviting refuge our travellers are speedily delivered by an invitation to join the strangers who are in possession of the lodging, and who prove to be four French officers of rank. We pursue our description of the *venta*.

They arrived at that portion of the house called the kitchen. This name was given to a dark nook, ten feet by twelve, which had no other light than what fell from a hole through the ceiling. The hearth was in the centre of the floor. The smoke of the fire, and the steam of the meat, wandered over the room for a time, and finally escaped by the opening, after having deposited unequivocal evidence of their progress in a most disagreeable combination of foul scents. The travellers then ascended a narrow wooden staircase, and found themselves in the solitary sitting-room of the house.

The worthy tutor, who in idea includes dragoon officers in the same category as mad dogs, consoles himself with the recollection that on the morrow his pupil will be delivered from the perils of such dangerous companionship; but the fates are against him. The young men agree to travel together to Madrid, and to form one family while in that city; and the following day they establish themselves at the hotel of the Fontana de Oro. Shortly after their arrival they attend a masked ball, where poor M. Bernardin, whom the laughter-loving dragoons have maliciously invested in a rose-coloured domino, narrowly escapes the stiletto of a jealous beauty, who mistakes him for her recreant lover, while the young marquis, while separated from his friends, is appealed to for protection by a graceful and bright-eyed mask against the violence of one of her own countrymen. The inevitable consequence ensues. De Villefranche accepts the stranger's challenge, and by a happy accident runs through the body the most celebrated swordsman in Spain. As he is leaving the ground with his witnesses, somewhat disabled by a flesh-wound, and is about to enter his carriage to return to the city, a young female, closely veiled, and attended by a grey-haired domestic, emerges from among some trees, and having hastily seized his hand, and pressed it between her own, she murmurs softly, "I too was there!" and then hurriedly retreats. He at once recognises the heroine of the ball, and is, of course, more deeply in love than ever.

A few days subsequently he is met by a man who bids him be at a particular spot at eleven o'clock the same night, to which he at once consents, feeling convinced that he is about to meet his beautiful unknown. His mysterious guide conducts him through a labyrinth of narrow and tortuous streets, ere he finally stops before a tall and gloomy building, into which they are admitted by a pass-word. Here, instead of the fascinating incognita, he finds himself in the presence of a group of dark figures, so closely folded in their long black cloaks that identification is impossible. To his astonishment these personages relate to him his own history in all its details, and finally conclude by informing him that the lady of whom he has become enamoured is the Donna Antonia, the only child of Don Leyva Maldonado, a grandee of Spain, who has resolved to accept no son-in-law whose rank is not equal to his own, or whose wealth is not commensurate. Having crushed him with these tidings, they nevertheless declare that, should it be their pleasure so to do, they can secure her hand for him, even though he be a foreigner, and comparatively poor. In fine, they are the heads of a conspiracy formed against FERDINAND, and they frankly inform the marquis that they have need of money, and that, as Antonia Maldonado will, on the day of her marriage, come into possession of a million of piastres, they will undertake to accomplish the union upon his signing a bond to pay over half that sum to themselves. The proposal is rejected with disdain; upon which they assure their victim that, should he venture to betray the confidence reposed in him, both his own life and that of the lady will be the forfeit of his temerity. He desires to be suffered to depart; when one of the masked figures, as it passes near him, whispers—"Comply; one watches over you." Madly in love, terrified at the idea of violence to his idol, and reassured, in spite of his better reason, by the cheering voice, the marquis becomes irresolute, and again the same murmur reaches him—"Save Antonia." Confused by the mystery about him, and excited to the most painful degree by the idea that the destiny, even the existence, of the lady depends upon his decision; rendered happy and hopeful, also, by the repeated assurances which he receives that the daughter of Don Leyva looks favourably upon him, his sense of right gives way, and scarcely conscious of what he does, he signifies his consent. A paper is produced—it is the bond—and in an instant his name is affixed to it, and it is secured by one of his singular companions. In two months Antonia is to be his wife. He receives the pledge without one heart-throb; he begins to believe that he is the victim of a fevered dream; and as the sable procession slowly disappears, once more the deep voice whispers—"There is one who watches over you." In the next instant De Villefranche is alone. The same guide reappears, and by the same circuitous route conducts him again to his hotel. From this moment the marquis is no longer a free agent. He is dogged whenever he moves from his apartments; letters are written in his name which control his actions; the debts of honour which he contracts are paid. Meanwhile, he has been introduced to the superb palace of Don Leyva, has been courteously received by the father, and tenderly by the daughter. His passion increases with every interview, and yet he hates himself for the pusillanimity which has made him a party to so foul and unmanly a contract. A thousand times the tale is on his lips; a thousand times he resolves rather to devote himself to a life of regret and wretchedness, than owe her hand to any influence save that of her affection. His plans to this effect are, however, always frustrated, and at length he resolves to reveal the plot to Don Leyva himself. For this purpose he sallies forth one morning, but is met by a couple of his persecutors, who upbraid him with his weakness, and prevent his approaching the palace.

Rendered desperate by this determined opposition, the marquis draws his sword, and wounds one of his tyrants, who coolly folds his mantle about his arm, and bids him consider that the life of Antonia will be the forfeit of his imprudence. Still weak from the effects of the duel, and over-excited by the mystery and disgrace of his position, Villefranche faints, and on recovering consciousness, finds himself at home at his hotel. A few nights subsequently Don Leyva Maldonado gives a *soirée*, which is attended by all the *élite* of Madrid, and where the marquis and his friends agree to jostle all the male guests, in order, if possible, to discover the man whom he had struck. The attempt fails. Every individual who is touched on the arm shrinks as though hurt, and the mystery is only deepened. The haughty Spaniard, meanwhile, has consented to the marriage of his daughter with Villefranche, in a letter which purports to be a reply written to the demand of the marquis, and to his extreme surprise, hurries on the contract, affirming that there are threatening circumstances in the political state of Spain, which make him anxious for the safe departure of Antonia for France, the country of her mother, and in which her estates are situated. For himself he affirms that he is no longer young, and will never forsake the land which gave him birth. Rendered desperate by this pertinacity, Villefranche resolves, on the very evening when half the aristocracy of Madrid are assembled to witness the signature of the contract, to incur the risk of Antonia's indignation and refusal, rather than dishonour himself for ever by being a party to the bargain of which she is ignorant; and accordingly he induces her to leave the guests, and to meet him in a retired apartment, where he may, without interruption, be enabled to confide to her his secret. He has just done so, and she is a prey to the most violent struggle between her tenderness for him and her revolted pride, when the door suddenly opens, and gives entrance to a man draped in a long robe of black serge.

A CONSPIRATOR.

"Albert," said the mask; "you forget that they are awaiting you in the saloon, to sign your marriage contract."

Albert shuddered. Antonia leaning her clasped hands upon his shoulder, turned a look of energetic haughtiness upon the intruder, and replied firmly,

"I will not sign the contract. Not that the marquis has lost any portion either of my love or my esteem, for I here swear never to belong to another; but, because I will not ratify by my name so shameful a bargain!"

"Child! apply not the words shame and infamy to the great and glorious thoughts whence are created martyrs, as pure and as sublime as those who die for religion and the faith. It is now too late to cast a stain upon your high name by a public scandal; more than a thousand persons are collected in the saloons. You have no longer time to hesitate. You shall sign, Antonia."

"Cowards!" murmured Albert.

"You cannot alter my resolution;" said Antonia, proudly and calmly; "the blame rests with its authors! I will not sign."

"And I say that you shall. It is my will," and the mask was torn from the countenance of the speaker.

"My father!" exclaimed the lady, burying her face in her hands."

"Great heavens!" cried Albert, shrinking with surprise, "Don Leyva Maldonado!"

It is even so. The father of Antonia is the leader of the conspiracy, who, fearful of appropriating to the uses of the insurrection his own ostensible property, has resolved to make that of his daughter supply its place. Of course every difficulty, every reluctance disappears at once from the hearts of the lovers; and as their united endeavours to dissuade Don Leyva from his perilous career prove abortive, it is decided that the marriage shall take place immediately, and that the marquis shall at once pass over to France with his beautiful young bride. This, however, is not to be; the bosom-friend and *protégé* of the proud grandee has betrayed the plot and its authors to the government; and the moment of their reunion in the halls of the Maldonado palace has been chosen to seize them. Don Leyva and his daughter are conveyed to the prison of *La Corte*, to which the other conspirators had already been consigned, and Villefranche remains heartbroken.

A variety of plans are discussed between the marquis and his friends for the liberation of Don Leyva and his daughter, which are rendered more hopeless by the fact that the Spaniard himself is *au secret* in a subterranean dungeon. Having effected a communication with Antonia, they have however facilitated in some degree her own attempts; and having succeeded in interesting the jailer's daughter, and being rendered desperate by the discovery that the trial of Don Leyva is to take place on the following day, and that the proofs against him are sufficient to insure his condemnation, she exerts all her energies to induce the warm-hearted and sympathizing Theresa to assist her; and she at length prevails. The keys are to be secured, and at eleven o'clock at night she is to bring them to Antonia. Our author shall describe how they succeeded.

A FLIGHT FROM A STATE PRISON.

The young Spanish lady heard the hour of deliverance and salvation strike. She was standing near her door in eager anxiety. So soon as she heard Theresa, she opened it softly, and went towards her on tiptoe. "Here I am," she whispered; "the turnkey has retired for the night." Theresa had a taper in her hand. "I tremble," she said faintly; "for we must pass through my father's room; there is no other entry to the dungeons."

Each held her breath, and they shuddered as they advanced, whenever a board cracked beneath their tread. When they arrived at the door of the jailer's room, Theresa gave the taper to Antonia while she gently opened it; then, having entered, both listened eagerly. Nothing, however, was audible in the chamber, save the heavy breathing of the sleeping Jeronimo. They advanced cautiously. The jailer had thrown himself upon the bed in his clothes, as the commissioners who were to question Don Leyva were to arrive in the course of the night. Near him, as was usual, lay a pair of pistols upon a table. As they were passing the bed, Jeronimo moved, and they became paralysed with terror, and retreated into a corner of the apartment, while Theresa tremblingly seized the hand of her companion.

"Unfortunate man!" murmured Jeronimo; and again all was silence.

"He sleeps!" whispered Antonia; "let us lose no more time."

Hand in hand they traversed the room, and gained the opposite door. Before they crossed the threshold, Theresa turned a last look upon the calm and honest face of her father. "Oh!" she exclaimed, as she extended towards him her clasped hands, "my father, pardon me!"

The jailer's daughter was familiar with all the intricacies of the prison, and they consequently reached without difficulty the cell of the hidalgo. Their keys turned readily in the locks, but the sound produced by forcing the rusty bolts made them shiver as they echoed through the dreary vaults, and died away like an exhausted groan.

Don Leyva had ascertained from Jeronimo that his accomplices had all been removed to separate prisons, and that he was to be submitted to the question in the course of that night. The good jailer had warned him of the fact, in order that he might have more time to prepare his answers.

When Maldonado heard voices at the door of his cell, he never doubted that they were those of his judges, and he resolved to meet them calmly.

"It is me!" murmured Antonia, beneath her breath; "father, come quickly."

"My child!" exclaimed the astonished Don Leyva.

"Come quickly, father, from this dark prison; each minute is now worth an hour to us."

"But how do you hope?"

"Ask nothing, but follow us."

"You are not alone, then?"

"No, here is the jailer's daughter, the angel to whom we owe our deliverance."

Don Leyva made no reply, but he pressed the hand of Theresa in his own; and, after having carefully locked the door of the cell behind them, they pursued their dark and hurried way. They soon arrived at the entrance of the subterranean, which, as Theresa had stated, opened by a secret door into the *Rua de Atocha*, near the church, and of which she had secured the key. It was approached through a vaulted archway, so low that it could only be traversed by bending the figure nearly double.

Once in the subterraneans, where they had no longer any apprehension of being overheard, they had only this door to pass ere they once more had liberty before them. For the last time the terrible sound of the harsh bolts as they were shot back fell upon their ears.

"Is it you?" eagerly whispered a voice, which Antonia at once recognised as that of Villefranche.

"Yes," murmured the lady.

"And now," said Theresa, "may God protect and guide you, and may my father pardon me."

"Theresa, we shall meet again," said the young Spanish lady, as she folded the jailer's daughter to her heart.

"Go, go!" urged Theresa earnestly; "do not make my sacrifice useless." And she suddenly closed the door behind her.

The marquis and his companions were all disguised, in order to

avoid suspicion in traversing the city. They had provided mantles for Don Leyva and his daughter, as well as the tall conical hats worn by the peasantry, above the handkerchief which they knot about their heads. Then the party separated, and, taking four different directions, hastened to their rendezvous beyond the gates, where horses were awaiting them.

We shall close our notice with the return of the noble-hearted Theresa through the vaults, the *denouement* of the tale being too complicated for the narrow limits to which we are compelled to confine our article :—

A CULPRIT.

The noble impulse of devotion and generosity had sustained the strength of poor Theresa so long as the life and liberty of the prisoners depended upon her exertions; but when the door closed behind them, and that she found herself alone in the dark and chilling vaults, hearing no more the earnest prayer, "Save us!" breathed into her ear, she felt herself tremble and grow faint, and was obliged to lean against the damp and dripping wall for support. Alas! reflection had come upon her, poor child; she now thought only of her father, whose sleep and confidence she had alike betrayed; and an indescribable terror paralysed her faculties. At length she crawled out of the subterranean, and slowly and with difficulty compelled herself to traverse the windings of the building. The sound of her own footsteps startled her; she seemed to see distant lights, to hear voices calling to her; and she frequently stopped to listen through the silence to all these noises conjured up by her fears.

At last she stood beside the door of her father's chamber; she had only to traverse it, and all would be safe. But did he still sleep? She shuddered as the doubt came upon her: she opened the door gently, very gently, and then she stood still, pale, gasping, without strength or voice; and before her stood the stern and threatening figure of her father, with his eyes fixed on hers.

"Whence come you, Theresa?" he asked, in a voice which struck upon the heart of the poor girl.

"Father——"

"Whence come you? and the lady Antonia, where is she?"

"Father," repeated the pale Theresa, in an imploring accent, "do not look so harshly on me."

"Whence come you, I ask? The lady Antonia could not have left her chamber without passing through your own—answer—answer—why is she not with you?"

"Oh, father, you terrify me! I dare not—I cannot—"

"I will seek her myself," cried Jeronimo angrily, as he pushed aside his daughter.

"Father, she is gone——"

"And Don Leyva?——"

"Oh! forgive me, father; I could not resist her tears—I have saved them both!"

"Saved them! Unhappy girl, you have destroyed your last parent!"

Theresa had fallen at her father's feet, and buried her streaming eyes in her open palms. "Destroyed you!" she echoed, as she sprang up, and stood erect before him—"destroyed you! what mean such words?"

"They mean, unfortunate child, that my life must answer for that of my prisoner; I was forewarned of this!"

"Your life?"

"And that I expect his judges every hour—they are now, perhaps, at the gate."

"Oh, heaven!" exclaimed Theresa, frantically, "your life—destroyed by me! Father, for pity's sake—do not await their coming. Let us fly—let us both fly—this key——"

"It is that of the vaults."

"It is—it is— that way they escaped. We can rejoin them at the frontier. Father, do not stand thus motionless, gazing upon me.—Father,—come—they will condemn you also—and it will be I who——"

Jeronimo seized his pistols. "By the vaults, perhaps there is yet time—"

"Impossible—come, father, come."

"And my duty—and my honour? You have destroyed me, ungrateful girl, and you have dishonoured me—"

"Oh, mighty Lord!" cried Theresa, as she wrung her hands in a paroxysm of despair, "have pity on us! I prayed to you earnestly on my knees. If it was a crime, wherefore did you permit it?"

Jeronimo bent over his daughter. "Do you hear," he asked huskily; "they are approaching."

"There is yet time," persisted Theresa, throwing herself upon her father's neck. "In the name of my mother, whom you so loved and wept, come—come—"

"You deceive yourself, Theresa; it is too late. My fate is now in the hands of God."

"Wretch! wretch!" exclaimed the poor girl, beating her brow with her clenched hands.

"Be calm, my child;" said the wretched man; "be calm before these strangers." At the same instant the door opened, and three persons entered in long black mantles which swept the floor. One of them presented a paper to the jailer, saying as he did so, "We come to interrogate Don Leyva Maldonado."

"Don Leyva Maldonado has this night escaped from his dungeon," replied Jeronimo, in a firm voice.

"Escaped! impossible! It is you who have let him free."

"I deny the charge."

"You have connived at his escape."

"I connive at his escape!" said Jeronimo. "Had my own father been condemned to death, and imprisoned in that dungeon, under the safeguard of my honour, it would have continued closed until he walked from it to his execution; and, had I seen him attempt evasion, I would have brought him down with one of these pistols!"

"Why did you not do so in this case?"

"Because I have been betrayed; and have only this moment learnt his disappearance."

"Who then delivered him?"

Theresa advanced. She was about to declare herself the aggressor; but Jeronimo, holding her back, answered calmly, "I do not know."

"You must find a more fitting answer before the tribunal that will judge you; you must now follow us to your dungeon."

"I am ready," was the reply.

Then, for the first time, he turned towards his daughter, and took her in his arms; his brow no longer lowered; and an expression of deep tenderness and paternal love lighted up his features.

"Theresa," he said, as he removed her hands from her face, "I forgive you."

"I shall go with you, father."

"You must remain here, Theresa; pray, and await the result with patience. Francesco, I confide my child to you."

"Make yourself easy," said Francesco, as he extended his hand to the jailer; "until you reclaim your daughter, she shall be my own."

JOURNAL OF GERMAN LITERATURE.

Reise nach Neapel, Sicilien, Malta, und Sardinien zu Anfange des Jahres 1844. Von C. O. S. von Arnim. (*Travels to Naples, Sicily, Malta, and Sardinia, at the beginning of* 1844. By C. O. S. von Arnim.) London, 1845. D. Nutt. 2 vols.

Xerxes offered a reward for the invention of a new pleasure. It was the wish of a satiated voluptuary. We are afraid the public, as regards books of travel, is in no purer moral condition, and no longer feels either the pleasure of instruction or the stimulant of excitement. Described, sketched, recollected, noted, in every contrast and change of style, Europe and Asia have become at last, by dint of "Libraries of Travel," and "John Murray's Hand-Book," as common, as well known, as Cheapside or Pall-mall; and the invariable characteristic of all such new books is the reproduction of familiar scenes, differing only in effect according to the varying talent of their authors. A narrative of a "Journey into the realms of Death" written with the genius of Defoe, and with rather more than the truthfulness which distinguishes Mrs. Veals, would be indeed the "new pleasure," deserving of the "great reward." It is the only region undescribed, destined to be traversed by all, the land of the first-born, and the last; the resting-place and home of the human race, from whence the earliest doom proceeded, and in which the final mercy of Creation will be fulfilled,—this is alone unknown, imperceptible, veiled and impalpable to man. The merit of the present work consists in its entire absence of pretence, and its light and pleasing style. The writer tells us what he saw and what he thought on daily occurrences and common events, and his incidents of travel do not in any manner vary from those habitually recorded by others, who pass a vacation in rushing upon a high road from one great city to another.

THE CONGRESS OF VERONA.

The congress was a new epoch in my life, and I anticipated much pleasure and enjoyment, but, excepting the assemblage of so many eminent, remarkable persons whom I then saw, the rest was a dream. During the three weeks I passed there, not a fête was given. The opera, which was not so good as in the other Italian cities, was frequented, and time was otherwise whiled away amid the society of our own sex. The only lady who received company of an evening, and, excepting Lady Londonderry,

the only ambassadress, was Princess Lieven. Here, the greater number of the diplomatic corps met, and I had favourable opportunities of witnessing the surprising tact and great dexterity of Prince Metternich, who could descend in a moment from the discussion of general matters to the nicest details of political interest with some other minister, and again resume his former lively conversational tone. No man ever better understood the art of uniting the utmost facility of intercourse with the most important occupations; and had all the diplomatists of Verona followed his example, it would greatly have affected the social relationship of those not immediately connected with their circle. But this was not the case, for many, before this time and subsequently acknowledged to be companionable men, were at that moment inapproachable. Every one was fettered by the sense of his own importance, and thought only of what, during the short duration of the congress, he had to say, to propound, and to effect. On every side small circles of debaters were formed, and if one ventured to speak of common matters to a diplomate, it was easy to perceive his abstraction by the wandering answer you received. Far, however, be it from me to indulge in over-censoriousness in this respect, for I am willing to admit that when my head is full of "coming fancies," I am guilty of being sadly *maussade*, and moreover allow that a congress to the idler is but a dull event, unless held in a large city like Vienna, where the festive party and fête-giving spirit reigns.

We do not in the least doubt this, but admit we are surprised to find any man confessing that he has sinned to the extent of believing in the possibility of a lively intercourse between the men of red tape and protocols in the days of the settlement of the "Affairs of Europe." Their nature was subdued to what it worked in, and even in their hours of social relaxation was over-shadowed by the gloom of treaties and conventions. Like the ministers of the *Rolliod*, their very chit-chat partook of their habitual peculiarities, those of men who

> On coffee now the previous question move;
> Now rise a surplusage of cream to prove;
> Pass muffins in committees of supply,
> And "buttered toast" amend by adding "dry."

Our author is more at home and at ease in

MILAN.

I had resolved this time to spend a week in Milan, and this went far too rapidly. The corso was always filled by the most stylish equipages, the shops offered the most beautiful wares, and the confectioners in particular rivalled by their delicate inventions their most gifted brethren of England and France. One shop in particular arrested attention, which displayed in its window a yellow building of about a foot and a half high, representing a dining-room, where maccaroni was cooked and eaten. Upon it was written, "Cucina stupenda. Qui si mangia bene, si spende poco." "Wondrous Kitchen.

> "Here, eat well you may,
> With but little to pay."

The figures within were all about three inches high, cleverly formed, and denoting the several appropriate details of cooking and eating; both enjoyment and gluttony were expressively imitated, and in what manner? Not in stone or wood, or in any other hard material, but butter—pure yellow butter! When I saw this, I at once understood how Canova first attracted attention in the kitchen of the Nobile Falieri, by his artistic skill in moulding forms and figures in the same material; and subsequently justified the fondest anticipations of his patrons by the lofty development of his genius, in which they felt so honourable and deep an interest. Having spoken so much upon the elegant equipages and shops of Milan, what shall I add upon its palaces and mansions, as compared with the other great cities of Italy; the praiseworthy and marked cleanliness of its inhabitants, and domestic management? I pass over the palaces of the governor, the Litta, Serbelloni, and others, where all is silk and gold, but refer specially to the houses of the middle classes—the shop-keepers—where, under many contrasting circumstances, every moment we perceive that we are in the capital of an intellectual patriarchal government. And yet one hears complaints against it, and in the events of past years we have sorrowful proof that all has not ended in complaints. But all is forgiven, no one molested for the past, and I therefore hasten from the subject; meanwhile, the traveller always enjoys the good fortune to be welcomed in every land, even in those which are the most unsettled, and no one desires that he should forfeit the protection of his natural and becoming neutrality. Most inconsiderate are those who do so; they sacrifice the two important ends of travel—amusement and instruction.

This is one of the golden rules of travellers, and were the case susceptible of accurate proof, we believe it would be found the results of political disquisitions upon the social condition of despotic governments have most frequently retarded improvement, nourished suspicion, or been cited as the justification of greater restrictions. Monarchs, under such circumstances, consider travellers as spies, and treat their subjects as informers.

NAPLES.

Owing to the slight interest which the court had of late years taken in the public amusements of the Neapolitans, the city had become less attractive to strangers. In Rome, indeed, there is no court, and neither pope nor cardinal considers throwing sweetmeats at each other a duty, but their subjects have learned to do this without them. But when, on the contrary, in the other cities, the leading aristocracy avoid the public festivals, their example is successively imitated by every inferior grade, and then we hear on all sides—"What, go there! Oh dear, no! we never do; it is not good taste;" and so on, whether it be to see, to sit, to stand, to do, or to suffer. Or else, "We had the pleasure of meeting them so and so," or of "seeing you at ——," and in this consists the pleasure! And thus of late years had it been at the carnival; visitors at first diminished, then ceased to come; the tradesmen and hotel-keepers sent up piteous cries, as when these are unemployed, the class beneath them suffers still more—discontent and sorrow were general throughout Naples. Suddenly it was announced, that not only would the court entertain the patricians of the city, but the public were also to partake greatly of its festivities. Every face brightened up, even the poorest felt he should not then go supperless to bed, for the *confetti* which the wealthy scatter fall in truth into their mouths in the scramble. Under the shadow of such coming events, I entered Naples. The carnival had not outwardly commenced, but all was bustle and excitement in the houses. On the second day a ball was given in the so-called Academia—a club composed of the *élite* of Neapolitan society, under the especial patronage of the king.

* * * * * *

Waltzes prevailed, and the so-called Française was danced; then Cotillions, and the renowned Polka, which appeared to me to be nothing more than the Polish Radowacka. Some gentlemen played whist, and all here, as elsewhere, complained of their bad luck, and how much they lost in winter; so that by the general tone of lamentation, always admitting it to be true, we must conclude gold had the power of vanishing beneath their touch. Here, as generally throughout Italy, the best balls are those given by the foreign ambassadors. Of the Italian nobility, Prince St. Antimo, I remember, gave in his spacious hotel one of the grandest, and which was attended by the most select society. Well do I recollect the advice of an old English gentleman upon this subject, who told me that his father had warned him that, unless he would make a few friends and many hundred enemies, never to give a ball, which is very probably the reason why so many, and these wealthy persons, have so decided a preference for dinner-parties, where, by the smaller number of guests, attention can be paid to all, and none complain of being neglected. * * * * The carnival, nevertheless, went on, and the king himself appeared masked, in an open carriage, from whence the sweetmeats were thrown. No difference would be observable in this amusement, as between Rome and Naples, if the materials of which these are composed were similar; but whilst Rome is careful that sweetmeats should not have the solidity of lead bullets, Naples is indifferent both to the sufferings of its visitants and inhabitants. Sweetmeats here, therefore, mean bitter almonds covered with sugar, and other matters capable of giving a hard blow, leaving to the recipient a pleasing recollection of the carnival in the shape of a bump on the forehead or a black eye. Wire masks, therefore, held before the face with one hand, whilst with the other the sugary missive is thrown, are indispensably requisite. The Toledo is constantly filled towards eleven o'clock with three double rows of carriages and people on foot. Every window, every balcony is occupied, for which great prices are charged, and from whence war is waged with the crowd below. Amid this tumult large chests in the shape of waggons, clumsily made, and covered all over with grotesque images and gold and silver, and upon which are masks of all kinds, appear; these maintain the war with the balconies, and especially wherever they detect an acquaintance; and as I was happily located between two of the most elegant ladies of Naples, the battle raged terrifically in our quarter, and I retired repeatedly wounded from the field.

MALTA.

I attended the English church on the following Sunday, which until this time was merely a large room in the governor's palace, and where, although placed immediately opposite the clergyman, I felt, with the rest of his (English) congregation, that to hear is not always to understand. It will be doubtless a matter of great surprise to know that, notwithstanding the religious feeling of the English, and the length of time they have been masters of

the island, no Protestant Episcopal church has been here erected. But, as it often happens, there was a quarrel about the cost; the government offered only five thousand pounds, and was of opinion the zeal of the applicants should supply the remainder; these, however, were, on the contrary, impressed with a belief that it is not for the subject to build churches, but the state. Thus year after year passed away, until the arrival of Queen Adelaide for a few months' residence. What the English government could not afford, her liberality effected; she cut the knot of the difficulty, gave the money to the architect, and the new temple soon rose, built in good style, and probably is by this time consecrated for divine worship.

We would willingly extend our extracts, but those we have given will sufficiently shew the unpretending character of the work, and the author's light and pleasing style. Germany has recently contributed some valuable works upon the countries of the East, and to these we trust we shall be enabled also to direct the attention of our readers. We could wish, however, that travellers on the continent would restrain their partiality for describing familiar scenes, and combine some settled purpose with their pleasure. One inquiry into the moral and social statistics of a people is of more value than fifty repetitions of what we know.

JOURNAL OF AMERICAN LITERATURE.

Conversations on some of the old Poets. By JAMES RUSSELL LOWELL. Cambridge (U.S.) J. Owen, 1845. London, Wiley and Putnam.

FOR a book of dialogue we have hitherto had little relish, because we have generally found it loaded with unprofitable prattle. Dialogue to a mere book-maker, like a prop to a rotten house, helps to keep him from falling. Whenever he finds his genius too weak to "carve a Colossus," he can turn to a "cherrystone," and make his personages bandy compliments, and exchange large utterances of nothings as a prelude to some wisdom which is to follow. Men are not supposed in dialogue to start at once upon the game—certainly not. Like beagles, they must scent and chatter as a preliminary to the chase. Thus dwarfish writers find the form of dialogue as necessary as to a musician is rosin for his fiddle-bow. Could we erase one half of what has been written in this style, we could send the remainder into the market with a stronger recommendation. All authors cannot hold sweet converse, like WALTON, LANDOR, and TOOKE.

But these remarks will not apply to Mr. LOWELL, nor to his conversations. We admire the author and his book. We are grateful to the wind that wafted such a volume to our shores. Its transatlantic origin does not contract the circle of its universality, for what is written in the spirit of a man is written for the benefit of men, whether fathered in America or England. Mr. LOWELL need not be "shelled like the rhinoceros," as CUMBERLAND remarked an author ought to be, since we think an honest critic will scarcely attack one who in the main has written so finely.

Mr. LOWELL is not an idle and provoking man, who undertakes to guide us to some lovely scene, but who takes such a sinuous route, and paces the ground so slowly, that we weary ere we approach it. His intellect is any thing but a locomotive engine, that creeps off like a snake, and is indebted to time before it can outstrip the eagle. Mr. LOWELL dashes at once into a crowd of beauties, and his readers feel instantly aware of spiritual presences. The moment he touches the threshold of page No. 1, he is surrounded by fine imagery and enthusiastic voices, which break like music on the ear. Men of such common names as "John" and "Philip," by whom the dialogue is carried on, discourse of uncommon things, as if one was JOHN MILTON and the other PHILIP MASSINGER.

Dialogue is always more or less discursive. It has a centripetal and centrifugal power. But if Mr. LOWELL draws us away at times from the turnpike road of his argument, it is to take a momentary ramble in some by-lane, where we can catch a glimpse of a landscape peopled with lovely creations. Wherever he wanders he exchanges beauty for the more beautiful! Shall we then quarrel with our author because his book wants design? Not unless we desire to imitate the hypercritics, who, to look like wise men, declared the nose of one of MICHAEL ANGELO's figures to be a *little* too large.

What a fine subject has Mr. LOWELL chosen to exhibit his genius! *Conversations on some of the Old Poets*, if indeed they can be called *old*, who have taken a lease of all time, and made immortality their perpetual youth. How racily does he discourse on the "Father of English Poetry." CHAUCER is the God of his idolatry, but his love and reverence of the ancient poet arise from no blind servility, but from a thoughtful discrimination of the excellencies of composition. Thus he speaks of CHAUCER and antiquity:—

Chaucer's satire is of quite another complexion. A hearty laugh and a thrust in the ribs are his weapons. He makes fun of you to your face, and, even if you wince a little, you cannot help joining in his mirth. He does not hate a vice, because he has a spite against the man who is guilty of it. He does not cry, "A rat i' the arras!" and run his sword through a defenceless old man behind it. But it is not for his humour, nor, indeed, for any one quality, that our old Chaucer is dear and sacred to me. I love to call him *old* Chaucer. The farther I can throw him back into the past, the dearer he grows; so sweet is it to mark how his plainness and sincerity outlive all changes in the outward world. Antiquity has always something reverend in it. Even its most material and perishable form, which we see in pyramids, cairns, and the like, is brooded over by a mysterious presence which strangely awes us. Whatever has been hallowed by the love and pity, by the smiles and tears of men, becomes something more to us than the moss-covered epitaph of a buried age. There was a meaning in the hieroglyphics, which Champollion could not make plainer. It is only from association with Man that any thing seems old. The quarries of the Nile may be coëval with the planet itself, yet it is only the still fresh dints of the Coptic chisel that gift them with the spell of ancientness. Let but the skeleton of a man be found among the remains of those extinct antediluvian monsters, and straightway that which now claimed our homage, as a triumph of comparative anatomy, shall become full of awe and mystery, and dim with the gray dawnlight of time. Once, from those shapeless holes, a human soul looked forth upon its huge empire of past and future. Once, beneath those crumbling ribs beat a human heart, that seeming narrow isthmus between time and eternity, wherein there was yet room for hope and fear, and love and sorrow, to dwell, with all their wondrous glooms and splendours. Before, we could have gone no farther back than Cuvier. Those mighty bones of ichthyosauri and plesiosauri seemed rather a record of his energy and patience than of a living epoch in earth's history. Now, how modern and of to-day seem Memnon and Elephanta! If there be a venerableness in any outward symbols, in which rude and dumb fashion the soul of man first strove to utter itself, how much more is there in the clearer and more inspired sentences of ancient lawgivers and poets!

There is poetry in this. It smacks of richness, and is savoury with unusual expression. CHAUCER may be proud of such an acquaintance. Mr. LOWELL utters aphorisms better than most men. They have all the rotundity and force of EMERSON's, without their mystical clothing. Mr. LOWELL is equal to the subject on which he writes, which is giving all the praise that can be given to a man who attempts to converse on poetry. The timid COWPER was more fit to be a leader of armies than an unpoetical mind is suited to question poetical truth. The angular mind of JOHNSON was unfit to judge of it. But Mr. LOWELL is inoculated with the marrow of poetry, and this is his opinion of the mission of the poet:—

POPE.

You and I have very different notions of what poetry is, and of what its object should be. You may claim for Pope the merit of an envious eye, which could turn the least scratch upon the character of a friend into a fester, of a nimble and adroit fancy, and of an ear so niggardly that it could afford but one invariable *cæsura* to his verse; but, when you call him poet, you insult the buried majesty of all earth's noblest and choicest spirits. Nature should lead the true poet by the hand, and he has far better things to do than to busy himself in counting the warts upon it, as Pope did. A cup of water from Hippocrene, tasting, as it must, of innocent pastoral sights and sounds of the bleat of lambs, of the shadows of leaves and flowers that have leaned over it, of the rosy hands of children whose privilege it ever is to paddle in it, of the low words of lovers who have walked by its side in the moonlight, of the tears of the poor Hagars of the world who have drunk from it, would choke a satirist. His thoughts of the country must have a savour of Jack Ketch, and see no beauty but in a hemp-field. Poetry is something to make us wiser and better, by continually revealing those types of beauty and truth which God has set in all men's souls; not by picking out the petty faults of our neighbours to make a mock of. Shall that divine instinct, which has in all ages concerned itself only with what is holiest and fairest in life and nature, degrade itself

to go about seeking for the scabs and ulcers of the putridest spirits, to grin over with a derision more hideous even than the pitiful quarry it has moused at? Asmodeus's gift, of unroofing the dwellings of his neighbours at will, would be the rarest outfit for a satirist, but it would be of no worth to a poet. To the satirist the mere outward motives of life are enough. Vanity, pride, avarice, these, and the other external vices, are the strings of his unmusical lyre. But the poet need only unroof his own heart. All that makes happiness or misery under every roof of the wide world, whether of palace or hovel, is working also in that narrow yet boundless sphere. On that little stage the great drama of life is acted daily. There the creation, the tempting, and the fall may be seen anew. In that withdrawing-closet, solitude whispers her secrets, and death uncovers his face. There sorrow takes up her abode, to make ready a pillow and a resting-place for the weary head of love, whom the world casts out. To the poet nothing is mean, but every thing on earth is a fitting altar to the supreme beauty.

And again take his opinion of

WORDSWORTH.

The artificial style of writing, which tyrannized when Wordsworth first became sensible of his own powers, so disgusted him as to warp his inborn poetical faith into a fanaticism. That which should have retained the flexible sensibility of a feeling became stiffened into a theory. He has beheld nature through a loophole, whence he could see but on one side of him, though the view was broad and majestic. His eye has glorified whatever it looked upon, and the clod and the bramble have shared equally in transfiguration with the mountain and the forest. The cloud which the sun's alchemy transmutes to gold is, perhaps, not more grateful for that light than the smallest grass-blade which he shines upon, but the eye reaps a richer harvest of consolement from it. I cannot look the gift-horse in the mouth, especially when he is the true steed of the Muses, but I should have been more grateful to Wordsworth for a larger bunch of lilies and less darnel. Yet his reducing the movements of his poetical nature to a principle, if it has straitened his revenues from some sources, has not been without its rewards also. It gave surety and precision to his eye, so that it looked at once through all outward wrappages to the very life and naked reality of things, and he has added more to our household words than any other poet since Shakspeare. Most of his work is solid, of the true Cyclopean build. There is no stucco about it, and it will bear the rudest weather of time.

These opinions may be disapproved, but they are opinions sprinkled with rose-water. They have upon them the scent of incense offered at the shrine of honesty. Their earnestness is a warrant that Mr. LOWELL has the courage to think for himself, and if he has erred, he has erred on the side of the heart. His conception of poetry is lofty, and, we venture to say, correct. Poetry has no light to shine in the crooked mind of a THERSITES. TIMON of Athens laid claim to it in his prosperity, but it fell from him when he nicknamed his brother man a wolf, and counselled the youth of sixteen to "pluck the lined crutch from the old limping sire." The heart is the only mirror in which poetry will reflect itself. It has no business, no sympathy with the head, for all its impressions lie deeper down. But hear what our author says of

THE POET AND THE PREACHER.

Your notion is a fanciful one. It is only because the poet is nearer to a state of nature in spiritual things than other men, and because his natural instinct for truth is keener, that he is the master of a more inspired utterance. We stupidly call the life of savages a state of nature, as if Nature loved our bestial qualities better than our divine ones. The condition of the poet may be more truly named so, in whom the highest refinement of civilization consists with the utmost simplicity of the unblunted spiritual instincts. He is weatherwise in the signs of Providence. The dense, hot air, which foretells the coming earthquake of a revolution in the moral world, grows painful to his lungs, while other men can yet breathe freely in it. Trifles, which other natures pass by unheeded, are to him unerring finger-posts. He can trace God's footsteps by a broken twig or a misplaced leaf. But, after all, it is only the music of the verse, and not the mere form of verse itself, that makes the poet's truths more welcome. Music understands all languages, and she interprets between him and his hearers. You see I have been tearing a leaf out of your own book. The truth is, that the world cares very little about the matter. It has become a mercantile world, and, if some murmur of the poet's song creep into the counting-room, it thinks of the Insane Asylum and runs up another column of figures. But when a rude fellow pushes in, and becomes downright abusive in every-day speech, and gives the respectable world the lie without scruple, why then, if the constable be not at hand, a writ of trespass is sued out in Judge Lynch's court! So, too, of the preacher. The world goes to church to be quiet, and takes it amiss to be interrupted in a calculation of the price of cotton by a personal reference to any of its own bosom sins. The world has engaged the preacher to abuse the Scribes and Pharisees, and not to be looking too nicely after its own conscience. The world believes firmly that the whole race of Scribes and Pharisees was dead and buried two thousand years ago, and sees no harm in being a little severe upon their foibles, especially as there are no surviving relatives whose feelings can be set on edge by it.

(*To be continued.*)

THE TOURIST.

[All the world travels now-a-days. Great, therefore, will be the utility of a periodical to which every Tourist may communicate such of his experiences as to routes, sights, conveyances, inns, expenses, and the other economics of travelling, as may serve his fellow-tourists. To this design we propose to devote a distinct department of THE CRITIC, and we invite communications of the class described relative to travelling both abroad and at home.]

EXCURSIONS ROUND LONDON.

A RAMBLE TO FOOTSCRAY.—"What shall we do with ourselves to day?" is a question which the busy at the dawn of a holiday, and the idle every day, as they breathe the hot air of the streets, are wont to put to one another, and the reply is invariably "What *shall* we do?"

It ought to be, "What *can* we do?" That is the meaning of the speaker, and there are thousands who will thank us for telling what *can* be done and enjoyed in *one* day by the dweller in the heart of London. We have personally proved the pleasures we purpose to recommend to our readers.

You need not discompose the order of your family by tumbling out of bed at an unseasonable hour, and breakfasting in a hurry on dry bread of yesterday's baking, tea made with water that has not boiled, and the crabbed countenances of maid-servants, put out of the way by your unwonted appearance before the room is cleaned. Rise at your usual time, and dress deliberately; throw on your lightest summer clothing, and your loosest coat, and, above all, don the easiest boots in your store, even though they be the oldest and not the most shapely or the most sound, and descending, breakfast in peace, and lay in a good foundation for the day's work that is before you.

Fail not to board the Woolwich steamer at eleven o'clock, and with the fresh breeze blowing all about you, and the sun dancing on the water, you pass through the forests of masts that proclaim the greatness of your country and its sources, and speeding thus for seven miles amid the finest river scenes in the world, you will be landed at Woolwich before the clock strikes one, even if the wind and tide be adverse.

For this day make no pause there; that will be the business of another excursion. But straightway mount the hill until you find yourself upon the common, and then turn, and a prospect that will make your heart glad will stretch itself out before your astonished eye; the metropolis with its thousand towers—the river with its ten thousand ships; the rich plains of Essex, and the distant hills, a shade more purple than the blue sky that descends upon them.

When you have taken your fill of this magnificent spectacle, onward to the hill top—Shooter's Hill, so famous in the romance of robbery—now alas! for ever flown—and crossing the highway there, a little lane will conduct you down the other side of the hill. Here a prospect of a very different kind opens upon you. A green pastoral landscape—hill, wood, meadow—all richly green and exuberantly fertile, and rejoicing in the fulness of summer. You are now fairly out of London; entirely in the country; untrained hedgerows on either hand covered with dog-roses and woodbine, and filling the air with fragrance. A little way, and you enter a coppice, shady, cool, with narrow foot-paths, across which the neighbours hang as if holding converse about the spring, and as you pass, the cool leaves fan your cheeks, and the smell of fern brings back a train of memories of childhood ramblings in brake and coppice, hunting birds'-nests or seeking nuts.

From this you emerge upon a range of meadows and corn-lands, from which comes up the fragrance of bean-flowers, clover, and, at times, of the new-mown hay. Not far before you a spire points up to heaven from among a crowd of trees, and thitherward you bend your steps. As you go, the butterflies flit before you, the grasshoppers chirp a welcome, and the birds in every hedge sing with all their might; while from above, far beyond the straining of your curious eye, there comes down a strain from the "ethereal minstrel, pilgrim of the skies," which, if you are poetically inclined—and how could you be otherwise on such a day in such a spot?—you might well fancy to be the song of an angel bidding the world rejoice in the beauty of the season. You may be forgiven the vanity of sup-

posing that all this flood of melody is poured forth for your special welcome on the rare occasion of a visit to the palace of Nature.

You reach Eltham; and having viewed with curious antiquarian eye the relics of the old dining-hall, still through fields and green lanes you go on, until the picturesque village of Chiselhurst arrests your steps. But you must contemplate it only, not enter. *Your* way to-day turns to the left, and a lane, not yet despoiled of its hedge-row trees, winds about among cottages covered with roses, and the habitations of wealthy citizens, jealously encircled with walls, until you arrive at Footscray, and begin to think of rest and a dinner, which you have well earned, for although, amid the charms of such a country, the distance has appeared to be trifling, in truth you have compassed no less than eight miles from the point where you left the steamer.

Many hospitable sign-boards offer "good entertainment;" but, although it be more modest in its aspect, for many special reasons seek you the *Seven Stars* there, close by the bridge. The chances are that at the very door you will see mine host, hight Mr. EDMONDS, a hale, hearty man, with a face that looks a welcome and promises good cheer, and clothed from head to foot, hat, waistcoat, coat, trousers, in cool white. He greets you cordially, hastens to bring the purest water wherewithal you may clear the dust from your hot face. Probably he tells you, to your infinite satisfaction, that you have come at the very nick of time; that he has just risen from his dinner-table, and, if you prefer an immediate feed, there is ample and good fare ready for you. A glance at him satisfies you that it is a safe bargain to dine at *his* table—that it is a guarantee for abundance and excellence. The word is given, and in a few minutes you are summoned to a delicious little room, whose windows, festooned with flowers, look over a clear mill-stream, and let in the fresh breezes from the neighbouring hay-fields; and behold! to you just then more fragrant, a table with the whitest of cloths covered with good things!—a shoulder of the sweetest lamb you ever ate (at least, you think so, for you never were so hungry), new potatoes solid without waxiness, peas fresh from the garden, a glorious gooseberry pie and cream, a salad, and country bread. If you add a pint of your host's prime port, you will not be the worse for the luxury. As soon as you are seated, the worthy landlord comes in person, in pursuance of a most commendable custom with him, to assure himself from your own lips that all is to your liking. For such a dinner, to which you do ample justice, you may be sure, the charge is just *two shillings!* Is there not good reason for preferring *the Seven Stars?*

When you have eaten to your heart's content, and feel that sort of satisfaction which follows a rest after a long walk and a good dinner, descend to the border of the stream below you. There you will find hedges and bowers of roses, with seats where you may loll, and sip your wine, and watch the great trouts come almost to your feet to seize some incautious fly that has ventured too near the surface of the water, or mark the swallows dipping their bosoms into the stream and twittering as they shake the cool drops from their wings. Or, if it please you better, there is a pair of stately swans, whose motions will convey to you all pleasant images of beauty and grace.

But the shadows lengthen, the air is cooling fast; you reluctantly bid adieu to the stream, and swans, and swallows, and roses, and mine host, and direct your steps towards Eltham on your return. There rest again at any one of the many inns that invite your notice, and take a refreshing cup of tea. By that time the sun will have set, the sky will be glowing with gold and crimson. Through a succession of rich meadows you pursue your walk to Greenwich, rejoicing in the cool evening. From the meadows you emerge upon the breezy plain of Blackheath, and crossing it make straight for the railway, which in a quarter of an hour will carry you again into the busy heart of the metropolis of the world, and a supper and a sound night's sleep will be your portion at your home. Reader! all this country, all this pleasure, all this health-giving, exercise are to be enjoyed *in one day* at a cost of *five shillings!*—EDITOR OF THE CRITIC.

ART.

THE CARTOON AND FRESCO EXHIBITION, WESTMINSTER HALL.

IT will be remembered by most of our readers that, after the close of the Fresco Exhibition last year, her Majesty's Commissioners for the Fine Arts, desirous of securing for the decoration of the Houses of Parliament the best talent the country might afford, invited British artists generally to compete for three further prizes of 200*l.* each, on the same subjects as Messrs. MACLISE, COPE, DYCE, HORSLEY, THOMAS, and REDGRAVE, the successful candidates at the last competition, had been commissioned to execute for the House of Lords, should none superior offer at this year's Exhibition.

It may be affirmed without fear of contradiction, that at no antecedent period of this country's history have the fine arts been so prosperous, so munificently supported as they are at present. Government commissions hold out splendid rewards of emolument and fame; art-unions scatter their useful bonuses around; public institutions patronize; trading speculators are active, and in their way assist; and, lastly—happy result of the refinement which thirty years of peace have fostered and that daily diffuses itself more widely among the masses—private individuals expend, beyond a doubt, a larger amount annually in works of art than has ever been known up to this time. Nor has there been any period when artists were more honoured than at present. In the palmy days of REYNOLDS, of WEST, and even so lately as the presidentship of LAWRENCE, fewer artists frequented the court, nor were they as a body so universally received and entertained on terms so flattering by the nobility and commoners as they now are.

With these advantages, this liberal patronage, these honours, and opportunities for achieving an enduring fame, do the productions of the artists, as they should do, exceed in merit what heretofore has been accomplished?—do they even justify intrinsically the generous treatment they receive? Let us look to this exhibition for reply; herein lies the answer given by THE ARTS of Great Britain to the question, *What can you do?* and by this exposition we may fairly estimate their value.

The impression left on the mind of the intelligent spectator who shall have examined the works now exhibited in Westminster Hall, is one by no means flattering to the character of British Art. Of the one hundred and forty-five specimens exhibited, the bulk is scarcely endurable, some ten or twelve are respectable, perhaps five or six stand above mediocrity, and there is one only which may with justice be classed among the productions of the highest art, and of that we shall presently speak. It is not that we have generally to complain of poverty of conception or deficiency of originality in these works, for of imagination self-shaped and appropriate, we have enough; but the force of it is lost for want of artistic government; the elements of composition are there, but the power of combining them so as to produce an effective whole is not there; hence the disjointed and unimpressive productions whose abundance we lament.

The next drawback from the value of these works is the slovenly and incorrect drawing in many places visible. To such a degree does this sin prevail, that we blush for British Art when we think of the triumph those masterly draughtsmen the French and Germans must feel on comparing their respective schools in this particular with ours. When will our artists condescend to bestow proper attention on this most essential and acquirable (though difficult) art? In *expression* too there is a feebleness we greatly long to see replaced with power.

Of the frescoes, as they are this year subsidiary to the designs, we have little to say, other than that the success of our artists in this method of painting is not such as to render us anxious that the works to be undertaken for the House of Lords should be executed in that vehicle. Indeed, notwithstanding the current of opinion at present sets strongly in favour of this imperfectly-understood art, we doubt greatly its fitness for indoor walls, owing to the heaviness and opacity, the chilliness and hardness of its tones, though, perhaps, for ceilings it may be used to advantage.

It is a source of wonder and regret to us that, with the exception of some five men, all of whom are commissioned to execute a compartment in the Palace of Westminster, the competition for this proud work has been, by tacit consent of the seniors, limited to a few junior and honourably ambitious men. Where are our LANDSEERS, our ETTY'S, our EASTLAKES, our KNIGHTS, and our PATTENS? artists who can produce nothing bad, but who have power, for the most part, to achieve triumphs. Is it that they hold themselves above competition, or do they fear it? In either case their love of self overmounts and tramples on their devotion to art. It was not thus with the old painters, whose souls so centred in their profession that they counted that gain which exalted it, though it were to the disparagement of their own works. That Mr. SELOUS, also, with his exuberant fancy, his origi-

nality and power, should have contributed nothing, there is no excuse, especially when is borne in mind his triumph at the first year's competition.

To the gentlemen selected at last year's exhibition, and commissioned to execute a work each for approval this year, t is no more than justice to say that they have amply vindicated the judgment of the committee; for, beyond a doubt, their works, taken collectively, transcend an equal number of the best contributed by other artists. Mr. MACLISE has indeed produced a powerful and captivating work, which stands out in honourable prominence before the others, and will render this exhibition memorable to those who take an interest in the Arts; a brief notice of this, with some other subjects, will be found subjoined.

There are twenty-nine specimens of sculpture; few of which deserve especial notice, except a *Statue of Shakspere* (127), by JOHN BELL, which for appropriate feeling and the expression of character, surpasses, in our opinion, every representation of the divine bard that we have ever seen. A work by Mr. THRUPP (117), *A Hunter returning Home;* another by Mr. J. EVAN THOMAS (122), *The Afflicted Mother;* and a third, by Mr. HENRY SHENTON (119), *Statue of Archbishop Cranmer*, are meritorious, and therefore deserving of attention. We proceed to give a short account of the most conspicuous works.

11. *The Spirit of Religion*, J. NOEL PATON.—To this has been awarded a premium of 200*l*. It has some imagination, graceful outline, and careful drawing to recommend it, but is deficient in sentiment and expression.

14. *Justice* (Cartoon), JNO. Z. BELL.—The figures here, like most of those by MICHAEL ANGELO, are of colossal stature. The attitudes are original, yet destitute of visible purpose. Why place Justice on an unseemly seat in the corner of a dungeon? The wonder expressed by the rising figure, equally with the expression of Justice herself, are unintelligible.

18. *Prince Henry acknowledging the authority of Chief Justice Gascoigne.* ALEXANDER BLAIKLEY.—This is by some degrees the worst representation of this imposing scene in the Exhibition. The head of Chief Justice Gascoigne has surely been a study from some imbecile old woman.

20. *Chivalry, under the inspiration of Religion, preserving the Throne from Anarchy and Confusion.* JAMES and GEO. FOGGO.—Here there is no improvement. If abundance of line flowing sinuously through the composition be a merit, this is most praiseworthy. Altogether, it is a preposterous, extravagant production.

23. *An Allegory of Justice* (Cartoon). E. H. WEHNERT.—Originality, skilful composition, and power, honourably distinguish this cartoon. The allegorical meaning is clearly conveyed by the action of the figures.

29. *Prince Henry acknowledging the authority of Chief Justice Gascoigne.* R. W. BUSS.—A more ungainly, vulgar creature than the Prince is here made it were hard to conceive. The line he presents is just that of a strained bow; the figure of the Chief Justice, which is good, contributes something to redeem what but for this would be a contemptible composition.

32. *The Baptism of King Ethelbert in the River Glen* (Cartoon). JOSEPH SEVERN.—Here, again we have the common-place. There is neither becoming sentiment nor expression; neither is there originality, nor grace, nor power, to recommend it.

35. *Religion.* (Executed by commission.) JOHN CALCOTT HORSLEY.—The first work that produces an impression on the spectator is this. An appropriate and elevated sentiment prevails throughout, governing all things. The composition is simple even to severity, the drawing good, and the expression correct. A grand figure is that of him who, directing his attention to the Word of God, has cast his earthly crown to his feet.

38. *Justice* (Cartoon). WILLIAM CAVE THOMAS. (Executed by commission.)—Skilful combination, and artistic judgment in the division and arrangement of the subject, distinguish this work. There are many emblematic figures introduced, the whole of which are ably connected, and contribute their respective shares to the general impression most effectively.

41. *The Spirit of Chivalry.* DANIEL MACLISE, R. A. (Executed by commission.)—To speak in terms too enthusiastic of this grand work would be difficult indeed. It is one of which any artist who ever lived might be proud, and that would do honour to the arts of any country. In examining it, one is at a loss which the most to admire, the exuberance of imagination, the masterly power of composition, the beauty of the separate figures, the skilful drawing, or the happy and unmistakable expression which everywhere prevail. For sentiment and feeling, no less than for power, this magnificent work is beyond praise. Never, surely, was there a cartoon produced wherein the *mechanical* merit was more conspicuous. What the artist has produced in simple black and white surpasses what we should have thought possible, had we not here witnessed the perfection to which these simple colours might be wrought. This is a cartoon which will be remembered; it forms of itself quite an epoch in British Art, for we know of nothing so wonderfully perfect by an English artist up to this time.

46. *The Spirit of Religion.* EDWARD ARMITAGE.—This is another work to which has been assigned a premium of 200*l*. Its chief recommendations are skilful drawing and grouping. The intention of the artist, moreover, is intelligibly expressed.

57. *Edward the Black Prince receiving the Order of the Garter from Edward the Third.* C. W. COPE, A.R.A. (Executed by commission.)—A clever and pleasing cartoon. The figure of the Prince is dignified and noble, the action becoming, and the composition singularly happy.

60. *Prince Henry acknowledging the authority of Chief Justice Gascoigne.* RICHARD REDGRAVE, A.R.A.—Simplicity is here carried to an extent bounding on poverty. The expression, which is marked and truthful, is the most praiseworthy feature of this cartoon.

65. *The Baptism of Ethelbert.* W. DYCE. (Executed by commission.)—This subject shews infinitely better in fresco than in the cartoon. As regards manipulative merits, this fresco stands superior to all others in the exhibition. The effects are broad, and nicely adapted for this vehicle.

75. *Abstract representation of Justice* (Cartoon). W. PHILIP SALTER.—There is ability in this; the design and execution are equally good.

79. *Religion* (Cartoon). S. BENDIXEN.—The artist has here (we think appropriately) laid the scene in a church. There is grace and beauty in the composition, and singular care has been bestowed on *the hatching.* As a masterpiece of the pencil, this work comes next to that by MACLISE.

85. *An allegory of Justice* (Cartoon). JOHN TENNIE, Jun.—This is the third and last work to which the premium of 200*l*. has been awarded. It is indeed deserving of reward, being a strikingly original and able work. The conception is masterly, the grouping novel and skilful, the drawing admirable, and the expression fine. Were the others to which have been given premiums but equal to this, we should better have been satisfied with this exhibition.

98. *An abstract representation of Justice.* F. and M. BROWN.—This, too, is conceived in a fine spirit. It reminds one of the works of PAUL VERONESE and SEBASTIAN RICCI. Justice is here properly represented, with her eyes bound and her hand to her ear. Variety of character, truth of expression, artistic government, and some skilful drawing, recommend this cartoon.

MUSIC.

New Publications.

Ten Songs. By HENRY RUSSELL. Davidson.

THESE songs were published in a series of cheap music, which we have already noticed under the title of *Music for the Million.* Mr. RUSSELL'S style has achieved considerable popularity; but for our own part we must confess to a great dislike to it. We detest declamatory music; it is not the business of music, which should appeal to the sentiments, not to the perceptions. To the many, however, who think otherwise, and are enraptured with his noise, these ten songs will be a great treat, especially as they are to be procured at such a trifling cost.

The Musical Treasury, Vocal and Instrumental, &c. Davidson.

A VERY handsome volume of popular music, well arranged, neatly printed, and published at a singularly moderate price. The contents are selected with much taste. They consist of songs, duets, glees, overtures, quadrilles, waltzes, polkas, galopades, &c., some original, but for the most part reprints of the popular

music of the time. Besides these, there are extracts from favourite operas, and a few sacred pieces. Such a miscellany is admirably adapted for family use, for here all tastes and abilities may find something suited for them in a moment; the mood or the occasion may be consulted for appropriate themes. The *Musical Treasury* is unquestionably the most *useful* collection of music we have ever seen.

The Pale Moonbeam. The music by M. E. WILLEMENT. The words by P. S. SPARLING. London, Boosey and Co.

Days Gone By. The words by Mrs. J. SPICER. The music by M. E. WILLEMENT. Boosey and Co.

THERE is something peculiarly sweet and pleasing in the sentiment of these little melodies. They scarcely need the words to tell their story. Miss (or Mrs. ?) WILLEMENT has taste which, with cultivation, may lead to fame.

THE DRAMA AND PUBLIC AMUSEMENTS.

ITALIAN OPERA.—We have scarcely any thing to say respecting her Majesty's Theatre this week. *Il Giuramento* has been repeated, greatly to our surprise, for it is a heavy business, but it attracted a large house again; or rather, there was a large house assembled, irrespective of the piece, and intent solely upon its performance, which was fine, infinitely beyond the merits of either music or libretto; or, perhaps, the fact may be, that Mr. LUMLEY having displayed throughout such admirable judgment in his selections, his audiences, however they may doubt as to a particular revival, waive the doubt, and make up their minds that the manager must know best what is good for them. The crowd, on the occasion of MARIO'S benefit, on Thursday week, was absolutely awful; and, more happy than they, who forced a way in, hundreds went away from pit and gallery doors, from absolute lack of room to receive them; both the one and the other *locale* was literally "chuck full." Signor PUZZI, too, who took his benefit last Thursday, with *Anna Bolena*, selections from *Pietro l' Eremita*, and infinite dancing, for the entertainments, obtained ample suffrages, TAGLIONI not slightly conducing to the concourse on all these occasions. By the way, immense as is our admiration of this nymph, we cannot but think she is rather preposterous in her demands upon the unhappy American manager, who aspires to delectate Brother Jonathan, and put a trifle in his own pocket, by aid of "her so potent art." One hundred and twenty pounds, not Scots, but sterling,—say 120*l.* and not a dollar or cent less,—is the Sylphide's demand from the Transatlantic lessee, for capering about his stage-boards a half-hour or so. If this don't make the President of the more or less United States dissatisfied with his condition, he must, indeed, be a remarkable man. A hundred and twenty pounds a night for a mile and a half of dancing! That is to say,—for three nights a week, 18,720*l.* per annum, "besides a handsome house" on each of sundry benefit nights. We must confess that this appears to us *rather* too forcible; and we cannot but think that such intense impudence should at once receive an effectual check on the part of English and American lessees. Mr. LUMLEY, for instance, had a *full* and crowded house every night, before Mademoiselle TAGLIONI came, and he would have continued to fill his house, if Mademoiselle TAGLIONI, *déesse de la danse* though she be, had never come at all. Charming is she, though aging; graceful, well nigh, as the fawn; but a hundred and twenty pounds a night for a dancing-woman!!

DRURY LANE.—The regular season at this theatre has closed, after, we believe, a very successful campaign; but its walls are not deserted, the Brussels Company having migrated hither from Covent Garden, for some reason to us unknown, but which seems to have been connected with a squabble, Mr. ROBERTSON having, as we learn from the police reports, laid an embargo, not only upon that which Mr. POPE says makes the man (and woman inclusively), but upon the men and women themselves, or certain of them, of the company; and it was only after application made to Bow-street authorities that the mimic potentates and peasants, and what not, were released from durance vile. It has been said that the company removed to Drury Lane from over the way in consequence of the Queen's wanting to hear them, but declining to visit Covent Garden on account of the League; but it were treason, in a small way, to credit the statement. However, this much is quite certain, that on the day of the removal, last Friday, her Majesty and Prince Albert, with the King of the Belgians and his consort, honoured the performances at Drury Lane with their presence, the opera selected being *Les Huguenots*, performed in a most masterly manner. It is a pity the work is so long that all but the enthusiasts of music feel a sensation of weariness stealing over them ere yet the piece is two-thirds done. As in our meals, so in our musical repasts, we should "rise with an appetite." HALEVY'S *Reine du Chypre* was produced on Monday with excellent effect, and all the greater, as to externals, that the scenery, decorations, and some of the dresses used in it were the same as those which gave such *éclât* to the *Bride of St. Mark*, the story of which is, *exceptis excipiendis*, the same with that of *La Reine de Chypre*. The French opera, admirably sung throughout, went off very agreeably, though it contains scarcely any thing which strongly impresses itself upon the imagination or the memory. One *chanson*, however, recurs to us most pleasantly, the dicing song, given by COUDERC, full of life and spirit, and sung *on ne pourrait pas mieux*. Composers should love such men as COUDERC, who perfectly enter into their conceptions, and give them forth in a manner realizing even an author's "idea of the thing." The house was very indifferently attended; all shame be to the public for it. When the company has left us, which it will do very shortly, though we are in hopes that the term we specified in our last number will be somewhat extended, everybody will be getting up from their arm-chairs, where they have been weighing the criticisms in all the papers, and say one to another, "This French opera seems a capital thing, let us go and hear it." We rejoice, by anticipation, in their feelings of anguish when they shall find the doors closed. *La Juive*, also by HALEVY, is announced for immediate production (we believe on Wednesday next), and will doubtless be admirably *mise en scène*. In this respect, the company certainly enjoy great advantages at Drury Lane, where so much attention has been paid to spectacular effects, and where, as we think, the *Jewess* itself was produced some years ago, as a drama, in a very gorgeous style. The performances on Wednesday comprised *Le Postillon de Longjumeau* and *La Part du Diable*. Their Majesties of England and Belgium were present, with Prince Albert, and numerous other notabilities.

HAYMARKET.—We have nothing to notify respecting the little theatre in the Haymarket, unless it be the intimation that a new comedy, it is said, and some minor novelties, are in forward rehearsal, and will shortly be produced; an intimation we feel personally considerable pleasure in making, having seen *Time Works Wonders* thrice out of its sixty representations, and being strongly impressed, in consequence, with the fact that it is possible to have too much of a good thing. At intervals, we shall be happy, again and again, to renew our acquaintance with DOUGLAS JERROLD'S clever play, but meantime, we desiderate a little variety. Talking of novelties, SHERIDAN KNOWLES has returned from his voyages and travels in the south of Europe, and has brought back with him, in addition to pencillings of his way, a play, which we understand is at the present moment under the consideration of some theatrical director, and, for aught we know, may be the identical new comedy mentioned above.

SADLER'S WELLS.—The efforts of Mrs. WARNER and her coadjutor continue to meet with a success alike creditable to them and to the population by whom they are more immediately surrounded, and from whom they derive, we presume, their main support, though very many there be, doubtless, who resort thither from farthest west, earnest play-goers, sworn liegemen to MACREADY, who, as they may not see MACREADY himself, do the next best thing open to them, visit the arena wherein two of his most distinguished pupils and *camarades* exhibit no faint reflection of his management. *Richelieu* has had a considerable run, followed by *Love*, and the entertainments provided are altogether of a nature calculated to attract at once a refined and a numerous audience. that result so desirable for all parties,—for managers, for audience, and for the public.

STRAND THEATRE.—This little theatre has closed, whether permanently or only for a while we cannot say. The alleged reason for not opening on Saturday was the indisposition of Mr. HALL, but we fear that the indisposition of the public has had something to do with the matter. We regret the circumstance, for we have passed many a pleasant evening at this theatrelet, and cannot but think that it might be made to answer with the class of dramas in which Mr. HAMMOND was wont to take a prominent part.

SURREY THEATRE.—The enterprising manageress of this popular and very beautiful theatre has commenced her opera season, having engaged for that purpose Madame EUGENIA GARCIA, Miss COLLETT, Mr. D. W. KING, Mr. BARKER, Mr. MACMAHON, Mr. WEISS, and Mr. A. HARRIS, some of them favourably known to the public, the rest less known to fame, or, at all events, less known to us. However, they have begun exceedingly well, all of them, with the anglicized version of *Lucia di Lammermoor*; and we were greatly pleased at once with the performance of the opera, and with the attention which it received at the ears of the Surrey audience, a very full one, as is a matter of course here. The applause was as well timed and as earnest as at other places of greater pretensions to musical discrimination. EUGENIA GARCIA, we need hardly say, filled the part of *Lucia*, and sang with much taste and feeling. Mr. KING'S *Edgardo* was a highly creditable performance, evincing care and study. The orchestra is under the competent direction of Mr. LODER. *The Waterman*, which we detest, succeeded;

and the performances concluded with a new melodrama entitled *Faith, Hope, and Charity, or Chance and Change*, written by the author of *The Road of Life*, and really an effective piece. The story is that of a gamester, who marries an heiress for love of her money, and after having reduced himself and her to the lowest distress, by late hours and bad company, is restored, in the turn of fortune, to his former position, having realized, meantime, the valuable lesson how inestimable is the treasure of woman's love, and having a heart still sufficiently whole to enable him to make their future life happy by turning the lesson to account and abandoning the error of his former ways. Mrs. R. HONNER, a very clever actress, impersonated the heroine, and we were altogether surprised by the manner in which Mr. HICKS filled the part of a dashing, devil-may-care, dissolute companion of the gambler, who, in the course of the piece, by gradual descents, becomes a mere vagabond and outcast. He played the character excellently well. The comic interest of the drama is sustained by Miss MARTIN, Mr. COWELL, and Mr. R. HONNER, who made the audience laugh in a manner totally inconsistent with the state of the atmosphere.

FRENCH PLAYS, ST. JAMES'S THEATRE.—Mademoiselle ELIZA FORGEOT took her benefit on Wednesday, when M. ARNAL appeared in a new vaudeville, highly popular at Paris, called *Le Carlin de la Marquise*, and in *Un Bal du Grand Monde*. Even if it were necessary, which it is not, under the circumstances, to give an account of these pieces, we have not the spirits to do so, having just returned from this pleasantest of all theatres with the melancholy consciousness, recalled to us in full force by the very pleasure of the evening, that but for a night or two more are we to enjoy that pleasure, the season having absolutely arrived at its close. All honour be to Mr. MITCHELL for his admirable and most honourable management, for his unchecked spirit, for his unhesitating and liberal enterprise.

THE COLOSSEUM. — The following distinguished persons, amongst others, have recently visited this establishment:—The Duchesses of Sutherland and Buccleuch and party, Marchioness of Donegal, Marquess of Exeter, Earl and Countess of Dunraven, Earl of Uxbridge, Lords Leigh, Harrowby, Manvers, De Lisle, Carnarvon, and Sherburne; Right Hon. Sir Robert Peel and Lady Peel, Ladies Stradbroke, Canning, Rolle, Miss Burdett Coutts, &c. &c. &c.

ORIGINAL CONTRIBUTIONS.

THE HOME OF THE WRETCHED.

In a lone alley,
Far from the light,
Stands a low dwelling
Hidden from sight;
The roof is uncover'd,
Bare are the walls,
And o'er them the spider
Leisurely crawls.

Surely no mortal
Maketh abode
'Neath that dread portal,
The haunt of the toad!
Alas! a sad mother,
Spurn'd by her kin,
With five little children,
Are dwelling within.

When Fortune was kind,
None so happy as they,
For of friends they could find
Enough for each day;
But Poverty came,
Its banner unfurl'd,
And friends then soon left them
To want and the world.

See the poor mother
Bending with grief
Over her children,
To think that relief
From the torments of hunger
Cannot be supplied:
Ah! almost she wishes
They long since had died!

Look how they're stretching
Their tiny dark arms
To a mother's fond bosom,
That beats with alarms!
Mark, how they ask her—
Implore her for bread
Oh, is it not dreadful?
God's creatures unfed!

But where is the husband,
The pride of the wife?
Oh, where is the father
That gave them their life?
No more shall they see him,
For deep in his grave
He sleeps 'neath the billow,
By ocean's blue wave.

E. M. R.

NECROLOGY.

THOMAS HOOD.

BY MRS. S. C. HALL.

(*From the Art-Union.*)

THE past winter has been one of dismal heaviness to us, for it has been so to many dear friends; a cold, bleak "season"—each month surpassing its predecessor in the number of its bereavements, until we have asked each other, "Is the cup of sorrow yet unfilled?" All through February and March the dull boom of the death-bell mingled with the snow-wreath and rose above the storm, while the frost-bound earth echoed the clank of the mattock and the spade. We do not speak of the simple hearts, near and dear, whom death found as fittest for immortality—ripest for the sickle—but of others, known to the world about us, who have been taken "home" in the flower of their days; and more especially of one, just gone, whose gentle spirit passed away while nature was recruiting—resuming her leaves and flowers, and wearing once again a happy look of plenteousness and peace.

First, from over the sea, came news of the death of one who, if longer spared, would have achieved a much higher reputation than she had yet won—for her mind was evidently gaining strength, and her views of life and knowledge of literature were expanding. One of our contemporaries has said, that Mary Anne Browne was "spoiled at first by over-praise;" over-praised the girl-poet might have been, but none who have read what she has written as Mrs. James Gray could have deemed her "spoiled"—for all her latter works evince care and thought, and much genuine refinement; and her last small volume of poems, *Sketches from the Antique*, supply evidence of higher hopes and holier aspirations than belong to the "spoiled" children of the Muses. Her short life, though uneventful, was checquered and of uneven course—as literary lives always are in England—but she was a loving and a beloved wife, esteemed by those who knew her as a kind and amiable woman, and one of rare industry. I found it hard to believe that death had taken her from the new-born infant that nestled in her bosom; that the grave had closed over the laughing girl I had seen but as yesterday—her rich brown curls clustering round her throat, and her eyes luminous with mirth.

But heavier sorrows followed. There are few, indeed, who are acquainted with the light and graceful literature of our country—who cull the simple and natural flowers so plentifully scattered in their paths—to whom the name of Laman Blanchard is unknown: his ready and eloquent pen could indite a sonnet, point an epigram, tell a story, or lend interest to an essay, while lower spirits were wondering and pondering what they had to write about.

His name was a pleasant watchword, a guarantee that something was to follow—racy, and fanciful. His wit, rather genial than caustic, and so abounding that it brightened every thing it played about, was checked only by a sensitive desire to avoid giving pain; even where to censure became a duty, this tenderness in his nature was apparent in his writings: he frequently stopped short of his object lest he might inflict a wound. Of late, few articles bore his name in periodical works; and those who are unacquainted with the mighty mechanism that scatters "leaders," "criticisms," and "reviews,"—"opinions" of all kinds on all subjects to guide the multitude,—little imagine what volumes have passed down the stream of time, written for "the day," by this man of many labours, but upon which the power of the throbbing brain had been lavishly expended.

Sixteen years ago we knew him; ever as a poet, buoyant with youth and hope—his purpose fixed, his independence unflinching—with the dreamy, ardent temperament of a genuine "child of song," yet turning himself to the direst and hardest duty work, and labouring at every thing which did not compromise the principles with which he set out in life,—fighting his way with a brave heart and a bright eye, known only to be loved, and imparting as much pleasure to, as he received from, literary society. Many are the happy and profitable hours we have passed to-

gether, his ready sympathy attracting confidence that was never betrayed. Alas! his wife became the victim of a distressing malady; and his sensitive nerves were ill able to endure long midnight watchings, relieved only by midnight labour—the coin with which genius purchases bread. She died some months ago, and to all but him her death seemed a mercy. From that time, however, his light of life either blazed or flickered, as it was excited. He rose up, and went about, and wrote, when he could, but fancied, and perhaps truly, that he could not write as he had done. The fact was, his mind required repose—a total absence from labour—it craved rest; but how is the producer of periodical literature to find rest? People tell you "not to be excited," "not to overwork yourself." Ah! they cannot see under the gay draperies that society folds around the form—they cannot see the chains that bind us to the galley. A terror that he should be unable to provide for his children took hold of our poor friend—seized him by the brain through the heart; his eyes became affected—to all appearance they were as bright as ever, but he could not endure the light, and continued to suffer intensely; his imagination appeared to retain its power after his reason had given way; and thus was the fountain of life exhausted at one-and-forty! The eloquent and tender poet—the man with many real friends, yet dying in harness, which, if one ready hand had unbuckled for a time, might have been worn, after a brief rest, in honour for many years! Not but he was difficult to manage; loath to owe any debt save to his own exertions; and proud—as all right-thinking men must be—of the independence that had won the respect and friendship of the intellectual and the true; and it was hard, when you saw his bright face or heard his pleasant words, to think of him and sorrow—the sure suggestion was, that he would be better by-and-by. Ah! it was a mournful termination to such a life.

And, after he was laid in his grave, the bells tolled on; another and another passed away—names highly honoured in art—Calcott, Smirke, Phillips, the gentle and highly-gifted Duncan; and now one whose name has long been a household word, but whose death has been anticipated for months, nay, for years—the noble poet—yet, strange to say, better known as the annual "jester"—Thomas Hood! Truly, the man who, year after year, furnished abundant food for mirth, and yet could imagine "The Plea of the Midsummer Fairies," "The Dream of Eugene Aram," and depict such realities as "The Song of a Shirt" and "The Bridge of Sighs," must have been formed in no common mould! He, too, is gone "home!"

I remember the first time I met him was at one of the pleasant *soirées* of the painter Martin; for a moment I turned away—as many have done—disappointed; for the countenance, in repose, was of melancholy rather than of mirth: there was something calm, even to solemnity, in the upper portion of the face, which, in public, was seldom relieved by the eloquent play of the mouth, or the occasional sparkle of the observant eye; and it was a general remark among his acquaintances, that he was too quiet for "the world." There are many wit-watchers to be found in society, who think there is nothing in a man, unless, like a sounding-board, he make a great noise at a small touch,—who consider themselves aggrieved, unless an "author" open at once like a book, and speak as he writes; this vulgar notion, like others of the same stamp, creeps into good society, or what is so considered, and I have seen both Hook and Hood "set," as a pointer sets a partridge, by persons who glitter in evanescent light simply by repeating what such men have said. Mr. Hook, perhaps, liked this celebrity—this setting and staring, this lion hunt—so different from the heart-worship paid to veritable greatness. Mr. Hood did not: he was too sensitive, too refined, to endure it; the dislike to being pointed at as the "man who was funny" kept him out of a crowd, where there were always numbers who really honoured his genius, and loved him for his gentle and domestic virtues. It was only among his friends that his playful fancy flourished, or that he yielded to its influence; although, strictly speaking, "social" in all his feelings, he never sought to stimulate his wit by the false poison of draughts of wine; nor was he ever more cheerful than when at his own fireside he enjoyed the companionship of his dear and devoted wife. He was playful as a child; and his imagination, pure as bright, frolicked with nature, whom he loved too well ever to outrage or insult by slight or misrepresentation. And yet he was City born, and city bred,—born in the unpoetic district of "the Poultry;" though born, as it were, to letters, for his father was a bookseller; and the son was remarkable for great vivacity of spirits, and prone to astonish good citizens, guests at his father's, no less than his fellow-pupils when at school, by the shrewdness and brilliancy of his observations upon topics of which it was thought he knew nothing. He finished his education at Camberwell; and, even at that early age being in very precarious health, was advised to try the effect of a sea voyage upon his constitution. The sea suited him not. I can well imagine its boiling turbulence—its fitfulness—its glittering brightness, and its fearful storms finding no sympathy in the gentle bosom of the author of "The Plea of the Midsummer Fairies."

He passed some years, on his return, with relatives in "Bonny Dundee;" and, manifesting a great talent for drawing, was apprenticed to his uncle, Mr. Robert Sands, an engraver. But he trifled with the pencil, while he laboured with the pen: his future destiny was pointed out by the light of genius. And what rare talents did he not possess, blended with the gentleness and kindness of the sweetest of poetic temperaments—how full his sympathies!—how honest his heart—how great and true in all things! Although his existence was a long disease rather than a life, he was free from all bitterness and harshness of spirit, feeling intensely for the sufferings of others; he was in every way unselfish; prone to the very last to turn his own sad sufferings into jests, and forcing those who wept over his agony, fierce as it was (until the last dull sleep which continued from the Tuesday to the Saturday of his death), to smile at the wittiness of his conceits, mingling as they did with a touching consciousness of his situation, and the solemn belief in that HEREAFTER which, in all faith and humility, we believe—to the full extent of knowledge—he now enjoys.

But what a sad picture, and by no means a solitary one, do the last months of this GREAT MAN'S life display! "The Song of a Shirt" was knocking at every heart in Great Britain, while its author was panting for breath, and trying to enlist the forces of his friends in the launch of the magazine that still bears his name. And his friends stood by him: they gathered willingly beneath the banner which, had it been raised by a strong arm, instead of one trembling with pain and the unsteadiness of departed health, would have battled the breeze nobly, and waved for years triumphantly above—as a shelter to—his home. A little longer, and the difficulties of his position increased; one illness succeeded another, and "l'Envoi" at the end of each "periodical labour" induced the mingled smiles and tears of his admirers. He wrote wit while propped by pillows; and the chapters of a novel—doomed to remain, like his life, a great fragment—were produced between the intervals and beatings of heart disease.

Alas! what those endure who *write* for bread! But it is all over with him now; the *gold* has been refined, and the *crucible* is broken; the toil-worn body has been bowed in death that the *soul* might escape into life; the mortal cerements have been burst; the winged child is borne into the true life—the life of eternity! Those who loved him best rejoice at his release from labour—never remunerated in proportion to the pleasure it gave—never in a way at all commensurate with the enormous profit it produced—seldom, perhaps, thought of by those whose hearts it opened. Latterly his dear friends had been agonized by his terrible lament, "I cannot die—I cannot die!" Such friends were thankful to lay him, on the 10th of May, in a calm grave at Kensall-green. It will not, we are sure, be long before a monument is raised to his memory; and there are hearts enough in England to remember that his widow and two children have but the hundred a year to subsist on—bestowed by Sir Robert Peel, whose letter, in words which did him honour, conveyed the request that he might be permitted to make the personal acquaintance of one whose works and whose character he had long admired and appreciated. In this generous wish and hope he was destined to be disappointed,—but

Honour and glory to a great statesman with a good heart! Such men are worthy almoners of genius!

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

Mesmerism in Disease; a few Plain Facts, with a Selection of Cases. By HENRY STORER, M.D. London, 1845. Baillière.

A Discussion on Mesmerism between Mr. E. T. Hicks and Mr. J. O. Rumball, at the Theatre, Gloucester. London, 1845. Dyer and Co.

A Manual of "the Cure of Nature," as applied to the Relief of Disease in general. London, 1845. Longman and Co.

THREE pamphlets, the publication of which proves that public attention is at length wakening to the importance of Mesmerism as a subject for inquiry, at least, if not for credence.

Dr. STORER, a physician practising at Bath, is one of the few of his profession who have dared to defy hostility and avow his belief in a fact which he has investigated and found to be true. For this he is entitled to respect, and the persecution which has hitherto been the lot of all who have ventured to look beyond the prescribed path of professional routine, is an assurance that, with motives so strong to passive acquiescence in hereditary dogmas, only a sincere if mistaken conviction could have persuaded him to avow himself a convert to the facts of Mesmerism, and practically and successfully to apply it to the cure of disease.

The purpose of his little volume is to remove some lingering prejudices by detailing what Mesmerism has already accomplished, especially as a curative agent.

It has ever been the reproach of the English, that they wrap themselves in their own self-esteem, and, imagining that all knowledge is limited to their own little isles, live and die in entire ignorance of the progress of knowledge and of taste among their continental neighbours. Of late years something has been done for the removal of that reproach; and every month gives signs of a rapid extension of curiosity among our countrymen to learn the thoughts of their fellow-men in Germany and France. The great success that has attended the attempt of THE CRITIC to supply such information regularly and systematically, is a sign of this happy enlargement of sympathies. But, as yet, the movement is partial; and one proof of this is the manner in which even men pretending to science, and journalists who ought to know better, speak of Mesmerism, as if it numbered among its believers and practitioners only a few charlatans and ignoble quacks. But what is the fact? In Germany it is admitted as a regular branch of the science of medicine, and is no more disputed than the motion of the blood, or the functions of the brain, or any other established doctrine. In Prussia it is practised by the government physicians by direct authority. At Stockholm it is a part of the examination by the university previous to admission to degrees. In Russia the emperor appointed a commission to investigate it, and they reported that it is "a very important agent," and his own chief physician practises it. In Denmark physicians practise it under a royal ordinance, by a decree of the College of Health. LAPLACE, the astronomer, says of it, "that he could not withhold his assent from what was so strongly supported;" and CUVIER remarks, "it is no longer permitted us to doubt that the proximity of two animated bodies in a certain relation, and with the help of certain motions, does produce *a real effect*, wholly independent of the imagination of either." Among its distinguished votaries on the continent are, JEUSSIEU, HUFELAND, GEORGET, ORFILA, CLOQUET, ARAGO. Among physicians at home who have avowed their belief in it are CONOLLY, ABERCROMBIE, ELLIOTSON, ASHBURNER, DAVEY, WILSON, SYGMUND, ARNOTT, COSTELLO. Among other names of eminence, who may be numbered as having expressed their conviction of the truth of Mesmerism, are PRINCE ALBERT, Lord BROUGHAM, the Earl of WESTMORELAND, the Duke of MARLBOROUGH, the Bishop of NORWICH, Colonel GURWOOD, Sir WILLIAM MOLESWORTH, Sir WILLIAM HAMILTON, Miss MARTINEAU, Miss MITFORD, Sir E. L. BULWER LYTTON, CHARLES DICKENS, COLERIDGE, Mr. MACREADY, WILLIAM HOWITT, BASIL MONTAGUE, &c. No less than three clergymen have written books in support of it, and every day now produces, not only multitudes of new proofs, but multitudes of new converts.

Dr. STORER proceeds to collect a number of authenticated cases of cure, among which we observe spinal affections, uterine disease, neuralgia, deafness, epilepsy, spasmodic asthma, neuralgia of the heart, hysterical epilepsy, lock-jaw, St. Vitus's dance; all, it will be observed, affections directly or indirectly connected with a disordered condition of the nervous system.

Besides the surgical operations performed without pain, which have been recorded in THE CRITIC, Dr. STORER narrates an amputation of the thigh, an amputation of the leg, extraction of teeth, division of tendons at the back of the knee-joint, removal of diseased bone from the jaw, and amputation of the breast.

A volume containing so much interesting matter as we have described must be a welcome contribution to the cause of truth, for it will dispel many prejudices, remove many doubts, and tempt to serious thought and inquiry thousands who disbelieve merely because they have never been shewn that Mesmerism, if true, will be a blessing to mankind, and that some of the greatest and wisest of the age have investigated it and satisfied themselves of its truth.

The second pamphlet is an extended report of a scene in the theatre at Gloucester, on the 17th of April last, of which an account was published in THE CRITIC at the time of its occurrence. Mr. HICKS triumphantly defeated his opponent alike in fact and in argument. Those who read that narrative will be pleased to obtain the short-hand writer's notes, which are here given *verbatim*.

The *Manual of the "the Cure of Nature"* is a short, sensible, practical series of instructions for the employment of Mesmerism for the relief of disease. The writer, who is evidently a man of large experience, minutely details the rules to be observed, and his pamphlet may be recommended to practitioners as a *safe guide*.

THE SEERESS OF PREVORST.

TO THE EDITOR OF THE CRITIC.

DEAR SIR,—I have read the *Seeress of Prevorst* in the original, and that with much interest. Ghost-stories, as they are called, have always been so rife in the world, that I was glad to find something like a distinct statement on the subject by a man of any degree of intellectual culture. Now, Kerner was a painstaking and even eminent physician; a lyric poet of reputation in a country where authors are more, and readers less, numerous than in Great Britain; a scholar of manifest research, especially in the higher psychology; and a pious Christian to boot, although his piety was of a somewhat mystical and attenuated kind. The second part of the *Seeress* is the first attempt at a regular *comparatio instantiarum*, in the department of so-called spirit-seeing; and therefore both interesting and useful, in spite of the feeble step with which poor Kerner endeavours to follow the Baconian precepts. I smiled as I proceeded through the narrative, but it was not with disdain; it was with eager curiosity to know the *real* meaning of phenomena so honestly believed, so credibly attested, and so piously set down. Not only the belief in the possibility of purely spiritual individuals making themselves present to, and conferring with, people who are yet "in the flesh;" but the *facts* on which such a belief is grounded, demand a profound, a delicate, and a sagacious investigation. I had thought that such of the followers of Mesmer as are at the same time men of philosophical habits of thought were the very persons to encourage and prosecute such an inquiry. They seemed to me to be richer in facilities for the task than any other school. I was accordingly surprised at the summary manner in which you condemned the beautiful abridgment of Kerner's book which has just been presented to the English public by the ingenious Authoress of *Aristodemus, Men and Women*, and other well-known works. It is to be allowed that there is something repulsive in the extreme childishness of Kerner's own views of the subject. It is disagreeable to notice how unquestioningly he believes that the forms, dark and light, male and female, robed and booted, with which his miserable patient holds her dialogues, are veritable, outstanding, visible and audible ghosts. But the great question with which alone philosophers are concerned, is not whether these and such apparitions be purely subjective or purely objective; it is, whether they be purely subjective, or *partly* objective and *partly* subjective. The differences between these phenomena and the cases of common sensuous illusion are so very great, as to suggest the possibility of there being some external cause of their appearance; external, that is, to the particular incarnated spirit before whom they come; external, that is, again, not in space, but in the basis of spiritual existence. Kant, not to speak of Eschermayer and his school, believes that they do originate in such externalities, but by a roundabout process.

Suppose, for example, that everybody allows a spirit to be, for the very reason that it is a spirit, invisible. Grant, for the sake of the question, that a disembodied spirit, having now nothing to do with space, is the possessor of a kind of omnipresence, so far as space is concerned; then the Mesmerist should be the very first to admit the likelihood that a spirit may be actually *perceived* (not seen, nor heard, nor felt, of course) by one who is still incarnate, and yet shut in from the world of sense by the condition of negative polarity, into which the sensative element of her nervous system has been thrown. Such a thing being once admitted, it is easy to conceive how the spiritual presence is translated by the roving and resistless fancy into symbols; into the language of sensation; into forms, and colours, and sounds.

This theory may be far from the actual truth; it is not that which I adopt; but it at least shews what a pity it is to reject any decent statement of those *facts*, on which alone the true theory can ever be erected. As a collection of such facts, strange

and incredible as they may seem, the work of Kerner is big with interest. It is a pity that Mrs. Crowe did not write a more elaborate preface, and shew how completely and easily the narrative is separable from the popular theory of such things, with which it is everywhere impeded.

The immediate occasion of addressing you these few lines, is the perusal of your excellent observations on Wienholt's lectures by Colquhoun, in THE CRITIC of Saturday, the 28th inst. The glimpse you have there afforded of your ideas concerning the true mechanism (if such it dare be called) of perception, strikes me as being capable of application to the study of ghost-seeing: and I beg you will read Kerner's narrative with the view of instructing your readers. The commendation with which you quote a passage from Mr. Colquhoun's essay, regarding St. Paul's definition of the natural and the spiritual bodies, should facilitate the solution of the theories, at least to your own mind. Buck, the celebrated American philologist, has published a work on the *Anastasis* or Resurrection of the New Testament, in which he argues just such a conception of the spiritual body as Kerner and Colquhoun have both adopted (though with a difference), and that upon purely hermeneutical grounds; so that the tendency of all the higher sciences,—theology, metaphysics, physiology, and transcendental physics—is culminating towards a common higher point of view, which shall probably embrace these much despised, and strongly asserted, facts of ghost-seeing within its range.

In conclusion, if you will insert these remarks in the next number of your most valuable journal, you will greatly oblige one who takes a passionate interest in every opening of light upon the surpassing mystery of existence. Being, at the same time, with every sentiment of consideration,

June 30, 1845. YOUR FREQUENT READER.

CURE OF EPILEPSY.—CLAIRVOYANCE.—(*From a Correspondent.*)—This patient, a girl of the age of 14, had been for two years so violently convulsed by this disease, that her intellect had become enfeebled, her memory lost, and all the better faculties depressed, so that her appearance when she was first brought to me was that of one *approaching to idiocy*. Her conduct was violent, no self-control—cold pains in the head, tearing pains in the limbs, and great tendency to sleep; eyelids much depressed, and a gloomy countenance; fretful and disobedient; could never be trusted alone, and always much affected at the change of the moon.

This case was begun the last week in May. A regular attention three times a day did not for ten days give much hope of producing an impression, when a slightly comatosed state was at last induced. After a few times, she began to make a grumbling noise, waving her head, and appearing very cross. Further symptoms were then elicited by a passionate determination to kick a little hassock, which improved to a mischievous sort of fun in kicking and turning it over and over with the foot. She would be delighted if she could slide her foot under the hassock, and in a very arch and clever manner succeed in sending it to a distance. This was the first indication of somnambulism. Then she began to utter monosyllables; and then to cry, kick, bite, pinch, and be very determined to obtain food. In about a week she slept with a single pass being made before her, and became a most interesting subject of clairvoyance. She would sort coins, saying one was white, another yellow; naming the shillings, the half-crowns, and the sovereigns. She was delighted to find a halfpenny, examine it, *not by touch*, but by intently *looking* at it; fix it between her hands, and asking, "Head or tail?" which she always told right; "Because," she said, "I can see, and you can't." She won several halfpence in this way; and I put a halfpenny between my own hands, offering the back of my hand to her, desiring her to look and see if she could win my halfpenny, which she did through my closed hands three times, when she complained of being so tired she could not see any more.

Her eyes are closely shut, and she has no power whatever to open them. She reads as fluently in this state as when awake; she writes with the greatest ease little poems she has learnt, and sends notes to her friend, folds and directs them herself; and she has written two copies in a copy-book, carefully keeping the lines and dotting the i's.

Two or three times she has been able to see into different apartments while she was lying on the couch. The first was thus:—She rose suddenly from her pillow, exclaiming, "Oh! I can see the dog, I can see the cat." "What are they doing?" "Oh, the dog is lying asleep in the corner, curled round; and the cat is running about." This was so, but it was down stairs, in a room beneath us. At the same time she said, "I can see your fine room, too—your fine carpet—blue, red, brown, white—such a fine carpet! Now I will go into the closet, and see your fine books." She described the newspapers and books. "And there sits ——— reading the newspaper, and there is his coat, and there are his gloves."

I could give a great many more very curious exploits, during magnetic sleep; but I have merely wished to bring forward sufficient instances to shew the progressive state of this child's intellect. She is now, when awake, affectionate, obliging, active, energetic in assisting everybody; and her fits have diminished, so that ten days elapse between them, and instead of remaining an hour and a half, they pass away in about five minutes.

Her physical strength during sleep is so wonderfully augmented, that she with ease takes me in her arms and carries me about the room. She laughs and romps about with any one who notices her kindly, and can hear all that is said in the room.

One case of distressing ear-ache was cured in five minutes, and has not returned since.

Another case of rheumatism in the head—an elderly lady—which had so afflicted her she had no rest, was cured in half an hour, and has not returned since.

LAVINIO JONES.

TO BOOKSELLERS.—*A stamped copy of* THE CRITIC *sent regularly to any Bookseller, for his own use, at the cost of stamp and paper only, on prepayment of* half a year's subscription, at least (4*s.* 4*d.*), *which may be transmitted in penny postage stamps.*

BOOKSELLERS *and Keepers of Circulating Libraries are requested to communicate to* THE CRITIC *the results of their experience as to books and classes of books most in demand, and other similar information. Books wanted to purchase inserted in the weekly list without charge.*

BOOKSELLERS' CIRCULAR.

STILL have few *new* books come to hand, although small adventures, the profusion of foreign literature, and the reprints of works that have received the stamp of public approval, afford abundant themes for our journal. Probably the reader loses nothing by this pause in publication. The greater portion of the new books produced for library use by a certain set of publishers are so thoroughly trashy and contemptible, that the fewer we have of them the better for the public taste. The only substantial books received are from Messrs. CURRY and Co. of Dublin, namely, two promising volumes of *Translations of German Anthology*, and two others on *The Practice of Angling*, by O'GORMAN.

OPINIONS ON THE CRITIC.

TO THE EDITOR OF THE CRITIC.

SIR,—Permit me to assure you that I am highly pleased with the manner in which THE CRITIC is conducted, not only for the valuable information to librarians, who are deeply indebted to it, but for its general tone and temper. Wishing every success,

I remain, Sir, truly yours,

Belfast, July 5. JAMES O'NEILL.

REGISTER OF NEW PUBLICATIONS,

From July 5 to July 12.

NOTICE TO BOOKSELLERS.

A Register lies at THE CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* THE CRITIC, *and no charge will be made either for registration or for publication in* THE CRITIC. *Particulars forwarded* by letter *will be duly inserted.*

LIST OF NEW BOOKS.

Arcana Entomologica, by J. O. Westwood, esq. Vol. II. with 48 coloured plates, royal 18mo. 2*l.* 2*s.* cl.—Astrologer's daughter, a Novel, by Rose Ellen Hendriks, 3 vols. pt. 8vo. 1*l.* 11*s.* 6*d.* bds.

Benevolence in Punishment; or, Transportation made Reformatory, royal 12mo. 4*s.* 6*d.* cl.—Bennett (Dr.) on Diseases of the Uterus, post 8vo. 6*s.* cl.—Blair's Sermons, new edit. 1 vol. 8vo. (Cadell) 9*s.* cl. lettered.—Bray's (Eliza) Travels and Romances, Vol. III. "The Protestant," fc. 8vo. 6*s.* cl.

Cobbin's (Ingram) Descriptive New Testament for Schools and Families, with Explanatory Notes, Engravings, and Maps, 12mo. 5*s.* cl. gilt.

Daubigné's History of the Reformation translated, first portion, med. 8vo. 10*s.* 6*d.* cl. (Whittaker's Popular Library.)

Evans's (Rev. W. E.) The Songs of the Birds, fc. 8vo. 5*s.* 6*d.* cl.

Felix on the Use of the Cricket Bat, 10 plates. 4to. 12*s.* cl. gilt.—Foster's (John) Essay on Popular Ignorance, new edit. fc. 8vo. 5*s.* cl.—Folkestone Fiery Serpent; together with the Humours of the Dover Mayor. Sec. edit. 1*s.*

THE CRITIC,
And Journal of Literature.

SATURDAY, JULY 19, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

JOURNAL OF ENGLISH LITERATURE.

BIOGRAPHY.

Memoirs of Lady Hester Stanhope, as related by Herself in Conversations with her Physician, &c. 3 vols. Colburn.

THERE was nothing in the character or career of Lady HESTER STANHOPE that called for more than such a brief notice as might have been contained in the pages of a monthly magazine. Eccentricity, verging upon insanity, was all that distinguished her above her fellows, and unless the world is to be deluged with memoirs of maniacs, it would do wisely to discountenance this first step to such a consummation.

And if any special interest attaches to the peculiar form her monomania assumed, or if the mystery with which travellers, looking for a good story to make their friends at home wonder and stare, loved to envelope her person and abode, may be deemed by some to justify the dedication of a book to a detail of her oddities, there can be no doubt that three volumes given to such a topic is an invasion of the reader's time, patience, and pocket, which ought to be resented by a refusal to purchase so small a substance at so great a price. Seldom, indeed, among the many specimens of book-making that come under our notice, have we seen one so outrageous as this. Upon the face of them the dull and tedious conversations with which the narrative "drags its slow length along," are deliberate expansions of short remarks, if not fabulous altogether. The proof is in the language—in the structure of the sentences—in the train of thought. No person talks as he writes; the turn of conversation is always brief, pithy, suggestive rather than descriptive; we hint more than we say, and the hearer is required to gather from looks and tones almost as much as from words. Is such the character of the pretended conversations in these three heavy volumes? Far from it. They bear the marks of the study. They are written, not spoken, dialogues; compositions, and not reports. It is possible that for many portions of them there might have been a substratum of fact. The ingenious memoir writer may have heard Lady HESTER tell certain stories somewhere to somebody, and she may even have gone so far, seeing what a *gobemouche* he is, as to amuse herself by playing upon his credulity, and trying how much he could swallow; but that all that is set down in these ponderous pages was in word uttered by the lady to whom they are attributed, he must be more gullible than sagacious who could believe.

We are far, however, from asserting that these memoirs contain *nothing* new, *nothing* curious, *nothing* interesting. A physician could not have been for years in attendance upon a being so wavering between insanity and genius as Lady HESTER STANHOPE, without seeing and hearing much that will amuse. But our protest is against the expansion of these few grains of gold over some thousand pages, when they might have been condensed into some two or three hundred with advantage to all but author and publisher. This dilation of the material of books for trading purposes is one of the nuisances infesting the literature of our time, and which it will be the unshrinking endeavour of THE CRITIC to abate, by exposing it wherever found, and counselling the many hundreds who have adopted this journal as their guide in the purchase of books, to withhold their sanction from the system by refusing to buy works written and printed with the sole purpose of extracting from them the largest possible sum in return for the smallest possible value received. We have observed that Great Marlborough-street is especially obnoxious to this complaint, and it is in the spirit of friendliness, and in the hope that he will exercise more care for the future to check the *copia verborum* of his writers and the *paucitas verborum* of his printer, that we candidly tell Mr. COLBURN what is the opinion, not of ourselves alone, but of the trade, of the libraries, of the book-clubs, as well as of readers, and we can assure him that we shall as cordially welcome an improvement in this respect as we have frankly preferred the complaint, and that nowhere will we see the same tendency to expansion of thought and type in him or in any other without proclaiming it in a like strain of censure.

The substance of these *Memoirs* may be stated in few words, and half a dozen of the more interesting passages will exhibit the book in its most attractive aspect. We perceive that some of the journals under publishers' influence are trying to push it into popularity by elaborate and repeated notices. In truth this prominence is not deserved, nor shall we stoop to follow the example. A few columns will suffice for the exhibition of such claims to respect as it honestly possesses.

The ink with which these remarks were written was scarcely dry when there appeared in the daily papers a letter from the present Lord STANHOPE, positively asserting the utter falsity of the statements relating to himself which the composer of these *Memoirs* has put into the mouth of Lady HESTER. This more than justifies the suspicions we have entertained, and of course throws doubt over every part of the narrative; nor can reliance be placed upon any thing advanced upon such a questionable authority.

Lady HESTER STANHOPE was the daughter of CHARLES, Earl of STANHOPE, by HESTER daughter of the great Earl of CHATHAM. From her childhood she was forward, imperious, daring, and eccentric. At the age of seven she got into a boat alone, and pushed off from the shore, resolving to go to see what sort of a place France was. Her memory was extraordinary. "I could recall," she said, "every circumstance that ever occurred to me during my life, every thing worth retaining that I wished to remember; I could tell what people said, how they sat, the colour of their hair, of their eyes, and all about them, at any time for the last forty years and more."

Her wild humours subjected her to severities from her governesses, and really she had cause to complain of their efforts to improve nature:—

> One governess at Chevening had our backs pinched in by boards, that were drawn tight with all the force the maid could use; and as for me, they would have squeezed me to the size of a puny miss—a thing impossible! My instep, by nature so high, that a little kitten could walk under the sole of my foot, they used to bend down in order to flatten it, although that is one of the things that shews my high breeding. Nature, doctor, makes us one way, and man is always trying to fashion us another. Why, there was Mahon, when he was eight or nine years old, that never could be taught to understand how two and two make four. If he was asked, he would say four and four make three, or ten, or something; he was shewn with money, and with beans, and in every possible way, but all to no purpose. The fact was, that that particular faculty was not yet developed; but now, there is no better calculator anywhere.

Her portrait of her half-mad father is by no means flattering:—

> Lord Stanhope was engaged in his philosophical pursuits, and thus we children saw neither the one nor the other. Lucy used to say, that if she had met her mother-in-law in the streets, she should not have known her. Why, my father once followed to our own door in London a woman who happened to drop her glove, which he picked up. It was our governess; but, as he had never seen her in the house, he did not know her in the street. He slept with twelve blankets on his bed, with no night-cap, and his window open. How you would have laughed had you seen him! He used to get out of bed, and put on a thin dressing-gown, with a pair of silk breeches that he had worn overnight, with slippers, and no stockings; and then he would sit in a part of the room which had no carpet, and take his tea with a bit of brown bread. He married two wives—the first a Pitt, the second a Grenville; so that I am in two ways related to the Grenvilles.

And this is her description of herself at twenty:—

> Sir Sydney Smith said of me, after he had known me fifteen years, and when my looks were much changed by illness, "When I see you now, I recall to my recollection what you were when you first *came out*. You entered the room in your pale shirt, exciting our admiration by your magnificent and majestic figure. The roses and lilies were blended in your face, and the ineffable smiles of your countenance diffused happiness around you."

When mentioning this, her ladyship added: "Doctor, at twenty my complexion was like alabaster, and, at five paces' distance, the sharpest eye could not discover my pearl necklace from my skin. My lips were of such a beautiful carnation, that, without vanity, I can assure you very few women had the like. A dark blue shade under the eyes, and the blue veins that were observable through the transparent skin, heightened the brilliancy of my features. Nor were the roses wanting in my cheeks; and to all this was added a permanency in my looks that fatigue of no sort could impair."

Here is a curious trait of past manners:—

As for tutors, and doctors, and such people, if, now-a-days, my lords and my ladies walk arm-in-arm with them, they did not do so in my time. I recollect an old dowager, to whom I used sometimes to be taken to spend the morning. She was left with a large jointure and a fine house for the time being, and used to invite the boys and girls of my age, I mean the age I was then, with their tutors and governesses, to come and see her. "How do you do, Dr. Mackenzie? Lord John, I see, is all the better for his medicine. The duchess is happy in having found a man of such excellent talents, which are almost too great to be confined to the sphere of one family." "Such is the nature of our compact, my lady, nor could I on any account violate the regulations which so good a family has imposed upon me."—"It's very cold, Dr. Mackenzie: I think I increased my rheumatic pains at the Opera on Saturday night."—"Did you every try Dover's Powders, my lady?" He does not, you see, tell her to use Dover's Powders; he only says, did you ever try them? "Lord John, Lord John, you must take care, and not eat too much of that strawberry preserve."—"How do you do, Mr. K.?—how do you do, Lord Henry? I hope the marchioness is well? She looked divinely last night. Did you see her when she was dressed, Mr. K.?"—"You will pardon me, my lady," answers the tutor, "I did indeed see her; but it would be presumptuous in me to speak of such matters. I happened to take her a map" (mind, doctor, he does not say a map of what), "and, certainly, I did cast my eyes on her dress, which was, no doubt, in the best taste, as every thing the marchioness does is." Observe, here is no mention of her looks or person. Doctors and tutors never presumed formerly to talk about the complexion, and skin, and beauty, of those in whose families they lived or found practice. Why, haven't I told you, over and over again, how Dr. W— lost his practice for having said that a patient of his, who died, was one of the most beautiful corpses he had ever seen, and that he had stood contemplating her for a quarter of an hour? She was a person of rank, and it ruined him. Even his son, who was a doctor too, and had nothing to do with it, never could get on afterwards.

From Mr. PITT she got a pension of 1,500*l.* a year; but upon that she could not live in comfort, and it was poverty that turned her thoughts to emigration. This is the sort of wretchedness endured by those who have to maintain the show of rank upon limited means:—

Not being able to keep a carriage, how was I to go out? If I used a hackney-coach, some spiteful person would be sure to mention it:—"Who do you think I saw yesterday in a hackney-coach? I wonder where she could be driving alone, down those narrow streets!" If I walked with a footman behind me, there are so many women of the town now who flaunt about with a smart footman, that I ran the hazard of being taken for one of them; and if I went alone, either there would be some good-natured friend who would hint that Lady Hester did not walk out alone for nothing, or else I should be met in the street by some gentleman of my acquaintance, who would say, "God bless me, Lady Hester! where are you going alone?—do let me accompany you:" and then it would be said, "Did you see Lady Hester crossing Hanover-square with such a one? He looked monstrous foolish; I wonder where they had been." So that, from one thing to another, I was obliged to stop at home entirely; and this it was that hurt my health so much, until Lord Temple at last remarked it; for he said to me one day, "How comes it that a person like you, who used to be always on horseback, never rides out?"—"Because I have no horse." "Oh! if that is all, you shall have one to-morrow."—"Thank you, my lord; but if I have a horse, I must have two; and if I have two, I must have a groom; and as I do not choose to borrow, if you please, we will say no more about it."—"Oh, but I will send my horses, and come and ride out with you every day." However, I told him no; for how could a man who goes to the House every day and attends committees in a morning, be able to be riding every day with me? And I know what it is to lend and borrow horses and carriages. When I used to desire my carriage to go and fetch any friend, my coachman was sure to say, "My lady, the horses want shoeing;" or the footman would come in with a long face, "My lady, John would like to go and see his sister to-day, if you please:" there was always some excuse. All this considered, I made up my mind to remain at home.

In 1810 she left England for the Mediterranean. Touching at Gibralter, Malta, and Zante, she explored Greece, spent some time at Constantinople, and suffered shipwreck at Rhodes on her way to Egypt. After wandering about for some years, she finally took up her abode on Mount Lebanon, where she was enabled to indulge her despotic humours over a household of slaves, and doubtless to enjoy the interest taken by her countrymen at home in the eccentricities which travellers recorded in their journals and published for the gratification of a curiosity always raised by any thing that has an air of mystery.

The conversations said to have been held in this retreat occupy the greater portion of the volumes, and from them we propose to glean some of the most interesting passages, following the plan of the biographer, and throwing them together without regard to order of time.

LADY HESTER STANHOPE IN THE EAST.

Lady Hester Stanhope had adopted a particular mode of dress, to which she adhered without much variation, on all occasions, from the time she fixed her abode at Jôon. It was a becoming one, and at the same time concealed the thinness of her person, and the lines which now began slightly to mark her face. Lines, that mark the habitual contraction of the features into a frown, a smile, or a grin, she had none; and the workings of her mind were never visible in her lineaments, which wore the appearance of serene calm, when she chose to disguise her feelings. But age will, without furrowing the brow or the cheeks, bring on that sort of network which we see on the rind of some species of melons. This, however, was so very faintly traced, that it could not be detected without a little scrutiny; and, by means of a dim light in her saloon, together with a particular management of her turban, she contrived to conceal the inroads that years were now making on what her bitterest enemies could not deny was always a fine and noble face. It was this kind of pardonable deceit that made me exclaim, on meeting her again, after a long separation of several years, that I saw no alteration in her appearance. Her turban, a coarse woollen, cream-coloured Barbary shawl, was wound loosely round, over the red *fez* or *tarbôosh*, which covered her shaved head; a silk handkerchief, commonly worn by the Bedouin Arabs, known by the Arabic name of *kefeyah*, striped pale yellow and red, came between the fez and the turban, being tied under the chin, or let fall at its ends on each side of her face. A long sort of white merinoes cloak (*meshlah*, or *abah* in Arabic) covered her person from the neck to the ancles, looped in white silk brandenburghs over the chest; and, by its ample and majestic drapery and loose folds, gave to her figure the appearance of that fulness which it once really possessed. When her cloak happened accidentally to be thrown open in front, it disclosed beneath a crimson robe (*joobey*) reaching also to her feet, and, if in winter, a pelisse under it, and under that a cream-coloured or flowered gown (*kombàz*) folding over in front, and girded with a shawl or scarf round the waist. Beneath the whole she wore scarlet pantaloons of cloth, with yellow low boots, called *mest*, having pump soles, or, in other words, a yellow leather stocking, which slipped into yellow slippers or papouches. This completed her costume; and, although it was in fact that of a Turkish gentleman, the most fastidious prude could not have found any thing in it unbecoming a woman, except its association as a matter of habit with the male sex. She never wore pearls, precious stones, trinkets, or ornaments, as some travellers have affirmed: indeed, she had none in her possession, and never had had any from the time of her shipwreck. Speaking of her own dress, she would say, "I think I look something like those sketches of Guercino's, where you see scratches and touches of the pen round the heads and persons of his figures, so that you don't know whether it is hair or a turban, a sleeve or an arm, a mantle or a veil, which he has given them." And, when she was seated on the sofa, in a dim corner of the room, the similitude was very just. It was latterly her pride to be in rags, but accompanied by an extraordinary degree of personal cleanliness. "Could the Sultan see me now," she would say, "even in my tattered clothes, he would respect me just as much as ever. After all, what is dress? Look at my ragged doublet, it is not worth sixpence; do you suppose that affects my value? I warrant you, Mahmood would not look at *that* if he saw me. When I think of the tawdry things for which people sigh, and the empty stuff which their ambition pursues, I heartily despise them all. There is nothing in their vain-glorious career worth the trouble of aspiring after. My ambition is to please God. I should be, what I intrinsically am, on a dunghill. My name is greater than ever it was. In India I am as well known as in London or Constantinople."

HER RELIGION.

She entertained a firm belief that the elements were filled with spirits, who watched over and guided the steps and actions of men. The air we move in and the earth we tread on, she considered as filled with delicate and aerial beings, by whom the gentle and sage were rewarded and protected for the amenity and prudence of their every-day movements and actions, but who, in return, avenged themselves on the wicked, nay, even on the awkward, by causing the numberless bodily accidents which such persons are liable to. "Never do I move a foot," Lady Hester would sometimes say, "but I ask these guardian sylphs to watch over me; and never do I see a blundering fellow knock his head against the top of a doorway, but I think he is breaking some of their delicate members. For, as a piece of valuable china is generally set in a place where it may not be easily knocked down, so do these spirits generally perch where our steps may not molest them: and, as a man who spits about a room commonly aims his saliva where he will not spoil his furniture, so should we look that our motions and gestures do not injure these unseen creatures; and hence it becomes us, in what we do violently, to give them a kind of warning to get out of the way.

HER CHARACTER.

Never was there so restless a spirit—never lived a human being so utterly indifferent to the inconvenience to which she subjected others. Nobody could pursue their avocations in quiet: she must give instructions to every one; and although the unexampled versatility of her talents and genius seemed to inspire her with an intuitive knowledge on all matters, yet it was irksome to remain three or four hours together to be taught how to govern one's wife, or how to rear one's children; how statesmen were made, or how ministers were unmade; how to know a good horse or a bad man; how to plant lettuces or plough a field. The love of power made her imperious; but, when her authority was once acknowledged, the tender of unconditional submission was sure to secure her kindness and largesses. All this was royal enough, both in its tyranny and its munificence.

* * * * * * *

Her maids and female slaves she punished summarily, if refractory; and, in conversation with her on the subject, she boasted that there was nobody could give such a slap in the face, when required, as she could.

* * * * * * *

For the last fifteen years of her life, Lady Hester Stanhope seldom quitted her bed till between two and five o'clock in the afternoon, nor returned to it before the same hours the next morning. The day's business never could be said to have well begun until sunset. But it must not be supposed that the servants were suffered to remain idle during daylight. On the contrary, they generally had their work assigned them over night, and the hours after sunset were employed by her ladyship in issuing instructions as to what was to be done next day; in giving orders, scoldings, writing letters, and holding those interminable conversations which filled so large a portion of her time, and seemed so necessary to her life.

* * * * * * *

As it had become a habit with her to find nothing well done, when she entered her bed-room, it was rare that the bed was made to her liking; and, generally, she ordered it to be made over again in her presence. Whilst this was doing, she would smoke her pipe, then call for the sugar-basin to eat two or three lumps of sugar, then for a clove, to take away the mawkish taste of the sugar. The girls, in the meantime, would go on making the bed, and be saluted every now and then, for some mark of stupidity, with all sorts of appellations. The night-lamp was then lighted, a couple of yellow wax lights were placed ready for use in the recess of the window; and, all things being apparently done for the night, she would get into bed, and the maid whose turn it was to sleep in the room (for, latterly, she always had one) having placed herself, dressed as she was, on her mattress behind the curtain which ran across the room, the other servant was dismissed. But hardly had she shut the door and reached her own sleeping-room, flattering herself that her day's work was over, when the bell would ring, and she was told to get broth, or lemonade, or orgeat directly. This, when brought, was a new trial for the maids. Lady Hester Stanhope took it on a tray placed on her lap as she sat up in bed, and it was necessary for one of the two servants to hold the candle in one hand and shade the light from her mistress's eyes with the other. The contents of the basin were sipped once or twice and sent away; or, if she ate a small bit of dried toast, it was considered badly made, and a fresh piece was ordered, perhaps not to be touched. This being removed, the maid would again go away, and throw herself on her bed; and, as she wanted no rocking, in ten minutes would be sound asleep. But in the meantime her mistress has felt a twitch in some part of her body, and ding ding goes the bell again. Now, as servants, when fatigued, do sometimes sleep so sound as not to hear, and sometimes are purposely deaf, Lady Hester Stanhope had got in the quadrangle of her own apartments a couple of active fellows, a part of whose business it was to watch by turns during the night, and see that the maids answered the bell: they were, therefore, sure to be roughly shaken out of their sleep, and, on going, half stupid, into her ladyship's room, would be told to prepare a fomentation of camomile, or elder-flowers, or mallows, or the like. The gardener was to be called, water was to be boiled, and the house again was all in motion. During these preparations, perhaps Lady Hester Stanhope would recollect some order she had previously given about some honey, or some flower, or some letter—no matter however trifling; and whoever had been charged with the execution of it was to be called out of his bed, whatever the hour of the night might be, to be cross-questioned about it. There was no rest for anybody in her establishment, whether they were placed within her own quadrangle or outside of it. Dar Jôon was in a state of incessant agitation all night.

* * * * * * *

Her despotic humour would vent itself in such phrases as these. The maid one day entered with a message—"The gardener, my lady, is come to say that the piece of ground in the bottom is weeded and dug, and he says that it is only fit for lettuce, beans, or *selk* [a kind of lettuce], and such vegetables." "Tell the gardener," she answered vehemently, "that, when I order him to dig, he is to dig, and not to give his opinion what the ground is fit for. It may be for his grave that he digs, it may be for mine. He must know nothing until I send my orders, and so bid him go about his business."

* * * * * * *

In reference to the blind obedience she required from servants, Lady Hester Stanhope one day said to me, "Did I ever tell you the lecture Lord S******* gave me? He and Lady S—— had taken me home to their house from the Opera. It was a cold snowy night; and, after I had remained and supped *tête-à-tête* with them, when it was time to go, owing to some mistake in the order, my carriage never came for me; so Lord S—— said his should take me home. When he rang for the footman to order it out, I happened to observe, "The poor coachman, I dare say, is just got warm in his bed, and the horses are in the middle of their feed; I am sorry to call him out on such a night as this." After the man had left the room, Lord S—— turned to me and said, "My dear Lady Hester, from a woman of your good sense, I should never have thought to hear such an observation. It is never right to give a reason for an order to a servant. Take it for a rule through life, that you are never to allow servants to expect such a thing from you; they are paid for serving, and not for whys and wherefores."

It would be difficult to paint a more detestable, unamiable character than this, which has been presented in the very words of a biographer who is enthusiastic in his admiration, and talks about "honour to her memory!" Honour! for what? If such be the beings to be honoured, then must the world be provided with a new code of morals and religion.

This work possesses no one quality to recommend it to the book-clubs, and few that fit it for the circulating libraries, the largest only of which should order it, and they would be wise to avoid it if they can. Its popularity will not repay its cost.

The Despatches and Letters of Vice-Admiral Lord Viscount Nelson. With Notes by Sir NICHOLAS HARRIS NICOLAS, G.C. M.G. Vol. the Third. Colburn.

THE contents of this volume extend from January 1798 to August 1799, a period of no more than twenty months. But brief as was the interval, it was big with important events to NELSON, to his country, and to the world;—some that redounded to his glory, others that have cast a cloud upon his fame, which not all the endeavours of his biographers have succeeded in removing—scarcely in relieving. The most prominent of the occurrences about which the correspondence and the despatches are concerned, are the battle of the Nile, the breach of the treaty of capitulation with the Neapolitan insurgents, and the—murder, shall we call it?—of CARACCIOLI.

Sir HARRIS NICOLAS labours hard to shew that NELSON does not deserve the blame that has been thrown upon him for these latter transactions. But it is with very partial success that he adduces the pile of documents relating to them which he has gathered with so much industry. This is not the place for a review of the evidence, and in truth the task would be more tediously dull than our readers would approve; but, stripped of its verbiage, the indisputable conclusion is, that NELSON deliberately set aside a convention made by Cardinal RUFFO with the Neapolitan conspirators, contrary to

the acknowledged rule of public faith that the act of one in authority is to be held binding upon his superiors, and availed himself of the treachery to murder CARACCIOLI under the pretended form of a legal trial. It has been said that NELSON had no motive for such dishonour, and that it is not probable he would have hazarded his reputation without a purpose. But the motive, before only suspected, is pretty clearly proved by the researches of his biographer. The fact was that NELSON was so violent a partisan, that he thought no faith was to be held with opponents; that *any* treachery was allowable towards Jacobins and Revolutionists. The mania of the time had taken possession of him, and the horrible doctrines, not only preached but practised on both sides as suggested by intensity of hatred, had blotted from his mind, as from so many others, all sense of humanity and justice towards men opposed in principle, in party, or in sect. A startling proof of this is supplied by a correspondence in the present volume between NELSON and TROUBRIDGE, the latter thus addressing the former:—

The whole of the chief Jacobins are quarrelling about their honesty. I have just received an account that a priest named Albavena is preaching up revolt in Ischia: I have sent sixty Swiss and three hundred loyal subjects to hunt him; and shall have him, I expect, dead or alive, to-day. I pray your lordship to send an honest judge here to try these miscreants on the spot, that some proper examples may be made. Two *p. m.*—Pray press the Court to send the judge by the return of the Perseus, as it will be impossible to go on else; the villains increase so fast on my hands, and the people are calling for justice; eight or ten of them must be hung.

And thus did NELSON answer an epistle imbued with the demon spirit of the Mountain.

My dear Troubridge, many thanks for your letters by the Perseus, and for the good news you have sent us. May God ever give you that success which your high merit deserves! We go to the Queen this evening, where all your letters are already gone; and I have pressed for flour: every thing which the islanders want must and shall be instantly sent. Money, 500*l.*, is sent you. I well know, from experience, that all ships ought to have money on board. I have drawn on the Victualling Board; therefore you will procure proper vouchers,—that is, as near as circumstances will permit, receipt and price paid. The universal joy over Palermo for this first success (which I really look upon as the near forerunner of the fate of Naples) is as great as can be wished. I shall finish when I return from the palace.

Just come from the Queen and Acton. Every provision asked for will begin to be loaded to-morrow. Minerve shall bring the *troops* and *judge*. Send me word some proper heads are taken off: this alone will comfort me. With kindness remember me to all with you, and believe me your affectionate NELSON.

Not a word of rebuke, but evident approval of the sentiments, and almost an echo of them.

If such, then, were NELSON'S prejudices on the subject of Jacobinism and Jacobins that he deemed any treachery justifiable in dealing with them, the motive is supplied, the mystery is explained.

A volume so dull and tedious we have seldom slept over, therefore we spare our readers the infliction of any further comments upon it. As a fragment of British history, it must be placed upon the shelves of great libraries, even though there it is like to remain for consultation rather than for reading. And book-clubs that require something sober will find this a very sober work indeed. But to circulating libraries that need to buy books to interest as well as to instruct, we would say, waste not your money upon this, it is not the work for *you*.

VOYAGES AND TRAVELS.

Travels in North America; with Geological Observations on the United States, Canada, and Nova Scotia. By C. LYELL, Esq. F.R.S. Author of "The Principles of Geology." In 2 vols. London, 1845. Murray.

IT was in the year 1841 that Mr. LYELL visited North America, for the purpose of pursuing in that almost unexplored field his geological researches. His name was a passport everywhere, and the welcome given to him by all classes afforded opportunities for observation both of the people and the country which he has turned to good account, bringing home a portfolio of sketches that combine to a remarkable extent the qualifications of vivid description and calm impartial reflection. Mr. LYELL has looked at the peculiarities of American institutions and manners with the eye of a philosopher, who estimates them solely by reference to the circumstances of the country in which they exist, and not by comparison with the forms of another people differently situated. His judgment is singularly fair, and his whole mind liberal and unprejudiced. These volumes shew him to be a man of larger capacity even than his *Geology* has proclaimed him. His scientific habits have moulded his mind to the perception of hidden truths; have taught him that he who would arrive at right conclusions must not be content with the surfaces of things, but must look below to find their meanings. Hence is he the very reverse of the TROLLOPE school of tourists. It is not enough for him to find fault withal that the manners and modes of thought in America are different from those in England; he asks, if there be a cause for this in the condition of the country; if the dissimilitude be in the spirit equally with the form; if man be not man there as elsewhere, with very nearly the same amount of virtues and failings; and where he finds evil existing, as he must, he seeks the counterbalancing good which *he* has learned from a close inspection of nature has been provided by a beneficent Deity regardful of *all* his creatures.

The remarks on men and manners are agreeably mingled with the most curious results of his inquiries into the branch of science with which his name is linked, and which is certainly indebted to him for a considerable portion of the popularity it enjoys. These give additional value to a work otherwise deserving to be read by everybody.

Mr. LYELL has another merit, that he is never tedious about trifles. His eatings, drinkings, and sleepings are not daily recorded, with the minuteness of a bill of fare. He tells only that which all must be curious to know, and he writes in a style peculiarly pleasant and readable, without pretension, but free from the fault of carelessness.

What are the impressions which the perusal of these travels leaves upon the mind? Upon the whole, favourable to America and the Americans, vastly more so than national prejudices will be pleased to admit. He presents some public questions in a light so new, that opinion upon them must be greatly modified, if not changed; one of these being the famous *repudiation* of Pennsylvania. It appears, moreover, that ordinary travellers see but a fraction, and that the least estimable, of American society. The better classes there do not much appear in public, do not live at hotels, do not patronize strangers, do not receive *lions* from England, do not take part in politics or associations. Hence, the traveller never comes in contact with them, and consequently is ignorant not merely of their character, but even of their existence, and on his return home the pictures he has taken of a fraction of the people are published as portraits of the whole. It is precisely as if an American were to visit England for a couple of months, live at an hotel, attend a few public meetings, and then profess from the persons he has seen to sketch the English people. However truthful the likeness to the section he has seen, it would be but a caricature of the whole, and so it is with English tourists attempting to picture America and the Americans.

Mr. LYELL remained in the New World about a year, visiting during that period Halifax, Boston, New York, Philadelphia, Georgia, crossing the Alleghanies, and thence to the Ohio, the lakes of Montreal and Quebec.

From the huge mass of interesting and instructive matter condensed in these valuable volumes we might with ease gather passages of worth sufficient to fill half a dozen entire CRITICS; but with space so limited, our perplexity is what to choose where the wealth is so abundant. We must be content with such a sprinkling as will tempt the reader to seek in the work itself the stores of which the following are only samples.

GAS FOUNTAINS AT NIAGARA.

At the falls of Niagara, where we next spent a week, residing in a hotel on the Canada side, I resumed my geological explorations of last summer. Every part of the scenery, from Grand Island above the Falls to the ferry at Queenstown, seven miles below, deserves to be studied at leisure. We visited the "burning spring" at the edge of the river above the rapids, where carburetted hydrogen, or, in the modern chemical phraseology, a light hydrocarbon, similar to that before mentioned at Fredonia, rises from beneath the water out of the limestone rock. The

bituminous matter supplying this gas is probably of animal origin, as this limestone is full of marine mollusca, crustacea, and corals, without vegetable remains, unless some fucoids may have decomposed in the same strata. The invisible gas makes its way in countless bubbles through the clear transparent waters of the Niagara. On the application of a lighted candle it takes fire, and plays about with a lambent flickering flame, which seldom touches the water, the gas being at first too pure to be inflammable, and only obtaining sufficient oxygen after mingling with the atmosphere at the height of several inches above the surface of the stream. At noon, on a hot summer's day, we were tempted, contrary to my previous resolution, to perform the exploit of passing under the great sheet of water between the precipice and the Horseshoe Fall. We were in some degree rewarded for this feat by the singularity of the scene, and the occasional openings in the curtain of white foam and arch of green water, which afforded momentary glimpses of the woody ravine and river below, fortunately for us lighted up most brilliantly by a mid-day sun. We had only one guide, which is barely sufficient for safety when there are two persons, for a stranger requires support when he loses his breath by the violent gusts of wind dashing the spray and water in his face. If he turns round to recover, the blast often changes in an instant, and blows as impetuously against him in the opposite direction.

THE SCOTCH IN NOVA SCOTIA.

Not a few of the most intelligent and thriving inhabitants are descended from Loyalists, who fled from the United States at the time of the declaration of independence. The picture they drew of the stationary condition, want of cleanly habits, and ignorance of some of the Highland settlers, in parts of Nova Scotia and Cape Breton, was discouraging, and often so highly coloured as to be very amusing. They were described to me as cropping the newly-cleared ground year after year without manuring it, till the dung of their horses and cattle accumulated round their doors, and became, even to them, an intolerable nuisance. They accordingly pulled down their log-cabins and removed them to a distance, till several of their more knowing neighbours offered to cart away the dung for a small remuneration. After a time, when the Highlanders perceived the use to which the manure was put, they required those who removed it to execute the task gratuitously; and my informants thought that the idea might possibly occur to some of the next generation of applying the material to their own fields.

PRIMÆVAL FORESTS.

The stumps of trees, some six feet high, are still standing in the gardens and between the houses. Our inn-keeper remarked that the cost of uprooting them would be nearly equal to that of erecting a log-house on the same place. I amused myself by counting the rings of annual growth in these trees, and found that some had been only forty years old when cut down; yet when these began to grow, no white man had approached within many leagues of this valley; most of the older stumps went back no farther than two centuries, or to the landing of the pilgrim fathers, some few to the time of Sir Walter Raleigh, and scarcely one to the days of Columbus. I had before remarked that very ancient trees seemed uncommon in the aboriginal forests of this part of America. They are usually tall and straight, with no grass growing under their dark shade, although the green herbage soon springs up when the wood is removed, and the sun's rays allowed to penetrate. Some of the stumps, especially those of the fir tribe, take fifty years to rot away, though exposed in the air to alternations of rain and sunshine, a fact on which every geologist will do well to reflect, for it is clear that the trees of a forest submerged beneath the waters, or still more, if entirely excluded from air, by becoming embedded in sediment, may endure for centuries without decay, so that there may have been ample time for the slow petrifaction of erect fossil trees in the carboniferous and other formations, or for the slow accumulation around them of a great succession of strata.

Mr. LYELL'S remarks on slavery are characterized by singular moderation. He expresses the strongest conviction of its general evils as an institution, but he admits that, as far as regards the immediate well-being of the slaves themselves, there is not so much to complain of. For the most part they are better off than independent labourers, and practically they are unconscious of any disadvantages arising from it. Some instances of this are curious.

SLAVERY IN PRACTICE.

The negroes, so far as I have yet seen them, whether in domestic service or on the farms, appear very cheerful and free from care, better fed than a large part of the labouring class of Europe; and though meanly dressed, and often in patched garments, never scantily clothed for the climate. We asked a woman in Georgia whether she was the slave of a family of our acquaintance. She replied, merrily, "Yes, I belong to them, and they belong to me." She was, in fact, born and brought up on the estate.

On another occasion, we were proceeding in a well-appointed carriage with a lanter, when we came unexpectedly to a dead halt. Inquiring the cause, the black coachman said he had dropped one of his white gloves on the road, and must drive back and try to find it. He could not recollect within a mile where he had last seen it: we remonstrated, but in vain. As time pressed, the master, in despair, took off his own gloves, and saying he had a second pair, gave them to him. When our charioteer had deliberately put them on, we started again.

* * * * *

On entering the station-house of a railway which was to carry us to our place of embarkation, we found a room with only two chairs in it. One of these was occupied by a respectable-looking woman, who immediately rose, intending to give it up to me; an act betraying that she was English, and newly arrived, as an American gentleman, even if already seated, would have felt it necessary to rise and offer the chair to any woman, whether mistress or maid, and she, as a matter of course, would have accepted the proffered seat. After I had gone out, she told my wife that she and her husband had come a few months before from Hertfordshire, hoping to get work in Virginia; but she had discovered that there was no room here for poor white people, who were despised by the very negroes if they laboured with their own hands. She had found herself looked down upon even for carrying her own child, for they said she ought to hire a black nurse. These poor emigrants were now anxious to settle in some free state.

Mr. LYELL'S views of the emancipation question are extremely sensible, and deserve anxious consideration.

PROSPECTS OF SLAVERY.

Professor Tucker, of Virginia, has endeavoured to shew that the density of population in the slave states will amount, in about sixty years, to fifty persons in a square mile. Long before that period arrives, the most productive lands will have been all cultivated, and some of the inferior soils resorted to: the price of labour will fall gradually as compared to the means of subsistence, and it will, at length, be for the interest of the masters to liberate their slaves, and to employ the more economical and productive labour of freemen. The same causes will then come into operation which formerly emancipated the villeins of western Europe, and will one day set free the serfs of Russia. It is to be hoped, however, that the planters will not wait for more than half a century for such an euthanasia of the institution of slavery; for the increase of the coloured population in sixty years would be a formidable evil, since in this instance they are not, like villeins and serfs, of the same race as their masters. They cannot be fused at once into the general mass, and become amalgamated with the whites, for their colour still remains as the badge of their former bondage, so that they continue, after their fetters are removed, to form a separate and inferior caste. How long this state of things would last must depend on their natural capabilities, moral, intellectual, and physical; but if in these they be equal to the whites, they would eventually become the dominant race, since the climate of the south, more congenial to their constitutions, would give them a decided advantage. A philanthropist may well be perplexed when he desires to devise some plan of interference which may really promote the true interests of the negro. But the way in which the planters would best consult their own interests appears to me very clear. They should exhibit more patience and courage towards the abolitionists, whose influence and numbers they greatly overrate, and lose no time in educating the slaves, and encouraging private manumition to prepare the way for general emancipation. All seem agreed that the states most ripe for this great reform are Maryland, Virginia, North Carolina, Tennesse, Kentucky, and Missouri. Experience has proved in the northern states that emancipation immediately checks the increase of the coloured population, and causes the relative number of the whites to augment very rapidly. Every year, in proportion as the north-western states fill up, and as the boundary of the new settlers in the west is removed farther and farther beyond the Mississippi and Missouri, the cheaper and more accessible lands south of the Potomac will offer a more tempting field for colonization to the swarms of New Englanders, who are averse to migrating into slave-states. Before this influx of white labourers the coloured race will give way, and it will require the watchful care of the philanthropist, whether in the north or south, to prevent them from being thrown out of employment and reduced to destitution. If due exertions be made to cultivate the minds and protect the rights and privileges of the negroes, and it nevertheless be found that they cannot contend, when free, with white competitors, but are superseded by them, still the cause of humanity will have gained. The coloured people, though their numbers remain stationary, or even diminish, may in the meantime be happier than now, and attain

to a higher moral rank. They would, moreover, escape the cruelty and injustice which are the invariable consequences of the exercise of irresponsible power, especially where authority must be sometimes delegated by the planter to agents of inferior education and coarser feelings. And last, not least, emancipation would effectually put a stop to the breeding, selling, and exporting of slaves to the sugar-growing states of the south, where, unless the accounts we usually read of slavery be exaggerated and distorted, the life of the negro is shortened by severe toil and suffering. Had the white man never interposed to transplant the negro into the New World, the most generous asserters of the liberties of the coloured race would have conceded that Africa afforded space enough for their development. Neither in their new country, nor in that of their origin, whether in a condition of slavery or freedom, have they as yet exhibited such superior qualities and virtues as to make us anxious that additional millions of them should multiply in the southern states of the Union; still less that they should overflow into Texas and Mexico.

A TOWN LIGHTED BY NATURAL GAS.

Sailed in a steam-boat to Fredonia, a town of 1,200 inhabitants, with neat white houses and six churches. The streets are lighted up with natural gas, which bubbles up out of the ground, and is received into a gasometer, which I visited. This gas consists of carburetted hydrogen, and issues from a black bituminous slate, one of the beds of the Hamilton group of the New York geologists, or part of the Devonian formation of Europe. The lighthouse-keeper at Fredonia told me that, near the shore, at a considerable distance from the gasometer, he bored a hole through this black slate, and the gas soon collected in sufficient quantity to explode when ignited.

Currency doctors might read a lesson here:—

AMERICAN NOTES.

Wishing to borrow some books at a circulating library (in Philadelphia), I presented several dollar-notes as a deposit. At home, there might have been a ringing of coin upon the counter, to ascertain whether it was true or counterfeit; here, the shop-woman referred to a small pamphlet, reëdited "semi-monthly," called a "Detector," and containing an interminable list of banks in all parts of the Union, with information as to their present condition, whether solvent or not, and whether paying in specie, and adding a description of "spurious notes." After a slight hesitation, the perplexed librarian shook her head, and declaring her belief that my notes were as good as any others, said, if I would promise to take them back again on my return, and pay her in cash, I might have the volumes.

It often happened, that when we offered to buy articles of small value in shops, or fruit in the market, the vendors declined to have any dealings with us unless we paid in specie. They remarked, that their change might in a few days be worth more than our paper. Many farmers and gardeners are ceasing to bring their produce to market, although the crops are very abundant, and prices are rising higher and higher, as if the city was besieged.

According to Mr. LYELL, the Philadelphian repudiation was not quite as black a transaction as it was represented. He was present, and describes the ruin as tremendous. The bankruptcy was total, not partial. The holders of bonds at home suffered equally with those abroad.

It was painful to witness the ruin and distress occasioned by this last blow, following, as it did, so many previous disasters. Men advanced in years, and retired from active life, after success in business, or at the bar, or after military service, too old to migrate with their families to the West, and begin the world again, are left destitute; many widows and single women have lost their all; and great numbers of the poorer classes are deprived of their savings. An erroneous notion prevails in England that the misery created by these bankruptcies is confined chiefly to foreigners; but, in fact, many of the poorest citizens of Pennsylvania, and of other states, had invested money in these securities. In 1844, or two years after my stay in Philadelphia, the Savings Bank of New York presented a petition to the legislature at Harrisburg for a resumption of payment of dividends, in which it was stated that their bank then held 300,000 dollars, and had held 800,000 dollars, but was obliged to sell 500,000 at a great depreciation, in order to pay the claimants, who were compelled by the distress of the times to withdraw their deposits.

In fact, the Pennsylvanians did not pay, simply because they were insolvent; and not from any dishonest intent to defraud the foreign creditor.

In Nova Scotia, which is represented as a most uninviting country, Mr. LYELL met with remarkable kindness and attention.

I never travelled in any country where my scientific pursuits seemed to be better understood, or were more zealously forwarded than in Nova Scotia, although I went there almost without letters of introduction. At Truro, having occasion to go over a great deal of ground in different directions, on two successive days, I had employed two pair of horses, one in the morning and the other in the afternoon. The postmaster, an entire stranger to me, declined to receive payment for them, although I pressed him to do so; saying that he heard I was exploring the country at my own expense, and he wished to contribute his share towards scientific investigations undertaken for the public good.

With these specimens we reluctantly take leave of Mr. LYELL'S volumes, which we can heartily recommend to every book-club and circulating library, as a work sure to become popular, for it is substantially good.

POETRY.

The Maniac Improvisatore, and other Poems. By WILLIAM HURTON. London: E. Churton.

THE Rosinante of Don Quixote was not a more spavined, gravelled animal than the Pegasus on which Mr. HURTON rides. We have been speculating as to the cause of this. It may be that poor old Pegasus is worn off his legs by the number of riders who have spurred him since the time of HOMER. As the proverb says, a free horse may be ridden to death. Or it may be that he has tumbled down the side of Parnassus and sprained his ancle. At any rate, he limps very much, as our readers shall judge.

> In the southern part of that sunny clime
> Which has been termed the "Land of Song,"
> Di Luca with a proud head mocks Time,
> And stands forth the wild billows among:
> Its extreme point is a huge black rock,
> From which frequent rebounds the storm waves shock.

These lines are in the beginning of the *Maniac Improvisatore*. We doubt not the genuine *improvisation* of the verses we have quoted, and we should not be inclined to question the madness. They certainly were never written from close study, without which a poet is a thing of naught.

Mr. HURTON observes in his preface that "some who may glance over this little volume will in its author meet one whose acquaintance they have already made in one or more of the writings which, under assumed signatures, he has put forth from time to time." Herein lies the evil. Mr. HURTON has gathered, it seems, all his writings into one book, as a thrifty housewife sweeps crumbs into her apron, one half of which are not worth the gathering. He has overrated the public appetite, and catered as for a glutton, who never asks for *quality*. Mr. HURTON has entreated a candid review; but without imploring *our* candour, he may have reckoned upon it from the impartial character of THE CRITIC. It always pains us to call upon a man to withdraw himself from the flowery paths of poetry, since we know his love is rooted to them. There have been other labyrinths as difficult to find an exit from as that of Crete, and such a one is poetry. Mr. HURTON should be resolute, and strive to escape from it, despite the false praise of his over-earnest friends. If he must write, let him turn to prose. Notwithstanding his want of all poetic rule, we should not say this of Mr. HURTON if he had given us the slightest foretaste of poetic power. We cannot detect in him the spark that time and study can fan into a flame; and hence we infer that the recording angel has omitted Mr. HURTON'S name from the scroll of poets.

Love's Legends. By ARCHER GURNEY. London: Mitchell.

MR. GURNEY thinks that "superficial critics" may liken his *Bertha* and *Peri* to BYRON'S shorter poems and to MOORE'S *Lalla Rookh*. Probably they will be so likened from a similarity of circumstances; but if plots or situations be imitations, then are all poets imitators. It is straining at a gnat to say so much. It seems to be universally understood that a writer may take a plot that has been used by another, and only be called a borrower; but let him take the published thoughts of another and he sinks immediately into a thief. Mr. GURNEY has shewn in his *Bertha* the fall of an unsuspecting, generous child of nature, like the "Haidee" of BYRON, the "Alice" of BULWER, and the "Effie Deans" of SCOTT. He has only

copied a design. His thoughts, we think, are the promptings of his own brain.

The *Peri* is not like MOORE's poem of the same name, but in character like his *Loves of the Angels*, in which an ethereal being is enamoured of a mortal. All other natures would be too gross, heavy, and worldly, and therefore the *Peri* chooses a minstrel for her lover. This is a consolation for the poets! Having little of comfort and the good things of this world, they must think all earthly troubles counterbalanced by the eye of favour with which spiritual ladyloves behold them.

Mr. GURNEY's style is easy and flowing. He seems to have had considerable practice in versification. He rarely soars high, and rarely sinks low, but keeps a middle course betwixt the heavens and the earth. Occasionally a gleam of sunshine falls upon his wings, and then he sings with a more clear and musical voice, as—

> Oh, she was beauteous! Golden hair
> Streamed round her form in flowing tresses;
> Eyes hath she such as souls must snare,
> Lips hath she such as court caresses;
> A form not all too straight and slender,
> Yet light though rich in beauty's pride;
> And, more than all, a soul most tender,
> Which in such dwelling *must* abide.
> He sees and loves! Nor wonder ye
> That love in him so prompt should be!
> Within his soul the lightning lay,
> Ready to strike when beauty's ray
> Should, kindling, call it into play.

The three poems in *Love's Legends* being long, we should not be giving an idea of their merits by chopping off here and there a bit for extract.

We hope Mr. GURNEY does not deceive himself when he says, "My poems are written *for the many, and not for the select few.* If the many do not approve, I shall have written, or at least published, in vain." The many do not read poetry. It is too spiritual for the worshippers of pounds, shillings, and pence. Mammon has no spare moments in which to study verses. Do, Mr. GURNEY, be contented if your poems find their way to a few social hearths, and with the "select few." Be not surprised if your book be kicked out as an interloper from the market-places: better books have been served the like. A poet must live on the promises of hope, as an equivalent for actual disappointments.

If Mr. GURNEY be a young man, with the means of study, let him write again. We have an impression that he can do better things.

EDUCATION.

Campion's Penman's Delight. London, 1845. Darton and Clark.

THE penman will indeed delight in this elegant volume, which supplies to him a complete series of copper-plate specimens of fancy writing of all kinds known in caligraphy, and many which we see here for the first time. As we open, the eye lights upon an illuminated title-page, itself a very gem; then follow the letters in every graceful form, and with the multitudinous adornments the most skilful pens have thrown about them; lastly, we are presented with a series of sentences fancifully designed with exquisite taste and in astonishing variety. We most cordially recommend this beautiful volume to all who desire to accomplish themselves in the art of caligraphy; it is by far the most tasteful and perfect teacher we have ever seen, and proves that the art of writing may be elevated to become a branch of the fine arts.

The Comic Music for the Million. London: Darton and Clark.

ONE of a series of little pamphlets, suggested by the success of the *Comic Latin Grammar*, and framed on the same plan. The philosophy is conveyed through the medium of fun, both by letterpress and by clever wood-cuts. We much doubt whether this novel mode of conveying knowledge be a proper one; if it will not associate a serious matter with ridiculous notions in the young mind. This, however, is open to question, and they who think otherwise will find the *Music for the Million* comic enough for their purpose.

The Alphabet of Nature, &c. By ALEXANDER J. ELLIS, B.A. London, 1845. Bagster and Sons.

A Manual of Phonography. By ISAAC PITMAN. Seventh Edition. 1845. Bagster.

The Phonotypic Journal, published Monthly. Bagster.

ALL these publications proceed from the same source. Mr. PITMAN, of Bath, has been for some years engaged in framing a system of phonography, or signs by which sounds may be expressed, so that the same signs may serve as a universal medium for communication among all people, and for all languages. The analogous instance of music probably suggested the perfect practicability of a design, the worth of which, if successful, would be beyond calculation. The same note in music conveys precisely the same idea of sound to every person of every clime and tongue in the civilized world. No reason can be assigned why signs should not be agreed upon whereby to convey to all the same spoken sound. The scheme is manifestly practicable in itself, provided only that the consent of the world be obtained for its universal use. Mr. PITMAN has framed his plan with great ingenuity; and it possesses the added advantage of being stenographic, or a short hand, as well as phonographic, or suggestive of sounds. Whether it will be possible to induce men to adopt a new form of communication by writing, is a problem to be solved by experience. At all events, Mr. PITMAN is using the proper means to the attainment of his end by a periodical publication, in which practical proof is given of the applicability of his plans to the purposes of life; and this, as well as his manual, will well reward examination.

Conversations on Arithmetic. By Mrs. HENRY AYERS. London: Souter and Law.

"THE design of this work," says the ingenious authoress, in her preface, "is to simplify and render agreeable and pleasing to children a study which is frequently looked upon as tedious and incomprehensible, and therefore only regarded with feelings of dread and dislike."

The excellence of such a design will be denied by none; but its practicability many will doubt. The attempt to simplify the study of arithmetic has been often made, but with very indifferent success, not, however, from obtuseness on the part of the instructors, but from the inherent obscurities of a science whose theory is beyond the grasp of the young mind, although its mechanical practice is to be readily acquired.

Mrs. AYERS, if she cannot boast a conquest over difficulties that have defeated all her predecessors, may certainly claim the merit of having done more to help her pupils through them than any other teacher we can remember. In the form of familiar conversations between little Lavinia and one Constantia, a friend of the family, Mrs. AYERS has contrived to explain not only the rules of arithmetic, but their *rationale*, and thus to introduce the unsuspecting reader into the arcana of science almost without his being aware of his progress. This volume is peculiarly adapted for use in schools and families, and few will make its acquaintance without thanking us for calling their attention to it.

The Young Christian's Companion; a series of Addresses adapted to Youth of both Sexes. By Mrs. AYERS. 2nd edition. London: Souter and Law.

THE subjects upon which Mrs. AYERS addresses the young in the language of piety, directed by experience of the world, and in a tone of affectionate exhortation, which cannot but win a patient hearing from those to whom she speaks so kindly, are such themes as "Obedience to God," "The Duty of Prayer," "The Study of the Scriptures," "Public Worship," "Conversation," "The Employment of Talents," "Evil Speaking," "Truth," "Friendship," "Conduct to Inferiors," &c. &c. A more useful little book could not be placed in the hands of children.

MISCELLANEOUS.

Flowers of the Matin and Even Song; or, Thoughts for those who rise early. By MARY ROBERTS. London, 1845. Grant and Griffith.

"EVERY flower telleth its own tale to the ear of reason, yet men pass by unheeding. Women, too, and young children, who love flowers and ask questions concerning them, seem alike regardless of the small voices which speak from out the brakes and hedge-rows, the gaily decked meadows, and daisied commons. I have listened to those voices, heightening the delight of every country walk, and I have desired that I should profit likewise. Amid those mingled voices, therefore, I have sought to embody a few of the most interesting, and to describe especially such flowers as observe a fixed time of opening or shutting, and from which LINNÆUS constituted his celebrated Horologe, or Watch of Flora."

Such is the appropriate preface to this elegant little volume, and the excellent design thus described has been accomplished with the enthusiasm of one whose heart was in her work. Here we have the poetry of flowers; the best thoughts with which they have inspired the best writers, accompanying a

brief and pleasantly written natural history of each, from the pen of the authoress. Coloured prints illustrate the text, and the volume, thus abounding in beauties for the mind, is made attractive to the eye by the best paper and type, and a neat binding with gilded edges. It is just the book for a school prize or a midsummer present, to be read in the country during the summer holidays, amid the objects so charmingly depicted in its pages.

A brief Account of the Parish of Stowting, in the County of Kent, &c. By the Rev. FRED. WRENCH, Rector of Stowting. London, 1845. J. R. Smith.

IN the village of Stowting, situate about six miles to the north-west of Hythe, were discovered, some few months since, a quantity of ancient weapons, ornaments, a vase, and coins. Of these engravings have been made, and are now presented to the notice of the curious; with this additional recommendation, that the profits arising from the sale of the work are to be applied towards the restoration of an ancient stained glass window in the parish church.

JOURNAL OF FRENCH LITERATURE.

Painting among the Ancients, followed by the History of Painters. By ALEX. DUMAS. Two vols. 1845.

THE first section of this work might more properly have been called "The Early Histories of Greece and Rome;" for, sooth to say, the author troubles himself but little about the arts; mention of them being only incidentally made where they affect the progress of the rising colonies. The book is, altogether, a disappointment; a crude, cold, uninteresting compilation from standard authorities, condensed in an unsympathetic, business-like spirit. An elaborately articulated skeleton, without one rag of drapery to soften down its angular proportions. It has evidently not been a labour of love; and is consequently more than usually redolent of the defects of style attributed to M. DUMAS. It is with some difficulty that we have collected here and there a fragment in his better manner; and these have only led us the more to regret that he should not have brought, if not more pains and carefulness, at least a little more enthusiasm, to his self-delegated task.

PAINTING AMONG THE EGYPTIANS.

One of the first conditions for reproducing the beautiful is to have it constantly before the eyes, and upon this point the Egyptians, those first masters of the art, were not, it must be confessed, favoured by nature. Even as among the Chinese, the Hottentots, and the Laplanders, their men and women have a distinctive character of face, and for that reason no variety of physiognomy. The men were stout and heavy; the women, those fruitful mothers, were maidens sufficiently unattractive; while each and all had that tawny description of skin which caused them to be called Egyptians, or *sun-burnt*. The handsome Egyptians, of whom speak the two Latin satirists, were from Alexandria, that is to say, Greeks, born of Greek parents. On the other side, thanks to the ardent imagination of the Orientals, who incline rather to seek the extraordinary than the beautiful, the Egyptians, like the Persians, instead of making their gods in their own likeness, and endeavouring to elevate the divine nature by the perfection of forms, selected gods who were at once fantastic and monstrous. Osiris had the head of a hawk, Anubis had a dog's nose, Isis had horns on the forehead, and the Sphinx, those strange hermaphrodites of the Nile, had, as everybody knows, the head of a man, the bosom of a woman, and the claws of a lion. The Egyptians had consequently no chance of discovering the beautiful, either upon their earth or in their heaven.

This was not all: in the same spirit as their physicians were directed never to go beyond the prescriptions inserted in their sacred books, so were their workmen in painting and sculpture ordered to seek no new style, but strictly to follow up that which had been already adopted; we say workmen, and not artists, for they were really mere workmen, who undertook to shape porphyry, and to daub tombs, not from any inspiration of individual genius, but because their fathers had done the same before them. As to any progress in anatomy, it is clear that such was out of the question, all sections of the body being forbidden; the embalmers themselves, who were only permitted to make one solitary incision on the side of the corpse, being, at the close of the operation, pursued by yells and execrations, as well as having stones flung at them by the relations and friends of the person whom they had embalmed.*

* Diodorus of Sicily.—*Winkelmann.*

Thus, from the unknown centuries in which it commenced, to the day when the Ptolemys closed the Nile with their new empire, Egyptian painting had made but slender progress; it presents always the same harsh figures in profile, denuded of anatomy, grace, or picturesque effect; advancing stiffly one foot upon the other, and sometimes even painted entirely in blue, on a black ground, like the little Osiris found at Herculaneum.

All these circumstances were consequently opposed, as will at once be evident, to the discovery of the beautiful by the Egyptians, as Europeans understand the term.

Similar summaries of Etruscan and Greek art succeed; and it is much to be deplored that such passages as we have already stated are merely episodical, the foundation of the work being a dry, hard, historical compilation, containing a detail of facts of which a boy of the fifth form would be caned for being ignorant. We turn with pleasure to the biographical sketches which form its sequel. We have had more than one author in our own country engaged upon the "Lives of the Painters," our valued and lamented friend ALLAN CUNNINGHAM among the rest; but his were English painters, and the difficulties of the undertaking were consequently increased tenfold, for he was perpetually *en pays de connoissance*, where the slightest error or exaggeration would have been at once detected and exposed. We all know how admirable a work Lady MORGAN produced on the life of only one of the old masters, and we are compelled to allow that M. DUMAS has produced a set of sketches, not one of which is indebted to his pen for any interest which it may possess. As in the opening portion of the book, we are here again duly favoured with dates and names of scrupulous correctness; but in reading of art, we seek to catch something of its inspiration; and when we follow, step by step, the career of those who have made through its glorious medium their names a watchword in the whole civilized world, we desire to be aroused out of our apathetic earthiness, and to be inspired with an earnest wish to kindle our own torches at the same holy altar. Alas! M. DUMAS is no Pygmalion; he has drawn down no fire from Heaven. Not a pulse has throbbed as he wrote. Here and there the natural romance of events has been too much for him, and we have accordingly charming little passages which give us an insight into the spirit depths of the great men of by-past days, when emperors sat beside their easels, and kings were jealous of their friendship. We will extract one or two of these for the amusement of our readers. The biography of LEONARDO DE VINCI is the most interesting of the collection. According to the sketch of M. DUMAS, he must have been another admirable CRICHTON.

LEONARDO DE VINCI.

Leonardo was born at the Chateau de Vinci, of which the ruins may still be seen near the lake of Fucecchio, a few leagues from Florence; thence his name of Leonardo de Vinci. He was the natural son of a notary. Assuredly, the proverb which states that children so born are always more happily endowed by nature than others, must acquire increased credit from the example of Leonardo, predisposed as he was from his birth to elegance, art, and science. His face was handsome, his figure admirably proportioned, his intellect quick, and his application steadfast and persevering; and, rare indeed! with the rigid and exact judgment of the mathematician, he possessed the brilliant imagination of the artist; and with the apparent frivolity of the man of the world, the profound application of the scholar. Accordingly, on seeing his son at once a poet, a geometrician, a mechanic, a painter, a dancer, a horseman, and a musician, the good notary could not decide upon the future pursuit of a youth whom all around him agreed to look upon as a prodigy of universal precocity, when the boy relieved his father from all further difficulty by declaring that he would be a painter. The worthy notary upon this collected some of his son's drawings, and carried them to Andrea Verrocchio, another phenomenon of the same description, who had earned for himself a five-fold reputation as painter, statuary, engraver, goldsmith, and musician. Verrocchio looked at the drawings with an attention which indicated their importance in his eyes, and asked Master Peter (Leonardo's father) from what artist he had obtained them, to which question Master Peter answered that the artist was his own son, a boy of twelve years old. Verrocchio would not believe the tale, so the child was brought to him, and in his presence sketched some groups of men, animals, and flowers. The incredulous Verrocchio was, of course, convinced, and young Leonardo entered the *atelier* of the master whom he was soon to surpass.

Three years afterwards, Andrea Verrocchio was painting for

the monks of Vallambrosa a picture of St. John baptizing Jesus. Leonardo executed in this picture an angel so full of grace (now shewn as his first work) and which his master considered to be so perfect, that he would not retouch it. It consequently remains as it came from the pencil of an artist of fifteen.

But while he was becoming a great painter, Leonardo did not abandon his other accomplishments. He played upon several instruments, and, among others, on a lyre, of which he was almost the inventor; a clever chemist, he amused himself by composing, of different unsavory materials, some detestable odour, which compelled all who were in the room to desert it; at another time he applied mechanism to the purposes of magic; an arm-chair, where an impertinent critic believed himself to be solidly seated, would make the circuit of the apartment to the great terror of the victim of this unexpected locomotion; he made birds which flew alone, and quadrupeds which walked by hidden machinery; he invented machines for perforating rocks, and instruments for raising enormous weights; one day he proposed to lift the church of St. Lawrence, and to replace it upon a fresh foundation. In short, nothing was talked of in Florence but the young Leonardo de Vinci.

We cannot forbear transcribing one anecdote of this celebrated painter, which strikes us as highly characteristic of his painstaking, imaginative, and yet joyous nature.

THE HEAD OF MEDUSA.

One day a peasant called upon Ser Piero, and brought to him a sort of shield, which he had made from the trunk of a fig-tree, begging him to have it covered with some of his son's painting; he cared not what the subject might be, and left the artist at full liberty to follow his own fancy. As the notary, who was a zealous sportsman, had often found this same peasant a capital poet and companion, he undertook the commission, and promised to give the shield to Leonardo. The painter began by passing the shield through the fire, and then having polished it, he whitened the whole surface. During this time he was dreaming of what he should paint upon it, and he ultimately decided upon a head of Medusa. Accordingly, he collected in his workshop, which was closed against every one, adders, lizards, bats, toads, crickets, grasshoppers, and moths; and from all these hideous objects, these fantastical and noisome reptiles, he composed one solitary monster, which, crawling from beneath a rock, shot fire from its eyes, and smoke from its mouth and nostrils. It was the Medusa of which he had dreamed.

At last, satisfied with his work, Leonardo placed the shield in a favourable light, framed it in with moss and branches, and, calling his father to him, pointed it out. Hercules would have discovered in it a new hydra to attack, and would have fallen upon the shield with his club. *Ser Piero* was not a Hercules; he shrieked, and tried to escape, but Leonardo held him back.

"All is right, father," he said; "I have accomplished my wish: what you have taken for an unknown and living monster, is nothing but the painting which you asked for; take your peasant's shield and carry it away with you."

So saying, the young Leonardo tore aside the moss and leaves, took the large shield, and presented it to his father, who received it with some reluctance; but, when he became quite convinced that it was in fact a miracle of art, and not a caprice of nature, he did not require to be told twice to secure the prize: he took the master-piece, and carried it away; only, as it was necessary to return a shield to the peasant, *Ser Piero* purchased an old escutcheon which he met with by chance, on whose surface was painted a heart transfixed by an arrow; and gave it as something precious to his shooting companion, who fortunately understood sporting and fishing better than painting. As to the Medusa, he sold it for one hundred ducats to some dealers, who resold it shortly afterwards for three hundred crowns to the Duke Galeas.

One more anecdote, and we have done.

JEAN BELLIN.

Towards the conclusion of the year 1452, in the time of the unfortunate Francis Foscari, who, eight years previously, had been compelled to sign the sentence of his son James, and who five years afterwards, was himself deposed, a foreign painter, preceded by a brilliant reputation, arrived at Venice.

He was called Anthony of Messina, according to the custom of the times, which generally added to the Christian name received at the font, that of the locality to which the individual owed his birth. He was said to have inherited the secret of a Flemish artist; a secret which gave to his pictures so clear and brilliant a colouring that nothing in art had hitherto so thoroughly succeeded in emulating nature. * * * * All the ardent youth of that generation which was to witness the birth of Titian and the death of Gentile de Fabiano, was in commotion to gaze upon the first works which the foreigner would exhibit. And two months after his advent, a portrait was exposed to public admiration, which far surpassed all the promise of his fame. It was that of a senator. Never, indeed, had been seen a painting so striking, tones so harmonious, shades so softly blent. All Venice clapped its hands before this painting.

The next day a young noble who had arrived three days before from Padua, as he affirmed, called upon the painter in order to have his portrait taken. The price, debated for an instant, was fixed at twenty golden ducats; and as the stranger appeared hurried to return to Padua, the first sitting was arranged for the following day; Antonello merely stipulating that the stranger should retain the same costume which he then wore, and which was so elegant in its form, and so harmonious in its tones, that it appeared to have been draped by a statuary and selected by a painter.

At the appointed hour the young man arrived. He was, at least in appearance, one of those useless dandies who pass their lives in following ladies to church, or princes to the chase. Of art, according to his own account, he knew nothing; loving it by instinct, as every Italian of that time loved it; but arguing the subject of painting with an ignorance which, more than once, made the learned professor smile, to whom he had addressed himself to transmit his features to posterity.

Nevertheless the sitter observed the labours of the master with extraordinary curiosity. In the first operation, which consisted in preparing his colours on the palette, and diluting them with an unknown liquid, which was, without doubt, the secret of Antonello, he did not lose sight of it for a single second, a circumstance which the painter remarked to him. He replied, with charming simplicity, that his doing so could scarcely be considered wonderful, as not only it was the first time that he had seen an artist at work, but also that he had never before been in a painting-room.

Antonello believed him; and there was so much frankness in the tone and look of the young noble that he continued his operations without the slightest misgiving.

So passed the first sitting. Antonello wished to defer the second for a day or two; but the stranger, still under the pretext of his wish to leave Venice, requested so pertinaciously that no interval might accrue, that the painter consented to receive him again on the morrow.

The next day the sitter followed all his movements with the same attention; but the artist had ceased to observe any caution in his presence. The stranger was so ignorant of art that he had no apprehension of the discovery of his secret; nevertheless either by chance, by some unconscious remains of distrust, or simply from an excess of politeness, Antonello did not leave his visitor for one moment alone.

The following morning the stranger arrived at the same hour; but on this occasion, just as Antonello was diluting his colours, the young man ventured to ask him, with an air of perfect indifference, the nature of the ingredient which he used for this liquefaction. The painter replied that it was an elixir which he had invented, and which was so expensive that it had compelled him to raise the price of his pictures; and there the subject dropped.

Before the conclusion of the sitting, a young girl, who served as a model for the first Venetian artists, knocked at the door of Antonello, who had desired to see her. Antonello, informed that she was waiting in an adjoining room, desired she might be told that he wished her to come in the evening, as he could not then attend to her; but she sent him word that she had no time to spare in the latter part of the day, and that he must come and look at her at once, or she would not return.

Antonello, grumbling at her resolution, rose and went into the other apartment, begging the young noble to excuse him, which he did in the most gracious manner possible. Scarcely had the painter closed the door behind him, when the stranger bounded from his chair towards the bottle which contained the precious elixir, filled from it a small phial prepared for the purpose, and replacing the bottle on the bench, and the phial in his pocket, resumed his seat and the attitude in which Antonello had left him so promptly, that when the painter returned, five minutes afterwards, nothing appeared to have changed its place.

The work had progressed rapidly; it required but an hour or two more to complete the *chef-d'œvre*, and it was arranged that the young noble should take his last sitting at the same hour on the morrow. Before he left the painter, the stranger, who appeared to be enchanted, compelled Antonello, although greatly against his inclination, to receive the twenty ducats, which was the sum agreed on, for the yet unfinished portrait. The painter raised several objections to this prepayment, to which he was only reconciled by remembering that one more day would complete it.

The sitter then took his leave, and walked from the house at a calm and leisurely pace; but scarcely had he turned the corner of the street, when he ran at full speed towards the nearest canal, threw himself into a gondola, and desired the boatman to row him home with all possible despatch. Ten minutes afterwards he rushed into an apartment, or rather into a painting-room, whose walls were covered with madonnas, saints, and christs,

seized a palette, poured upon it some drops of the precious liquid, diluted his colours, and convinced himself, by a few touches upon the canvas, that so soon as he should have discovered the composition of the elixir of which he possessed a sample, he should be as skilful as Antonello. The difficulty was to ascertain of what the elixir was compounded.

He examined it in the light, tasted it with the tip of his tongue, poured a few drops upon paper, then upon different stuffs, and saw with the greatest astonishment that the elixir was simply an oleaginous matter exactly resembling oil. He hastened to an alchemist with whom he was acquainted, and gave him the phial, begging him to analyse the liquid which it contained, and to acquaint him with its nature. The alchemist, on seeing it, began to laugh, telling him that it was oil; and, on a second look, he affirmed that it was linseed oil.

The young man was overwhelmed with astonishment. As he returned home, he purchased a bottle of this oil, and passed the whole of the day in painting upon the new system which he had surprised, and when the twilight came he had thoroughly convinced himself that he possessed the secret of Antonello of Messina.

The following day he kept his appointment; but when the painter begged him to assume his accustomed position, the stranger laughingly replied that it was useless for them to fatigue themselves by this constraint, for that he would finish the portrait himself. Antonello gazed on him with astonishment; but the young man requesting of him the loan of his palette, and, taking a brush, commenced with his usual talent, painting in the gold chain which hung from the neck of his own likeness. The young artist who had thus discovered the secret which Antonello had inherited from Van Eyck, was John Bellin, who was born about 1426, and was then between 26 and 27 years of age.

The biographies of ALBERT DURER, of BACCIO DELLA PORTA, the convert and friend of SAVONAZOLA, known as FRA BARTOLOMEO, and of LUCA CRANACH, the friend of LUTHER, are, after that of DE VINCI, those which possess the greatest share of general interest. On the whole, the book is nevertheless a failure. The material for an admirable work is indeed there; but it is merely the block of marble, precious in itself, but awaiting the touches of a skilful hand to increase its value a thousand-fold. The talent of M. DUMAS is, however, so versatile, that he may well find indulgence for a single failure, even although it be a signal one. He evidently cannot *feel* art. He talks of it "as maids of fifteen prate o' puppy dogs;" and he depresses where he should elevate the sympathies of his reader. It is, nevertheless, extraordinary that an author possessed of so fertile and facile an imagination as M. DUMAS should, upon such a subject as painting and painters, have suddenly set himself down to write like a lexicographer or a mathematician, and have thrown off so entirely the graceful mantle of the poet and the novelist. Precision and correctness were, we admit, indispensable; but these are not inconsistent with grace and melody. No one knows better than M. DUMAS that *artis est celare artem*, and we therefore the more regret that on this occasion he should not have put his knowledge into practice, and presented to us a composition of beauty, as he might have done, instead of giving us, in the words of the Irish baronet, "a bone to pick."

LITERARY GOSSIP AT PARIS.

(*From our Correspondent.*)

If not the last *on dit*, at least the loudest in the literary and artistic coteries of Paris, is the rumoured elopement of the Viscountess de Saint Maro (better known to the public by her *pseudonyme* of La Comtesse Dash, under which appellation she has published several works of fiction), with the stripling son of the Hospodar of Moldavia. The lady, although long separated from her noble husband, is still a wife, the Viscount being in full health, and the Roman church not admitting divorce under any circumstances. It is stated that they were, however, divorced in Moldavia according to the laws there existing, and forthwith united; a union which cannot of course be recognised as legal in the country of the adventurous heroine. *Madame la Viscomtesse* is no longer young, but more than double the age of her innamorato, who is said to have been dazzled by the *prestige* of her fame. We do not attempt to vouch for the accuracy of these facts, but give them as they were related to us. It is true that this is the season when the Parisians of the *grande monde* are all in *villagiatura* on their respective estates, and when *canards* of every description are invented for the amusement of those less favoured portions of the population who are compelled to content themselves with the lime avenues of the Tuileries, and the rural shades of the Champs Elysées, and the Bois de Boulogne. We trust, however, that the most hoax-loving of our gay-hearted neighbours would not have ventured upon so minute and identified an anecdote without foundation. Of this we are certain, that had the accomplished Viscountess known as much of Moldavia and the Moldavians as we ourselves do, she would have remained very contentedly in Paris, even in her state of premature widowhood.

Madame de Montgolfier, the wife of the celebrated auronaut died last week at Paris at the patriarchal age of 111 years. This venerable lady was eminently distinguished for elevation of character, liveliness of intellect, and for her great conversational tact, nor will the void which she has left in an extensive circle be readily filled up.

All Paris has been thrown into confusion by a moral-quake. M. Victor Hugo has, it is asserted, forgotten his dignity, both as peer of France and as father of a family, and given occasion for an affair before, not "the gentlemen of the long robe," but the Upper Chamber, of which he has so lately become a member. We cannot permit ourselves to make further mention of this matter in the pages of THE CRITIC, than that the lady is wife to a distinguished painter; and that immediately on the discovery of her frailty she was, according to the French law in such cases, conveyed to prison. The *Quotidienne* states that M. Hugo is to escape scathless; the *Gazette de France*, on the contrary, affirms that the injured husband will carry his complaint bafore the Chamber of Peers. It is a singular fact, of which the present circumstance is only another example, that *esclandres* of this description are seldom caused in France by any but middle-aged men; it is rare indeed to find *la jeunesse* figuring as defendants in cases so extreme.

JOURNAL OF GERMAN LITERATURE.

Bericht über die bewirkte Untersuchung einiger Theile des Mosquitolandes, erstattet von der dazu ernannten Commission. (*Report of the Examination of some parts of the Mosquito Territory by the Commission named for that purpose.*) 1845. Berlin.

THE object of this commission, undertaken during the spring and summer of the past year, will be best explained in the words of the preface. "The commission was intrusted with the task of examining the Mosquito country, and in particular that part of it now offered for purchase, in the shortest possible space of time, geographically, statistically, historically, and politically, with reference to the condition of the ground, the native animals, and the indigenous plants, the inhabitants of the country, and their way of life; with reference also to the climate, and its effects upon the health; in reference also to the agricultural and commercial relations of the country, both now and hereafter, all to be examined in so far as is necessary to answer the inquiry, whether the establishment of a German colony in that country would promise encouragement and success."

With this design the commission left Berlin on the 10th of April, 1844, and after various delays succeeded in reaching the Mosquito country, Cape Gracias a Dios, on the 10th of June. The investigation occupied them until the 2nd of August, when they sailed to Belize, and from thence returned home by North America, reaching Berlin on the 14th of October. The present volume contains the result of the inquiry, in a notice of its history, a review of the condition and customs of the inhabitants, the state of agriculture, &c. the whole terminated by copies of documents referring to grants of land from the king of the Mosquito territory to various individuals, and a succinct account of the language, specimens of Indian composition, a vocabulary, and so forth. The exact situation of the Mosquito land may not be clear to many; for their benefit, therefore, we may state that it is that portion of Central America first trod by COLUMBUS on his fourth voyage; hitherto it has remained almost as much unknown to Europeans as at that day; the information spread concerning it has been remarkable for unfounded statements and careless reports. The name itself has caused some discussion, many supposing it to have arisen from the swarms of mosquitoes which were said to infest the coast. There is a note on the subject, which is worth extracting.

The inhabitants of the Mosquito country, with the exception of some European settlers, are aboriginals, giving themselves the general name of Misskitös, and are called by Europeans Indianos, Bravos, Moscos, Mosquitos, Mosquito Indians. It has frequently been the question, to what circumstance this country owes the designation of Mosquito Coast, seeing that the insects known by that name are here far less numerous than in

many other coasts of America. Some time since the opinion was current that the name had been acquired from the numberless small islands, lying near the coast, which have been said to have the appearance of innumerable flies swimming on the water. Upon a map, perhaps, one's fancy may discover some truth in this resemblance, but hardly in looking upon the reality, where the islands, viewed either near or at some distance, have, if possible, less resemblance to flies than to any thing else. It may be permitted to add one more conjecture to the many that have been broached on this subject. Let us then suggest that the name of the coast is derived from that of the inhabitants, and that the latter is originally an Indian name, corrupted by the Spaniards; for it must strike all who hear them that the Indians, who, from their intercourse with the Spaniards, are perfectly well acquainted with the expression mosquitoes for flies, and are also in the constant habit of using it, never call themselves Mosquitos, or Mŏskĭtŏs, but on the contrary style themselves distinctly and uniformly Mueskitos (Misskitŏs); and if the other word is applied to them, they correct it carefully, adding, "Mosquitoes are flies,—we are Miskito men," as has more than once occurred to us. If now, the race originally living on the coast were called Misskitos or Misskos, it is highly probable that, naming themselves thus to the first Spaniards arriving in their territory, these latter gradually corrupted it, and applied to them, instead of Misskito, Mosquito, the name of the numerous insects on the coast.

The entire region known under this denomination is inhabited by several races, differing much one from the other in external appearance, and but little as regards manners and customs. Their chief divisions are three—the tribe of Sambos, the original Indians, and the Karaibees. The former comprehend the reigning power. All live in established dwellings, passing their days in hunting and fishing, cultivating just so much of the land as is necessary for their existence. Far up the country there are said to be yet some wandering tribes seen about, but our writers saw nothing of them. There are, of course, no means of rightly estimating the amount of population. Their history is absolutely buried in darkness; the few occurrences they relate are only sufficient to render "confusion worse confounded." Their months are reckoned by the moon, but of years they keep no account, and no man knows his own age; consequently, whatever they relate is marked by disorder and confusion. It is, however, well known that they resisted the arms of the Spaniards under Alonzo de Ojada and Diego di Nicuesca, yielding neither to their force and cruelty, nor to the mandate of the Pope, which enjoined them to "deliver themselves peacefully to the dominion of the lawful ruler of the world." To this day their hatred to the Spaniards is intense; tales of their horrid barbarity are transmitted from father to son; and this quiet and gentle people become violently excited at the idea of subjection to, or friendship with, a Spaniard. Spaniard and enemy are, in their language, the same thing.

The first colony laid here was in the year 1730, when some English settled near the Black River, Cape Gracias a Dios, and at Blewfields. During the war between England and Spain in 1739, a few forts were built for the protection of the young colony, which, with the exception of some disasters, continued in a flourishing condition until, in consequence of the peace of Paris (1783), the colonists were commanded to evacuate the country. Some few, however, in Blewfields, remained in their possessions; and the Indians, left once more to themselves, were attacked by the Spaniards, who were anxious to secure the deserted fort at the mouth of the Black River. This unsuccessful attack was also the last made upon the unfortunate Indians by their ancient enemies.

Much has been attempted by their late kings, who have had the advantage of education among the English in Jamaica, to improve the condition of their people, but hitherto without any success deserving of mention. Civilization of a barbarous people can only be accomplished by education of the rising generation.

It is a source of great pleasure to the Indian to see a European employed with and instructing his children. It flatters his vanity that they should become like the wise white men, and what indolence and custom alike render useless and indifferent to him, he is most anxious and eager to secure to them. With the greatest interest the Indians inquired of us whether the second son of the deceased king, Prince Clarence, who had been sent to England for his education, had already learnt much; whether he knew as much as a young Englishman of his own age; and it caused universal satisfaction when we answered in the affirmative, and in proof thereof produced a letter written by the Prince to his mother, which our fellow-traveller, Captain Willock, had to deliver. The young Indians are, moreover, willing and eager to learn, very quick in acquiring knowledge, and gentle and confiding in disposition, when once the timidity is overcome with which a white man at first always inspires them. Education of the young is the only means by which this long neglected people can be led to civilization. And for two hundred years, since which England has been the confederate of this nation, nothing has been done! Inquire what means have hitherto been used to give these people any sort of instruction, and we find that here and there an English missionary has appeared among them, and as long as he gave brandy he found ready listeners. When they cease to give spirits, the hearers cease to come near them. * * * They have no ideas whatever concerning the creation. The stars are, in their opinion, bright stones. They believe in a superior benevolent Being, but without thinking it necessary to worship him; on the contrary, all their thoughts and ceremonies are consecrated to the evil power, whom they believe to be omnipotent, and finding his greatest delight in tormenting and destroying mankind. When asked why they never pray to God, but always to the devil, the answer immediately follows, that a prayer to the good spirit is not necessary, for he gives them all good things without their asking, and it is only the devil who ever prevents him, therefore they must pray to the devil to grant them the good and spare them the bad. Herewith they have the greatest fear of spectres, so that after the sun has gone down, no Indian will leave his hut alone. They lay their dead in one-half of a canoe, while the other half covers the body, and thus they consign them to the earth. Their belief in the duration of life after death is manifest in their burials. They provide the dead with victuals and hunting implements, that he may have all things ready for the other world, and long after the death, they continue to lay meat and drink upon the grave, while they dance and sing around it. But where and how the life continues they have no idea whatever. Superstition forbids them to speak of, or even name, the dead. Another custom, alike peculiar and disastrous to the land, is that of cutting down every palm-tree at the death of the Indian who planted it. * * * Their dances are entirely confined to the girls and women, accompanied with drums, songs, and little clappers, which the dancers hang round their necks, made from the dry shell of the unripe calabash fruit. The dances consist merely of movements to and fro of the upper part of the body, while the feet move slowly to correspond. Beyond every thing, the Indians are delighted with listening to stories and tales, the more wonderful the better. For hours together they will sit around the clever story-teller in wondering silence. But they all know that what they have heard is but fiction, and one would be mistaken, therefore, in concluding them to be credulous. "It is all lies!" say they, rising slowly when the tale is ended, their faces beaming with pleasure, "It is all lies—but very beautiful!" * * * Generally speaking, their huts contain but one room. A fire glimmers all day, and great part of the night, on the centre of the floor, while near, and almost directly over it, are the hanging beds, swinging between two beams. In these hammocks the male inhabitants of the hut generally pass both day and night in the *dolce far niente*, while the women either sit cowering over the fire, or employ themselves in household matters. Besides the beds, there is little to be found in the Indian hut; a few calabashes, perhaps, serving for eating and drinking utensils, and an iron vessel. Here and there, too, one may discover a broken plate of English ware, a fishing-net, an old musket, or a sword-formed axe, a spear, and a bow and arrows. With these, one sees not less miserable specimens of their food, oyster-shells, a bundle of plantains, cocoa-nuts, and red palm berries. Proper sharers in this domestic economy, where dirt and filth of all kinds fail not, are their pigs, fowls, and lean, hungry dogs; and what a contrast to the luxury of nature without! * * * The cocoa-nut palm is not only the most beautiful, but one of the most useful trees growing in these parts. They plant them by means of the ripe nuts, which are allowed to lie unmolested on the ground, until the young shoots appear. When the shoots reach about half a foot in length, the nut and shoots are planted in the earth. The tree grows rapidly, in the sixth year bears fruit, and, one year with another, brings every month from fifteen to five and twenty nuts. After thirty, the tree produces no more nuts.

Several chapters are devoted to a detail of the natural productions, both animal and vegetable, of the kingdom. America is well known not to present such a variety of the former as the Old World, and the Mosquito Coast, in particular, bears evidences in its formation of its comparatively late origin. The wild horses scour the savannas in countless herds; the Indians catch them with the lasso, but use them only for riding. The cattle are in great beauty and perfection,

but left almost wholly wild. Such a thing as a drove of cattle is not to be seen in the possession of an Indian throughout the entire Mosquito Coast. They eat the flesh of the alligator, and consider it a luxury.

It has been ascertained by experience that the alligators desert a place near which men have established themselves. Five or six years since, some Indians settled themselves on the mouth of the Alligator Creek, above the Segovia River, and made vigorous war upon the numerous alligators in their neighbourhood; but, before long, they remarked with astonishment that they had completely deserted the river; and many similar examples are related. We caught a young alligator of a foot and a half in length, with the design of bringing it alive to Europe, but, during the very stormy passage we had through the Gulf Stream, it died, and became so rapidly putrid that not even the skin could be preserved; for no one would undertake the business of drawing it off and stuffing it, and we had neither spirits nor brandy on board.

Our extracts have already been sufficiently long; we must therefore take our leave of this volume, trusting that the next colony which wends its way to the Mosquito Coast may prove more successful than that under MACGREGOR in 1820, of which not a trace now remains. This result, however, is ably proved to have been the consequence of mismanagement in the beginning, and MACGREGOR'S folly afterwards, and not the effect of climate or country, as generally has been considered.

JOURNAL OF AMERICAN LITERATURE.

Lowell's Conversations on some of the Old Poets.

[CONCLUDING NOTICE.]

FROM the home truths given in our last number let us turn to a passage not less truthful and still beautiful.

THE HUMANITY OF THE POET.

Surely, you jest. A greasy savour of the kitchen intrudes itself into whatever is done for the belly's sake. No. What a man pays for bread and butter is worth its market value, and no more. What he pays for Love's sake is gold indeed, which has a lure for angels' eyes, and rings well upon God's touchstone. And it is love that has inspired all true hearts. This is the ample heritage of the poets, and it is of this they have made us heirs. When the true poet is born, a spirit becomes incarnate which can embrace the whole rude earth as with the soft arms of a glorifying atmosphere. The inarticulate moan of the down-trodden he shall clothe in language, and so wing it with divine music that the dullest heart shall look up to see it knocking at heaven's gates. The world's joy, ere-while a leaden cloud, shall turn gold under his sunlike look. And when such a spirit comes forth from its heavenly palace, where it had been wrapped softly in the imperial purple of noble purposes and happy dreams, and tended by all the majestical spirits of the past—when it comes forth in obedience to the beckonings of these its benignant guardians, saying, "Behold, my brethren are ahungered and I will feed them; they are athirst and I will give them drink; my plenty is for them, else is it beggary and starving," and is jeered at and flouted because it can speak only the tongue of the heaven whence it came, now foreign and obsolete, what bewildering bitterness, what trembling even to the deep Godward bases of faith, what trustfulness mocked into despair, become its portion! The love, the hope, the faith, which it had sent out before it to bring it tidings of the fair land of promise, come back pale and weary, and cry for food in vain to the famishing heart which once so royally entertained them. The beautiful humanity, a vision of which had braced the sinews of its nature, and had made all things the vassals of its monarch eye, seems to it now but as a sphinx, from whose unchangeable and stony orbs it can win no look of recognition, and whose granite lips move not at its despairing cry. You smile, but let me think it is for sympathy. A sneer is the weapon of the weak. Like other devil's weapons, it is always cunningly ready to our hand, and there is more poison in the handle than in the point. But how many noble hearts have writhed with its venomous stab, and festered with its subtle malignity!

How deep is Mr. LOWELL'S love of poetry. He breakfasts and sups upon it, and, in this working day world finds it more sweet and grateful than the children of Israel did the manna in the wilderness. He reads a pathetic story of a mother parting from her offspring, and pauses after the reading to "hear the mother's tears fall upon the face of her child." Such simple criticism on a poet's verse is better than the whole verbiage of the reviews. And then how gloriously comes the reason for the pause. "The first voice that is heard after the reading of good poetry comes ordinarily from the shallowest heart in the company. Praise follows truth afar off, and only overtakes her at the grave; plausibility clings to her skirts, and holds her back till then."

We spare the reader our own language, and continue with our author.

THE LOVE OF THE BEAUTIFUL.

The love of the beautiful and true, like the dewdrop in the heart of the crystal, remains for ever clear and liquid in the inmost shrine of man's being, though all the rest be turned to stone by sorrow and degradation. The angel, who has once come down into the soul, will not be driven thence by any sin or baseness even, much less by any undeserved oppression or wrong. At the soul's gate sits she silently, with folded hands and downcast eyes; but, at the least touch of nobleness, those patient orbs are serenely uplifted, and the whole spirit is lightened with their prayerful lustre. Over all life broods Poesy, like the calm, blue sky with its motherly, rebuking face. She is the true preacher of the Word, and when, in time of danger and trouble, the established shepherds have cast down their crooks and fled, she tenderly careth for the flock. On her calm and fearless heart rests weary freedom, when all the world have driven her from the door with scoffs and mockings. From her white breasts flows the strong milk which nurses our heroes and martyrs; and she blunts the sharp tooth of the fire, makes the axe edgeless, and dignifies the pillory or the gallows. She is the great reformer, and, where the love of her is strong and healthy, wickedness and wrong cannot long prevail. The more this love is cultivated and refined, the more do men strive to make their outward lives rhythmical and harmonious, that they may accord with that inward and dominant rhythm by whose key the composition of all noble and worthy deeds is guided. To make one object, in outward or inward nature, more holy to a single heart is reward enough for a life; for, the more sympathies we gain or awaken for what is beautiful, by so much deeper will be our sympathy for that which is most beautiful,—the human soul. Love never contracts its circles; they widen by as fixed and sure a law as those around a pebble cast into still water. The angel of love, when, full of sorrow, he followed the first exiles, behind whom the gates of Paradise shut with that mournful clang, of which some faint echo has lingered in the hearts of all their offspring, unwittingly snapped off and brought away in his hand the seed-pod of one of the never-fading flowers which grew there. Into all dreary and desolate places fell some of its blessed kernels; they asked but little soil to root themselves in, and in this narrow patch of our poor clay they sprang most quickly and sturdily. Gladly they grew, and from them all time has been sown with whatever gives a higher hope to the soul, or makes life nobler and more godlike; while, from the overarching sky of poesy, sweet dew for ever falls, to nurse and keep them green and fresh from the world's dust.

No wonder that Mr. LOWELL sickens at the jugglery of the politician, since poetry is anti-Machiavel. But withal he hopes that, in the future, the poet and the politician shall be united in one mind. BURKE, he believes, had a narrow escape from being such a man. But this narrow escape seems to us as wide as the poles are asunder. Had BURKE been more of a poet, he would have been less as a politician. Like the *see-saw* of children, the poet flies up while the politician sinks down, and *vice versâ*. The politician must cast off the leper's skin, and be purified, before he can don the dress of the poet. The unwieldy growth of selfishness among which a politician now legislates is fatal to the poetic feeling. What change and the future may do, we know not; but we should be glad to hail a BURKE and a MILTON in one body.

Tempora mutantur, et nos mutamur in illis.

The warrior, like the politician, is below the level of the poet. We take Mr. LOWELL'S opinion of

NAPOLEON.

What an intellect was Napoleon's! He was the Goethe of the throne and the camp. And that huge structure which he piled with such wasteful pains was but like the winter palaces of the Czar, being reared by the intellect alone, of its icy blocks, crystal, far-shining, yet no match for the silent eye of that all-beholding sun of mankind's moral sense. What pang of the world's sore distressed heart did he make the lighter? What gleam of sunshine streamed into the dim hovel of our race the more freely and bounteously for him? The great intellect dies with its possessor; the great heart, though his name in whose breast it had its ebb and flow be buried in the mouldered past, survives for ever, beckoning kindred natures to deeds of heroic

trust and self-sacrifice. Is Luther dead while Garrison still lives? The intellect would fain bargain with and outwit the future; the heart buys acceptance of it with a simple smile. This, then, is the great errand of the poet; to keep alive our fealty to the heart; and, even when it has been banished by the usurping intellect, to rouse our loyalty with the despised, and therefore unmolested, persuasion of a song.

Mr. LOWELL has as little of Americanism as any American we are acquainted with.

CANT OF NATIONAL LITERATURE.

It is a little strange that the English, all of whose glorious past belongs equally to us, should pity us for having no antiquity to look back upon, as if that, even were it true, would preclude us from having poets. Besides sharing their own history and tradition with them, we can also claim our share in the ancientry of this, our adopted hemisphere, and point to monuments, set by which their idle Druid-stones are but things of an hour ago. Not that the poet needs such obscurities to grope in, or desires a greater antiquity than that of his own heart, in which are written the same wondrous oracles, uncertain, yet not past finding out, of which all his brethren, from Eden downward, have deciphered but a few lines. Wherever Shakespeare lays his plots, that ruddy English heart of his was the true meridian, whence the degrees of latitude and longitude were numbered. Paradise and pandemonium both found room enough with Milton in that little house in the Artillery Walk. The poet who leans upon the crumbling arm of Eld will never himself become a part of history. When he crossed the threshold of his own heart, he left his strength behind him; and, in proportion as he wanders farther thence, he becomes remote from the hearts of all his kind; his words become a dim murmur, with no articulate syllable to claim attention from the ear.—But I interrupt.

No doubt, our poets may find proper subjects, without going out of their own geographical territories; but I would not imprison them within those. What has poetry to do with space and time? Past and future are to her but arcs of one horizon, whose centre is the living heart. Yet how much cant do we hear about a national literature! Let a man make a Pequod or a Cherokee bemoan himself through some dozen or more stanzas in such a style as neither of them ever dreamed of; let him invent a new rhyme for Huron, or a new epithet for Niagara, and he has done something national. What have we to do with a dance of savages more than with one of dervishes, or that of the planets which Pythagoras fancied? Our notion of an Indian is about as true as that which the Europeans have of us. In all the situations which are proper to poetry one man will feel precisely like another; and to the poet it is quite indifferent whether his scene be in Congo or Massachusetts, unless, indeed, he be not strong enough to walk firmly without the external support of old associations or magnificent ones. An Indian whose child dies, mourns the loss of one who would have been a great brave and an expert hunter; a tradesman in the same case laments that of a lineal successor behind the counter. Where is the difference in the feeling? Yet, in writing about the first, one would be bolstered up with rocks, woods, rivers, lakes, wigwams, scalping parties, and the whole machinery of savage life—things merely extraneous and cumbrous, and not at all belonging to the bare feeling one is trying to reproduce. It is merely because of our arbitrary and unnatural associations with different callings or modes of life—associations unworthy of men, much more, then, unworthy of poets—that we esteem the savage more picturesque (or whatever you choose to call it) than the tradesman. In all the feelings with which Poesy concerns herself, the latter may be, and ought to be, superior. The savage has had, it is true, the limbs of the oak-tree for his cradle; the primeval forest and the lonely prairie have been his playmates and nurses; the sky, the waterfall, the thunder, the stars, the legends of his forefathers, these have been his letters and his poetry. But the other, if he has not been dandled by the forest-titan, has had the nobler tutelage of a mother's arms; nature denies herself to him no more than to his savage brother; the stars, and the forest, and the waterfall have their secrets for him as well; and in books he can converse with yet higher company, the ever-living spirits of the brave and wise. Methinks the account between the two is well balanced; or, if not, that the *debit* is on the side of him whom we idly call the child of nature, as if we dwellers in cities were but her foster-sons. A man is neither more nor less a poet because he chooses one subject or another. Did not the cast-away shell of a tortoise become Apollo's lute?

Although we have been prolific of extract, we cannot tear ourselves away from these communings with the poets. "But one more," as Othello says, "and this the last."

TREATMENT OF POETS.

PHILIP.—Yes, men always deny the messenger of God at first. The spiritual eye, like that of the body, until taught by experience, sees objects reversed, and makes that seemingly come from hell, which has in truth but just descended, warm and fragrant, from the heart of God. But Time can never put Eternity off more than a day; swift and strong comes the fair to-morrow, and with it that clearer perception of the beautiful, which sets another fixed star in the bright coronet of Truth.

JOHN.—But when the world is at last forced to believe the message, it despitefully entreats the bearer of it. In most cases men do not recognise him till the disguise of flesh has fallen off, and the white wings of the angel are seen glancing in the full sunshine of that peace, back into whose welcoming bosom their flight is turned. If they recognise him earlier, it is with a scurvy grace. Knowing that hunger is the best taskmaster for the body, and always using to measure spirit by the laws of matter, they conclude that it must be the sharpest spur for the soul also. They hold up a morsel of bread, as boys do to their dogs, and tell the prophet to speak for it. They know that he has a secret to tell them, and think they can starve it out of him, as if it were an evil demon.

* * * * * * *

That poverty may be of use to the poet, as you have said, may be granted, without allowing that it must come to the actual pinch and gripe of want with him. The man of genius surely needs it not as a spur, for his calling haunts him from childhood up. He knows that he has that to say that will make the great heart of the universe beat with a more joyous peacefulness and an evener motion. As he grows to man's estate, the sense of a duty imposed on him by nature, and of a necessary obedience to heavenly messengers, which the world neither sees nor acknowledges, grows stronger and stronger. The exceeding brightness of his countenance weaves a crown around his head out of the thick air of earth; but earthlings cannot see it. He tells his errand, and the world turns its hard face upon him, and says, "Thou art a drone in my busy hive; why doest thou not something?" Alas! when the winter season comes, the world will find that he has been storing honey for it from heavenly flowers, for the famishing heart to feed upon. He must elbow through the dust and throng of the market, when he should be listening to the still, small voice of God; he must blaspheme his high nature, and harden his heart to a touchstone to ring gold upon, when it is bursting with the unutterable agony of a heavenly errand neglected,—that bitterest feeling of having "once had wings." The world has at last acknowledged his sovereignty, and crowned him with a crown of thorns. Thomson, in one of his letters, says:

"The great fat doctor of Bath told me that poets should be kept poor, the more to animate their genius. This is like the cruel custom of putting a bird's eye out, that it may sing the sweeter."

The world plays the great fat doctor very well.

Our readers may observe that in the extracts we have given, there is little mention made of the old poets. But be it remembered that it is more difficult to select from a good book than from an indifferent one. Where beauties are thickly strewn, the mind is puzzled to choose a particular beauty. We could easily select a flower from a vase, but a garden full would distract us with variety. We can only recommend our readers to read Mr. LOWELL'S book. Such discourses on poetry are perfect sermons. When any of the kind come into the world, they come like sunshine, with a gladdening and a luminous power. The more the uses and the influence of poetry are taught, the less will be the necessity for stringent political enactments. LYCURGUS and SOLON were less lawmakers than HOMER and EURIPIDES. Alas, that England and America, as Mr. LOWELL laments, should care so little for their poets! A perfect age must be a poetical age. Not the mere barren system of writing verses, but a flexile state, in which feeling and sensation shall be the grand monitors.

Young Englandism, or any other ism, will prosper, if it return to the simplicity, the faith, and the sublimity of poetry.

THE TOURIST.

[All the world travels now-a-days. Great, therefore, will be the utility of a periodical to which every Tourist may communicate such of his experiences as to routes, sights, conveyances, inns, expenses, and the other economies of travelling, as may serve his fellow-tourists. To this design we propose to devote a distinct department of THE CRITIC, and we invite communications of the class described relative to travelling both abroad and at home.]

A HINT TO TOURISTS IN AUSTRIA AND ITALY.

A NOTION very generally prevails that the best of all coin upon the Continent is the English sovereign; that it will carry you over Europe. The cause of this impression is, I suppose, the

readiness with which it circulates in Belgium, North Germany, Switzerland, and the great highways of travellers. But it is a mistake altogether. In the Austrian dominions the sovereign is scarcely known. Last summer, I traversed Styria and North Italy, and, acting upon the prevalent belief, took with me nothing but sovereigns. The consequence was, that at many of the post-stations and inns they were refused, or valued only as Napoleons, and no more allowed for them. Frequently I was compelled to sell my sovereigns for fifteen shillings. If travellers would avoid this serious loss and inconvenience, I would advise them, before they enter the dominions of Austria, to provide themselves with the Austrian notes, which are convenient for carriage, and pass everywhere at their full value. I avail myself of this valuable department of THE CRITIC to offer to those who may follow me the results of my own experience. SENEX.

THE TYROL.—I want to go by the most picturesque route from Vienna across the Tyrol to Switzerland. Will any of the readers of THE CRITIC who may have attempted it oblige me, and perhaps many others, with a sketch of such a route, naming places, distances, time, and conveyances?

AN INQUIRER.

[We shall feel equally obliged by such a communication as that requested by our correspondent. This is the very object of THE TOURIST, and thus will its utility most appear. Our hope is ultimately to make it a complete periodical *Handbook for Travellers*, an indispensable addition to Murray.—Ed. CRITIC.]

HOME TOURS.—Would some of the readers of THE CRITIC favour the rest of us with their experience of Home Tours, naming the best and most reasonable hotels, &c.? G. L. T.

[A good hint.—Editor of THE CRITIC.]

ART.

THE NEW PANORAMA.—To the really magnificent pictures of Nanking and Naples, already noticed in this Journal, there has just been added another of surpassing beauty—a panorama of Athens and the surrounding country. To the scholar, the artist, the student of history, and the traveller—indeed to all who take interest in that which has once exercised a controlling and directive influence over other nations, and in other times, this picture will be welcome. Once the centre of civilization to the world, the seat of learning and wisdom, where the fine arts were carried to a pitch of excellence never before attained, never since surpassed, Athens, with its noble monuments of former grandeur contrasting against its modern barbarism, is still lovely and interesting.

The prospect is taken from the hill of Musæus, which commands a fine view of ancient Athens. In the immediate foreground are the remains of the splendid monument of Philopappus, with its bas-reliefs and mutilated statues. On the east, crowning the summit of the Acropolis, stand the ruins of the Parthenon, imposing and grand in their decay. On the left of the portico is a square-built, ugly, modern tower, erected in the poverty and barbarism of modern Greek taste, and which, contrasted against the magnificent architecture beside it, furnishes unintentionally a gauge which shews the vast difference there is between the Greeks of the present day and the Athenians of two thousand years ago. The arch of Adrian, the temples of Jupiter, Victory, and Erecthæus, a newly-built palace of King Otho, and part of the modern city, add interest to this side of the picture. Behind these stand the stately mountains of Pentelicus and Anchesmus, and to the right the famed range of Hymettus.

On the south, at a distance of some six miles, lies the blue Ægean Sea, with the port of Piræus, and the islands of Salamis and Corinth; and in the extreme distance a lofty chain of mountains.

On the north stands the Pnyx, the lovely temple of Theseus,—a spot ever sacred in the eyes of Christians,—the Areopagus, where the Apostle Paul preached to the Athenians. Mount Parnes, the precipice above Phyle, and the snow-clad range of Cythæron close in the view.

In the foreground, on the left of the monument of Philopappus, is a group of Greek maidens dancing the Romaika, and surrounded by spectators of different ranks. To speak too highly of these figures would be difficult indeed. There is actual motion, life, and spirit in the dancers. The combination of lines is pleasing, while it has the merit of being thoroughly original. There are three women seated on the ground, so grouped as three figures were never grouped before, yet producing a most agreeable line. Scattered through the picture on the roads, and in becoming places, are men and animals, which add by character or some other peculiarity to the interest of the scene.

The landscape, too, is admirably painted. There is abundance of soft sunny atmosphere; the colouring is forcible, clear, and truthful, and the effects are most judiciously thrown in. Nor can we close this notice without a compliment to Mr. KNOWLES, the gentleman from whose drawings the panorama has been produced. He appears to have devoted great care to the perfection of his sketches, as is evidenced by the elaborateness of the details; and that they are faithful to the objects themselves is equally clear, for there appears nothing of truth sacrificed to the mere picturesque.

To our friends, as both for its historical associations and artistic excellences, this is an attractive and meritorious picture, we unhesitatingly recommend a visit to the Panorama of Athens.

THE DRAMA AND PUBLIC AMUSEMENTS.

ITALIAN OPERA.—Our readers have, doubtless, many a time and oft, heard about the Quadruple Treaty, and have reflected with more or less of respect, according to circumstances, upon the diplomatic qualities of the negotiators by whom, *post longos labores*, the said treaty was brought to pass; but the Quadruple Alliance just effected by the masterly genius of one single diplomatist at the Great Theatre in the Haymarket, beats the other all to nothing, both in conception and in effectuation. The man who, last week, should have told us with an air of any thing like gravity, that TAGLIONI, and CARLOTTA GRISI, and CERITO, and LUCILE GRAHN were going to stand up together on the Opera stage, for any other purpose than a fight, would have been at once earnestly recommended by us to the care of his friends, with a view to an early inquiry *de lunatico;* being estate-less ourselves, we dread no such inquiry, our friends having nothing to get by it; and besides, it is of matter of fact we speak, when we state that TAGLIONI, and CARLOTTA GRISI, and CERITO, and LUCILE GRAHN *have* stood up together on the Opera stage, once, and twice, and thrice, and *not* for the purpose of a fight, but to dance such a *pas de quatre* as has never been danced before, and will never be danced again, so we conceive, but by the glorious four themselves. Up to the moment of their actual appearance, the most fearfully heating cares, the most intense suspense, pervaded the crammed house: and there was some reason for their doubts and fears; for, but a short time ere the opera commenced which preceded the *pas*, one of the four,—"Oh, breathe not her name,"—manifested decided symptoms of recusancy, on the ground that M. PERROT, the inventor of the said *pas*, had not therein assigned her an equal position with the other three; but on Mr. LUMLEY'S suggesting, with an emphasis, that if she persisted in not making one in the *pas de quatre*, they would be reduced to the necessity of having a *pas de trois*, wherein she would not appear at all, the fair rebel submitted. When the *four* graces, linked hand-in-hand—touching emblem of friendship until death, or, at least, until the *pas* should be past—came bending forwards, there was a perfect hurricane of hurraing, which continued until the very last courtesy was courtsied, and the curtain finally descending, the proud scene was o'er. There was a very ludicrous incident just before the dance commenced; a rain fell from the gallery of many-coloured papers, whereon was printed an Italian sonnet in glorification of CERITO, setting her above all the dancers of all time, past, present, and to come. The episode produced some amusement, and was therein useful, as relieving the attention, for a moment, of the audience. To describe a dance is obviously impossible; at all events, so we think, not being able to do so ourselves—if the thing were in us, the *pas de quatre* would have awakened the slumbering faculty; but this we can say, that the dance in question is the most marvellous Terpsichorean display that ever "raised our spirits or charmed our *eyes*." It were at once difficult and altogether invidious, to institute a comparison between the four "dansooses," as the Popular Lecturer, Mr. ALFRED ORMONDE, phrases it; let us rather content ourselves with stating the fact, that each, in her particular way, danced better than she ever danced before in the whole course of her life; our readers, who have seen each or all, may hence readily judge for themselves how stupendous the grand total must have been. We should insist upon Mr. LUMLEY'S being forthwith named our ambassador at Paris or Vienna, or wherever else perils do most environ British plenipotentiaries from the tricks and cheateries of foreign manœuverers, so consummate is the diplomacy he has manifested in this most delicate and difficult matter;

but Mr. LUMLEY has got a much better thing where he is, having recently acquired the entire property in the Italian Opera House, a highly gratifying circumstance, at once as shewing that his talents and energy have obtained a rich reward, and as affording an unquestionable guarantee for the future excellence of the management of this magnificent, but for so long a period, wretchedly administered theatre. Under this head we may, more appropriately than anywhere else, record the marriage of Mademoiselle DUVERNAY, whose nuptials with "STEPHENS LYNE STEPHENS, esq. of Roehampton, and Portman-square," were celebrated on Monday last, at Putney. What pretty Christian names, by the way, the fair one has: *Yolande Marie Louise.*

FRENCH PLAYS.—These delightful entertainments have terminated, after a season which we are glad to understand has been productive of pecuniary results to the spirited lessee, greater than those realized in any former year. Her Majesty, with Prince Albert and the King and Queen of the Belgians, were present on Friday evening, when M. ARNAL performed three of his favourite characters. It was really quite delightful to hear the hearty manner with which her Majesty entered into the fun of the thing; she laughed right joyously. M. ARNAL took his benefit on Wednesday, the closing night of the season. M. PHILIPPE continues his *Soirées* and *Matinées Mystérieuses* at this theatre, with great and well-deserved success.

DRURY LANE.—The Brussels company are continuing their performances here, having given themselves an extended *congé*, which, however, must needs expire, we believe, next week. We can hardly, indeed, expect that the Belgians will much longer permit us to rob them at once of their king and of their Grand Opera. The former, perhaps, they might spare for a few weeks more; but the Grand Opera——! Meantime, his Majesty ever and anon gives his subjects an audience at Drury Lane, accompanied by his royal consort, and the Queen of Great Britain with her consort, and in the presence of a very handsome attendance of English, who find the affair very nearly as amusing, perhaps more so, than a drawing-room or levee elsewhere. On the last occasion when this ceremony took place, the Brussels company presented their sovereign and the assemblage with *Le Postillon de Longjumeau*, a comic opera by ADOLPHE ADAM, which gave infinite satisfaction to the entire audience. The libretto is animated and effective, and the music airy, graceful, and mirth-inspiring, fitting the story and the situations like a glove. As to the story, it is that of a musical postillon, whose voice, on the day of his wedding with the hostess of the inn at Longjumeau, attracts the attention of the Marquis de Corcy, one of the courtiers of Louis XV., who is out on a quest after a competent vocalist to fill a part in the court revels. The singer's vanity is so tickled with the flatteries of the great man, and his avarice so excited by his promises, that he consents forthwith to accompany the marquis, leaving his bride in solitude to mourn. The *éplorée* Ariadne, after the first outbreak of grief at the desertion, determines to quit the country; and accordingly, in the last scene of Act 1, takes her departure for the Isle of France. When the second act commences, ten years are supposed to have elapsed; the *ci-devant* postillon, under a new name, has become one of the stars of the Grand Opera at Paris, and a fine gentleman, addicted in a sad degree to dissipation of all sorts. We find him at this particular juncture extremely assiduous in his attentions to a *Madame de Latour*, a lady from the colonies, rich, beautiful, and virtuous. He proposes marriage, and is accepted, and the nuptials are forthwith to be celebrated. This *Madame de Latour* is none other than *Madelaine*, the fair landlady of Longjumeau, who, somehow or other, has attained rank and fortune in the Isle of France, and, having returned, foolishly enough, in search of her rascally husband, and found him, has resolved to tantalize him a little before declaring herself. The worthy ex-postilion endeavours to delude her into a sham marriage by a sham priest; but she effects a real marriage by a real priest; then, slipping away, and resuming her landlady costume, she reappears before her nefarious spouse, who is perfectly horror-struck at the dilemma in which he supposes himself involved, and is so grateful at being relieved from his fright by an explanation, that he promises to be the best of boys for the future. The opera was excellently supported, more especially by Madame GUICHARD, who filled the part of the heroine in a manner which elicited universal and warm approbation of both her singing and acting. *La Juive* has not been presented, possibly in consequence of the three nights of performance this week being occupied by benefits. *Lucie de Lammermoor* was given on Wednesday for the benefit of Mademoiselle PLUNKETT, one of the most charming of *ballerine.*

PRINCESS'S THEATRE.—We found a full attendance here on Wednesday, drawn together by the combined attractions of Miss GEORGIANA SMITHSON and Mr. OXBERRY, the former, a successful *débutante*, in the character of *Zerlina*, in AUBER'S opera of *The Syren*, the latter in the adaptation from the "Caudle Lectures," which has already had a run at this theatre of nineteen nights, and promises to continue a favourite for a long time to come. The opera is infinitely better got up than could have been anticipated in such a bijou of a place; Mr. ALLEN fills the part of *Marco Tempesta* exceedingly well, and he is efficiently supported by Mr. LEFFLER, as *Balbaya*, the Neapolitan impresario, and by Mr. WALTON, as the ridiculous *Duke of Popoli.* Mr. C. HORN, too, we are glad to notice, manifests improvement. The star of the opera, however, is Miss GEORGIANA SMITHSON, whose appearance on Wednesday was her third on any stage. We must confess we did not ourselves go quite all the way with the audience in the enthusiasm which they displayed in her favour, but we regard her as possessing qualities which, carefully nurtured and disciplined, may obtain for her permanent public favour, and lead her on in the way of fortune. As to scenic effects, the Smuggler's Retreat, in the second act, was excellently managed. *A Court Ball in* 1740 followed, and though the twenty-seventh night of its appearance, was as well received as ever. What a capital dance that *Sir Roger de Coverley* is! How full of animation! how pleasant, though proper! It is one of those features of the good old times, or at least of the times of modern antiquity, which we should vastly like to resume. We would gladly exchange for it the stupid quadrille, which everybody anathematizes, and yet which everybody combines to retain. Next after the Ballet, came *Mrs. Caudle, or Curtain Lectures*, a most laughable affair, and of a nice morality. OXBERRY'S amusing farce, *The Three Clerks*, completed the evening's ample entertainments.

SURREY ZOOLOGICAL GARDENS.—M. JULLIEN has given two Monster Concerts at these gardens. The latter occurred on Friday, a most inauspicious day; but, notwithstanding the rain and the cold, the gardens were crowded, and the crowd seemed absolutely to take all the more pleasure in the entertainments, because of the rain and the cold, out of opposition. These concerts are of the same kind with those so successfully conducted by M. JULLIEN at the English Opera House and at Covent Garden, but on a much larger scale, there being no fewer than 300 performers engaged, embracing many of our most eminent names in instrumental excellence, who execute, in perfection, music of the most various character—polkas, quadrilles, and waltzes, alternating with sonatas, symphonies, and so on. "God Save the Queen" is played in the same manner as is the Russian national anthem, a salute of cannon marking each bar, which produces a very striking effect. The public and the profession are greatly indebted to M. JULLIEN for these promenade concerts, whether at the Lyceum, at Covent Garden, or at the Surrey Zoological Gardens.

THE COLOSSEUM.—It is scarcely possible to conceive the magnificence, and at the same time the exquisite taste with which this establishment is laid out. The whole exhibition reflects the highest credit on the spirit of the proprietor, who has allowed such ample means to the genius of Mr. BRADWELL, and we are glad to find it crowded, both morning and evening, with the nobility and gentry, among whom we lately observed, the Turkish Ambassador, the Duke and Duchess of St. Alban's, Earl Stafford, Lord Feversham, Lord Melbourne, Lord Say and Seal, Lord Bolton, Earl of Balcallo, Lady Combermere, Lady Brougham, Lady Bandon, the Bishop of Lincoln, &c. &c. &c.

ADELAIDE GALLERY.—We are glad to observe that this old-established place of amusement and instruction is fast retrieving its former high reputation. Under the present management the greatest care is taken to preserve its respectability, and we see that the audiences are increasing. "The Infant Sappho," little LOUISA VINNING, is nightly delighting those who witness the exertion of her powers; the delicacy of taste and musical correctness with which this wonderfully gifted child executes difficult passages, and the feeling evinced in her performance of some of the popular ballads of the day, shew that she possesses in rare degree the endowment of the "spirit of song." Mr. RUSSELL'S "Lectures on Character," form another attractive feature at the Gallery. The vivacity and humour of this gentleman's sketches make the lecture most amusing. His vocal illustrations are admirably introduced, and as he possesses a good voice, and uses it with great taste and judgment, the songs of themselves form no mean portion of his entertainment. To those interested in railway matters we should recommend a visit for the inspection of KOLLMANN'S locomotive engine for traversing curves on railway lines, and also for ascending inclines or gradients. Judging by the performance of the model, daily and nightly exhibited, the principle is one very applicable to railways, and is of great importance, inasmuch as it is proposed to diminish by its means the danger of running off the rails, and many other difficulties. In such a journal as this it is impossible to enter into the technical details. An inspection of the model itself will be the best means of judging of the merits of the invention. PILBROW'S atmospheric railway is also now completed, and is a great source of attraction and interest.

ROYAL POLYTECHNIC INSTITUTION. — Professor BACHHOFFNER is now delivering a lecture on Electro-culture, or the application of electricity to agricultural purposes. As this matter has been the subject of extensive speculation among our practical farmers, and even among our scientific men, we felt anxious to hear what the Professor had to say on the matter, because from his peculiar position we have a right to expect from him a thorough knowledge of the subject. The lecture opened with an elaborate view of the electricity of the atmosphere and its various phenomena, including the *feu d'Elmo*, the Castor and Pollux, &c. The Professor next examined critically the reported experiments of Mr. FORSTER, and laid before his audience the results of many of his own researches in artificial electro-culture. We have not space to follow Dr. BACHHOFFNER through his able lecture, but we may conclude by informing our agricultural friends that we were convinced, and so we believe was the vast audience, that man cannot, by any of his paltry efforts, give to vegetation more of the electro-vital principle than nature has already taken good care to supply.

THE BRITISH MUSEUM.

We have been put in possession of the annual returns relating to the great national institution in Great Russell-street, containing the accounts, estimates, number of persons admitted, and the progress of arrangement, &c. These returns were laid on the table by the First Lord of the Treasury, and ordered to be printed on Monday last. We proceed to give the details *seriatim*. The total receipts during the year 1844 amounted to the sum of 40,430*l*., of which 8,114*l*. was derived from the fourth instalment of the Parliamentary grant for the financial year 1843-44 (due Lady-day, 1844), and 28,490*l*. from three instalments of the amount granted by the House of Commons for the year 1844-45 (which amounted to 28,490*l*.) The fourth instalment of 9,496*l*. due Lady-day last, had not been received when the accounts were made up. The estimated expenditure for the year 1844 (ended the 31st of December) amounted to the sum of 40,889*l*. whilst the actual expenditure has been 37,449*l*. leaving a balance in hand on the 31st of December last of 2,981*l*. Of the sum of 37,449*l*. thus expended, 18,664*l*. was appropriated to salaries; 1,481*l*. to household expenses; 11,706*l*. to purchases and acquisitions; 4,563*l*. to bookbinding, cabinets, &c. for preserving collections; 962*l*. for the cost of printing catalogues and making casts; and 69*l*. 17*s*. for law expenses. Amongst the items expended on purchases and acquisitions, we find a sum of 1,626*l*. for MSS.; 4,421*l*. for printed books; 739*l*. for fossils and minerals; 1,135*l*. for zoological specimens; 100*l*. for botanical specimens; 1,539*l*. for coins and numismatic antiquities; 204*l*. for casts from Athens; and 903*l*. for prints and engravings.

The available surplus in hand is reduced, by estimates, &c. given in the return, to the sum of 1,317*l*.; and the estimated charge for the service of the year ending Lady-day 1846, amounting to 43,356*l*. it follows that Parliament will be called upon to vote the sum of 42,040*l*. (the sum proposed by Sir R. Peel) for the year ensuing, from Lady-day 1845 to Lady-day 1846. This is an increase of 4,053*l*. on the grant of last year, which was only 37,987*l*. The increased estimates occur chiefly under the head of "salaries," "purchases and acquisitions" (12,704*l*.). There is also an account of the expenditure of certain "special" Parliamentary grants received during the year ending Christmas 1844, amounting altogether to 10,145*l*. of which 9,049*l*. has been received. The sum of 1,000*l*. was paid for a collection of fossils belonging to Mr. Kock; 45*l*. for some Syriac MSS. purchased in Egypt by the Rev. H. Tattam; 1,000*l*. for the expenses of excavating at Xanthus, and conveying sculptures to England; 1,200*l*. for coins from the collection of the Duke of Devonshire; 3,304*l*. for books and MSS. from the libraries of his Royal Highness the late Duke of Sussex, Mr. Bright, and Dr. Southey; and 2,500*l*. for coins belonging to the collection of the late Mr. Thomas. The sum of 3,751*l*. was also received on account of the grant for the purchase of land and houses required for the purposes of the new buildings, of which sum 3,566*l*. was expended on a piece of land, and for leases, fixtures, &c. of two houses in Great Russell-street, and 184*l*. on law and surveying charges. We next arrive at the return of the visiters, &c. It appears that in the year 1844 the number of persons admitted to view the general collections in the Museum amounted to 575,758, being an excess of 58,318 over the number admitted in the preceding year, 1843. The number admitted in 1842 was 547,718; in 1843, 517,440; in 1841, 319,374; in 1840, 247,929; and in 1839, 280,850; from which it follows that the visiters have increased in the space of six years by 294,908, or upwards of 100 per cent.! The visiters are most numerous in the months of April, May, June, July, August, September, and December. There were in January, 37,179; in February, 19,705; in March, 26,780; in April, 58,689 (Easter having fallen in that month); in May, 83,876; in June, 59,972; in July, 85,320 (the Midsummer holydays); in August, 66,264; in September, 43,547; in October, 27,374; in November, 20,212; and in December (the Christmas vacation), 46,840. The two worst months appear to be February and November, when the weather is, generally speaking, wretched. The number of visits made to the reading-rooms for the purpose of study and research amounted, in 1844, to 67,511, being a decrease of 3,420 compared with the preceding year. In 1810 the number of book-worms and black-letter hunters was only 1,950. The number of visits by artists and students to the galleries of sculpture, for the purpose of study, was 5,436 in 1844, and 4,907 in 1843. In 1840 the number amounted to 6,354, since which period it has, with the exception of 1843, gradually decreased. The number of visits made to the print-room was about 8,998 in 1844, 8,162 in 1843, 8,781 in 1842, 7,744 in 1841, 6,717 in 1840, and 1,065 in 1835.

The public are admitted to the Museum on Mondays, Wednesdays, and Fridays, between ten a. m. and seven p. m. from the 7th of May to the 1st of September. Artists are admitted to the sculpture galleries every day except Saturday. Persons applying for the purposes of study or research, are admitted to the reading-rooms (which are complained of as dreadfully defective in point of ventilation) from nine a. m. to four p. m. every day. The Museum is closed the first week in January, September, and May, and on Church festivals and fasts. In the department of MSS. 591 additions have been made in manuscripts, 161 in original charters, and 153 in original seals. Amongst the MSS. acquired we may notice the following:—the autograph MS. of Sir R. K. Porter's travels in Georgia and Persia, illustrated; 50 ancient MSS. on vellum, connected with biblical and classical literature, in Hebrew, Greek, and Latin; 4 valuable Leiger books of the Monastery of St. Edmundsbury, and 1 of the Priory of St. Denis, near Southampton; 2 extensive collections of Welsh MSS. in prose and poetry, including a copy of the laws of Hywel Dda, written on vellum, at the commencement of the 13th century; 36 vols. of Portuguese history, from Dr. Southey's library; 83 vols. from the library of the late Duke of Sussex, including many valuable ancient biblical, liturgical, and theological MSS. on vellum, in various languages, several of which are beautiful works of art; also the beautiful book of prayers, executed in 1524, for the King of Poland, Sigismund I. and a splendid copy of the Sanscrit epic poem, *Ramayana*, written in the years 1651-1654 and 1707, illustrated with 700 paintings; and the *Book of Hours* which belonged to King René of Anjou, and Henry VII. of England, exquisitely illuminated. The number of MSS. delivered to readers in the reading-room amounted last year to 20,987. In the department of "printed books," 15,501 works and volumes have been recently added to the library, of which 738 were presented, 2,732 received by copyright, and 12,031 purchased. Amongst the remarkable objects purchased may be mentioned a Hebrew Old Testament, with points and accents, printed at Naples in 1491, folio; the Psalter, in Greek, Hebrew, Arabic, and Chaldee, with three Latin versions, printed in 1516; the New Testament, in Ethiopic; the first edition of the Latin Bible, printed at Rome in 1471; the *Recueil des Histoires de Troye*, and the Fables of Æsop, printed by Caxton in 1483. The average number of daily readers is 234, and each reader consults, on an average, about five volumes daily. We have no space to quote from the report of the "Natural History" departments, including the mineralogical, zoological, and botanical branches. The principal acquisitions of the last year, in the department of "Antiquities," have been a large Chinese bell, decorated with figures and inscriptions; a considerable addition to the Xanthian sculptures; a colossal kneeling statue of an Egyptian chief, in black basalt; a piece of mosaic pavement from the site of Carthage; about 4,050 coins, including 80 gold, 1,207 silver, and 1,561 brass, from the Duke of Devonshire's collection; and 190 gold, 258 silver, and 287 brass, from Mr. Thomas's sale. In the "Prints and drawings" department there have been added a collection of Raphael Morghen's engravings; some very curious unique specimens of early playing-cards; some very rare proofs of Swanevelt's etchings, and many additions to the works of A. Mantegna, Rembrandt, Le Blond, and the old German masters.

Such is an epitome for this year of the information thus obtained relative to the state of the British Museum.

ORIGINAL CONTRIBUTIONS.

SONNET.

BY CALDER CAMPBELL.

THE rathe intricacies of bowery woods,
Where every branch sends forth a carol sweet
From merry birds;—the garden-walks, where floods
Of fragrance at each onward step we meet;—
The mountain's cloudward heights, where Silence broods,
And Thought weaves imagery, whose shows repeat
Phantasmal shapes that are the myth of truth;—
The ocean's marge, where Pœsy may build

Unending mausolea to the dead,
And on the unstable carpet of whose field
White gulls float ghostlike:—these, in very sooth,
Are rife with pleasantnesses, that make youth
In the worn breast of age!—But sickness dread
From me shuts out the joys they erst were wont to yield!

NATURE'S GOLD AND SILVER.

Draw nigh and hear, thou miser-hearted man!
Silver and gold will curse thee utterly;
Curse thee for evermore—as curse they can—
If words of warning do not set thee free;
Then listen to the whispered truth of poesy!

Upon thy coffer Ruin plants his foot,
And see a heap of dust creeps dumbly down,
And mingles with thy coin. Decay is mute,
For did he babble like a silly clown,
No time had he to eat strong walls and temples down.

Dust on thy coin, and dust upon thy soul,
A just deduction! Try a little breath!
'Twill puff it off as easily as the fool
Blows up a feather, and the wealth beneath
Look bright as noon again. Dust is the form of death.

Try but a little breath; speak noble speech,
And follow it by deeds. Say to the poor,
"Here 's help for ye, and yours," and to the rich,
"Be brothers to the poor," and evermore
The dust shall quit thy soul, and quit thy coffered store.

On silver and on gold perchance thy eye
From habit loves to gaze. Well, be it so!
God hath supplied thee, 'neath the naked sky,
With silver and with gold that bud and grow—
Some yellow as the stars, some white as whitest snow.

O man, a counterfeit best pleases thee;
Or other wealth but coins wouldst thou heap up!
The gold and silver for the child and bee,
Are what from heaven the angels have let drop—
The daisy and her sister flower the buttercup.

Walk in the lanes, and in the meadows walk,
And bare thy bosom to all loveliness:
Thou canst not solve the mysteries which birds talk,
Nor weave in subtle loom the flowers' rich dress;
But thou canst love them all, and all that love confess.

Of all God's creatures him I value least,
Who is too much a man to be a boy;
Who holds it 'neath his dignity to feast
Upon remembrance of an early joy;—
The best of men will weep to see some infant toy.

Hang in thy button-hole, whene'er they bloom,
The buttercup and daisy. They will be
To holy eyes more glorious than the plume
A hero wears; and they will preach to thee
Of how the sun and shower drop favours ceaselessly.

They will be signs and symbols in thy coat,
And, though thy eyes be dim and hair be grey,
Thy life is childhood. Age is far remote
From him whose love of flowers ne'er fades away,
Who loves them through the night, and loves them through the day.

Away! the counterfeit cast off from thee,
And Nature's gold and silver gather up;
Such as keep innocent the child and bee,
And which from heaven the angels have let drop—
The daisy and her sister flower the buttercup!

E. H. BURRINGTON.

CRITIC OF TRADES, INVENTIONS, ETC.

[Every person feels the want of an *honest* informant to direct him where the best commodities of all kinds are to be purchased. New inventions for use or ornament are daily produced, which would be cordially welcomed if their merits were made known. An advertisement alone cannot be trusted. An impartial reporter is wanted in whom the public can confide. This department of THE CRITIC will endeavour to fulfil that duty. To aid the design, correspondents are requested to inform our readers of any new production for use or ornament they may try and prove, of the places where the best commodities of any kind are to be procured, and so forth. Of course no anonymous communication will be attended to.]

This is emphatically and pre-eminently the age of invention; and "rumours" of invention abound, of course, in the ordinary multiple ratio. One of these attributes to M. Daguerre a discovery "almost as wonderful," according to the journals which report it, "as that to which his name has been given." To us it seems still more wonderful, according to the terms in which it is stated. M. Daguerre having, by his former invention, induced Nature to save the labour of man, by doing, herself, the work of the artist, has now, it seems, by way of compensation, hit upon a process which teaches man to shorten the labour, and anticipate the results, of Nature. The discovery in question, it is averred, enables him to give to a young tree, in three months, the same development as has hitherto required as many years.—A New York journal has a scheme for bringing that city, for the purposes of verbal communication, within an hour's distance of the coast of England; the agent, of course, is the electric telegraph. In spite of very obvious objections which present themselves to the realization of such a scheme—as, for instance, the certainty of the wire breaking by its own weight, and the rather appalling cost and labour of every now and then seeking the fracture, and recovering the parts in the depths of the wide ocean,—it is ingenious and plausible, and a very great improvement both on the spirit and power in which an imperial dreamer, of old, flung chains into the sea. All the conquests of the passions which history records fade into insignificance before the magnificent march and grand and enduring acquisitions of science in these latter times; and such a victory over, and captivity of, the old material power that kept the races of the world apart, though, in the Persian's case, the very idlest fancy that ever entered the brain of a crowned madman, is yet, probably, within the resources of the great monarch of the modern world, and, some day, perhaps, to be achieved.—*Athenæum.*

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and new phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

CLAIRVOYANCE.

Of the many curious phenomena of Mesmerism, none is so vehemently disputed as clairvoyance. Not only does it share the sentence of condemnation hurled by the ignorant against Mesmerism in all its forms, as entirely a falsehood and a fraud, but it has to endure that which is very much harder to be borne—the denial and the reproach of those who profess confidence in Mesmerism generally, avow their entire conviction of its truth in every other respect, but angrily protest against the existence of clairvoyance in any shape or under any modification.

Among the opponents of clairvoyance the most distinguished for their ability and their general fairness, are Dr. FORBES and Mr. BRAID. The latter has submited to the readers of THE CRITIC many very clever and elaborate arguments to shew why *clairvoyance cannot* be; to which the only answer that *can* be given is, to point to the *fact* that *it is.*

We hope it will be understood that we meet the opponents of clairvoyance in no spirit of hostility, or even of blame. If they have not tried and proved it, they have a right to be sceptical. It is a phenomenon that differs from our ordinary experience, and therefore not to be received as true without the strictest examination and the most decisive proof. We confess that we felt the same doubts as do Dr. FORBES and Mr. BRAID, long after the other truths of Mesmerism had become convictions, until repeated evidence of the fact compelled to credence. Such has been our personal experience, (guarded by every contrivance to insure accuracy that ingenuity could suggest), that if clairvoyance be not true, if we have been deluded by our hands, eyes, ears, understanding, then is there no truth in the world; then is no evidence to be relied upon; then are our senses and our reason only impostors, and "nothing is but what is not."

We are desirous of submitting to our readers the facts that have necessitated in our mind a conviction of the absolute reality of the alleged faculty of clairvoyance, but we must preface them with a few observations.

Mr. BRAID and the opponents of clairvoyance generally found their objections upon a fallacy that ought not to

receive the sanction of any lover of science. They do not seek Nature to learn of her, by ascertaining the conditions under which she works, but they endeavour to impose their own conditions. • For instance, a clairvoyant will read certain words placed within a box, or in an envelope, or in some other position in which they could not possibly be perceived by the eye in its ordinary state; but it by no means follows that he can read them under certain other circumstances. The experimentalist, however, takes no account of this; but, although entirely ignorant of the conditions under which perception takes place, he propounds other conditions, probably not within the compass of the faculty, and because it then fails, he rejects the successful experiments as impostures of some kind.

The unfairness and irrationality of this proceeding will be apparent from the consideration of an imaginary but analogous case. Suppose a blind man to be investigating the phenomena of sight, being himself, of course, as ignorant of the nature of sight as we are of the nature of clairvoyance. Suppose he were to find that his patient could discern an object placed at a certain angle, but not at a certain other angle; that he could describe it when glass was placed between his eye and the object, but not when a much thinner piece of gold leaf was interposed; that in a fog the same object was represented as a rock, as a tree, as a house, as a man, as a cow, as the mind strained itself to discover what it was so dimly outlined upon the retina. The blind philosopher, ignorant of the nature of a sense he had never experienced, would probably form strange notions of the faculty of vision. Were he to follow the example of the opponents of *clairvoyance*, he would deny its existence altogether, because his patient could not see under all circumstances he chose to dictate. "If there be such a sense as sight," he would argue, "if he can distinguish the object at ten yards' distance, why not at a hundred yards, why not at a mile? I put this glass, half an inch thick, between his face and the object, and he sees; I put this gold leaf, impalpably thin, and he cannot see. He tells me that one is transparent and the other is not; but that is only begging the question: by transparent he means simply that he can see through it, but still the question remains; if he can see at all, why should he not as well see through the one as well as the other? Clearly there is no such thing as sight."

This reasoning of the blind man is precisely parallel with that of the opponents of clairvoyance. He errs simply because he does not know the conditions under which the faculty of vision is performed, and, finding it fail when tried on his own conditions, he pronounces it an imposture. In like manner do we, as ignorant of the conditions under which the clairvoyant perceives, apply conditions of our own, probably inconsistent with those under which the faculty acts, and because then it fails to operate, we exclaim against it as a falsehood, and even go so far as to deny the acts which it performs before our very eyes, when operating according to the method prescribed to it by the laws of nature.

The practical conclusion from this is, that in our present state of almost entire ignorance of the *rationale* of clairvoyance, the true philosopher will be content simply to note facts, to try, by repeated and careful experiment, what the faculty termed clairvoyance can effect, and what it cannot do. Thus, possibly, may we attain to a knowledge of the natural laws under which it works, and then, and not till then, shall we be able to assign satisfactory reasons why some experiments succeed and others fail, although there be no apparent cause for the difference of result.

Facts, then, are just now the most needed. We want not *arguments* to shew why clairvoyance cannot be, or ought not to be, or *vice versâ*; but merely experiments, the results of individual examination:—"I tried this test under such and such circumstances, and such was the result." "I did thus, and thus was I answered," and so forth. Failures are equally useful with successes, for they will shew the boundaries of the alleged faculty and the conditions under which it operates. As the beginning of a contribution to such a store of facts, we proceed to lay before the readers of THE CRITIC the results of the experiments we have personally made, in the hope that they may stimulate inquiry in others, and tempt those who have tried and observed to communicate the results of their experiences in the like manner.

We begin with the latest case that has fallen under our notice, because it is very recent, it is very decisive, and was conducted with the most careful regard for ascertaining the very truth.

The patient was a boy, aged about 17, in the employ of the publisher of THE CRITIC. The occurrences took place at the chambers of the Editor, where none were present but two other gentlemen, one of them an F.R.S. who came purposely to test that which when he came he believed to be an imposture.

The first proof of clairvoyance was thus shewn. On being mesmerised, the boy fell on the sofa, and his head reclined on a heap of newspapers, six or seven in number, that were accidentally lying there. When the boy changed from the coma to the sleep-waking state, he ran his hand over the newspapers on which he still lay, and presently said,—"Look here, there's the word 'Quarter.'" We looked immediately, but no such word appeared. He kept his finger at the place, and persisted that there was the word, and if not on the surface it was on one of the leaves below. We opened the papers, and on the lowest one in the heap, in the very spot his finger had indicated, was the word "quarter" in large type. There were at least fifty leaves of paper between his eye and the word.

We next blinded his eyes with our hands, and pressed the eyelids with the fingers, so that he could not move them. In this state he read the title of a book placed on the top of his head.

In the same blinded state he read the heading of a parliamentary paper, which one of our friends took from a drawer and held up on the other side of the room, at such a distance that we, with the utmost straining of the eye, could not discern a word or even a letter.

Words and isolated letters were next placed under the pillow of a sofa, and were read with ease and rapidity.

Five letters were stuck without order or connection on a piece of paper and placed upon his head. He first indicated with his finger the position of the letters, and then he named them correctly.

A book was taken from the shelf, and the back of it placed upon his brow, out of all reach of the eye, even had it been open, instead of being, as it was, tightly bandaged. He spelt the title, which was "Archbold's Nisi Prius."

This was the first experiment. On the following day we again mesmerised him.

As a still more decisive experiment, and to satisfy the scruples of our friend the F.R.S. who thought that, in spite of all precaution, vision might by some trick have been practised, a test was agreed upon which should set the question beyond all possible doubt. He was requested to retire and cut from some printed paper any word he pleased, to fold it in paper, seal it, and put the packet into his card-case, which was of *tortoise-shell lined with wood*. Without informing any of us what was the word he had so inclosed, he produced the card-case to the boy, who, after looking at it and pressing it to his lips, his forehead, and his stomach, for about four minutes, said, "The word is LONDON;" and so it was.

Still our friend thought that it was barely possible that it might have been a lucky guess; so he proposed to try him again with some *figures*, which it would be impossible to guess. In like manner he inclosed in four folds of paper some figures cut from a parliamentary paper, sealed it, and placed it in the card-case without naming to any person what figures he had put there. In still less time than he had taken to read the words, the boy read them correctly—"6 0 6." We should add, that each packet was taken out of the card-case still sealed, after the boy had named the contents.

On the following day, another gentleman, a member of the Temple, chanced to call at our chambers while the boy was being mesmerised. He was entirely an unbeliever. At his own request, he went to his chambers, and returned with a word inclosed in a thick card-case of leather, which he had there placed in it, with none present. He purposely named to no person what it was he had thus inclosed. In about five minutes, after an evident effort, the boy said, "I see it; the word is SOCIETY." And so it was, as was shewn when the card-case was opened.

The facts here reported are not hearsay; we adduce them upon our personal knowledge, under circumstances which make imposture impossible, because none were present who could be confederates, and without a confederation, fraud

would be impracticable. They have necessarily established in the minds of ourselves and the friends who witnessed and tested them, an entire conviction that clairvoyance is *a fact in nature*, and as such demands the strictest investigation. The other cases that have fallen under our personal observation, the curious features we have noted, and perhaps a few of the conjectures (for they can be no more) which these have prompted, must be reserved for a subsequent article.

MESMERISED WATER, &c.

TO THE EDITOR OF THE CRITIC.

SIR,—In reply to Mrs. Aglionby's inquiry touching the properties of mesmerised water, I beg to offer a few remarks; but rather to shew the nature and importance of the inquiry, than to afford any satisfactory information on the subject; with a view to help others to knowledge, by inducing a more strict and earnest investigation, directed to a better purpose, by opening wider and deeper the channel of inquiry, so that whilst the eye is expanded to a fuller appreciation of the vast dimensions and important bearings of this wondrously interesting subject, the sight may at the same time be contracted, to observe with careful attention every minute particular, the importance of which can only be discovered by repeated experiment; for we cannot say what may be important, and what may not, until we have brought the matter to trial and the result is fairly recorded. The properties of bodies are hidden secrets of nature, which are only known as they are called forth. Who could say what should be the phenomena of a mass of black gunpowder, to all appearance a substance the most inert and dead, until a spark of fire had been applied? The force and character of the innate properties of bodies are only appreciated in their effects in relation to other bodies; so that from what may appear at first to be the most trifling and insignificant means, follow often the most powerful and beneficial results. In the progress of knowledge it becomes apparent that all effects, even the most powerful, may be subdued by slight and gentle means—a word in due season—a touch in the right direction—the smallest portion of an ingredient placed in exact relation; and thus the electro-chemical influence of a minute homœopathic globule, rightly administered, may annihilate the most fearful disease as easily as a particle of contagion leaven a whole city; or a lightning flash—a something, a nothing—a touch, no more, destroy a church tower; for such is the course of nature and the power of knowledge. The efficiency of a means is only seen in the result; but men, for the most part, and philosophers, and great physicians not less so than others, are deluded in constantly judging of power by the quantity of crude, inefficient material, rather than turn to seek out the most fitting condition of a subtle agent. A powerful disease with such is only to be overcome and broken down by a large quantity of equally potent opposing disease-giving ingredient, too frequently tearing the constitution to pieces in the conflict; as violent rage got up to subdue a violent rage—as it were, to thrust an angry man out of the house by violence, rather than subdue and alter his condition by gentle speech—a great *looking* cause to produce a great effect; confounding the quantity or sustaining power of a property, with the quality or active principle in proper union developing phenomena through a whole mass; such as a particle of contagion to a healthy body, or the light which fills a room. The age of ignorance is ever an age of violence and cruelty. A touch or glance by one human being having the knowledge and special power, overpowers another, whose whole frame is held down in deepest slumber, the condition of his nature changed throughout. And how mistaken is the idea that it is the physically strong and healthy who always effect these changes the most readily. I have seen an extremely delicate child succeed immediately with a strong person, when the physically powerful and most skilled had failed entirely, after repeated trials; for the powers of Mesmerism vary considerably with different individuals, each possessing his own peculiar idiosyncrasy; this difference depending upon the health and character of the constitution, temperament, disposition, or special gift, and the relation of these peculiarities to those of the individual to be influenced; some possessing a far greater power than others, either generally, in any one form, or only over particular individuals, and producing effects of a more healthful character. One may induce sleep and cure fits, but possess very little power to relieve disease by touch, or to calm the irritability of a highly-sensitive nervous patient. An inflamed part may be relieved by the hand of one, whilst that of another will only increase the excitement. Hence the power of some is more suited to particular complaints. The firm, calm temperament will often succeed in mental irritation, where an irritable disposition would have very little influence, or only tend to increase the disease. The person who inspires the most confidence and is working in pure benevolence, under like conditions, has always a better chance. With some, who seldom do more than produce a slight sleep, disease may pass away for a time or only become modified, but return again in full force; whilst others take the complaint fairly out by the roots; and the last will produce the cure in half the time of the former, even when using pretty nearly the same process. Such being the case, the first thing a Mesmeriser should endeavour to ascertain is his own peculiar mesmeric endowments, so that he may produce as much good and as little evil as possible; and thus be enabled to place himself in a position that will be the most useful to others, and consequently most agreeable and easy to himself. Now, with regard to the effects of mesmerised water, be it remembered that the character of the power of the Mesmeriser is imparted to the water which he mesmerises, or other matter or object which he may influence, and will affect the patient accordingly, the power being pleasant or the reverse, and producing good or evil results, in accordance with its relation to the peculiar mesmeric condition of the patient, and the nature of the disease. Mesmerised water may be useful in particular cases from acting as an aperient, in others to induce sleep, or may only be of value when used after the sleep has been produced, or under one particular condition of the sleep, or in one particular stage of disease. Water mesmerised may be used also to change and deepen the sleep, and induce a more quiet and healthy condition. In some instances I have found it possess the marvellous power of instantly relieving long-seated pains, which my hand, though possessing a singular power of absorbing pain and disease, had been applied to in vain day after day. I have also found it most potent in giving tone and vigour to an extremely enfeebled system. By mesmerised water alone I have cured cases of great nervous debility and irritability, accompanied by sleepless nights, when the ordinary means did not apply, or could not be well carried out. The peculiar character of the water is a matter to be considered, and on which results will much depend; that which has been boiled is generally the best. Under particular circumstances, some mineral and mesmerically metalized waters are powerful and most beneficial, but should be used with very great care and judgment, for a Mesmeriser cannot be too often reminded that he is wielding a mighty and most subtle power, and that every power is to evil as well as to good, and that we are to be held responsible for the proper use of all our faculties, for our carelessness and for our ignorance, when we have neglected to acquire knowledge; and to assume to know what we do not, or to do what we cannot, is a miserable pride and weakness. It is not sufficient that we do much good, or more good on the whole than harm; the question is, do we accomplish all that we are capable of doing, and thoroughly displacing the idol self in the service of the good of others? Let us each look within the chamber of our pride and our vanities—see to this matter, and note well our deficiencies. By Mesmerism you may impart disease, increase or impede the cure of disease, or you may restore health, or greatly assist when other means are necessary. But in Mesmerism the power to do good far surpasses the tendency to evil, but to do less good than might be done is in effect an evil; and there is much to learn, unbounded knowledge to acquire. Virtues most potent lie hidden within every object on which the eye can rest, the most life-giving property is ever at hand, if we knew but the means to the end required,—if we knew but the quality of the various herbs, for instance, and the nature of their compounds as relating to health and disease, and the influence of Mesmerism under every circumstance, knowledge would indeed become a power capable of almost any thing. It is in the knowledge of such particulars that the genius and power of the Mesmeriser will be chiefly displayed, for Mesmerism presents to us a new description of chemistry, a vital electro-chemistry, when acting in union with the properties of the different bodies; the vital force imparting its powers, mingling, uniting, and varying in every instance, and then again changing under combination, and holding definite relation to particular conditions of health and disease, and the mesmeric trance, and these effects again varying according to the condition of the Mesmeriser and of the patient on whom the influence is to be used. Oh! that Lord Bacon were now alive! How his earnest soul would penetrate and revel in this inquiry—an inquiry which, in fact, he did enter upon with the liveliest interest, clearly seeing its great importance. But to those who practise Mesmerism in an off-hand, matter-of-course fashion, and fancy, in their ignorance, that they know all about it, and that any one can mesmerise well enough, and that in any case you have but to make a few passes before the patient for half an hour each day; and if that does not succeed, Mesmerism is to be considered inapplicable to the case. To such individuals my observations will appear but as a hopeless and unnecessary refinement of what is in itself sufficiently easy and open to all. But the powers of nature lie deep, and are passed by and trampled down unnoticed century after century by such men, who, dashing over the surface, take nature by storm; they winnow quickly, but it is the chaff that fills the air, and deludes the sight; and forgetting that to win so fair a lady, you must woo her perseveringly, and with all the deference and care of a true affection; for Nature is only overcome by knowledge,

and in the obedience to knowledge; and to become aware of the dreary chasm of our ignorance and our weakness is the first entrance into light and truth.

Few things are, perhaps, more lamentable to observe than the flippant conceit, the petty jealousies, and the almost total inefficiency of many who undertake Mesmerism, though often with a perseverance and a benevolence of purpose that would do good service directed through another medium, or by a better knowledge and judgment; and in which arises much of the odium attached to Mesmerism; but the error is as much on the side of the advocate as of the opponent, whilst the assumptions of speculation on the one side and scepticism on the other run riot together; and there is no space between the excited passions of men for quiet thought to rest and work on patiently, to the end that it may build to itself a pleasant mansion out of the fair realities of nature—a glorious edifice—the pillars of reason resting on the ground of solid fact, supporting all the beautiful structure of nature, blending together in one harmonious whole.

But the slow advance of knowledge proclaims the inefficiency of man; the shallow and false assumptions which content them; and the imperfect methods by which they proceed in their search after knowledge. Indeed, for the most part, men of science do but stop up the entrance to the temple of truth, and stand there before the altar like so many blocks or barking curs to impede the approach of others; for either they are so dull as not to be the least aware of their extreme ignorance, limited acquirements, and incapacity to judge of every matter in that infinity of nature of which they have evidence, any more than of the progressive principle of development and capacities of the human understanding when rightly directed; whilst some, with their little feeble taper-light, are ever ready to cast scorn and ridicule over the darkness which surrounds the path of other men, themselves perhaps deluded by every shadow, and shewing to the true philosopher more contemptible still than those whom they despise. It reminds him of the well-known assumption of the oyster-women at Billingsgate, who will not condescend to those who sell mussels. Superiority should induce a more humble spirit and deeper commiseration for the wants of others who have been less favoured; for the gifts of men are for love and the wise administering of true benevolence, not for the assumption of a childish authority over others; for the end of knowledge is not to excite but to subdue the passions into their best and purest channels. Let Mesmerists put aside their jealousies in the solicitude for fame, and be ever ready and anxious to render unto each according to his gift, and the happiness and the power of all shall increase; let them form themselves into a brotherhood of pure and enlightened spirits, neither having presidents nor vice-presidents, nor any other ruler than that of *pure* and holy thought, built upon the solid foundation of intellect and benevolence, raising their thoughts to all that is pure and most noble, striving to subdue the tone of excelling into the tone of excellence, and, being courteous to all, tolerate the opinions and respect the rights of each—the simple shewing of truth and its effects, contrasted with error and its evil tendencies, being their sole argument to their accusers, who will ever be found amongst the ignorant, the prejudiced, or the bigoted, and to whom argument, or the display of indignation or of anger, is but fuel to the fire and an incentive to opposition. Let such a brotherhood be formed—silently sympathizing in the good working of their great, enlightening, and most truly benevolent cause—the cause of the brothers and sisters in charity; and such a compact, joined by the sympathies of their highest and best nature, will have more sway over the world's heart than any young sect newly split off from a church, or political combination of worldly, ambitious men, striving after a fleeting popularity. The only true ambition lies folded up in the interests of the community and the advance of knowledge. One truth in nature revealed may loosen a whole fabric of error, and change the thoughts of men and the destiny of a world; for all truth is united, and powerful to reform; by truth shall the slave be made free, and the free become enlightened; and those who were at one time the victims of ignorance and of evil, which ever lies close in its wake, shall be advanced continually, step by step, in the eternal progress of development to greater ends—firmly and more firmly to be bound down by the principle of good enlightened and diffused throughout.

I am, Sir, very sincerely,
HENRY G. ATKINSON.

18, Upper Gloucester-place, London, July 7, 1845.

BOOKSELLERS' CIRCULAR.

STILL have few works of any worth come to hand. Perhaps our readers are not aware that a systematic attempt is invariably made to prevent the establishment of a new literary journal, by withholding from it all kinds of support in the shape of presentation copies or advertisements, until it has by its own strength passed beyond need of help, and then, when they are obliged to avail themselves of it, lest they should be rivalled by their juniors, the great publishers come to it. This is the case with all literary journals; but hostility is more especially directed against one that is known from the circumstance of its connections to be thoroughly independent. A sternly honest guide for the book-club, the circulating library, and the general reader, is an object of an almost ridiculous dread on the part of certain publishers, who purposely avoid sending their books to it, although they will do so to some dependent hack of a journal with a circulation not by one-twentieth so large nor in any manner so influential or respectable as that of the independent journal they shun. The reason is obvious. They are conscious that an honest, impartial review would be condemnatory of their bad books, and mar the puffing by which they hope to push them into a temporary sale. We observe that, with one single exception, all the publishers of really good books appear anxious to bring them under the notice of THE CRITIC, and a copy is forwarded as soon as it issues from the press. The books we do not receive are those that will not endure candid criticism. But they shall not so escape. We have made arrangements by which we may obtain access to the rubbish of certain warehouses, and its worthlessness will be duly exposed in spite of all attempts at concealment; the reader and the library-keeper shall be warned what to avoid, and the paid puffs and paragraphs of the newspapers, and the notices of the hack reviews (the property of booksellers), shall no longer impose upon such of them as honour THE CRITIC by relying upon its recommendations in their purchases.

The Chamber of Deputies of the State of Wirtemberg has been occupied with a matter urged upon it by the booksellers; who seem to have learnt the hardship upon authors of a copyright of no more than ten years' duration, only through the medium of the foreign interpretation. In most of the other German states, the right of literary property is much more extensive;—as for example, in Prussia, where the author enjoys it for life, and his heirs for thirty years after his death. In that kingdom, in Bavaria, and in Saxony, there is, besides, a law which assures to foreign works the same rights as they enjoy in the several countries wherein they are published. Thus, all works published in Wirtemberg may, by the very just limitations of this law of international copyright, be reproduced in any of those three countries at the expiration of ten years from their appearance at home. The foreign governments in question do not think it necessary to give, for the sake of the Wirtemberg bookseller, a longer protection than that government itself gives for the sake of the author. The booksellers have, in consequence, petitioned the Chamber to assimilate the legislation of Wirtemberg in this respect to that of the other states,—and the Chamber has recommended it to the government.

The booksellers of Southern Germany assembled, on the 16th ult. at Stuttgardt, as had been appointed; and at that meeting it was decided that Augsburg, Frankfort, and Stuttgardt shall be the three exchange towns in which they will, for the future, regulate their accounts (as formerly at Leipsic) in each alternate year. The King of Wirtemberg notified to the members that all public edifices and establishments should be at all times open to them. From Stuttgardt it is further announced that the printers of that town were to celebrate, in the course of the present month, the four hundredth anniversary of the invention of printing, by a banquet, concert, and ball; and that Duke Charles, of Wirtemberg, had lent them his palace of Stuttgardt for the occasion.—*Athenæum.*

OPINIONS ON THE CRITIC.

TO THE EDITOR OF THE CRITIC.

SIR,—I beg to add my humble testimony to the usefulness of THE CRITIC as a book-guide and advertising medium—I find it so, at least, and think that you deserve the thanks, as well as the support, of booksellers, librarians, &c. &c. for the judicious arrangements you have made for their accommodation. Persevere, and your journal must ultimately command the patronage of the trade in general.

I am, Sir, yours, &c.

Dingwall, July 12, 1845. JAMES KEITH, Bookseller.

THE CRITIC,
And Journal of Literature.

SATURDAY, JULY 26, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

JOURNAL OF ENGLISH LITERATURE.

PHILOSOPHY.

Wienholt's Lectures on Somnambulism.

(THIRD NOTICE.)

THE singularly interesting and instructive inquiries into natural somnambulism to which these thoughtful lectures are devoted tempt us to return to them, for here we have the first systematic examination of a subject that medical science has hitherto evaded instead of boldly grappling with and investigating it.

WIENHOLT admits that the first glance at a subject seemingly so full of mystery threatened to present insurmountable obstacles to further progress. But, on closer inspection, they lose much of their height and ruggedness, and he opens his fourth lecture with expressions of cheerful confidence that, with care and pains, a path might yet be found, "which, if it does not conduct us over, may yet lead us past," the difficulties that rise frowning before us; and he proceeds at once to encounter them.

The two most formidable difficulties are—"1st, that we should receive visual impressions without the assistance of that sense which is constructed so entirely and peculiarly for the purpose; and, 2nd, that this should be effected without the co-operation of that matter which otherwise is alone capable of procuring them."

The lecturer opens the investigation of this objection with an inquiry how far extends our assured knowledge of the sensitive faculty in general.

All that we really know is, that in our sensations certain external *stimuli* act upon certain sensitive organs, and produce in them some change, which is communicated to the mind. This change is received either immediately from the object itself, as in smell, taste, and touch, or mediately through light and air, as in hearing and seeing. The change thus produced is conveyed to the brain by the nerves, and, if they be disordered, either they convey no sensation or an incorrect one.

This is all we *know* of the process. What are the changes of the sensitive organs—how they are conveyed—how the brain receives them—how the mind perceives them through the brain—in short, how PERCEPTION is produced, we are entirely ignorant. The image formed upon the retina is not itself conveyed to the mind; the mind only recognises it when it falls there. No reason can be assigned why the same impression might not be conveyed by other organs, or why the mind should not perceive through a different medium. It is purely a question of fact; *is* the organ of vision essential under all circumstances to the PERCEPTION by the mind of an external object touch cannot reach? If experience shews that there are conditions in which perception takes place through other media, there is in it nothing more wonderful than in perception through the retina; the one is in itself quite as mysterious, quite as curious, quite as inexplicable as the other.

Let us see if there be any facts in nature not questioned, which shew that the external organ is not always necessary to the mental perception.

In the animal kingdom we find abundance of such instances, especially among the insect tribes.

In many of these animals, we can find no vestige of an organ of smell; and yet many of their operations evince a very high degree of this sense. Most insects possess eyes; but in regard to their number, as well as their form and condition, these organs differ, not only among themselves, but also from those of other animals. The eyes of the common fly, for example, are sex-angular; the spider has no less than six of these organs; and yet, judging from their operations, they appear to receive only a single perception from these various images. The chameleon moves only the one eye, without the other, and can thus see before and behind, towards the sides, upwards and downwards. In birds, the eyes are placed on the sides of the head; they do not, therefore, like us, see only one object with their two eyes, but several. In the polypi, we perceive nothing analogous to our finer senses, and yet, without eyes, they manifest the most delicate sensibility to light—they are visibly affected by light and darkness; and when any nourishment comes near them, they immediately perceive it.

In the bat the faculty of vision continues after the organ has been completely destroyed. SPALLANZANI and other naturalists have verified this fact beyond a doubt:—

Now, these naturalists discovered that the bat, even when blinded, regulates its motions in the same manner as when possessing the complete use of the eyes. In several of these animals, they destroyed both organs of vision, depriving them of their transparency by means of a red-hot iron, or picking out the whole eye with the point of a pair of scissors, cutting away the roots, and filling the cavities with melted wax. These completely blinded bats were not in the slightest degree obstructed in their motions. They flew about, by night or by day, with their wonted ease and rapidity, avoiding all obstacles which lay, or were intentionally placed, in their way, as dexterously as if in full possession of their sight. They turned round at the right time when they approached a wall, rested in a convenient situation when fatigued, and struck against nothing. The experiments were multiplied in the most varied and ingenious manner. A room was filled with thin twigs; in another, silken threads were suspended from the roof, and preserved in the same position, and at the same distance from each other, by means of small weights attached to them. The bat, although deprived of its eyes, flew through the intervals of these threads, as well as of the twigs, without touching them; and when the intervals were too small, it drew its wings more closely together. In another room a net was placed, leaving occasional irregular spaces for the bat to fly through, the net being so arranged as to form a small labyrinth. But the blind bat was not to be deceived. In proportion as the difficulties were increased, the dexterity of the animal was augmented. When it flew over the upper extremity of the net, and seemed imprisoned between it and the wall, it was frequently observed to make its escape most dexterously.

WIENHOLT suggests whether the perceptions of blind persons might not proceed from some other medium than that usually adduced as the explanation of their wonderful acuteness, the exaltation of the other senses by repeated efforts. In illustration he adduces some curious facts:—

John Genelli, a blind man of Combassi, learned statuary in his twentieth year, after he had lost his sight; and, although blind, the figures he cut in profile were both beautiful and resembled the originals. He is also said to have occasionally employed himself in crayon-painting. Wezel, in the second volume of his *Essay on the Knowledge of Man*, mentions another blind man, who not only played skilfully at cards, but was also a good chess-player.

In Diderot's excellent letter *sur les aveugles, à l'usage de ceux qui voyent*, some notice is taken of a man born blind, who was living at the time the author wrote (1749). He was a chemist and a musician. He judged correctly as to beauty and symmetry—knew very well when another object came in his way—and made no mistake, in passing a street, whether it was a *cul-de-sac* or an ordinary thoroughfare. He wrought at the turning-lathe, and with the needle; took machinery to pieces, and reconstructed it, &c.

M. Baczko, who has himself been blind for eighteen years, takes this opportunity to relate of himself, that he also possesses many of the faculties above mentioned; that he, too, by the mere touch, acquires an idea of the forms of bodies, and, with no less facility, can distinguish the height, length, and breadth of a room. Moreover, he adds the interesting observation, that, in his frequent dreams, during his eighteen years' blindness, he has not six times dreamt that he was blind, but that, in this state, he sees and acts as if he had the complete use of his eyes.

In the *Gentleman's Magazine* for 1757, there is an account of a patient who was cured of small-pox by Sir Hans Sloane, and who, at the termination of the complaint, was seized with violent convulsive fits. After the use of the cold bath, which had been resorted to after the failure of several other remedies, she lost first her sight, then her hearing and speech, and, besides, the power of deglutition. This last privation continued for three quarters of a year. During this period, her touch became so delicate, that, by means of her fingers, she could distinguish not only the principal colours of various stuffs, but even the mixed

colours, and their finer shades. In other respects, too, she supplied, in this manner, the want of her eyes. But many of her actions and expressions shewed that she must have acquired sensations and perceptions in some other way. Upon one occasion, her friends wished to conduct her into a room where they gave her to understand that she would find acquaintances only. When the door was opened, she drew back with displeasure, because, as she said, there were strangers in it, and her friends had deceived her. She occupied herself much with sewing, and her work was remarkably neat and regular. Among many things of this kind which were preserved in her family, there is a pincushion which is scarcely to be equalled. Sometimes, too, she wrote, and her writing was still more extraordinary than her sewing; perfectly regular and correct; the penmanship very beautiful; all the lines straight, and the letters at an equal distance from each other. The most astonishing thing during her writing was, that she always discovered when she had left out a letter, and placed it above the word to which it belonged, with the proper mark. She used to rise from her bed at all hours, and to sew or write, when her pains would not allow her to sleep. As all these operations in a blind and deaf person appeared so very extraordinary, it was imagined that she must still possess some feeble remnants of sight and hearing; but all experiments proved the contrary. One evening, a clergyman found her working at a table on which there stood a light. He held his hat between her eyes and the light, so as to render the latter of not the smallest use to her. She continued her work undisturbed, until, accidentally raising her hand to rub her forehead, it came in contact with the hat, upon which she fell into violent convulsions. Thunder and lightning had no effect upon her, although she had formerly been very much frightened during stormy weather. Upon one occasion, she was sitting with her face to the window, during a violent storm of thunder and lightning, but she continued, undisturbed, at her work. Even her physician, Sir Hans Sloane, who was for some time very sceptical in regard to the correctness of these facts, became, at length, completely convinced of their reality. In Bath her convulsive fits diminished, but she continued deaf, dumb, and blind.

We cannot refrain from presenting one other very interesting case, it is that of Mademoiselle PARADIES, a distinguished musician.

This lady, when only in the second or third year of her life, was seized with amaurosis, which entirely deprived her of sight. She never recovered, and became so blind, that she could neither perceive the lightning in a stormy night, nor the light of the sun at noon. When she approached a burning candle, her friends were obliged to give her warning, or to remove the light, otherwise she would have passed her hand through it or burned herself, which frequently happened. I shall say nothing of the great progress which this lady made in music, any more than I have thought proper to speak of Saunderson's mathematical education. This much only I must mention, that, as the latter taught his science, so she gives instructions in her art to some young ladies, amongst others, to a very ignorant girl of sixteen years of age. This last-mentioned person she taught to sew, to play at cards, and, with incredible pains, succeeded in bringing her so far forward in music, as to perform several sonatas and a concerto. Mademoiselle Paradies sews well, and, in her earlier years, made lace. She plays all games of cards, and is very fond of the game of skittles. Dancing is one of her favourite amusements, and she takes a part in all German and foreign dances. She is passionately fond of the theatre. In her youth, she frequently performed important characters in private companies. She is also sensible of the approach of other bodies, and judges correctly of their distance and magnitude. She clearly perceives when any larger body stands in her way. She goes about the whole house like a person possessed of sight. When chairs or tables are displaced, and stand in her way, it sometimes happens that she comes against them; but this never occurs in the case of a person. When she enters a strange room, in which she had never previously been, she perceives whether it is large, moderate, or small. When near the centre of the room, she can determine whether it is long, broad, or round. When taken to the street, she easily perceives when she passes a cross street; and this even when the air is perfectly calm. When led past a house or garden in the open air, nothing escapes her attention; she inquires to whom this house or this garden belongs. The most remarkable thing is, that she can distinguish whether a garden is surrounded by boards, walls, or stakes. Of her perception of near objects, she convinced one of her sceptical friends in a remarkable manner. He led her along a narrow path through an alley of trees, and, with a stick given her by this friend, she struck every tree in passing, drawing back her hand each time, and she did not miss a single tree out of twenty.

Her ideas of beauty are derived from the perception of proportion in examining statues. She has much æsthetic pleasure in feeling them. This pleasure is in proportion to the beauty and correctness of the work. In the Müllerian cabinet and collection of antiques, therefore, she experiences great delight; and the observations she makes upon the objects are quite wonderful. Laughing, angry, weeping, calm and quiet countenances she recognises in a moment. She possesses such a clear and lively idea of certain passions and caricatures, that she sometimes excites, in her imagination, images which make her laugh. In her melancholy hours, too, images sometimes present themselves to her, which excite terror. A short time ago, as she was driving with two female friends in an open carriage, on a summer evening, a little stout mannikin appeared to her to keep running alongside the carriage, looking in and shewing his teeth, at which she was horrified, and had some trouble to get rid of the phantom.

Between these and the faculties of the somnambulist there is an obvious similarity, but there is also a striking difference. The blind attain to it by long-continued exercise, and by a communication of ideas with others. To the somnambulist it presents itself immediately as an already developed natural talent.

The question now arises, could the sort of perception that occurred in the cases above cited be the result of any conceivable education of the other senses? WIENHOLT examines them minutely, and decides in the negative, and having come to this conclusion, he proceeds to answer the question, "By what means can the mind of the sleep-walker acquire visual perceptions, if it does not obtain them through the medium of the eye?"

"The most natural solution which occurs to an unprejudiced person is to assume the existence of a sixth sense which is awakened in the blind, and supplies the place of the eyes." Such was the reply of the French magnetisers. But WIENHOLT shews that there is not the slightest proof to justify such an assumption. His own conclusion is similar to that which we have come to, namely, that in certain conditions the relationship of the soul and body is so altered that the former receives impressions of external objects by other than the ordinary *media* of the senses of the latter. His expressions are these:—

I am now entitled to hold it as demonstrated, that our soul, if it has once acquired perceptions through the medium of the eye, may afterwards, in an incomprehensible manner, indeed, and without the use of this organ, receive similar impressions, and continue to remain in the same connection with the external world in which it had previously stood by means of light and natural vision.

He deems that in the phenomena he has been reviewing are to be found the only conclusive evidence yet furnished by science of the immateriality, and consequent immortality, of the soul, and he concludes in this eloquent and joyous strain.

And if we look to the other class of individuals—the somnambulists—how are their spiritual faculties exalted? How comes it that their imagination is so much more vigorous and comprehensive than usual? How does their memory stretch back, and clearly represent to them periods of time, of which, in their waking state, they possessed only an obscure reminiscence, or which had entirely vanished from their mind? How much deeper are their impressions and feelings! how much sharper and more delicate their wit! how much more appropriate and precise their language! It is no uncommon thing for somnambulists, in their paroxysms, to compose essays superior to what they were capable of producing in their waking state, which they themselves read with astonishment on the following day, and will not acknowledge to be their own work. Finally—and this is the most important circumstance of all—their moral sense—this noblest and most valuable faculty of the human soul—is invariably more acute, more delicate, and more exalted, than in their waking state. And all this while one or more of the windows of the soul are closed up!—Verily! these phenomena cast a new light on our future existence. If the perfection of our soul, and the improvement of its faculties, become more conspicuous on the abolition of our sensitive organs, it is not incredible that, on being disengaged from the whole of its heavy external mantle—or, to use the expression of Jean Paul, on the complete removal of those leaden shoes, which are, indeed, necessary to us in this state of existence—our spiritual I will become more fully developed, will shine forth with a stronger and more brilliant lustre. And if this be true, to what may it not attain, when a new body and new organs shall have been conferred upon it, which oppose no barrier to its progressive development; deprive it of nothing; hold it not in fetters; but rather tend to lighten all its efforts—to support and assist its progress! Yes, truly! here our prospect is extended—a pro-

NEWSPAPER THE CRITIC

spect which is not the mere creation of a wayward fancy, but is founded on experience;—a prospect not new, indeed, to the Christian, to whom his Sacred Scriptures have long unfolded it; and who, even now, beholds his brightest hopes brought into perfect harmony with the phenomena of Nature.

Mr. COLQUHOUN has subjoined to these delightful lectures an elaborate appendix, which must form the subject of a distinct notice.

FICTION.

The Astrologer's Daughter; an Historical Novel: in 3 vols. By ROSE ELLEN HENDRIKS.

MISS ROSE ELLEN HENDRIKS has chosen a good subject, but she wants the ability to work it out. The astrologer is an imposter who has obtained a mastery of Mary of Medicis, and his daughter is the heroine. He predicts the massacre of St. Bartholomew, and this and the subsequent events are mingled with the plot, which is wanting in consistency and probability, while the characters who figure in it are ill designed and ill supported. It is not a novel that could be recommended to any circulating library, save in the last extremity of demand for something new.

POETRY.

An Easter Offering. By ANNE TRELAWNEY. London: Edwards and Hughes.

THIS is another of those little volumes of respectable poetry which so mightily perplex the reviewer how to speak of them. They are not good enough for praise, not bad enough for condemnation; they present no single feature requiring comment, and all that the critic *can* do is to receive them with civility as "good sort of people," very amiable and well meaning, but tedious withal, and, having gone through the formality of an introduction, to make a bow and pass on. Such is the character, or rather no-character, of Mrs. TRELAWNEY'S *Easter Offering*, and so we take leave of it.

The Death of Basseville. A Poem. Translated from the original of MONTI. London: Watts.

FEW of our readers require to be told who HUGO BASSEVILLE was. His removal from his native place to Paris, and his fortunes there; his acquaintance with MIRABEAU, his attachment to royalty, his conversion to democratic fanaticism, and his fatal visit to Rome, where he was stabbed, and died with the words upon his lips, "Je meurs la victime d'un fou," are matters of familiar history.

The Death of Basseville is a poem in *terza rima*, and translated in the same verse. The original is marked by some masculine scenes, and may be taken as a good specimen of Italian literature. MONTI aimed at shewing the horrors and the many evils of revolutionary principles, and it may with justice be contended that in depicting these he coloured somewhat too highly the other side of the question.

The translator of *The Death of Basseville*, or rather of the first canto, has not failed, if he has not succeeded, in his efforts. In a translation we rarely hope for the force of thought, and the nicer inflections of language, which distinguish the original. If the present translator be again the representative of MONTI'S fame, we advise him, while he transfers the thoughts of the Italian poet, to emulate more the *grandeur* of English verse.

EDUCATION.

The German Delectus; or, Elementary and Progressive German Reader. By E. ALBRECHT, M.A. Professor of German in London, and J. C. MOORE, author of "The German Interpreter." London, 1845. Moore.

IT is with strict truth that the compilers of this excellent little volume observe in their preface, that of the many selections from the best authors, published for the use of students of German, not one has been arranged systematically. The taste and research of the compiler have been more thought of than the instruction of the learner. Hence he who could read and understand the extracts would be competent to read and understand any work in the language.

The compilation before us proceeds more rationally. It is strictly progressive. The lessons begin with two words—a substantive and an adjective; then three, four, five, six, until we arrive at sentences, and from sentences to elaborate extracts, thus ending where its predecessors have begun. This account of the plan will of itself recommend this Delectus to all who are entering upon the study of the German language. Combined with OLLENDORF'S unrivalled grammar, it will supply all their necessities.

RELIGION.

Elements of the Christian Religion; being Sketches of Sermons preached at St. John's, Brighton. By the Rev. SPENCER R. DRUMMOND, M.A. Brighton, Folthorp and Co.; London, Hatchard, 1845.

THESE are literally what they are called, *Sketches of Sermons*—skeletons of discourses which the reader's own thoughts must clothe with flesh and adapt to the uses of life. Their brevity may be judged by this, that no less than twenty-five are packed within 107 small duodecimo pages. But, though words be few, there is no lack of thought. To the preacher it will be useful, as suggesting a multitude of subjects, which he may elaborate at pleasure.

Lectures on the Pilgrim's Progress, and on the Life and Times of John Bunyan. By the Rev. GEORGE B. CHEEVER, D.D. London, 1845. Fullarton.

THIS is one of the worst books proceeding from one of the worst schools that we remember to have met with. The burden of it is, the wickedness and stupidity of all members of the Church of England, and the godliness and wisdom of the author and the sect to which he belongs. The style of JOHN BUNYAN is clear, forcible, and expressive: the beauty of his allegory is, that it needs no illustration. Dr. CHEEVER'S lectures are partly a running commentary on good old JOHN BUNYAN, and partly a new "Pilgrim's Progress" of his own, directing its insinuations, in terms the most bigoted and illiberal, against all whose religious opinions he cannot embrace. This is not the spirit in which warfare of this kind ought to be carried on. Common sense and ordinary good feeling, no less than Christian charity, cry out against it. The prejudices of those who differ from us should never be treated too roughly; but it is hardly less than impiety to scoff at and ridicule them when they are concerned about the essentials of religion, about the efficacy of the sacraments, or the mysterious operations of divine grace.

MISCELLANEOUS.

Walks in South Lancashire and on its Borders. By S. BAMFORD. Published by the Author. 1844.

LITERATURE has always a tendency to increase the social comforts of man. It is a foreshadowing of all that can be most true and beautiful in society; it speaks in a voice superior to the common voice, and yet not above the understanding of the multitude; for its mission is purely to elevate and instruct. Literature is the popular mouth, which will be heard, and which must be beneficial. When it fails to be profitable it fails in its purpose, and is no better than the fungus, or poisonous excrescence that springs from a rich and fruitful soil. The literary man is a man of fine sensibilities. He has chosen his occupation because of the extensive opportunity it offers for the display of generous thought and expression.

We believe Mr. BAMFORD adopted literature for this reason, as he seems to be possessed of large sympathies. Our author has drawn back the golden curtain from the world, and exposed its dross and its deformity. He has raised his arm for the afflicted and battled with the evils that stand in the way of improvement. Mr. BAMFORD has a rooted dislike to the pharisaical cant that has stolen the name of religion. He has a fixed distaste for that quiet inanity which sits and prays when it should be up and doing. He would have men active in kindness, energetic in love, expansive in charity. His whole philosophy is in the brief word—*do*, and do to the utmost for the benefit of mankind.

Our author has endeavoured to infuse this spirit of generous energy through the medium of simple tales. We cannot review such detached stories with the same critical acumen as we should a three-volumed novel. It is enough for us that this desultory composition is more than counterbalanced by the nobleness of its tone. Mr. BAMFORD has walked among the workers, and gives us pictures of their intellectual, moral, and physical condition. In Oldham, he observes, that "poverty

was increasing on all hands, and the people were getting in a worse condition every week. A collector of rents said people were crowding by two and three families into one house; they could not pay rents for entire houses, and nearly all the workers who could raise money enough were leaving the country. Seminaries for the instruction of youth and children had, in some instances, become nearly deserted."

Haywood, a busy manufacturing town, and which about forty-five years ago had only one cotton-mill, the property of the present Premier's father, is described as more flourishing, and the workers less distressed than those of other places. Yet even here, as in all the manufacturing towns Mr. BAMFORD visited, the mildew of poverty had fallen. The information contained in *Walks in South Lancashire* is valuable, and we hope it will induce readers to exert themselves in behalf of those who need succour. It is our object to knit together the seemingly opponent elements of society; to trample down that unchristian creed whose votaries have no eye to weep, and no heart to feel for any but their own sorrows. With this aim in view, we must welcome our author as a pioneer in the same road.

When Mr. BAMFORD is free of minute facts and details, he writes with ease and even elegance. His very imagination is of the profitable kind. His idealism is not a vapour that ever recedes as the reader advances, but we can solve and understand it as a power used to instruct us in our social duties. We give one very beautiful, and, alas, truthful extract from this useful volume.

THE TWO JUDGMENTS.

In the solitude of the night I had a strange dream, at which my soul was troubled, and filled with fear and awe.

Methought I was in a large open place, where a great multitude of human beings were collected together. And they were divided into the accepted and the unaccepted; and they were separated by a barrier, on which stood an angel, whose robe was as white as driven snow; and the outside feathers of his wings were like frosted silver, and those of the underside were like pale gold; and he stood there as a test and a witness of truth; and he kept a record of the proceedings of these children of men, but they knew not that he was there.

And I perceived that the accepted party dwelt in a beautifu country, like a large park, which was laid out in pleasant walks beneath shady trees, and by quiet and retired places, and amongst shrubs ever blooming, and ever in leaf. And splendid palaces were there, furnished with rich carpets and soft couches, on which the weary went to repose; and tables were spread for them covered with ever delicious viands; and whatever they wished to eat, or to drink, or to clothe themselves with, was straight set before them. And they formed a most splendid company as ever was seen under heaven. Noble countenances were there, and beauteous and majestic forms; and their garments were all bright colours and hues; gorgeous tiaras and head-dresses they wore; and as they moved, their robes and jewels gleamed with splendour; and they walked about in the sun-light, all so happy; —and some danced to music, and some listened to ravishing strains, and some had fine pictures and statues, and some were happy in love, and some had beauteous children, and others took pleasure in splendid chariots, and in horses and hounds; but all seemed so happy, like very angels; and thus they spent their time within their pleasant inclosure.

And I remarked that three spirits stood within a gate, which led into the inclosure; and they kept it that none might pass within but such as were accepted; and I asked the angel about them, and he said they were evil ones; and their names were Ignorance, Pride, and Hypocrisy.

And Ignorance assumed an air of wisdom; and Pride was robed in a garment of meekness; and Hypocrisy wore the clothes of a saint.

And the angel waved his hand, and their garments were turned aside, and their bosoms opened, and I saw their hearts, all teeming with arrogance, and oppression, and avarice, and perfidy, which they hugged inwardly, saying, "No man will know."

And on the outside of the gate at the barrier, stood one keeper only, and the angel said he was a blessed spirit,—his name was Hope. And a mighty concourse of men, women, and children stood behind him; and they occupied a vast plain, of which there appeared not any end. And their looks were incessantly directed towards the country inside the barrier, and the splendid company there assembled. And the multitude were agitated by a variety of wants and passions, and they were restles as a tossed ocean; some were torn by envy, some by revenge, some uttered curses loud and deep, some brandished weapons, some plotted to force the barrier, and others betrayed them; some advised conciliation, some laboured unceasingly to hoard up wealth, some were a-hungered, some in rags, some had long been houseless, and they stood there, wind and storm-beaten, praying for food and shelter.

And the angel looked on the multitude of beings with pity; and he straightway waved his wings of glory, and there broke from them a light at which the sun grew pale, and a feeling of divine mercy and charity fell upon the hearts of many of the people inside the inclosure; and they held meetings, and heard sermons, and made collections, for the instruction, and the moral and religious improvement of the great outside multitude: many of them said also, "lest peradventure they break in upon us, all rude and uncivilized as they are, and take from us our houses and lands, and our silver and our gold; and rob us of our enjoyments;" and so they contributed liberally, and sent instructors amongst the people.

And from time to time those amongst the people who had acquired wealth, by whatever means, knocked at the barrier, and being deemed respectable, were, by the evil ones, admitted to share the joys and splendour of the place.

And mingled with the people, were good men, and self-taught geniuses, who needed not instruction; and attended not, therefore, to the precepts of teachers, but unto those of God only. And from amongst these from time to time, advanced some to the barrier, to see if peradventure they might be accepted.

And, as I looked, an old man came from the crowd and demanded entrance; and the keepers within asked on what grounds he claimed it; and the blessed spirit of Hope spake for him, and said he was a virtuous man; he had shared his bread with the hungry, and his garments with the naked, he had protected the defenceless, and had shielded the innocent, and had saved life. And Pride asked if he were wealthy? and Hypocrisy if he were of the true faith? and Hope said he was very poor, and the angel, yearning, said he would be found acceptable of God; and they heard the words of the angel, but knew not from whence they came. And the keepers, looking at his humble appearance, declared he could not be accounted respectable, and therefore could not be admitted, and they closed the door against him. And certain men and women, of noble carriage, and with shining countenances and apparel, advanced from the crowd within the barrier, and spoke words of comfort to the virtuous man, and stretched forth their arms and embraced him, and gave him of the food and raiment which they had in plenty, and the poor man was very grateful, and he blessed them and their posterity; and then he went his way and died amongst the people, and there was a great mourning for him, and a lamentation; and he was carried to a quiet green field, and there buried; and the people wept upon his grave, calling him, Father! Father!

And soon after another man came from the crowd. He was of mature years; of a thoughtfully placid countenance, and neatly, though humbly attired; and he had books and writings under his arm, at which he kept looking. And Hope said he was a man of learning, but very poor, and the three keepers looked at him, and saw that his apparel was humble; that his feet were scarcely concealed by his shoes; that his features were shrunken and furrowed by want; and that the only jewel he wore was a plain ring, on which he glanced affectionately. And when they questioned him, he said his life had been spent in endeavouring to benefit and enlighten mankind.

And Ignorance questioned him about air bubbles; and Pride inquired about his pedigree; and Hypocrisy asked if he had written sermons; and he said he had not written any sermons, unless the tenour of his life and of his writings might be considered as such; and he was adjudged not to be respectable, and was rejected; and thereupon certain noble-minded men and women advanced from the crowd, and spoke kindly to him, and embraced him, and bade him be of good comfort, and they gave to him that which gladdened his heart, and he blessed them, and prayed God to bless them; and the Angel which stood on the barrier wrote that blessing in his book, and it was not forgotten in heaven.

And in some time a third man came from the crowd to the gate; his appearance denoted extreme poverty; he was bent with the weight of years, and his grey hairs scarcely sufficed to cover his forehead; and he asked not so much to be admitted, as to obtain wherewith to keep his old age from want. And Hope said he was a naturalist, and had spent all the hours he could spare from labour, in collecting and arranging God's wondrous works in the vegetable creation; and they questioned him about his moral life, and he admitted he had not been altogether blameless; but he sincerely repented, he said, whatever errors he had committed, and hoped they would be forgiven. And the Angel wrote down those words, and they were not forgotten of God. And the keepers decided that he could not be allowed relief because his life had not been morally pure; and he turned to go away, but certain noble-hearted men and women advanced from the respectable side, and called him back, and covered his grey hairs with a mantle, and spoke kindly to him, and gave him wherewith to make his latter days comfortable; and he blessed them, and the Angel recorded that blessing, and he took down

the names of those who did these good things, and they were blessed above the rest of mankind.

And then came one from the crowd, bearing a harp, and his carriage was dignified and respectful; and he put down his harp near the barrier, and leaned upon it, for he seemed weary with long travel, and his grey hairs floated about the strings. And Hope said he was a bard, and the evil ones inside the gate would not believe that one so homely could be a bard. And he waved his hand for silence, and when the noise had abated, behold a sweet strain was heard from voices inside the barrier; the respectable ones were singing a new song, and that song was his; and the people took it up and shouted his name. Then the evil ones questioned him about his conduct in the world, but they inquired not what had been the conduct of the world towards him; and he turned away indignant, and dashing the tears from his cheek, he took up his harp to depart.

And certain noble-minded men and women called him to the barrier, and embraced him, and consoled him; and they would have given him food and raiment, and silver, and gold; but he would have none of their gifts, because he was not thought worthy to be admitted; and so he blessed them and went his way. And the Angel wrote down all these things, and he shook his wing above the harp, and there awoke a melody such as never on earth had been heard before. And the multitude listened in ecstasy and wonder; and the minstrel knew not whence the music came, save that his harp was vibrating; and looking towards heaven, he said, "Lord, if it be thy will, let my travail now cease!" and he leaned on his harp, entranced with the wondrous tones. And when the Angel folded his unseen wing, the music ceased, but the bard stood leaning on his harp as if still listening. And they called to him, but he moved not; and they urged him, but he lifted not his head. And certain of the noble-minded came over the barrier, and others advanced from the crowd, and when they tried to arouse him, he was no more. And they mourned over him, calling upon him with endearing words. And they placed him on a bier, and wreathed his bier with garlands, and they bound his brow with tendrils of young woodbine, and hazel-bloom,—for it was the spring season,—and they decked his harp with the new flowers of the year, and placed it beside him on the bier, one hand resting on its chords; and they carried him on their shoulders to a green sunny bank, where they buried him, and wept over his grave, saying, "Alas! alas! that we should live and hear that voice no more!" and they placed fresh sods above his grave, and planted there a young broom, emblem of his never-fading song. And when they returned, a young bard carried his harp tenderly aloft, and the flower wreaths swung upon it, and the Angel waved his wing, and the same sweet tones were heard as before; and the people stopped and wept, and looked up, saying, "It is he! it is he! our beloved one is still abiding with us." And they were comforted.

And after that a man advanced from the crowd bringing with him a machine most wonderful to behold; he had spent long days and nights of toiling thought in its construction, so that he had wasted his substance, and was now poor and distressed; and he craved wherewith to enable him to complete his machine, that he might obtain his just reward; and in order to shew what the machine would perform, he turned a wheel, and the machine spun out many fine even threads at once, so aptly almost that it seemed as if moving from reason. And the respectable class praised his ingenuity, but they vouchsafed him not any thing; and the three keepers at the barrier kept it closed; and certain ignorant ones advanced from the crowd, and threatened the man, and abused him, and broke his machine, so that he was obliged to flee and hide himself, and he did so, and disappeared, and died in obscurity, and left his children in want. And then came another man with a machine almost like the former one, but more complete, and he carded his wool and spun out his threads as had been done before, and he shewed the multitudes on both sides how those threads might be made to yield gold, and they bade him go on, and he spun many threads and exchanged them for gold, so that presently he was clothed in gold. And the people on both sides set up a great shout, saying, "Well done! well done!" and the barriers were quickly opened, and the man went within all laden with gold; and the respectables received him with joy and feasting, and he was accepted by nobles, and honoured by princes, and all because he had shewn them how to procure gold. And after that I heard a tender, sweet voice singing a mournful air; and behold it was a woman who came forward in face of all the people. A comely woman was she, dark-haired and very pale, and her dark locks were beaten by the wind, and a wreath of dying flowers was upon her head; and she moved slowly, bearing in her arms a babe which suckled sleeping at her bosom. And ever and anon as she moved, she turned towards the crowd within the barrier, looking as if she would fain behold some one there, and pouring forth the while tones that might have moved a heart of stone; and she sung the joys of innocence, and the downfal of virtue, and the wretchedness of guilt; and many hearts were moved, and many were fortified to good intent. And she essayed to pass the barrier, but the keepers prevented her, and called certain stately ladies, who said she was impure, and degraded, and they were surprised at her audacity in attempting to enter there; and she blushed when they mentioned her shame, and tears fell upon her bosom, and bathed the face of her child. And she said she would not have presumed to come had she not known that one whom she loved, the father of her infant was there; and the ladies denied that he was there; and she pointed him out, walking in grandeur with a bevy of the fairest and noblest. And the ladies reproached her, and bade her begone, saying, "she was not a fit associate for any one in that place;" and the barrier was closed against her. And she raised her voice, and sung a strain of her days of innocence; and her betrayer heard it, and looked, and saw her, but he moved on and disappeared.

And then her heart sank within her, and she turned to go away, but certain noble-minded ladies came down to the barrier, and they spoke consolingly to her, and offered her food, and clothing, and tried to comfort her. And she thanked the noble-minded ladies, and prayed God to bless them, and that none belonging to them might carry a broken heart; but she would none of their gifts, and so she went slowly away.

And the Angel wrote down those blessings in his book, and they were recorded as blessings in heaven; and the noble-minded ones were blessed. And Hope, the good spirit, would have spoken to the woman as she went her way, but she, turning, gazed upon him with an unearthly gaze, and pressing her infant to her bosom, her full heart stopped, and it beat no more.

The Book-Collectors' Hand-Book; a Modern Library Companion. Churton.

THIS is simply an advertisement of Mr. CHURTON'S establishment; an ingenious device to introduce his catalogue under pretence of friendly counsel by a disinterested *littérateur*. Such deceptions are not creditable; they are too much after the fashion of MOSES and SON and the blacking makers of old to be worthily adopted by booksellers, who ought to consider the respectability of their calling, and strive to maintain, at least, if not to advance it.

JOURNAL OF FRENCH LITERATURE.

The New Aladdin; followed by Fleuranges. By PAUL DE MUSSET. One vol. 1845.

THE new work of M. DE MUSSET has just reached us. The scene of the first story is laid at Venice, the second is purely French—so French, that to such of our readers as are unacquainted with the organization of Parisian society (if any such there be), we should despair of making the details of the story comprehensible, and the rather, that they are improbable enough even to startle a Frenchman. *The New Aladdin* is a fiction of a different calibre; not only novel in its idea and construction, but, moreover, conveying an admirable moral; it is told also with ease and spirit, and presents considerable variety. We said, as we thought, that the *Tour through Sicily, &c.* of the same gentleman, which we lately noticed, was a conceited, flippant, and empty production; and we are glad to find a legitimate opportunity of passing a more favourable opinion upon his subsequent labours.

The volume now before us contains, as we have shewn, two distinct tales. The author professes to have had the first of these related to him in the sea-seated city, during his sojourn there. Be this as it may, *The New Aladdin* is a very ingenious story, and there are many details introduced, which, however trifling they may be individually, nevertheless afford to the reader, in the aggregate, an admirable picture of the state of Venice before her fall. Take for example the following sketch.

VENICE IN 1795.

Louis Manino being Doge, the magnificent lordship, still existed in name, but its ruin was rapidly approaching. Industry, commerce, fortune, government, all was declining at the same moment; the fine arts were giving forth their last sigh; and as to the public morals, they were so loose that the rhymsters of Florence called Venice the *naughty place* of Italy. This ill-conducted beauty could not fail to be soon placed under strict guardianship, as she deserved. Nevertheless, there reigned at Venice a gaiety like that which filled the house of the prodigal son. Half the great names of the golden book were hidden under threadbare coats; the remainder, with some exceptions, were devouring the remnant of their patrimony, and leading a joyous life, in order to leave as little time as possible to their creditors, who, hoping nothing from their debtors, were them-

selves eating *the dinner of their master*. The guitar players and the women of pleasure might have grown rich, had they been faithfully paid, and had their value not degenerated; but there were so many grandee musicians, and so many great ladies complaisant, that the competition was formidable. The hotel-keepers only profited by the loose cash which still remained in the tattered pockets of the young and idle.

In the midst of this general disorder, and in opposition to the epidemic of folly and prodigality, a club was formed under the bold title of the *Taccagni*, or Misers. Half a dozen old merchants and toll contractors, shocked by the extravagance and luxury about them, made a parade of their avarice, and gloried in the contemptible name of *Taccagni*, as the society of *Lesine* had done in theirs a century before at Modena. When the example of an excess does not induce imitation, it invariably inspires a taste for its opposite extreme; and people become sordid from their hatred of prodigality, and from fear of ultimate want. This reaction might have produced a salutary effect at Venice, if the nobility could have been induced to try it as a novelty; but ridicule alone was engendered by the *Taccagni*; they were caricatured at the theatres; the pantaloons and harlequins were facetious at their expense; and their honourable club was overwhelmed with taunts even by the common people. Without retorting these mockeries, the *Taccagni* met regularly to talk over the means of still increasing their economies, and of becoming misers in a yet more supreme degree. They set the jesters at defiance, and spoke openly of the cynical statutes of their club; while they adopted a peculiar costume. This was composed of pantaloons of black cloth, a waistcoat with sleeves, a shirt of coarse linen (that of Holland being heretical), and covered the whole with a wide cloak of frise fashion, which served as a devotional habit at church; an umbrella in the spring, a dressing-gown in the house, a walking-dress in the street, a counterpane at night, and even a pall on the day succeeding the *passo extremo*. As to their hats, they purchased them at second-hand; the older they were the better; and they would assuredly have raked up some of those which figured in the time of Henrico Dandalo, if the Crusades had not damaged the beavers of the republic. When the bells of St. Mark were chiming for the interment of a senator, there was always to be seen in a corner of the church a group of *Taccagni*, calculating among themselves the expense of the catafalque, the music, the wax tapers, and the fees of the choristers; a habit which had more than once drawn down upon the displeasure of the pious, whom they disturbed in their devotions.

Six of these worthy individuals, after having on one occasion attended the pompous funeral of a Venetian noble, were crossing the *piazzetta* on their way to the quay, anathematizing the wasteful profusion of which they had just been the witnesses, when one of them stooped to pick up a lentil which appeared to have been dropped from a vegetable-basket. As he was in the act of rising with the precious treasure in his hand, his ill-fitting hat fell to the ground, and was instantly seized by a young man who chanced to be passing, and who ran off with his prize, pursued by the cries and threats of the angry owner. This lentil is the keystone of the tale, and the mischievous Zanetto is its hero. We will allow M. De Musset to make him known to the reader.

A VENETIAN ADVENTURER.

Zanetto was not a vagabond without name or dwelling, as may be thought, but simply a wild young rascal, a prodigal, as his father and grandfather had been before him, and his inheritance had been scant enough. As he had learned to read, write, and cypher, his uncle Don Joseph Tomolo, an advocate at Padua, had offered him a paltry situation among his oppressed and overworked clerks. Zanetto could not make up his mind to leave Venice; the nostalgia would have seized him as it did young Foscari, and he consequently refused. Having sold all his furniture, he found himself one fine day without a halfpenny in his pocket; but gay, reckless, and full of confidence in his strength, his handsome face, his nineteen years of age, and, above all, in the clemency of his Maker; for, by the signal favour of nature, Zanetto bore upon the lateral summit of his skull that strange protuberance to which Spurzheim gave the name of Hope; that is to say, the faculty of seeing the present through a bright prism, and the future all light. This rare and charming tendency sustained Zanetto in all his difficulties; and when hunger stared him in the face, he consoled himself by the reflection that the calling of a gondolier was esteemed noble at Venice, and that, consequently, even a *cavaliere* like himself could not be dishonoured by handling an oar in some passage of the Grand Canal.

This gay-hearted *neer-do-weel* at length consents to restore the hat of the *Taccagno*, on condition of receiving the lentil in exchange; a proposition merely made to annoy the miser, but to which he nevertheless reluctantly accedes. Zanetto walks off with the wretched vegetable in idle mirth, and then looks about him for another source of frolic. His attention is, after a time, attracted to an old Turk, followed by a servant carrying a large and apparently heavy bag, which he deposits upon the steps of the quay while he awaits a gondola in which to transport it to another quarter of the city. Zanetto approaches the Turk, and inquires whether the bag does not contain lentils. The Osmanli answers that it does; upon which Zanetto shews him the one which he has received from the *Taccagno*, remarking that he has just found it, and that consequently the bag must probably have burst in some direction. The Turk, in evident alarm, begs his new acquaintance to examine the canvas, in which Zanetto does in fact discover a small rent. The agitation of the Mussulman increases; and, earnest only to amuse himself, the young scapegrace offers to restore to him the little vegetable of which he has become the possessor, remarking, that from the evident value which the stranger attaches to his lentils, he cannot be dishonest enough to keep it. The Turk, struck by the refinement of Zanetto's honesty, desires him to take his place in the gondola, and to accompany him to his house, where he will shew him the contents of the bag. These prove to be jewels of enormous value, the heirlooms of several impoverished Venetian families, purchased from their representatives for the Sultan. Finally, having satisfied himself that all are safe, the Turk and Zanetto take some refreshment together, like old friends; and before they part, the grateful Osmanli offers his companion the choice between a purse containing 2,000 ducats and a small copper seal, which he declares to be a talisman, by whose means the young man may gratify every wish that he can form, simply by stamping the letter containing his demand with this mean-looking signet. After a moment's hesitation, Zanetto selects the seal; and forthwith they part, the Turk for Constantinople, as he affirms, and the mystified Venetian whithersoever his next vagrant fancy may carry him. Of course, he commits nothing but follies, becomes faithless to his mistress, is robbed in his own house, and half-poisoned by a sleeping-draught; and eventually imprisoned "under the leads" as a swindler; his signet, also carried off by the thieves, falls into the possession of his rival; the father of his promised bride, who is a *Taccagno*, turns him from his doors as a vagabond, after having received him as a prince; in short, he has run the gauntlet of suffering and ignominy, and is lying stretched along the quay moralizing on the past, and weaving a tissue of prudence and moderation for the future, when once more the Turk appears upon the scene; the mystery of the signet is unravelled, and the misfortunes of Zanetto are at an end; for, strange to relate, he resolutely adheres to his system of reformation, and soon learns to acknowledge the truth of the old adage, that "contentment is better than wealth."

There is a buoyancy of style, well sustained throughout the book, which is singularly pleasing. M. De Musset seems to have written it in a green bower, within sight of a running stream, with sunlight in the sky, and flowers scattered over the earth. The spirit in which it has been composed was a happy and a wholesome one; and the reader at once takes the infection.

We shall conclude our notice by one or two extracts:—

A LOVE SCENE IN VENICE.

As soon as he stood beneath the window, Zanetto took off his hat, and made the Venetian salutation, saying, "*Schiavo!* beautiful Luigia. Why are you not to-night at San-Salvatore, where the famous Sacchi is to improvise a new piece? All Venice will be there but you and I."

"Alas, Don Zanetto, my father will not allow me to go to the theatre; and the worst of the business is, that my future husband, Marcantonio, will not take me there either, when I am his wife."

"Your father is a tyrant; and if I were in your place, I would not accept such a husband as that miser of a Marcantonio. I cannot think why you thus suffer yourself to be shut up and worried."

"Alas, what can I do, my good Zanetto?"

"Ah, Luigia! if you had not forgotten the time when you promised to be my wife, and when I swore to remain faithful to you—but all that has escaped your memory."

"I remember perfectly, on the contrary, dear Zanetto. It was on a heap of sand, that we used to play together. I was ten

years old at least, and you thirteen, if I am not mistaken. For the last six years I have not seen you, however. Your father ruined himself, while mine has shut his door against you, and never ceases repeating in my ears that you have not a halfpenny, that you have not an idea of steadiness, and that you lead the life of a vagabond. A girl must marry as soon as she can. Marcantonio is ugly, rich, and avaricious. I should prefer another husband, handsomer, more generous, and who would let me go to the play; but where can I find him?"

"Here he is!" said Zanetto, striking his chest with the academical emphasis of his country; "here he is, beautiful Luigia. I have never ceased to love you since the day of the sand-heap. Those who tell you that my father ruined himself are right; but I will prove that I am neither ugly nor avaricious, like Marcantonio; and moreover, that as to not having a halfpenny, not being steady, and living the life of a vagabond, things are very different. Do you see that lantern yonder that they are lighting on board a Turkish ship? Well, if you were to make a rosary of what I possess in silver crowns, hard piastres, Spanish pieces, and gold sovereigns, your chaplet would reach beyond that light; and moreover, if you will be my wife, I swear and promise, in writing or otherwise, to take you to the theatre once a week, as much as you please, under pain of a separation. May I be drowned if I have lied in one syllable!"

"What! are you rich, Zanetto?" cried the Venetian beauty, her eyes flashing like carbuncles; "make haste, and speak to my father. Buy a house, and proclaim what you are worth. We will be married; and you shall give me twenty ducats to buy tapers, for I have promised St. Zacharius to burn for him sixty tapers of white wax if I marry a handsome man, and I will keep my vow faithfully. For Marcantonio I would not have burned a candle-end."

"You shall have your sixty tapers, but I will not buy a house; I must have a palace on the Grand Canal, and I shall engage some waiting-maids, and as many cooks as you please, without counting the hired musicians."

"Zanetto," replied the young girl, "it would be dreadful for you to laugh at me, for I feel my head swim. I no longer love Marcantonio, and I return to you with all my heart. I have a handsome coat for the wedding-day. I should like you to be as beautiful as the sun."

"I will have a white silk coat, with pink and gold fringes. As to your own marriage dress, it shall efface the gala mantle of the Dogeressa, unless the silk merchants of the Merceria have no more handsome materials in their shops."

"Oh! how delightful! Good Zanetto, take this white handkerchief as a pledge of my faith: I am your wife. Fly! my father has just turned the corner. If you deceive me, I shall die of grief."

"May St. John, my patron, break my bones, if I fail in my promise to you!"

Zanetto received the white handkerchief, covered it with kisses, and ran off up an alley; but scarcely was he alone when he began to feel terrified at the enormous lies that he had been pouring forth.

A TACCAGNO MARRIAGE SERMON.

"My son Marcantonio," said old Canapo, "while Don Vitale is giving to his daughter the instructions which a good father owes to his child, it is necessary, notwithstanding your good sense and your excellent qualities, that I should impress upon your memory also some wise advice in the presence of my brother Taccagni. We have often meditated, like men of mature age and experience, on the advantages and inconveniences of matrimony. It is for you, as you are about to marry, to know how to secure and to retain the profits of the conjugal state, by discountenancing and diminishing by degrees the expenses and outlay consequent upon that condition. A woman must not have ideas and tastes contrary to those of her husband; that is why I have chosen for you a helpmate imbued and penetrated with our doctrines. You are economical; you require a parsimonious partner, and I trust that Luigia will be such. In the precepts of our club it is said, that if you venture to take a wife, you should choose her small, because she can dress cheaper, she will spend less for her linen and her other clothes; that was why I chose a little wife for you. If the expenses of a married man are heavier than those of a bachelor, there is a compensation; the woman works, and takes care of the house. Never suffer your spouse to be idle. Always keep her at home; or, if she go to see a neighbour, make her carry her work with her: she will save candles while she works by another's lamp. Never leave her in the company of men, for fear of wicked thoughts; man is like fire, woman like tow; if they approach each other, the devil is the breath which blows upon them, and makes them blaze. Youth requires amusement; meet the evil half-way, and shew yourself a good husband without its costing you any thing, by walking out with your wife on fine days; but avoid coffee-houses, theatres, pastrycooks, and rain, which latter would oblige you to take shelter in some place where you must spend money. Do not let Luigia walk on the Rialto, among the jewellers, nor in the Merceria, where rich stuffs and laces might excite her envy, nor in any other neighbourhood where a display of expensive objects presents an odious temptation.

"This day, at twelve o'clock, you change your condition."

LITERARY GOSSIP AT PARIS.

From our Correspondent.

Considerable amusement was created last week by the *méprise* of the young and handsome wife of one of the chief magistrates of the capital, who has lately confined her reading to the *Juif Errant* of M. Eugene Sue, and who, on being informed of the results of M. Rossi's negotiations, exclaimed joyously, "I am delighted to hear it; I congratulate the *Rennepont* family; we have got rid of *M. Rodin* at last, and it was really quite time, for he had already lived through nineteen volumes."

It will be well if M. Sue take the hint; for the tale in question "drags its slow length along" in a way so wearisome that it betrays the fact that its author is "working by the piece," and looking to his pocket rather than to his literary reputation. We are fairly beginning to yawn over its platitudes.

Our own literary women, with very few, and those very pitiful exceptions, scorn all affectation of singularity in their dress or manner; but with the Parisian *bas bleu* it is precisely the reverse. They delight in the *monstrosities* which cannot pass without inducing an inquiry as to the identity of the wearer. The lioness loves to be "stirred up with a long pole," and compelled to roar. We have been highly amused lately with the innocent and unconscious epigram of a milliner, who, waiting upon one of the fair sisterhood with an account of rather formidable dimensions, thought it necessary to induce its settlement by the most honeyed words in her vocabulary, heightened in their power by a regret that her clever customer had so long suffered her pen to lie idle. The venture was peculiarly unfortunate; the last work of the said lady having "died, and made no sign." By way of recovering her *faux pas*, she resumed blandly, "As to your late failure, Madame, put it out of your thoughts; every one has his weak days. Who knows better than I that genius is never secure from failure? Even I myself, about two months since, had composed a love of a bonnet, upon which I founded the most legitimate hopes. Had it been adopted by a *grande dame*, or even a *petite maîtresse*, it would have made my fortune. I was just about to produce it, when my ill-luck would have it that Madame Sophie G—— walked into my show-room, took a fancy to my *pauvre cher chapeau*, and that very night, by wearing it at the *soirée* of Madame la Comtesse M——, she ruined its reputation for ever."

I need hardly tell you that the 14th instant, being the fifty-sixth anniversary of the taking and destruction of the Bastile, an immense crowd collected in the place where the fortress formerly stood. It was composed almost entirely of students and operatives, and no serious disturbance took place.

Mademoiselle Plessis, of the Théâtre Français, has sent in her resignation to the management. The event has created considerable sensation and no small annoyance to a large portion of the public, as she took the *rôles* of Mdlle. Mars, and filled them very efficiently. By her present resignation she loses her position as a member of the theatrical society, and her claim to a pension on her retirement. The indemnification is said to be an engagement in St. Petersburg for ten years, which is to produce the sum of 40,000 roubles and a pension of 2,000. M. Arnoud, well known in the world of letters, will be her companion to the city of the Czar, where their marriage is to take place.

JOURNAL OF GERMAN LITERATURE.

LITERARY INTELLIGENCE.

(From our Correspondent.)

In Germany the period for literary societies is at an end; a result which must always follow when the literature of any country has attained a certain standard of excellence. In Belgium, however, these societies are in full glory; and to them must be ascribed great part of the Flemish movement which has been so remarkable of late years. Many of the old associations exist even now in their antique form, with their president, their poet, &c. and from time to time manifest themselves to the world by some new publication, as lately in Ostend, Dixminden, &c. With these, many young societies may be named, either devoted wholly to literature, or to literature and the drama. In Antwerp, that entitled De Olyftak, the Olive Branch, is in full activity. Shortly after the foundation of the society appeared the *Woordstar* of V. Kerkhoven, to which all members of the society contributed. When this publication ceased, it was resolved to publish a history of the city, of which the fourth edition has lately appeared. It is an excellent work, compiled from the best authorities, and one which may well be recommended to students. It has the advantage of admirable illustrations; all

the public buildings, monuments, arms and seals of the city, statues of the most celebrated characters, are given in woodcuts, lithographs, or etchings, from the hands of the first artists of Antwerp. The members of this society likewise publish the literary journals *De Vlaemsche Letterbode, De Kederyker;* and some numbers of the *Nederduitsche Kunstbibliothek* have also appeared, a work supported by the first writers of the day, and brought out with great magnificence. It has been well remarked that the strength of Antwerp lies chiefly in the union between its writers and its artists; a union that exerts its influence as much in the higher as in the middling classes of society. The mass of writers are young men, who have no taste for inactivity; Ghent, on the contrary, bears in all its proceedings a character of reflection and deliberation, as if it never could take a step without considering for a year whether it would not be going too far. Brussels, too, has, not long since, established a society which bids fair to be of some influence. The governor of the province of Brabant, the Baron DE BIRON, is honorary president, and it publishes a monthly journal, entitled *Het Vaterland*, under the direction of V. DER BOORT. Belgium contains many associations devoted to literature and the theatre. Ghent is the principal seat of the Flemish drama; besides the ancient Kederykgesellschaft, established in 1448, several of importance have arisen.

No production of its own sons has excited such attention in Germany as the works which a few months have scattered all over Europe—THIERS's *History of the Consulate*, and *The Wandering Jew*. It is impossible to say that the interest raised by them has in any degree abated. Translators are as industrious as ever in seizing upon all that either France or England may produce capable of amusing the mass of readers. Germany can never be reproached, as France has been, with a deficiency of versions of the master works of other countries. A translation of SHELLEY's poems, by JULIUS SCYBT, said to be very good, has just been published at Leipsig, and a new edition of Miss KENNEDY's works, which are among the most popular of that class in Germany. They are busy, too, in investigating the state of English affairs, as the talented work of SCHULTE, on the Constitution of the English Parliament, sufficiently testifies; which, although the treatises of BLACKSTONE, MILLAR, DE LOLME, and HALLAM are well known through the aid of SCHMID, DAHLMANN, and RUDER, and also by means of the original publications of SCHMALZ, VINCKE, BESEHORNER, &c. on the same subject, must derive interest and authority from the fact of its author's long residence in England.

In novels and romances we have, as is usual, a large number to glance over. The *Tivei Franen* of Madame HAHN HAHN is yet to be counted among the novelties of the press—at least, among the novelties worth mentioning. REINHOLD'S *Historical Romances for the German Nation*, dedicated to ERNST HONWALD, are reported as good in their style. The three volumes contain the story of "George Podiedrad," "Scenes from the Seven Years' War," and the "Robbers of Spremberger." *Three Days from the Life of a Zurich Priest*, by HANS LEBRECHT, is a tale cleverly interwoven with the moral and political condition of Zurich during the last forty years; it might, perhaps, have been more popular had it contained matter less controversial, but in Switzerland, a country distracted by parties religious and political, it would have been difficult to write without some such evidence of its birthplace. It is adapted more for the Swiss than for a desultory public. The prolific writer A. V. STERNBERG has published *Jena und Leipsig*, which in the reviews is described as brilliant and clever, like all his writings; but having a tendency towards the political discussions of the times, and painting in no favourable colours the vices of aristocratic Germany. It contains, too, many dramatic situations and really poetical passages. *Der Roué*, by A. JAGER, known as the author of several novels and the *Life of Prince Pückler Muskau*, is deserving of mention, being entertaining, and even in parts instructive. We have in it a repetition of the Jean Paul description of Scheeraw, which place he selects for the cradle of his hero; this is a comparison to which few authors, we think, would expose themselves. *Ritter und Bauer*, and *Zigennen und Edellante*, are novels written under nearly the same impressions—the relation of the rich to the poor, but treated in very different styles; the first being, among novels, good, the second scarcely deserving more than a reference.

The Comte DE CORBERON has published a collection of German popular stories and legends, chiefly for the benefit of his own countrymen. The opinions of a foreign critic upon it may be quoted here. "The first collection of German popular tales and songs, published some years ago in a French dress, met with a very different reception from different literary circles. The one hailed it as the very quintessence of all true poetry; the other regarded the volume itself as evidence of excited and irrational enthusiasm. There were very few who rightly fixed their judgment between the two. In the end, the latter party held the sway, and the work fell to the ground in the struggle which took place regarding its merits. There are many at present even who do not perceive that, as time advances, the life of every nation becomes of more interest and importance to others. Napoleon proscribed the wonderful *De l'Allemagne*, because this most remarkable work of a remarkable woman was just of that nature to instil the French with a sympathy for the young and rising spirit of Germany. These French radical critics would imitate Napoleon, and repress to the utmost of their power every element of Germanism which comes in their way. They shew this in the determined antipathy to the German spirit which is to be met with in many of the liberal organs of opinion; incomprehensibility, obscurity, mysticism, are among the terms in most frequent use with these anti-Germans. Nevertheless, there are many in France to whom this work will be really welcome, many who will appreciate it, alike for the genuine beauties it contains and the great merits of its translation. We inquire for the sources whence the collector has drawn the materials of his labours; and, before all others, the old Musaeus stands conspicuous, whose works even now are read with delight by old and young. It is not, however, to be denied that he owes much to other works, for instance, the *Rubezahl* of Lyser; but the groundwork of his information is to be found in the *Wolksmärchen den Deutschen* of Musaeus. The editor declares also that he has spent thirteen years in travelling over Germany, in securing information relative to the subject which no book could have afforded him. The first volume is devoted to the frisky, capricious 'Rubezahl' alone. Is it not to be feared that, at this rate, the patience of a people, not nationally interested in the work, will be exhausted before it is near completion? It might, too, be objected to the editor that he is too fond of displaying the really vast resources of his mind, seizing with avidity upon the slightest opportunity of launching forth the treasures of his knowledge, and thus giving to his labours an air of heaviness, without which they would, undoubtedly, become more popular. His knowledge of German literature is certainly, for a foreigner, remarkably extensive."

Another work of this class is a volume entitled *Legends, Tales, Songs, &c. of Cologne;* the joint contributions of several hands, edited by ERNST WEYDEN, of which the *Blätter für Literarische Unterhaltung* remarks:—"Some time since, Ernst Weyden was author of a book styled *Köln's Vorzeit*, a book which has been much and deservedly read. It has been followed by this little work. The history of Cologne, which opens the former volume, must be reluctantly passed over; it furnished a short yet clear glance over the fate of the German Rome, and was, indeed, a most welcome preface to such a study. The tales and legends of course formed the chief contents, which, when given in their old and genuine style, are infinitely more pleasing than all the romanticism in the world. But some of the most beautiful sayings and legends have been robbed of all their truth and beauty; as, for instance, that of the *Cuniberts Born*. In this spring, so say the people, sit the children and the Mother of God. When a mother wishes for a child, she goes to the well, lets down the bucket, and the Mother of God sets one in the bucket for her. Commonly, however, the woman hurts her leg against a great stone which lies at the edge of the well, and then in bed she must stay until the leg is well again. In the present version we are told that the spring was a healing spring, and once or twice children have been discovered near it." *Die Sagen des Rheinlandes* is another work of the same class, which appeared some time since; the contents would disappoint all, who, reasoning that the Rheinlande must furnish an inexhaustible source of *Sagen* and legends for any who would give the necessary time to their investigation, takes it up in the expectation of meeting an interesting recital of the tales of that land of legends; but KIEFER, the author, has contented himself with simply stringing together some pages from the collections of SIMROCK, PFARRIUS, and others; the book, therefore, cannot be recommended as at all answering its expressed purpose.

Another journal has an observation applying to ourselves, which we give. "Gervinus, in his *National Literature of Germany*, has remarked, that at every period when the unceasing struggle between the backward tendency of the priesthood, and the onward march of the laity, has been at an exciting crisis, *Reynard the Fox*, that ever young poem, has invariably been again produced and seized by the latter party as a most useful weapon. Circumstances at this day have brought forward strongly the contention between these parties, and in England, where it rages more violently than elsewhere, an edition of *Reynard the Fox* has just come to light from the pen of S. Naylor."

We may refer to a collection of the novels and tales of THEODORE MUGGE, at present in course of publication. MUGGE is a writer who has always been popular, without ever succeeding in placing himself among novelists of the first class. He possesses the power of good arrangement, freshness of

colouring, and the art of combining the spirit of the day with his tale in a more eminent degree than the mass of modern writers of fiction. There is much, too, that is admirable in his works, and evidences a fine turn of mind; but, wanting the stamp of originality, he only pleases while being read; no after-impression remains, which alone determines the power of an author or his chances for immortality. His inventive faculties are fertile, but only in a limited field; his novels moreover commence with great vigour, often with novel combinations and situations, &c.; but this fire and energy last only a short time, and burn out long before the close of the volume. It is sad to see so much talent thrown away from mere want of concentration. The last novel of the authoress of *Schloss Goezyn* is now completed, entitled *Skizzen aus der Vornehmen Welt*. It is said to be clever and graceful, like all her writings. We may mention too, *Ivan*, by H. V. Bissing, the *Camilla* of Satori, and *Keine Geheimnisse*, from the pen of J. Hylarius, as all worthy to rank among the respectable novels of the day. Our notices of tales and romances have occupied so much space, that this week our remarks must here come to a close.

JOURNAL OF AMERICAN LITERATURE.

Letters from Italy. By J. T. Headley. New York and London, 1845. Wiley and Putnam.

There are two sorts of tour-writers; the man who travels with a daguerreotype and presents accurate, hard, unpoetical transcripts of the objects he sees, and the man who travels as an artist, catching and conveying to us with inspired pencil only the more striking *effects*, shewing things as seen in their most novel or most beautiful aspects, or still better, who tells the impressions they made upon his own mind, and reflects their images upon the mind of the reader, illuminated and made doubly interesting by the hues of his own spirit.

Each has his mission. A new district is best explored by your matter-of-fact man,—your traveller in spectacles, who makes a catalogue of the country he traverses, is tediously minute about heights, and distances, and magnitudes, draws whatever he sees in sharp angular outline, accurate as a mathematical problem, describing by rule and compass the precise figure it fills in space, and thus bringing back a ship-load of *facts* for the Cyclopædia and other very useful but very dull domestics.

When, however, a country has been thoroughly explored in this wise; when all its *facts* are ascertained, when all its objects of curiosity have been described a hundred times by pen and pencil, by author and artist, the services of the formal registrar are no longer required, his details are insufferably tedious, and he is dismissed with indignation as a pedant and a bore. Thenceforth, the only tourist we can abide in type is he who gives to an old theme a new aspect by investing it with himself; then we read with eager interest and curiosity, to learn how the places that stand in our memory as hueless forms have impressed another human mind, who has viewed them in the reality. We burn to know what emotions they kindled in him, the very narrative of which by sympathy excites kindred emotions in the reader, and imparts life, colour, motion, and soul to the daguerreotype image that was before lying in his mind so accurate, but so cold and dead. Such a tourist is always welcome; never can *he* weary; to him, the land trodden by millions of travellers is as fresh as if his foot were the first to disturb the dust of centuries, and he is perused with as much eagerness and pleasure as if his book were the first, instead of the last, of hundreds that have been inspired by the same localities. And this because it is the mind of the writer we read; it is for his emotions that our interest is roused; the individual fills and inspires the whole scene, and mind being infinitely diversified, the reflex of the most familiar objects will from every one be thrown out with the freshness of a new creation, though faithful to the original type,—another yet the same.

These preliminary remarks upon tours and tourists in general are not an inappropriate introduction to the volume which has been transmitted to us from America. *Letters from Italy* carry no recommendations on the face of them; they promise no novelty; nay, they would seem to be superfluous. The press has already flooded the world with books about Italy; every square inch of the country has been explored by every imaginable variety of the genus traveller—philosopher, poet, painter, statistician, antiquarian, twaddler. There would seem to be no gleanings for another labourer in the same field. But it is in seeming only. The *rationale* of tour writing we have feebly set forth above will explain why even Italy may yet afford material for ten thousand charming volumes, provided that the writer comprehends his mission and possesses the capacity for his office.

Such a writer is Mr. Headley. He knows his proper task, and he has the ability to execute it. He is essentially an *artist*. He does not copy, but he paints. He professes to report to us not so much Italy as *his views* of it. The scenes he sketches are vivified by the hues of his own emotions. The spirit of philosophy and of poetry is in him: or rather, we should say, he is in the frame of his mind a poet, for the true poet and the true philosopher are identical, and no man can be the one without being also the other. His letters breathe the air of the sweet south—the spell of the land of music and of painting is upon him; he has caught its inspiration, and it has made him eloquent. But he loves wisely. The natural beauties of the clime, the wonders of art which almost live and breathe beneath that blue sky, the memories that hallow every footstep, do not throw him into convulsions, nor do they blind him to the degradations and deformities, physical and moral, into which the people of that land have fallen from causes which all are ready to assign, but which yet remain to be calmly investigated. If we linger over these letters longer than is our wont, it is because it is a better book than it is our lot often to review; and the readers of The Critic are aware that its plan is to measure its notices by the worth and interest of the book reviewed, and not by its bulk, or the name of the publisher.

Mr. Headley quitted America in the autumn of 1842, sailing directly for Italy, and his opening description of life at sea not only possesses some novelty, but is a favourable specimen of his style.

LIFE ON THE WAVES.

The sleeping, or rather not sleeping, in a miserable berth six feet by two, holding on to the one above you to prevent being thrown out—the eating like an Eastern devotee bowing over his sacrifice—the pitching and tossing of the ship against a head-wind on the heavy breakers—the long, monotonous days, and often restless nights—the wearisome calms and fearful storms, and more than all the yearning after the green quiet earth, make a sea-voyage irksome and sickening. It is true there is some relief to this. There is a beauty at times in the ocean, in its changes and caprices, that breaks its otherwise insufferable tedium. I think I have never enjoyed *mere life* more keenly, than when sitting in a clear day far out on the flying jib-boom, I have careered with the careering vessel, and looking back a-down the keel, watched the waters part and foam away from the cleaving bows. Next to this I love, when the sea is "gently rough," to sit on the topmost yard, and look abroad on the great solemn ocean, and catching the dim outlines of the vessels that are hovering on the edge of the horizon, send down "Sail ho!" to the dreaming group on deck. It is pleasant also to lean over the taffrail and watch the rainbow-dolphin slowly swimming after the vessel, or the porpoises floundering ahead, while perhaps the black fin of a shark is combing the water in the distance. A clear evening on the quarter-deck is sweet, when the moist south wind just fills the sails that are gently swelling in the light of the moon, and the bright sparkles here and there on the water seem the twinkling of the feet of Fairies abroad on their nightly revels. There is a sense of freedom too at sea. The jostling multitude—the jar of wheels, and the clamours of money-mad men, are not around. The heart is not compelled to retire within itself lest its feelings should be detected, and its emotions mocked. There are also time and room enough to think. Every thing seems at leisure—even the waves when most excited have a stately motion. But these pleasures are all transient, and then comes the long pining after the fresh earth.

He landed in Genoa in October, and some half-dozen letters are devoted to that city. He opens one of these with a remark which proves how well he understands what a modern tourist has to do. "I have been," he says, "three weeks in Genoa, and I suppose I have not given you what is called a *general* description of the city. This I dislike most of all things—first, because it is indefinite, second, because it is uninteresting." We shall follow his example, and limit our extracts to matter that cannot be found in the Gazetteers.

Mr. Headley and his party determined to take a house in the neighbourhood of Genoa, and finally obtained one with which was associated the following curious

ROMANCE OF REAL LIFE.

There is quite a little romance connected with this building. It was formerly erected and owned by a wealthy man, who was in the habit of visiting a beautiful peasant girl in the neighbourhood. Pleased with his attention, she cast off, as ladies are very apt to do, the rustic lover she had before encouraged. But although her new admirer was frequent and steady in his visits, he never mentioned the subject of matrimony. Things went on in this way for three years, till one night the gentleman was startled, as he was about leaving the house, by the abrupt entrance of the two brothers of the innamorata, demanding that he should immediately marry their sister. They told him that he had visited her for three years, thus keeping away other suitors, and destroying all hopes of their sister's marriage except with him: three years were quite long enough for him to make up his mind in, and as he had not done it, they had concluded to do it for him. This was bringing things to a focus he had not anticipated. For a man of wealth and station to marry a poor peasant girl, merely because he condescended to be smitten by her beauty, was something more than a joke; yet he saw at a glance that there was more meant by those brothers' speech than met the ear—in short, that his choice was to be a marriage or a stiletto through his heart. This was reducing things to the simplest terms; rather too simple for the wealthy admirer.

The trembling, weeping girl, the bold, reckless brothers, and the embarrassed gentleman, must have formed a capital group in a peasant's cottage. At length Signor —— attempted to compromise the matter by saying that then was not the time, nor there the place, to celebrate such a ceremony; besides there was no priest, and the proper way would be to talk over the subject together in the morning. One of the brothers leaned back and rapped slightly on a side door; it opened, and a priest, with his noiseless, cat-like tread, entered the circle. "Here is a priest," said the brothers. There was a short interval of silence, when Signor —— made a slight movement towards the door. Two daggers instantly gleamed before him. He saw that it was all over with him—that the three years of courtship were going to amount to something after all—and so yielded with as good grace as possible, and the nuptials were performed. Like a man of sense, he immediately placed his wife in a convent to be educated, while he, in the mean time, bought a title. Years passed by, and the ignorant peasant-girl emerged into the fashionable world, an accomplished woman. She is now a widow, and is called the beautiful Countess of ——.

While at Genoa, the Carnival took place. Of this we have had so many accounts that we need not copy Mr. HEADLEY's picture, although more spirited than any we have seen, save to relate an anecdote of CLARA NOVELLO, who was engaged to sing there, after a contest between the governments of Rome and Genoa which should have her, and which was decided by their *sharing the honour!* She attempted an air unsuited to her voice, was slightly hissed, and walked off the stage in dudgeon. For this she was put under arrest for three days, but was released on promise of good behaviour.

The love of music in Italy amounts to a monomania. It absorbs all other thoughts, and probably tends not a little to keep the people in their present degraded and depressed condition. A horrible proof of it was witnessed by Mr. HEADLEY.

A SCENE AT AN OPERA.

I have seen and heard much of an Italian's love of music, but nothing illustrating it so forcibly as an incident that occurred last evening at the opera. In the midst of one of the scenes, a man in the pit near the orchestra was suddenly seized with convulsions. His limbs stiffened; his eyes became set in his head, and stood wide open, staring at the ceiling like the eyes of a corpse; while low and agonizing groans broke from his struggling bosom. The prima-donna came forward at that moment, but seeing this livid, death-stamped face before her, suddenly stopped, with a tragic look and start, that for *once* was perfectly natural. She turned to the bass-singer, and pointed out the frightful spectacle. He also started back in horror, and the prospect was that the opera would terminate on the spot; but the scene that was just opening was the one in which the prima-donna was to make her great effort, and around which the whole interest of the play was gathered, and the spectators were determined not to be disappointed because one man was dying, and so shouted, "Go on! go on!" Clara Novello gave another look towards the groaning man, whose whole aspect was enough to freeze the blood, and then started off in her part. But the dying man grew worse and worse, and finally sprung bolt upright in his seat. A person sitting behind him, all-absorbed in the music, immediately placed his hands on his shoulders, pressed him down again, and held him firmly in his place. There he sat, pinioned fast, with his pale, corpse-like face upturned, in the midst of that gay assemblage, and the foam rolling over his lips, while the braying of trumpets, and the voice of the singer, drowned the groans that were rending his bosom. At length the foam became streaked with blood as it oozed through his teeth, and the convulsive starts grew quicker and fiercer. But the man behind held him fast, while he gazed in perfect rapture on the singer, who now, like the ascending lark, was trying her loftiest strain. As it ended, the house rang with applause, and the man who had held down the poor writhing creature could contain his ecstasy no longer, and lifting his hands from his shoulders, clapped them rapidly together three or four times, crying out over the ears of the dying man, "Brava, brava!" and then hurriedly placing them back again to prevent his springing up, in his convulsive throes. It was a perfectly maddening spectacle, and the music jarred on the chords of my heart like the blows of a hammer. But the song was ended, the effect secured, and so the spectators could attend to the sufferer in their midst. The gens-d'armes entered, and carried him speechless and lifeless out of the theatre.

Here is another trait:—

"BRAVO."

The wife of our chargé related to me the other day a curious illustration of an Italian's habit of crying "bravo" to every thing that pleases him. During the winter there was a partial eclipse of the sun, and the Turinites were assembled on the public square to witness it. As the shadow of the moon slowly encroached on the sun's disc, they cried out "bravo, bravo," as they would to a successful actor on the stage.

Mr. HEADLEY appears to have been much disappointed with society in Italy. The balls are showy, but uninteresting; they consist of very small talk and very zealous dancing—just like balls in England. As for the fabled beauty of the Italian women, he could nowhere find it. Their charm lies in their graceful figures and movements, and their lively unaffected manners. Take this portrait of

THE BELLE OF GENOA.

There, for the first time, I saw the *belle* of the city, the Marchioness of Balbi. I was glad to see what the Italians regarded as beauty, and was surprised to find that she had the light complexion and rosy cheeks of the Saxon race. She *was* beautiful—*very*, but of that kind of beauty I do not particularly admire; it was, what I would term, of the *doll kind*. But oh, such spirits, and such a dazzling quantity of diamonds!—one almost needed to shield his eyes to look on her. The value of them was variously estimated, but the average estimate seemed to put them at about two hundred thousand dollars. But even her diamonds could not outshine the sparkling joy of her countenance. I never saw a being float so through a saloon, as if her body were a feather and her soul the zephyr that floated it. It made me sigh to look on her.

In Genoa, it seems, the monks and priests have established a regular trade of match-making, for which they receive three per cent. on all the dowry the bride they have won brings to her husband. "Custom," says our tourist, "has fixed this rate till it is absolute as law."

Italy is supposed to be the very focus of priestcraft, and so it is of priestly *power*; but it is questionable whether the people are really so imposed upon as they appear to be. A great storm occurred at Genoa during Mr. HEADLEY's residence, and prayers were offered in the churches, and the storm of course passed off in due time. On this subject he had some talk with two classes of persons—his attendant ANTONIO, and a gentleman of his acquaintance. Said the former, "Ah, they know that storms in this country never last more than four days, and they saw the wind was changing before they started." Quoth the latter, "Umph, they watched the barometer, and were careful enough not to start till they saw it rising." These are significant signs of what is working in the depths of the national mind.

Another mode of cheating the Church is related of the revels of the carnival:—

The *law* is, that no dance shall be *commenced* after the great bell of the cathedral has struck the hour of midnight. They are not required, however, to stop in the middle of one already commenced, but are permitted to dance it out. Taking advantage of this law, just before midnight they divide the orchestra and form a new dance. One part of the orchestra rest till the other become fatigued, when they relieve them. There are always enough dancers to keep the set full, and yet half the company be resting. In this way *the dance is not ended* till two o'clock. By this simple process they cheat the Church out of two good hours.

(To be continued.)

THE TOURIST.

[All the world travels now-a-days. Great, therefore, will be the utility of a periodical to which every Tourist may communicate such of his experiences as to routes, sights, conveyances, inns, expenses, and the other economies of travelling, as may serve his fellow-tourists. To this design we propose to devote a distinct department of THE CRITIC, and we invite communications of the class described relative to travelling both abroad and at home.]

HOME TOURS.—(*From a Correspondent.*)—There is a mania for going abroad in search of natural beauties and turning the back upon the beauties at home. I have travelled over a considerable portion of the Continent and can conscientiously aver that I have seen no scenery to be compared with that presented by our own country. Wales is as picturesque, if not quite so grand, as Switzerland: Scotland beats the Black Forest hollow; for river scenery there is nothing like the Wye; and the plains of Belgium and Germany are very uninviting to the eye accustomed to the rich meadows and wooded valleys of Old England. Our lakes are at least as good as those of the South, though not so large. In short, I would recommend those of my countrymen who have time and money to expend upon a tour, to try a travel in Great Britain. As everybody goes abroad, the select will now stay at home, and fashion will wander in the Highlands, or in Devonshire, or on the Welsh mountains, instead of the Rhine and Switzerland. I know many persons who purpose this diversion, but they want the aid so readily supplied if they go abroad. They need a *Murray's Handbook* to tell them what to see, how to travel, where to put up, what are the charges at the inns, and so forth. Would some of the readers of THE CRITIC favour us with a few skeleton home tours and the particulars, in ever so few words, which I have indicated? It would confer an obligation on many with intentions similar to those of your admirer. LECTOR.

ART.

THE exhibitions are now closing, and there is, and will be for some time to come, little of special interest to report in the department of Art. The exhibition of the works purchased by the prize-holders of the Art-Union is yet to come. Why it should be deferred to a period when the more influential classes have left town, we are at a loss to discover. That the delay is intentional, there can be no doubt; for ample time would be allowed the prize-winners to select the works they may prefer, if they were required to make their choice by the close of May. That the policy of the committee in postponing the exhibition to so late a period, is prejudicial equally to the institution itself and the interest of the arts, must be obvious to every one. When at last the exhibition shall be opened, we shall take the opportunity, as we did last year, of making such strictures on the society, its constitution and operation, as seem to us desirable, and unquestionably the interests of art demand.

We subjoin a report of the meeting for distribution of the prizes at the Government School of Design:—

On Wednesday the Annual Meeting and distribution of prizes to the successful students took place at the rooms, Somerset-house. The Right Hon. Lord Colborne presided, and was supported by Lord Ashburton, the Right Hon. H. Labouchere, M.P.; the Hon. Hugh Cholmondeley, M.P.; B. Hawes, esq. M.P.; H. T. Hope, esq. M.P.; H. G. Knight, esq. M.P.; R. M. Milnes, esq. M.P.; S. Pusey, esq. M.P.; Sir R. Westmacott, R.A.; Thomas Wyse, esq. M.P.; J. G. Lefevre, Vice-Chancellor of the University of London, &c. A large number of ladies were also present, and the rooms were decorated with specimens of the students' skill, most of which were highly creditable performances.

CHARLES HEATH WILSON, Esq. director of the school, read the report. It stated that the prize committee appointed by the council had examined the various designs and drawings exhibited by the competing students, and had much satisfaction in testifying to the great improvements which had been made in the school during the past session. The designs were more numerous, better executed, and displayed more knowledge of ornament, and greater range of taste and composition, than those exhibited on any similar occasion, holding out a cheering prospect of continued improvement on the part of the pupils. The committee had also much satisfaction in reporting that some of the students were already engaged as designers by manufacturers, and several of the designs which were exhibited that day had been purchased by Messrs. Holland and Son, upholsterers, of Marylebone-street, St. James's. Three of the principal designs, namely, the arabesque, subject "Painting and Music," by Mr. Murdoch; the arabesque called "Peace and War," by Mr. Stewart; and that in the Pompeian style, by Mr. Hammersley, had not been executed in competition, but were the works of the assistant masters, who had been engaged in the study of ornament, and employed as elementary teachers in the school during the past year. The committee had also much pleasure in alluding to a cartoon by Mr. Murdoch, which he had executed at home, and which was most creditable to his industry and advancement in his studies. Various designs for manufactures were exhibited, which were deserving of praise. An evening class had been established, in consequence of a large portion of students, to whom the study of the practice of painting was of essential importance, being able to attend in the evening only; but as painting by gas-light was attended with considerable difficulty, the practice of these students had been principally confined to subjects from casts, or groups of still life. This arrangement had been found to be of great practical benefit to the students, and the works produced by them had very considerable merit. The works of the female pupils were extremely satisfactory, as had also been the progress of the pupils in the modelling class.

The CHAIRMAN remarked, that in the higher classes of art, the people of England had generally been found inferior to their continental neighbours; but he thought, from the achievements of the students in that school, that in a few years we might be able to equal them. The noble lord passed a high eulogium on Mr. C. H. Wilson, the director of the school, and all who were concerned in the work of tuition.

His lordship then delivered the prizes. They consisted of sums of money from 30s. up to eight guineas, and were sixty in number, and were awarded for designs in carpets, paper-hangings, handkerchiefs, chandeliers, and every conceivable branch of manufactures, as well as for paintings, drawings, and sculpture, &c.

The principal prizes were adjudged to Messrs. Harvey, Cadman, Pearce, Jefferson, Denby, Longford, Wise, O'Reilly, Durrant, Abercrombie, and Wells; in the female school, to Misses Filmore, Cooke, Bragg, Smith, Hunter, Shaw, Jennings, Farrer, and Culbard.

MUSIC.

DE FOLLY'S NEW PIANOFORTE.

INNOVATIONS upon long-used and widely-spread forms, however valuable, are perilous to the hopes of the inventors. It is therefore not without well-grounded apprehension of the many and various impediments which an invention like M. De Folly's pianoforte will have to encounter, that we call the attention of our readers to its claims and merits. These, if established, must carry with them the entire subversion of the old structure of this kind of musical instrument. The principle upon which M. De Folly, an accomplished practical musician, has constructed his instrument, is a uniform distribution of the semitones throughout the scale, by means of keys alternately raised and depressed, of the same form as those already constituting the key-board of the pianoforte. The object of the inventor is to render the action of the fingers uniform, in whatever key the performer may find himself. This is done by two positions of the hand only, instead of the multiplied *poses* hitherto necessary. This novel construction not only facilitates the performance, but extends the range of musical combinations, by placing at the command of the player a larger number of notes, without distortion of the hand, or disturbance of its position.

To attain the average amount of proficiency upon this new instrument, not more than one-tenth of the labour demanded by the older will be required. To the objections of interested parties, whether professors or manufacturers of the pianoforte, no immediate attention need be paid. It is enough for our purpose to have pointed out the undeniable advantages arising from the simplified system which this invention offers. But one great practical impediment will be found in those who are already possessed of pianofortes of the old structure, and who are adepts in the use of them. Nothing short of a legislative enactment, calling in the *old* and enjoining the use of the *new*, can, as we think, establish that universality which must be considered an elementary principle of the instrument. We have before said that this invention must subvert the existing structure, and, as far as regards public performance, this would be of little importance; but in private use, the great source of recompense to which the inventor must ultimately direct his attention, we apprehend that, however great its merits, they will be balanced against outlay of money and practical utility. It must be borne in mind that a recommencement of study is primarily necessary, which, although shorter in its course, is disqualifying as regards progress, even if a double course of practice be not required to guard against the inevitable accident of not always finding an instrument of this kind at hand. We offer these observations in no unfriendly spirit to the ingenious inventor, but as reasonable grounds of impediment to the progress of his dis-

covery, against which he must hold himself prepared. Beyond these obstructions to its adoption, the invention comes full of promise, both as regards the facilitated practice and enlarged resources of the instrument; and we cannot allow it to pass without our recognition of its claims, against which, while we have felt it our duty to offer some objections, we cannot allow its access to notoriety to be barred by superficial sneers or envious detraction. This duty our position, wholly independent of the "manufacturer," or his occult agent, the "professor," enables us to discharge with justice to the public and those aspiring to their patronage and support.

THE DRAMA AND PUBLIC AMUSEMENTS.

ITALIAN OPERA.—We attended on Saturday to witness the second performance this season of MOZART'S *Cosi Fan Tutte* ("'Tis the way with them all"), which has been revived, we hear, at the express desire of her Majesty, at once a fine musician herself, and an excellent judge of music. Her selection of this most graceful opera for reproduction is of itself a proof of sound taste, for it possesses none of those elements which constitute attraction with minds of the more vulgar stamp. It has no glare, no excitement about it; its beauties are altogether of the more tranquil sort, appealing to the soul, and not merely to the ear, as is the case with far too many of the current favourites. The first act is more especially charming; its music is easy, flowing, natural, and full of melody; twining,—to adopt the language of a contemporary critic,—twining round the heart like the grape vine of the sunny South round the father of the forest; satisfying at once the ear and the understanding. On the last occasion of its production, in 1842, RUBINI and Madame PERSIANI filled the parts intrusted this season to MARIO and Madame CASTELLAN; Madame RITA BORIO has succeeded to Madame MOLTINI in the character of *Dorabella*, and Madame ROSSI CACCIA is the intriguing chambermaid, in place of Madame GRANCHI. The Signori LABLACHE, father and son, fill the same parts now which they impersonated then. It will thus be seen, that the cast of the opera is on the whole more efficient than in 1842, for while LABLACHE, *père*, is as good as ever, and LABLACHE, *fils*, better; while MARIO (who seemed really quite animated, for him) and Madame CASTELLAN may fairly contest the palm with their predecessors; while Madame RITA BORIO'S performance gave rise to no invidious recollection of MOLTINI, there can be no doubt that ROSSI CACCIA is a vast improvement upon Madame GRANCHI. The opera was well received, but without any very vehement enthusiasm, the audience, perhaps, reserving the strength of their hands and voices for the *Pas de Quatre*, which was danced that evening for the last time, CARLOTTA GRISI'S engagement then terminating for the season. The theatre was crowded beyond all precedent, enormous as the attendances have been. CERITO, who was announced for Tuesday in *Eoline*, was not forthcoming, and in her place LUCILE GRAHN, a very agreeable substitute, appeared as the *dryade*. LABLACHE took his benefit on Thursday, and a very beneficial benefit it must have been, as he well merits. *Don Pasquale* was the opera selected.

HAYMARKET. — MORTON'S play, *A School for Grown Children*, was revived here on Tuesday evening, after a repose of nearly twenty years, it never having been acted, we believe, since the first season of its production, in 1827, until the present time. Its five acts have been compressed into three by some judicious hand, a circumstance, as we take it, greatly conducive to the success which it met with on this occasion. Of the actors who participated in the production of the comedy in 1827, two still remain on the staff of the Haymarket, and resumed their parts on Tuesday as lively as ever, Mrs. GLOVER, to wit, and Mr. FARREN. For the rest of the *dramatis personæ*, Mr. HOLL took the part heretofore filled by CHARLES KEMBLE, *Sir Arthur Stanmore;* Mr. HUDSON impersonated *Young Revel*, *vice* JONES; Mr. WEBSTER replaced SERLE in the character of *Frank Ryland;* Mr. BRINDAL succeeded to POWER, in that of *Dexter;* and Mr. BUCKSTONE was *Buttercup*, whom KEELEY whilome represented. As to the ladies, whom we ought to have mentioned first, Miss JULIA BENNETT was *Lady Stanmore*, the character in which ample Miss CHESTER, in 1827, walked majestic; Miss FORTESCUE succeeded in the part of *Mrs. Revel*, to the charming CHATTERLEY, whom, by the way, we saw only the other day, looking well nigh as well as ever; Miss CARRE replaced Miss M. GLOVER, and Mrs. STANLEY invited comparison with Mrs. VINING. It is no slight praise of the Haymarket *troupe* to say, that, called upon to perform a comedy whose parts were manifestly written, as is but too commonly the case, for particular actors, not less than for a particular period and for a particular tone of public feeling, they have fitted themselves to the parts, as though the author had composed the work last month especially for them. As to the plot, its outline runs thus:—*Revel, senior*, an old Nabob, having a son sadly given to dissipation, can think of no better means of curing the young rake than by affecting to go to still greater extremes than he in the improprieties, and finally pretends to hang himself in a fit of despair for having lost all his fortune, as he feigns, at the gaming-table. Two others of the *grown children* are for a while made perfectly miserable, and their conjugal blessedness almost entirely destroyed, by the machinations of a malignant woman, rendered furious by jealousy; but their distresses, too, clear away. The folly of another of the *grown children* consists in his adventuring at the gaming-table a sum of money he has saved up for the filial purpose of paying his dead father's debts. He loses it all, and *hinc multæ lachrymæ;* but all ends well, and *Old Revel*, come back to life, takes part in a hornpipe so vigorously as to warrant the spectators in making him dance it over again. Mr. WEBSTER'S impersonation of *Frank Ryland* was exceedingly good; his pathos had nothing of the maudling about it. How Mr. FARREN filled his part may be readily conceived by all who have seen this accomplished performer. It must have been quite *A Cure for the Heartache* to Mr. MORTON to come across such men as FARREN, to enter thoroughly into his meaning, and to interpret it unmistakeably to his audiences. Mr. HOLL was placed in a trying position, filling, as he did, a character heretofore assigned to CHARLES KEMBLE; but he went through the ordeal very satisfactorily; he has a handsome and highly intelligent face, a good figure, and great animation. BUCKSTONE, of course, was amusing; his acting, as usual, was characterzied by mannerism, but his predecessor KEELEY is still more open to this objection than he. KEELEY very rarely gets beyond the point—which, however, answers his purpose—of the audience laughing at him; BUCKSTONE not unfrequently superadds to this the making the audience laugh with him; but then BUCKSTONE is a really clever man, KEELEY mere fat and face-making. Previous to the performances, the walls vicinous to the Haymarket were placarded with an announcement that Mr. CHARLES MATHEWS, who was to have taken the part of *Young Revel*, "in direct violation of his engagement, had refused to appear." We must confess that we are rather disposed to congratulate Mr. WEBSTER upon this proceeding of the refractory actor. Mr. and Mrs. MATHEWS, we believe, have, for some time past been drawing no less a sum than 60*l.* per week from the Haymarket treasury; and fully impressed, as we are, with the belief that their joint value to the theatre cannot be greater than, at the very outside, 20*l.* a week, we should imagine that Mr. WEBSTER will be only too happy to accept any tender of resignation which those *grown children*, in the inflation of their self-importance, may offer him. We like very well to see CHARLES MATHEWS in several characters, and we like pretty well, but not so well as heretofore, to see Madame VESTRIS in several characters, but we can dispense with them rather than hear of their airs, and the lessee of the Haymarket can dispense with them, we should say, rather than submit to their airs.

FRENCH PLAYS.—We stated last week that these admirable performances had terminated. We return to the subject, for the purpose of giving our readers a *resumé* of the arrangements which have thrown such *éclât* over the past season, arrangements, embracing as they have done, a large proportion of the available histrionic talent of the French metropolis. The success attending the performances of Mr. MITCHELL'S English company in Paris, and their marked patronage by Louis Philippe, seem to have given a new interest to the French plays in London; as these commenced on the 27th January with more brilliancy, and under more encouraging auspices, than in any previous season. The first stars were LAFONT and Madame NATHALIE, who at once established themselves as favourites. Next, scarcely less successful, came FREDERIC LEMAITRE and Mademoiselle CLARISSE. An entire change in the style of performances took place on the arrival of Mademoiselle PLESSY, who appeared March 21st, and remained among us for two months, with a popularity ever increasing. She was joined by RAVEL, who, playing on the same evenings with her, enabled the audience to enjoy at once the elegant comedy of the *Théâtre Français* and the broad farce of the *Théâtre Palais Royal*. By the way, PLESSY, it seems, has quarrelled with her manager at the *Théâtre Français*, and flown to Russia, bonds and bargains to the contrary being all set at naught. The forsaken *entrepreneur* threatens all sorts of fierce things, which we hope he will not carry into effect against so charming a person. At all events, we trust that PLESSY will have got thoroughly tired of St. Petersburg ere the St. James's next season opens. To proceed with our *resumé:* after RAVEL, came REGNIER, one of the most popular *artistes* of the *Théâtre Français*, and some of the best productions of *La France Dramatique* were acted by him in conjunction with Mdlle. PLESSY, Mdlle. BONVAL, M. CARTIGNY, aided by the excellent general company engaged by Mr. MITCHELL. Thereafter came ACHARD and his sweet voice, succeeded by ARNAL, with whom

the season closed, after seventy-one nights of performance, wherein no fewer than eighty-four pieces had been produced, of which fifty were entirely new to this country. We can conceive no reason why Mr. MITCHELL should not open again in the autumn; the past season has, we believe, been a successful one; why not a winter season as well? There are always plenty of people, of the higher class, too, in town, who would be delighted to have such a place to spend the evening in when the opera is closed and time weighs upon them as upon us with peculiar heaviness.

ADELPHI THEATRE.—*Marie Ducange* has been revived here, and, with Madame CELESTE for its heroine, is attracting full houses every night. The drama is excellently played, and well worth seeing.

DRURY LANE.—The performances of the Brussels operatic company have been extended to the present week, but are now concluded, we believe, for the season; the success, however, of the later representations has been such as to render it highly probable that the company will repeat their visit as soon as their other arrangements will permit. We shall be delighted to renew our acquaintance with them.

ASTLEY'S.—We attended at this handsome theatre on Tuesday, and witnessed the performance of a ballet of action by the French company, entitled *Il Diavolo di Abruzzi; or, the Brigand Chief and the Dog of the Chateau*. The *Diavolo* is represented by M. TOURNAIRE with much vigour, and he is supported by a large and well-disciplined company, not the least important member of which is the dog Nestor, an exceedingly intelligent and virtuously-disposed animal, which co-operates in the suppression of vice most energetically and successfully. The scenery is very good, and the *tableaux* arranged with a capital eye to effect. We have seen many a worse *mise en scène* at houses of far higher pretension. The scenes in the circle are very good, our prime favourite among the exhibitors being Madame KLATT, who displayed some of the most mistressly and elegant horsewomanship we ever witnessed. The entertainments concluded with *The Battle of Waterloo*, Mr. GOMERSAL appearing, for the thousandth time, for aught we know, as the Emperor. We wonder it has never occurred to this gentleman to "try the Napoleon dodge" in France. We are by no means clear that Louis Philippe would not deem it discreet to buy him up, in order to prevent any unpleasant contingency.

Tamburini is expected in town shortly, from St. Petersburgh, having taken a trip to his native Italy previous to coming to Paris. Mme. Viadot Garcia has arrived some time, having proceeded hither direct from the Russian capital. The campaign is described as having been brilliantly successful, and the entire company return for the next season.

VAUXHALL.—A third *Bal Masqué* was given here on Thursday, which we have not space to notice this week; we will do so in our next publication.

THE COLOSSEUM.—This temple of recreation continues to be an object of admiration to all classes of visitors. Its attractions are so varied, so intellectual, and at the same time so striking, that the spectator scarcely knows which the most to admire. The Museum of Sculpture, the Panorama of London, the Caverns of Adelsberg, Mont Blanc, Mer de Glace and Alpine Torrent, the Conservatories, beautiful Gothic Aviary, and Classical Ruins of Rome and Greece, together form a combination of entertainment unequalled perhaps in the world. The Colosseum is now rendered a yet more delightful lounge for evening parties than heretofore, by the introduction of music and *singing* in the Grand Saloon.

THE POLYTECHNIC INSTITUTION.—THE DUTY ON GLASS.—One of the effects of the removal of this duty may now be seen in the chemical lecture-room of the Royal Polytechnic Institution, where the large table used for the chemical experiments is covered by one enormous slab of plate-glass, nearly an inch in thickness, and covering a surface of twelve feet by five. The glass is embedded in *sulphate of baryta* to prevent the discolouring effects of any of the hydro-sulphate, which might by accident find its way underneath the glass. The comfort, cleanliness, and utility of a table so covered can only be fully appreciated by those who have to contend with the annoyances arising from the action of acids and alkalis upon common wood surfaces. The appearance of the table is certainly unique and beautiful, and reflects great credit upon the directors of the institution, as well as the parties under whose superintendence the whole has been constructed. The lecture of Dr. RYAN on steam-boiler explosions continues to attract crowded audiences, shewing the interest the public take, and certainly very properly, in a subject of such vital importance. One word for Dr. BACHHOFFNER, whose lectures on Natural Philosophy are clear and convincing.

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

CLAIRVOYANCE.

As every experiment, however apparently a repetition of former ones, is of invaluable importance in the ascertainment of the existence of the alleged faculty of clairvoyance, because the greater their number the more improbable becomes the presence of fraud on the part of the patient, or error on that of the observer, we make no apology for continuing to record the observations made upon the youth whose interesting case we last week introduced to our readers. And being immediately under our own eye, and employed in our own establishment, the opportunity will not be neglected for making and preserving a formal and extensive series of experiments; and we shall be obliged by suggestions from any quarter in aid of this endeavour to throw more light upon phenomena as yet so wrapped in mystery.

Since the publication of the last CRITIC the boy has been twice mesmerised with a view to a repetition of tests. The results were as follow.

On the first occasion there were present the same F.R.S. who had witnessed the former experiment, an eminent solicitor, and the wife of a distinguished physician who has been, and is, a decided opponent of Mesmerism, and the lady entered the room sharing to the full the opinions of her husband. The solicitor, too, had come in full confidence of fraud, and to make sure, as he thought, of exposing it, he had, previously to leaving his office, requested his clerk to cut out a word from any book he pleased, and enclose it in thick brown paper folded over some five or six times and sealed, so as to ensure that it had not been opened. No person in the room knew what the packet contained. On producing it, he said he should be satisfied if the boy would read it through the paper in which it was wrapt; but to make assurance doubly sure, and to test beyond all doubt Mr. BRAID'S assertion that they see by an exalted power of ordinary vision through a transparent medium, it was resolved that the packet should be placed in a box. Accordingly a card case was procured of solid wood, veneered with tortoise-shell, and into this the packet was placed, the boy not being present at the time.

The boy was then called in, mesmerised, and the card-case containing the packet was given to him. He breathed upon it several times, pressed it to his stomach and his forehead, and asked us, who had mesmerised him, to breath upon it also. His mind was evidently working itself up to a state of concentrated attention. He placed the case upon the arm of the sofa above him, threw himself upon the pillow, buried his face in it, the case still remaining on the ledge above him, and in this state he remained for two or three minutes. Then he said, "I see it now; it is wrapped in thick brown paper, and there are two seals on it—little seals. What a lot of folds to get through!" Presently he rose up with evident joy on his countenance. "What will you say if I tell you? It is 'LAW.'" And on opening the packet sure enough it was.

The F.R.S. and the lady then cut out something from a newspaper, we knew not what, and the lady folded it in the thickest brown paper many times, and sealed it with her own hand and put it into the card-case. Supposing that it had been a *word* they had so enclosed, we told the boy that there was a word for him to read. After pondering over it for some time, he said, "No, it's not a word—it's figures. I see them; they are 1217." Both the lady and gentleman had forgotten what the figures were, and, curiously enough, as they were guessing at it, the recollection of them escaped the boy also, and he was not then sure whether it was 1217 or 1717 he had said. However, it was the former, and on opening the packet there were the very figures enclosed.

Still the lady was not satisfied. In each case, she said,

somebody else besides herself had known what was put in the case, and she could not be sure that they had not told the boy. This was a reasonable objection enough in itself, though, to be sure, not very complimentary to her friends; but it was resolved that she should satisfy herself, by putting privately, and unknown to any body beside, something into the box, having first enclosed it in as much paper as she pleased, and sealed it with her own hands. She went apart for this purpose and produced the card-case. Not a word was said as to its contents. In about three minutes the boy said, "It 's not a word—it 's a picture—a picture of a lady walking with a parasol, and a little child." Mrs. M. was amazed and convinced now. On opening the card-case there was the thick packet, with seal unbroken, and within a vignette engraving as the boy had described.

Afterwards, one gentleman placed his hands over the eyes of the boy, pressing down the lids tightly with his fingers; then the other gentleman placed his hands over those of the former, and in this state the boy read whatever was put before him, and described pictures.

These occurrences took place at the chambers of the editor in the Temple.

On the following day the boy was taken to the editor's private residence. At this *séance* four ladies and one gentleman were present. He again three times read words embossed in the card cases of the company, and read with his eyes blinded.

And here we will note a very interesting incident accidentally elicited. There was a piano in the room, and the boy asked one of the ladies to play to him. To try what effect it might have upon him, we silently placed our finger over *Time* and *Tune*. The boy immediately made for the piano, and said he would play. He sat down and rudely but intelligibly produced several airs, and then wandered into a sort of extempore strain, keeping beautiful time, and with an evident idea of a tune in his mind, which he was unable to express on the instrument from ignorance of its mechanism. He informed them afterwards, when he was wakened, that he had never touched a piano before, but he had once thumped for a few minutes on an organ. This manifest exhibition of time and tune was curious enough; but the result was more so. While he was playing away with all his soul, and in evident enjoyment, we blew so gently that he did not feel it on the organs we had exerted. The effect was instantaneous. His hands wandered over the keys, without observance either of time or tune, in most unpleasing discord, and his face assumed a comical expression of amazement. "What have you done to the instrument?" he exclaimed; "you've been screwing it up, —it don't sound as it did—just put it right again, will you?" He was not conscious that the change had been in his mind, and not in the instrument. Again we touched Time and Tune, and again he played correctly; again we blew upon them, and again his hands wandered about in dire confusion. So delicate and perfect a proof of phreno-mesmerism we have never seen before, and we record it, hoping that the experiment will be tried with other patients, and varied as ingenuity may suggest. It must lead to extensive and useful knowledge of the precise functions of the various mental faculties.

The boy is extremely intelligent and communicative in the somnambulic state. He readily answers any inquiry, and he tells us that if any test is applied which he cannot solve he says so at once. He never guesses at an answer if he does not really perceive the object; hence it is that, unlike any other patient we have seen, *he has never failed in a single instance.*

When asked *how* he sees the objects in the box, he describes it thus:—he says he feels as if his eyes were turned up towards his forehead and fixed upon a spot on the brow (upon which he placed his finger to shew us)—it was just above the frontal sinus, in the region of *Eventuality*. When the eyes are so fixed, he adds, he perceives a blue light, which seems to illuminate every thing round him and to penetrate every thing, and by this light, which passes through the card-case and the paper, he sees what it contains.

He states further, that it is easier for him to see through a solid body than through one composed of folds; *each surface presents an obstacle and increases* the difficulty of seeing. Hence he can perceive objects within a wooden box more readily than within a couple of envelopes, and through brown paper more easily than through white paper.

This is the substance of his own accounts of the manner of this curious form of perception. We give it as we had it from him that it may be taken at its worth. In a subject about which we are so entirely in the dark, all evidence, however slight, has some value. It may at least assist inquiry and suggest experiments.

One word more before we conclude for this week. From many incidents, we have not space now to detail, we are satisfied that the faculty called *clairvoyance* is not an occasional but a universal incident to the mesmeric condition; that, by judicious management in encouraging to its exercise, every patient will be found to possess it in a greater or less degree. We therefore earnestly recommend to all of our readers who enjoy the opportunity, to make patient trial of it, and note the results. They must not be disappointed by failures at first, and great patience must be used in the experiments to incite the patient to the necessary effort of the mind, and to wait results; for perception is rarely manifested immediately, but only after a fixing of the attention for some minutes. If this trial be made generally we have little doubt that the most valuable discoveries will be the consequence of the experiments in clairvoyance.

MR. SPENCER HALL AND MR. BRAID.

TO THE EDITOR OF THE CRITIC.

SIR,—I beg to offer a few remarks in reply to the rabid attack which Mr. Hall has made upon me in THE CRITIC of the 5th instant. Mr. H.'s chameleon and ostrich similes are too poetic for my prosaic powers, and consequently I shall not attempt to cope with them. I may remark, however, that they are written with more of the *poetic license* than is consistent with the strict and correct narrative which becomes philosophic discussion; and a reference to Mr. Hall's writings, sayings, and doings will prove that his *own* opinions have not been without *something* of the *chameleon* character which he attempts to impute to mine.

It must have been obvious to every dispassionate reader that the reference I made to Mr. Hall and the "only Wm. Holbrook whom I had known," answering to the description given of himself, was not given with the view of stigmatizing them, but was merely a statement of facts required to identify the persons whom I had reason to believe were the *dramatis personæ*. I merely alleged that the *author* and *sponsor* of the letter were *different persons*, and that probably *the* William H. *referred to* might have lent his name in print to what was written by another; and now Mr. Hall admits the fact on both points, and thus proves that I was sufficiently clairvoyant to comprehend the whole of this shallow piece of manœuvring. But if Mr. Hall considers it such a grievous crime on my part to have made that slight allusion to himself and coadjutors in this cause, why not also assail the editor of THE CRITIC for referring to his proceedings *at Reading*, so justly as was done (through a correspondent) *in the same page with my letter?* Again, if Mr. Hall considers it a stigma for him and his subjects to be known as engaged in their present vocation, how does he reconcile his professions with his conduct in this respect? and how comes it that I see so many of his advertisements *announcing the fact?* one in THE CRITIC, so late as the 5th inst. in these words: "Engagements made for morning or evening lectures, illustrated by experiments?" Verily, it is Mr. Hall who ought to *blush* for *such inconsistency!*

It is quite true that I requested Mr. Hall to visit Manchester, and I think it very possible that, through my representations, he did so *sooner* than he otherwise might have done,—for I know he intended to come hither,—and I do not suppose he had any occasion, in a pecuniary point of view, to regret his having done so. Whatever obligations *I was aware that I owed to Mr. Hall* are fully acknowledged in my little work on Hypnotism, where the curious fact is also stated, that the mode of manipulating by which I now succeeded in eliciting mental manifestations (*after* reading reports of Mr. Hall's lectures at Sheffield), *was precisely the same as that which I first tried* WITHOUT SUCCESS. I have also explained the reason of this—namely, my having allowed the patients to lapse too deep into the sleep before I began my manipulations. The inferences, however, which I drew from what resulted were very different from Mr. Hall's notions, who was then multiplying phrenological organs with a zeal and success, which, if continued up to this period, must have rendered phrenology, long ere now, "a ravelled web" indeed.

If Mr. Hall is so desirous of making it appear that Mr. Holbrook came to Manchester *entirely on my account* (he knows I never asked such a favour), may I ask whether it was on *my account also* that he left home to go to Liverpool and so many other towns in England, as well as Scotland, with Mr. Hall? The most disingenuous part of all, however, is the attempt to raise a prejudice against Hypnotism by the mode of reporting

what took place when he was hypnotised by me. I did so only once, at my own house, in the presence of Mr. Hall and several mutual friends. All went on as usual for some time, when I was sent for to attend a lady under circumstances which would admit of no delay. As the patient did not awake readily, and Mr. Hall alleged he had become *cross-magnetised*, he was handed over to Mr. Hall, who was to *remagnetise* and *then arouse him*. He was cataleptic, but HAD NO CONVULSIONS, *whilst I was present*, and when I returned home an hour and a half after, I heard nothing of his having been *convulsed after I left*, or, *that there had been any difficulty in arousing him;* and so far from his manifesting any symptom of distress *after he was aroused*, I was told of him and the other subjects having amused themselves by various means, as can be certified by three of those who were present.

Perhaps Mr. Hall has conveniently confounded this case with what happened on that occasion with *another of his patients—Wilmot*. After arousing the *former*, Mr. Hall *magnetised* the *latter*, when a scene ensued which threw the whole of my household and others present into the greatest commotion and alarm. This patient had to be dragged into the open yard, and a tap of cold water made to play upon for a considerable time before he was sufficiently recovered to enable Mr. Hall to put him into a cab and take him to his lodgings. Surely I ought not to be held responsible for what happened when I was a mile distant from them; nor ought Hypnotism to be held so for what happened with a *magnetised* patient. I can honestly say I never encountered any such untoward circumstances with *any hypnotic patient*.

Hypnotism does not claim such transcendental powers as to be able to trace any connection "between Tenterden steeple and the flooding of Goodwin Sands." I presume such a feat may be more appropriately intrusted to Mr. Hall's patient, whom he reported as so clairvoyant that *he read verbatim letters travelling to him in the post-bags*. In reference to this case, I offered Mr. Hall five pounds *as a reward*, either to *that patient or any other he could find, who should accomplish this in the way I suggested, which precluded all possibility of mistake or collusion*. At first Mr. H. craved delay; in a second letter he pleaded ill-health and various other difficulties which had arisen to prevent its accomplishment, *but was to try it for me so soon as he recovered*. After I knew he was recovered, and had for some time been engaged in his public mesmeric lectures, I wrote to urge the fulfilment of his promise, but to this I had no reply nor allusion until what appeared in THE CRITIC of the 5th inst. If Mr. Hall had, *from the first*, meant to act as he has there implied, why did he not honestly say so in his *two first letters?* Mr. H. knows well that the test I proposed was of such a nature as could have admitted of no doubt whatever, and that if a few such tests were successfully performed and attested by such witnesses as he refers to, all cavil on the point would at once cease. The question of seeing through opaque bodies may be settled to the satisfaction of some, but the great majority of mankind think otherwise. It is not the veracity or intellectual respectability of the witnesses which is questioned, but the great want of uniformity in the results; *and the possibility or probability, from the nature of the tests used by them, when they have succeeded, of their having overlooked something which has enabled the subject to perform, by the* ORDINARY *media and organs, what they have alleged was effected through some occult power brought into operation by the processes resorted to*, which is alleged by sceptics as unsatisfactory.

Whatever inferences I have ventured to propound as my own opinions, have generally been accompanied with the premises from which they have been deduced; and thus others were left either to assent to, or dissent from, my conclusions, according to their own convictions. Notwithstanding Mr. Hall's sarcastic remarks and straining to misrepresent the *real* object and scope of my recorded opinions on this subject, I am perfectly contented to leave them for the candid critic and time to determine whether my views or those of the ultra-mesmerists are nearest the truth (for as yet we are only on the threshold of the inquiry), and it is gratifying to me to have the honour of appealing to the able article, *Mesmerism True, Mesmerism False*, in Dr. Forbes's Journal; to an able article in the *London and Edinburgh Monthly Journal of Medical Science*, and to *Fraser's Magazine* for June 1844 and July 1845, all of which ably support my views, *both as to the nature and extent of the phenomena*.

It has been long since observed, that assuming and endeavouring to maintain the attitude and expression of particular passions and emotions had a direct tendency to engender the feelings with which they are usually associated, *even in the waking condition;* and most people are sufficiently acute to have observed that, to a considerable extent, the leading traits of character are depicted in the form and features and expression of mankind generally. It is also generally admitted that "evil communications corrupt good manners," both morally and physically; and this is particularly apparent in many cases of squinting and stuttering, acquired from imitating others so afflicted. After having published these remarks, in addition to those contained in my former letter, as to the baneful tendency of reiterating false impressions in the waking condition, and the power of sympathy, habit, imitation, and excited imagination and credulity, I consider I have fully discharged my duty in submitting for general consideration what to me appeared a practice fraught with evil; and I shall now leave Mr. Hall and others so inclined to follow their own courses in this respect to any extent they choose, without the risk of farther molestation on my part regarding their "vigilant manifestations." I shall, however, remark, that if they succeed in demonstrating the possibility of *continually repeating false impressions, such as those alluded to, without inducing morbid mental or physical consequences, I consider they will realize for us a new physical and psychological phenomenon*.

In conclusion, I beg to assure Mr. Hall that, personally, I cherish no unkindly feeling towards him, but the contrary, and shall rejoice to hear how successful his labours may prove in his application of this new method of treatment for the relief of suffering humanity.—I am, Sir, yours, &c.

3, St. Peter's-square, JAMES BRAID.
Manchester, July 8, 1845.

DR. FORBES AND MR. VERNON'S EXPERIMENTS.

TO THE EDITOR OF THE CRITIC.

SIR,—I trouble you with the following facts, trusting you will allow space in your valuable journal for them; knowing the impossibility of obtaining even a line in the *Times* in answer to any thing they may have published against Mesmerism or its advocates, the leading journal, I presume, judging the time has not yet arrived when it would be advantageous to speak in favour of this truth. I shall comment as little as possible, mere opinion being worth little at present; my object is merely to have published a correct statement of the facts as they occurred in my experiments, which have been noticed in the *Times* from Dr. Forbes's account. Of course I am bound to believe the misrepresentations are *mistakes*, although others as well as myself wonder how such mistakes could occur when there appears to have been so careful a noting of events.

First, then, the experiments with Adolphe were *four*, as stated. At two of these sittings, according to Dr. Forbes's account, the inclosed words were read. The first was prepared by a gentleman who, I was told, belonged to one of the embassies. I never saw him before, nor have I seen him since. The package was carefully examined by several scientific persons present, quite as capable of judging as Dr. Forbes; they were satisfied of the utter impossibility of the word being read by ordinary vision, and they *knew* collusion was out of the question. Dr. Forbes says he and his friends were not satisfied, because the experiment was perfectly conclusive. There are *things* upon which some persons never will be satisfied. The other word read by Adolphe was prepared by Dr. Ottley, one of Dr. Forbes's party, and he was much *too wary* to give even a hint of a letter contained in the word. After it had been read, he publicly declared he was satisfied—that he could not stand against such an *accumulation of evidence;* but Dr. Forbes *says* he knows a lady who can do the same without being mesmerised. Was Dr. Forbes's lady in the same circumstances as Adolphe, seated in the middle of a large room, surrounded by spectators? If not, the counter-experiment of Dr. Forbes is worth nothing; if he says she was, his assertion is no more a proof than is the assertion of a Mesmerist. I shall be happy to see it done by the lady, or any one else, when I will admit further proof is wanting of clairvoyance, and that I can and will supply. Adolphe, at Dr. Forbes's house, after the most careful bandaging, played a hand at *écarte* with Mr. Ottley, and told several cards without touching them, in the presence of Professors Sharpey and Reid, Drs. Carpenter and Moore, and Mr. Noble, &c. Therefore three out of the four experiments with Adolphe I consider were perfectly successful.

With regard to the lady, she was tried but *twice*, not *four times*, as stated. The first time she said she could not see, but would on the 21st of the following month, if her directions were followed, which were, to be mesmerised daily till the 21st. Circumstances prevented this, and she was not mesmerised till the 21st, when the trial was made, although failure was anticipated, rather than disappoint the parties. If Dr. Forbes will refer to his notes, he will find that he had been put *en rapport* with the somnambule to speak about the box he had prepared, she explained why she could not see, and he remained quite close, if not in actual contact when speaking to her. I should like Dr. Forbes to explain, if he thinks somnambules are so cunning as to deceive men of the highest fame and character who examined them—men such as formed the second French commission—men like Huffeland, Wienholt, Bertram, Wolfart, Georget, Elliotson, Gregory, &c. &c.—what is the charm *he* possesses to render them so simple as to reply to his questions when they are shamming deafness. Why, Doctor, you could upon an emergency sham thus much, and hold your tongue for ten minutes to avoid being detected in a falsehood.

In conclusion, allow me to state that this lady has, under fa-

vourable circumstances, read words contained in boxes above twenty times. I can shew the words and explain the circumstances to parties anxious to examine the facts; but when somnambules are not *lucid*, and are urged to try to *see*, they will do so, and appear to make guesses, which Dr. Forbes thinks is a proof of their being impostors. I think the clairvoyant state being one of cerebral excitation, they, under the circumstances, being urged, state correctly what they *really* see from internal causes, as persons labouring under spectral delusions see and describe objects which really do not exist external of themselves. If the somnambules were cheating, would they say any thing, knowing that the chances must be more than 10,000 to one against their guessing right? This fact proves that, however ignorant we may be of the state they are in, it is impossible they can be artful characters wide awake. If awake, they must be the silliest creatures alive, and if the silliest creatures, how have they succeeded in deceiving the wisest men in all parts of the world?

Wishing to have the matter fairly brought to issue, I now state, as I have by advertisement in the daily papers, that I will meet (gratuitously) Dr. Forbes and twelve persons, medical and non-medical, and undertake to prove, according to his own tests, the fact of clairvoyance, the somnambules doing what it is impossible to do without Mesmerism,—decipher words or letters in opaque boxes, and indicate diseases in persons presented to them for the first time; the commission to name the times and place of meeting. In no other branch of science would teachers take the trouble of forcing conviction on the minds of men, when they (the taught) can alone be benefited, for it cannot matter to the world or to Mesmerists what is the opinion of any one or any party of medical men upon a subject which all can appreciate, and to which so many are daily having recourse and finding in its application that relief which it was impossible to find in the combined skill of the most celebrated practitioners. I shall be happy to receive communications as to the meetings or the formation of the commission to fairly investigate this subject, and remain yours obediently, W. J. VERNON.

27, Duke-street, Manchester-square,
July 24th, 1845.

EXTRACTION OF A TOOTH WITHOUT PAIN IN THE MESMERIC STATE.—Being in attendance on a family at Clifton, I was asked to see one of the servants, who had been suffering from violent tooth-ache, and had not courage to have her tooth extracted. On first trying to mesmerise her, I found a great impression was made; my second trial satisfied me that there was insensibility to pain; on my mesmerising her again on Saturday last, I found she was fully equal to any operation. I called on a dentist, residing at 28, Park-street, and made an appointment for him to meet me at 29, Park-street (where I have apartments), at three o'clock. The family came with their servant at half-past two o'clock. In less than ten minutes the servant, a very timid and excitable young person, was sent into the mesmeric state. At a quarter past 3, the dentist arrived. The tooth was a double one, with three prongs, and was firmly rooted in its socket; in truth, a powerful wrench was require to extract it. The gum was afterwards closed firmly with the fingers. During this period, the patient sat with her hands quietly resting on her lap; not the slightest motion or resistance could be detected by the lookers-on. After the operation, Mr. Moseley, the dentist, was asked his impressions, from what had passed: his reply was, "That there was perfect insensibility, and that she remained as passive as a block of wood." This opinion is the more satisfactory to me, Mr. Moseley being a perfect stranger, and before the operation expressed himself as very doubtful whether Mesmerism could be brought to such a practical bearing. On being awoke, the young woman looked about surprised at seeing strangers in the room; and when told by me that she would not now feel her tooth pain her, she doubtingly inquired, "What, then, is it out?" I need hardly say, that such a result was as gratifying to those who witnessed the operation without pain, as to the patient who lost her tooth without knowing it. I have not said a word to the parties on the report of this case; but I feel it ought to be made known, occurring as it does in the centre of much medical scepticism; and I can refer with confidence any medical or other sceptics to Mr. Moseley, the dentist, of 28, Park-street, and to Miss Smith, of 29, Park-street, Bristol, both of whom witnessed this interesting result, and will doubtless give their unbiassed opinions.

Mr. Estlin and his adherents, of the Bath and Bristol Provincial Medical Association, will perhaps say this is the force of imagination. They shall have the full benefit of this explanation. My reply is, that if imagination will allow limbs to be amputated, teeth extracted, and tumours removed, without pain,—to say nothing of the most distressing nervous diseases cured,—the sooner imagination is allowed to be an active agent of the pharmacopœia the better. To medical sceptics I would say, in the language of the late talented Mr. Chevenix, "Would it disgrace the greatest man whom England has ever produced to attempt an experiment or two upon a doctrine which Hufeland, Juisseau, Cuvier, Ampère, and La Place believed?" Surely, what great men believe, ordinary men may try.

I am, Sir, yours, &c.
HENRY ST BER, M.D.

27, Brock-street, Royal-crescent, Bath.

MESMERIC LECTURES.—SUCCESSFUL EXPERIMENT.—Mr. Spencer T. Hall gave his second lecture at Willis's Rooms, St. James's, on the 15th, and his second evening lecture at the Western Literary and Scientific Institution, Leicester-square, on the 16th. The audiences were very respectable, and appeared to be deeply interested. On the latter occasion, however, several parties said they should like to see the effects of the influence upon some one not previously known to Mr. Hall, and two or three gentlemen offered themselves from the body of the audience. Mr. Hall selected one who had previously avowed his scepticism, and soon succeeded in making a somnambulist of him, when he joined in an animated conversation, was thrown into ecstasy by music, responded in a most striking and conclusive manner to various phrenologic touches, and was then awaked, when he declared himself totally unconscious of every thing that had transpired between the closing of his eyes and his restoration to vigilance by Mr. Hall's manipulations. It is needless to say that this test of the influence gave great satisfaction to the entire audience.

NECROLOGY.

JOHN ADOLPHUS.

We regret to announce the death of Mr. John Adolphus, the celebrated barrister, which took place suddenly at the house of his son, Mr. J. Leycester Adolphus, in Montagu-street, Russell-square, at a late hour on Wednesday night. Mr. Adolphus was one of the oldest members in the criminal courts of this country, and father of the Old Bailey Bar. The deceased gentleman, in early life, raised himself to distinction in the metropolitan courts of criminal jurisprudence, and in a few years worked his way into a large and lucrative practice. Mr. Adolphus on various occasions throughout his professional career had distinguished himself in a very remarkable manner by his extraordinary talents, judgment, and energy, especially during the memorable trial of Thistlewood in 1820, when he was only retained as leading counsel on behalf of the conspirators a few hours before the trial commenced, notwithstanding which, though the trial was one of the most interesting and momentous which perhaps ever took place in a criminal court, involving as it did the liberties and lives of many individuals, he displayed as much legal knowledge, mental acuteness, acquaintance with the facts of the case, and professional talent generally, during the protracted proceedings, as if he had devoted an entire month to the preparation of the defence. The manner in which he acquitted himself was equally the admiration of the Bench, the Bar, and the public. That he was physically equal to the subject was the surprise of all who were aware of the fact that he had sat up the whole of the previous night for the purpose of mastering the principal facts of the case, scattered as they were over a mass of evidence. His statements and arguments were as clear and ingenious as his cross-examination of witnesses was skilful and felicitous. Mr. Adolphus spoke with much ease and fluency, and on all important occasions displayed talent and eloquence of the highest order. He has died sincerely lamented by a very numerous circle of friends. Among the literary efforts of the deceased gentleman may be mentioned the *History of the Reign of George III.* the seventh volume of which has just appeared; the *Political State of the British Empire*, 4 vols.; *Biographical Memoirs of the French Revolution; Life of Bannister*, 2 vols. &c.

JOSEPH AUGUSTINE WADE.

It is with deep emotion we record the deplorable death of this accomplished individual; a fine musician, a pleasing poet, and no mean scholar. He died at his lodging, 340, Strand, on Tuesday, under the most distressing circumstances, having suffered a long and severe illness, ending in mental derangement, brought on by incessant study, and, we fear, by habits or feelings which made the destructive resource to opium but too acceptable. Mr. Wade's musical compositions and poetical and other literary productions were of a high and pure order, nearly allied to that genius which is too much for the oppressed mind to struggle with. He has left a widow and two children utterly destitute, threatened with an execution for rent, and without the means of burying his remains!

MR. BUTLER, THE TRAGEDIAN.

It appears that Mr. Butler was engaged to deliver a course of lectures on Shakespeare's plays, at the Athenæum, Manchester. Wednesday, 16th inst., was the first of the series, *Hamlet* being the tragedy selected; but scarcely had he concluded reading the fourth act, before he became so seriously ill, that he was conveyed home. Not the slightest symptoms of recovery were perceptible afterwards, and on the following evening (Thursday), about half-past seven, as he was proceeding across his bed-room, supported by his wife, he suddenly fell back in her arms and expired. The complaint which has thus brought him to an early grave was one of a very painful and dangerous character, and it is understood that but a few months ago he was operateed upon by Dr. Liston. He was in his 41st year, and was much esteemed throughout the profession.

GENERAL JACKSON.

General Jackson, alias "Old Hiccory," the ex-American president, an individual throughout life very hostile to England, and the author of a number of political pamphlets, died on the 8th ult. at his residence in Tennessee.

CRITIC OF TRADES, INVENTIONS, ETC.

[Every person feels the want of an *honest* informant to direct him where the best commodities of all kinds are to be purchased. New inventions for use or ornament are daily produced, which would be cordially welcomed if their merits were made known. An advertisement alone cannot be trusted. An impartial reporter is wanted in whom the public can confide. This department of THE CRITIC will endeavour to fulfil that duty. To aid the design, correspondents are requested to inform our readers of any new production for use or ornament they may try and prove, of the places where the best commodities of any kind are to be procured, and so forth. Of course no anonymous communication will be attended to.]

GOOD BREAD. (*From a correspondent.*)—I am delighted with your design of giving to the readers of THE CRITIC honest information where articles of use or ornament may be procured of best quality. In London it will be especially useful; for such is the system of puffing that it is absolutely impossible to ascertain what praises are genuine; and so huge is the metropolis, that one may live in it all one's life, and not hear of something to be got in the next street possessing special claims upon one's patronage. The section of THE CRITIC which you propose to dedicate to the collection of such useful information must therefore recommend it to every housekeeper, and I make a point of telling all my friends what is your plan, and enlisting their aid, not only as subscribers to THE CRITIC, but as contributors to the promised record. I presume you will admit inquiries, as well as experiences, and double the field of usefulness, by enabling persons to name their wants and thus to procure the experience of your immense circle of readers to aid in the supply of them. My immediate inquiry is one which, I am sure, will be readily sympathized with by thousands in the metropolis. Where can I obtain the best and purest bread? I find no faith can be put in the advertisements; I have tried many, and all have deceived me. I therefore avail myself of the invaluable department of THE CRITIC, which I am now addressing, to ask of your readers if they can, *from their own experience*, say where the best bread can be procured by A HOUSEKEEPER.

WEST-END PRICES.—A dweller in the West end offers a hint to his neighbours. The prices of meat, vegetables, and fruit are at least 25 per cent. higher at all the shops in our neighbourhood than in the less fashionable parts of the metropolis. This is a consideration in the housekeeping of a large family. I was resolved to see whether it might be avoided. I went into the City and found that butchers and greengrocers were willing and anxious to serve me at City prices, and deliver at my door by means of their light spring carts. The plan I adopt is this: A note is posted every evening stating what things are wanted for the morrow, and the account is settled weekly. By this arrangement I have not only saved at least 100*l.* per annum, but I obtain meat, vegetables, and fruit of vastly better quality. I avail myself of your very useful and novel department of THE CRITIC to give to others in a like situation the benefit of my own experience. A FAMILY MAN.

MALLEABLE GLASS.—The *Segusian Mercury* states that a most marvellous discovery has been made at St. Etienne, of rendering glass as malleable when cold as when first drawn from the pot. This substance, which is called silicon, combines with various substances producing the most brilliant colours, and can also be obtained opaque or transparent as crystal. Its specific gravity is 2·85, water being 1·00. It is very ductile and malleable, and neither air nor acids act upon it.—*Commerce.*

TO BOOKSELLERS.—*A stamped copy of* THE CRITIC *sent regularly to any Bookseller, for his own use, at the cost of stamp and paper only, on prepayment of* half a year's subscription, at least (4*s.* 4*d.*), *which may be transmitted in penny postage stamps.*

BOOKSELLERS *and Keepers of Circulating Libraries are requested to communicate to* THE CRITIC *the results of their experience as to books and classes of books most in demand, and other similar information. Books wanted to purchase inserted in the weekly list without charge.*

BOOKSELLERS' CIRCULAR.

OPINIONS ON THE CRITIC.

TO THE EDITOR OF THE CRITIC.

SIR,—Permit me to take this opportunity of adding my cordial and sincere testimony of approbation of the plan on which THE CRITIC is and seems likely to be conducted. Taken as a single opinion, mine may be unimportant; but, as a book is made up of individuals, it may add another to the aggregate of general approval.

I wish it every success, and shall be glad to forward its interests as far as lies in my power. An energetic, and, at the same time, a really honest and faithful censor of the public press, must prove a national advantage, and eventually I should think will triumph over all obstacles raised against it, however difficult and discouraging may be its progress at first.

I am, Sir, your obedient servant,

W. R. BUSH, Bookseller.

Devizes, July 21, 1845.

LITERARY INTELLIGENCE.

A living monument of intelligent industry exists in Mr. John Britton, the eminent antiquary and topographer, to whom a public dinner was given at Richmond, on the 7th, his seventy-fifth birthday, by several cultivators of the liberal arts. In the table-talk it came out that Mr. Britton was of humble origin. Having been confined for six years of his youth to a wine-merchant's cellar, he entered upon his literary inquiries without knowledge of grammar or dictionary; bought both for the purpose; and, while yet apprentice, devoted four hours a day to mental improvement. He has produced 66 volumes, containing 1,866 engravings of noted accuracy, and costing in the outlay 50,000*l.* A subscription has been opened for a memorial to be presented to the venerable topographer, and 300*l.* has been collected.

THE LATE THOMAS HOOD.—We are glad to learn that the subscription for the family of this distinguished writer already exceeds 1,000*l.* and is still making progress. We have observed also, with satisfaction, during the last few days, the influential names of Mr. Charles Dickens and Mr. Thomas Carlyle added to the committee list. Sanctioned by such eminent examples, and hitherto so liberally supported by the public, this excellent object can hardly fail to meet with a complete success—such a success as will fitly express the public recognition of the poet's genius, and insure to those whom he held dear an ample provision against future want. We call attention once more to the subject, as we understand that the subscription-lists are to be closed at the end of the current month.

FREDERIKA BREMER.—We believe this charming authoress will shortly pass through Liverpool, *en route* to the United States.—*Liverpool Albion.*

EGYPTIAN ANTIQUITIES.—A sale by auction took place, at the auction rooms of Messrs. Sotheby and Wilkinson, of a collection of Egyptian antiquities, the property of Mr. Salt, which were discovered by him at Memphis, Thebes, &c. during his travels in Egypt many years ago, and which consisted of female ornaments, figures, and statues of deities, the worship of the Egyptians; canopic and other vases in alabaster, sepulchral tablets in calcareous stone, magnificent cases, which had contained mummies, manuscripts, or papyrus, &c. There were 172 lots, many of which were stated by antiquaries in the room to have belonged to the age of the Pharoahs, and fetched high prices. A sarcophagus of wood, entirely covered with paintings and hieroglyphics extraordinarily preserved, and found in one of the sepulchral chambers in the small temple of Isis at Thebes. The body in it was supposed to have been that of a person of high military rank, as when the sarcophagus was opened there were numerous gold and other ornaments on it, and in the case were two bows and six arrows. This was disposed of for 61*l.* The ritual of the Egyptian priesthood, written on the linen bandages with which the Memphian mummy opened in 1837 at Exeter-hall (supposed to have been the most complete extant) was enveloped, was sold for 18*l.* 10*s.* and the head and legs of the said mummy were sold for 3*s.* The upper portion of the case of a mummy of a lady of rank went for 6*l.* The figure of the deceased was described on the cover; the eyes were of composition, still of a

brilliant black colour, and the face covered with gold of an unusual thickness. A hieroglyphical papyrus 64 feet long, written for a deceased royal scribe, was bought for 14 guineas; another hieroglyphical papyrus of Anchapi, a functionary attached to the worship of the god Ammon of the Ptolmaic period, 13 feet long, was bought for 12 guineas. A sanctuary, 21½ feet high, composed of verde plasma, the inner part representing in relief the figure of a priest as holding in either hand a sceptre, surmounted by the head of one of the deities; on the top of the sanctuary are the cartouches of Ramises the Great—sold for 14 guineas. Another sanctuary, on which was a priestess, represented as making offerings to Osiris, who is standing between two serpents two feet two inches and a half high, was disposed of for 12*l*. A sacrificial font, composed of a solid block 31 inches in diameter, went for 9*l*. A painted tablet, representing the figure of a king, his queen, and daughter making offerings to Osiris, beneath which were 17 lines of hieroglyphics, four feet high, was bought for 15*l*. A necklace, composed of 12 shells of fine gold, each one inch in length, and containing three pieces of red composition inlaid on the upper part, of beautiful workmanship, sold for 8 guineas. The statue of Horus, sen. with the head of the hawk, surmounted by the globe, feathers, and two royal asps, was bought for 4*l*. 16*s*. The property fetched about 400*l*. Several of the articles were purchased for the British Museum.

ROMAN REMAINS.—A number of gold and silver coins of Constantine, Samian ware and tiles, have been found this week in digging the foundations for houses in Maiden-lane, Battlebridge. The coins, of the beginning of the fourth century, were in an iron vessel, about ten or twelve feet below the surface of the ground.

POMPEII.—Letters from Naples mention some recent discoveries of interest made in late excavations at Pompeii, particularly an extensive Necropolis. Beside one of the graves there is a seat, and over it is inscribed, "*Clovatius*, Duumvir and Tribune of Pompeii." This is a family name hitherto unknown. Near it is a monument of fine Grecian marble, richly sculptured. The ground where these discoveries have been made is the property of Signor Verlucci, who pays so little regard to antiquities, that as soon as he hears of a grave being explored he orders it to be filled up with earth or rubbish.

A letter from Rio Janeiro, of the 24th of March, states that Dr. Lund, the celebrated Danish naturalist and geologist, to whom we are already indebted for many interesting discoveries in Brazil, has found, in the province of Minas Geraes, a quantity of human bones, including some skeletons complete, in the fossil state (?). There are many skulls; and nearly all have the principal characters of those of the existing indigenous tribes of Brazil,—excepting that in many of them the incisive and molar teeth are exactly alike—a circumstance observed in some of the Egyptian mummies. The writer argues that as, hitherto, no human bones have been discovered, in the fossil state, in any other portion of the globe, those found in Brazil would seem to indicate that America, or its southern part, had been peopled before any of the other quarters of the world. Dr. Lund has also discovered, in the same province, a great quantity of fossil bones and skeletons of the horse,—an animal which, it is known, had no existence in Brazil when the Portuguese first landed there; and has further found the skeletons of forty-four different species of mammifers entirely unknown. The Doctor promises a detailed account of these discoveries to the Imperial Institute of History and Geography at Rio Janeiro.—*Athenæum*.

The number of works published in France during the first six months of 1845 amounted to 4,682—namely, works written in all languages, dead and living, 3,342; prints and engravings, 778; maps and geographical plans, 62; musical works, 500.

THE ADVERTISING SYSTEM.

Our Parisian contemporary publishes the following:—

"*The Times* journal, which occupies among British journals the same rank as the *Presse* among the French, and which, like it, defends the principles of the Government without being dependent on the Cabinet—*The Times* journal is of twice the present size of the *Presse*. The columns of *The Times* are forty-eight in number, and by the aid of a supplement their number is frequently increased to seventy-two, and even sometimes ninety-six during the Parliamentary session. Four-fifths at least of its columns are taken up by advertisements, the greater portion of which are only a few lines in length; and the total number of these summary advertisements in each number of the paper amounts generally to more than 1,000, and sometimes to 1,500.

"Such is the multitude of these advertisements in England, that, during the whole session of Parliament, four times a week, at least, the *Times* publishes a supplement of twenty-four, and sometimes of forty-eight columns, exclusively filled with advertisements, with the exception of the few lines necessary to connect the supplement with the body of the paper. In France, and in Paris especially, it is manifest that we are far behindhand in this respect. Whence arises this difference? It originates in the fact that in England all, without exception, have recourse to publicity. Does any one require some particular object, or clerks, or workmen, or servants, or horses, or coaches, the want immediately obtains publicity through the medium of the journals. If any one has received, invented, or fabricated any new article, or is the author of a new invention, or the purchaser of an improvement, changing his residence, extending his business, or has obtained some further claim on the confidence of the public, &c., the fact is immediately made known to all. In England every thing is advertised—births, deaths, marriages, departures, balls, and banquets. By previous agreement they even serve as a means of correspondence between parties. Lords and ladies, gentlemen, merchants, clerks, workmen, cooks, servants—none are above advertising. It is the universal channel of communication between all ranks and all professions. What is it which in England and the United States has given this immense development to advertising? What is it that has made it enter into the habits and customs of all? The low price of these insertions on account of the small space which they occupy. In England and the United States an advertisement never occupies one-tenth, nor the quarter, much less the half, of a page, as in the French journals, but generally is only of from two to ten lines in length. In this space, sufficient to call the attention of the public, what is required to be said is said without fine phrases, or one superfluous word; which allows of its being frequently repeated, and at little cost; it being necessary to fix the attention of the listless reader, that it should have struck his eye more than once. But when advertisements are too dear, they cannot be frequently repeated, and thus it generally happens that advertisements which appear only once or twice fail of effect. This is what occurs in France. What course, then, was the *Presse* instructed by experience to adopt? To take, as it always has done, the initiative of an useful reform, less, indeed, by reducing the price of its advertisements than by classing them methodically, and adopting for their composition an uniform type which should allow each advertisement to be printed in the smallest number of lines possible, without the fear of any being crushed by the neighbourhood of bill advertisements, composed in thick and variegated type, which forcibly attracts and retains the attention—to imitate, in a word, the English advertisements—to render French advertisements, by means of summary announcements, costing from 6 to 18 francs, accessible to all classes, viz.:—

"To merchants and traders, who are forced by the efforts of opposition constantly to recall to the public their existence and titles to its confidence by placing the name of their house constantly under its eyes whenever they receive any new merchandise recommendable from its low price, its superiority, or its novelty; to those who have an abatement in prices to announce; to those who wish to dispose of their stock, &c.

"To patentees who are desirous of making known or disposing of an invention or improvement.

"To landlords or principal tenants who have apartments, houses, shops, &c., to let.

"To masters who are in want of clerks, servants, journeymen.

"To clerks, journeymen, and servants, who are seeking for employment.

"To persons of all classes who have real or landed property to dispose of or purchase.

"The *Presse*, however, while giving the example of this reform, has not wished to operate it without transition; it has not entirely abolished the use of bill advertisements, which may be disposed according to the fancy of the advertiser; but it has given precedence to the rule over the exception—the small advertisements of all before the large advertisements of a few; it has separated the latter from the former, in order that the one should not injure the other.

"This is a first step taken by the *Presse* in the career of improvement as regards paid publicity. Doubtless the public will reward it when it shall have appreciated the immense advantages in the twofold position of buyers and sellers, who will in future be able to communicate all with each other at a small cost."

REGISTER OF NEW PUBLICATIONS,

From July 19 *to July* 26.

NOTICE TO BOOKSELLERS.

A Register lies at THE CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* THE CRITIC, *and no charge will be made either for registration or for publication in* THE CRITIC. *Particulars forwarded* by letter *will be duly inserted.*

LIST OF NEW BOOKS.

Abercrombie (John) on the Diseases of the Brain and the Spinal Cord, 4th edit. 12mo. 6s. cl.—Ancient Syriac Version of the Epistles of St. Ignatius, with an English Translation, Notes, &c. by William Cureton, M.A. 8vo. 10s. 6d. cl.—Apprentice (The): Vol. I. New Series, 4to. 3s. 6d. cl.

Bell's Stream of Time, continued down to 1845, mounted on roller and varnished, 2l. 2s.—Bosom Friend (The), a Novel, by the author of "Gambler's Wife," 3 vols. post 8vo. 1l. 11s. 6d. bds.—Book Collector's Hand-Book, a Modern Library Companion, 8vo. 2s. 6d. cl.

Christian Charity Explained, by J. A. James, 5th edit. fc. 4s. cl.—Chronicles of the Bastile, 1 vol. demy 8vo. with illustrations by Cruikshank, 1l. 1s. cl.—Confessions of a Convert from Baptism in Water to Baptism with Water, fc. 8vo. 2s. cl.—Count Königsmark, an Historical Romance, by Capt. Chamier, R.N. 3 vols. post 8vo. 1l. 11s. 6d. bds.

Daniell's Elements of Meteorology, 2 vols. demy 8vo. 1l. 12s. cl.—Downing's (A. J.) Fruit and Fruit Trees of America, with engravings, 8vo. 14s. cl.

Edgeworth's Parents' Assistant, new edit. 3 vols. 18mo. 7s. 6d. cl.—English Gentlewoman (The); or, Hints to Young Ladies on their Entrance into Society, 1 vol. post. 8vo. 8s. 6d.

Forbes's (J. D.) Travels through the Alps of Savoy, &c. 2nd edition revised, royal 8vo. 1l. 8s. cl.

Gray's Poetical Works, Eton Illustrated Edition, edited by Rev. J. Moultrie, M.A. 8vo. 10s. 6d. cl.

Hardcastle's Catechism of Astronomy and the Use of the Globes, 18mo. 2s. cl.—Hopkins's Exercises in Composition, 18mo. 1s. 6d. cl.—Hopkins's Exercises in Orthography, 18mo. 1s. 6d. cl.—Hopkins's Key to both the above, 18mo. 1s. 6d. cl.—Hopkins's Teacher's Manual of Mental Arithmetic, 12mo. 3s. 6d. cl.—Hopkins's Pupil's Manual of Mental Arithmetic, 12mo. 2s. cl.

Journal of an African Cruiser, by an Officer of the United States Navy, edited by Nath. Hawthorne, 12mo. 3s. 6d. cl.

Law of Fixtures, Ecclesiastical and Lay, by S. G. Grady, esq. 12mo. 14s. bds.—Legends of the Isles, &c. by Charles Mackay, royal 12mo. 7s. 6d. cl.—Letters from Italy, by J. T. Headley, 12mo. 3s. 6d. cl.—Lily M'Nab; or, the Heiress of Dunelf, a True Tale of Modern Times, by D. B. M'Leod, 3s. 6d. half cl.—Literary History of the New Testament, with Introductory Recommendations, by Rev. E. Bickersteth and Dr. Pye Smith, demy 8vo. 14s. cl.

Maitland's (Rev. S. R.) The Dark Ages, 2nd edit. 8vo. 12s. cl.

Naomi; or, the Last Days of Jerusalem, by Mrs. J. B. Webb, fc. 8vo. 4th edit. 7s. 6d. cl.—Napier's (Gen. W.) Conquest of Scinde, 2nd edit. complete in 1 vol. 8vo. 1l. cl.—New Tablet of Memory; or, Mirror of Chronology, History, &c. with Additions to end of 1844, 16th edit. 12mo. 6s. 6d. cl.

Stanhope, a Domestic Novel, 1 vol. crown 8vo. 8s. 6d. bds.—Sullivan's (Robert) Geography Generalized, 4th edition, enlarged and improved, 12mo. 2s. cl.

Thiers' French Revolution, Part VIII. (Whittaker's Popular Library) medium 8vo. 2s. 6d. swd.—Tales of the Colonies, by Charles Rowcroft, 4th edit. fc. 8vo. 6s. cl.—Townley's (Robert) Second Advent of the Lord Jesus Christ, a Past Event, 8vo. 5s. cl.

Wolski's (F. A.) New French Grammar, with Exercises, 12mo. 3s. 6d. bd.—Worsley's (W., B.A.) Six Discourses to Explain the Principles of Unitarianism, 12mo. 3s. half cl.

English Churchman, No. II.

GLEANINGS.

PORT PHILLIP.

An occasional correspondent at Sydney has forwarded us the following extract:—

(From the *Port Phillip Herald*, Jan. 28.)

"NATIVE CUSTOMS, &c.—We have been favoured with the following interesting paper, from the able pen of Mr. Assistant Protector Parker, on the manners, customs, and traditions of the Aborigines of the North-western or Loddon River District:—'Many erroneous opinions have been entertained respecting the character and habits of the Aborigines of Australia, and it has been commonly asserted that they are totally destitute of any notions worthy of the name of religious opinions. In the earlier period of my acquaintance with them I entertained similar views, but further communication has induced a conviction that a traditional mythology exists among them, rude and obscure indeed, but in all probability the indistinct relic of some older and more complete system. It must be sufficiently obvious to all who have had much intercourse with the native tribes, that they are exceedingly reluctant to speak on these subjects; a circumstance readily accounted for by the fact, that, whatever notions they entertain of supernatural beings, all refer to objects of fear and dread, and not of love. The older natives can scarcely be brought at all to speak about their traditions, but from the young men I have latterly obtained some more definite information than I formerly possessed, which appears to me of sufficient interest to become matter of record. I have long been convinced that, in addition to a general notion of the existence of an immaterial principle in man which survives the body, the Aborigines entertained opinions bearing a rude analogy to the metempsychosis of the Oriental mythologies. They have cherished the idea that the souls of their deceased friends pass into the bodies of certain species of birds. How long this is supposed to continue, and what may be the result of the change, they are either unable or unwilling to tell. The belief also has been very general that the whites who have occupied their country were formerly "black fellows," who have passed into a new and improved state of existence. It is remarkable, that the designation given to the white inhabitants of the colony in most of the dialects of which I have heard (*amydeet*, jojowrong, *amerjig*, koligan, *amy gai*, &c.) appears to be identical with the words used to describe the soul when separated from the body. I once, and but once, saw a singular ceremonious dance, on the Loddon station, which was called "Yepéne amy gai," or dance of separate spirits. It was avowedly a novel affair to nearly all the actors, and was taught by an old man from the westward, since dead. In this ceremony, after a very singular and not unpleasing dance with branches in either hand, all, with the exception of the two old men, who were leaders, came together to one spot, and gradually bent towards the ground, becoming slower and slower in the motions, till they were entirely prostrate. They remained perfectly motionless for some time, and a mournful chant was sung over them, and they were said to be "dead." The two old men then went round them several times, and seemed to be driving something away with their boughs, singing at the same time with increasing energy till they became very loud and rapid. Then, at a given signal, they all sprang to their feet, and recommenced their dance. They were then said to be "alive." I have made many inquiries to ascertain whether any notion of a superior power or deity existed amongst the tribes with which I am in communication. I think I have found a distinct tradition of the supposed existence of a being possessing some of the attributes of a deity. The name of this imaginary being is *Binbeal*. They assign to him the making of an original pair, from whom has descended the present race of man. There is evidently much vagueness and obscurity in their notions on this particular topic. But they are more distinct in their representation of the relation he is to bear to them after death. He is said to take the spirits of deceased natives and to subject them to a sort of purgatory, placing them in fire to try them whether good or bad; the good are at once liberated, but the bad are made to suffer for an indefinite time. They have sometimes replied to my inquiry, "Who made all things? &c." "Binbeal;" but the reply is given in a doubtful and hesitating manner, and it is a frequent acknowledgment with them that they are "very stupid," and know little about the great facts of creation and Providence. Other traditions exist among them referring to the origin of certain natural objects. Thus, they believe in the existence of another mythological being called *Bonjil* or *Pundyil*, who, however, is said to have been once a "black fellow," and a remarkable locality is indicated as his residence when on earth. This is the deep basaltic glen or hollow, forming the fall of "Lallal" on the Marrabool, near Mr. Airey's station. He is now represented as dwelling in the sky, and it is curious that they call the planet Jupiter "Pundyil," and say it is the light of his fire. This Pundyil is said to have found a single kangaroo, emu, and other animals on earth: that he caught them, cut them up, and by some mysterious power made each piece into a new kangaroo, &c. that hence the country was filled with these animals. Another tradition professes to account for the origin of the Pyrenees, Mameloid Hills, and the neighbouring heights. It is ridiculous enough in its detail, but supposes them all to have originated in a single immense mountain, which was torn to pieces by the action of fire. The volcanic character of the district may seem to suggest this notion. Of all the objects included in their rude and savage superstitions, none appear to exercise more influence on the native mind than the fear of the *mindye*. They apply this term to a large species of serpent, which is universally asserted by the natives to exist in the hitherto unexplored country between Mitchell's Outward Line and the Murray. The object of dread, however, is a supernatural being having the form of the animal just named. This being is represented as having the power of inflicting disease and death when invoked by incantations. The existence of any epidemic or endemic disease is always ascribed to its influence. It is remarked that the small-pox, which from the accounts given by the natives must at times have proved a terrific scourge to them, is called "*monola mindye*," or the dust of the mindye; and the scars left by it "*lillpook mindye*," or the scales of the mindye. The whirlwinds, which in the summer season carry up columns of dust to a great height, are much dreaded by the Aborigines. To be included in the vortex of one is regarded as a sign of speedy death, because it is said to be an indication of the presence of the mindye; it is, in fact, called 'its tail.' The men who are regarded as magicians or conjurors profess to derive their power from some pretended communication with this object. Although there seems to be nothing deserving the name of a regular religious rite among them, I am disposed to think that some peculiar ceremonies which have been

observed within the last two years are intended to propitiate this dreaded phantom, and to avert the consequence of its anger. And I think in their ceremonies and superstitions may be traced the obscure and nearly obliterated relics of the ancient *ophilatria* or serpent worship still extant in India and Africa. I am fully convinced that these wretched superstitions have far less hold upon the minds of the younger part of the aboriginal population than on the middle-aged and elderly people. Some of the young men openly ridicule their notions; and it is remarkable how very few attempt to question the truth of what is stated to them on religious topics. Their traditionary superstitions are too dim and indefinite to give the mind much pre-occupation, and the estimate which they have formed of the superior knowledge of the whites predisposes them to listen, at least with respect, to what may be inculcated. I have thus briefly sketched a few of the traditionary superstitions of the Aborigines. I do not, however, profess to give this as a complete delineation of the subject. Other details have been given me, but the information I have received is not sufficient to communicate. I have little doubt that more extended acquaintance with their language and opinions, and increasing confidence on their part, will elicit many interesting circumstances in connection with their history and associations.'"

IMPORTANT METROPOLITAN IMPROVEMENT.—We understand the commissioners for the improvement of London have it in contemplation to open a most important avenue from the West end of the town to the City, with the view of relieving the crowd of carriages now so inconveniently congregated at times in Holborn and the Strand. This new street is to continue the line opened from Coventry-street through Leicester-square to Long-acre, from the corner of Bow-street obliquely across Drury-lane to Carey-street, on the south side of Lincoln's-inn-fields; thence across Chancery-lane through the Rolls property, midway between Holborn and Fleet-street, to Farringdon-street, and passing under an arch to the wide part of the Old Bailey. This valuable opening is again to be intersected by a wide street extending from the north side of St. Clement's Church, known as Pickett-place, into the centre of Lincoln's-inn-fields, across which the street will go directly into Holborn, to join Red Lion-street, and thence direct to the Foundling Hospital, thus opening a noble avenue, long wanted, from the north to the south side of London. There is also every reason to believe that the long-required establishment of the courts of law in a central part of the metropolis will be accomplished. Surveyors have been engaged during the past week in measuring the new site, which is to extend from Boswell-court, Carey-street, to Bell-yard, Temple-bar, extending back towards the Strand, thus bringing the courts close to Lincoln's-inn and the Temple, and midway between the east and west and north and south portions of London. The plan is consistent with common sense and the convenience of the public, although long opposed by the selfish and bigoted influence of a few old crones who keep carriages, and find it desirable to combine parliamentary with legal interests. The plans will be carried out by Mr. Barry, the celebrated architect, and, combined with the new streets, north and south, east and west, referred to above, will indeed be a boon to the public, as well as a vast advantage to the metropolis in a healthful as well as moral point of view.—*Observer.*

HEDGEHOGS.—One of the most interesting facts in the natural history of the hedgehog is that announced in 1831, by M. Lenz, and which is now confirmed by Professor Buckland. That is, that the most violent animal poisons have no effect upon it—a fact which renders it of peculiar value in forests, where it appears to destroy a great number of noxious reptiles. M. Lenz says that he had in his house a female hedgehog, which he had kept in a large box, and which soon became very mild and familiar. He often put into the box some adders, which it attacked with avidity, seizing them indifferently by the head, the body, or the legs, and did not appear alarmed or embarrassed when they coiled themselves around its body. On one occasion M. Lenz witnessed a fight between the hedgehog and the viper. When the hedgehog came near and smelled the snake, for in those animals the sense of sight is very obtuse, she seized it by the head, and held it fast between her teeth, but without appearing to do much harm; for having disengaged its head, it assumed a furious and menacing attitude, and hissing vehemently, inflicted several severe bites on the hedgehog. The little animal, however, did not recoil from the bites of the viper, or indeed seem to care much about them. At last, when the reptile was fatigued by its efforts, she again seized it by the head, which she ground between her teeth, compressing the fangs and glands of poison, and then devoured every part of the body. M. Lenz says that battles of this sort occurred in the presence of many persons; and sometimes the hedgehog has received eight or ten wounds on the ears, the snout, and even on the tongue, without appearing to experience any of the ordinary symptoms produced by the venom of the viper. Neither herself nor the young she was suckling seemed to suffer from it. This observation agrees with that of Palles, who assures us that the hedgehog can eat about 100 cantharides without experiencing any of the effects which the insect taken inwardly produces on men, dogs, and cats. A German physician, who made the hedgehog a peculiar object of study, gave it a strong dose of prussic acid, of arsenic, of opium, and of corrosive sublimate, none of which did it any harm. The hedgehog in its natural state only feeds on pears, apples, and other fruit, when it can get nothing it likes better. Its ordinary food consists of worms, slugs, snails, adders, and sometimes rats and mice.

THE PORTLAND VASE.—Mr. J. Doubleday has at length completed his labours upon the Portland vase. That gentleman has accomplished his undertaking in so masterly a manner, that it would defy even the most critical to discover where the vase had been injured. We believe it is the intention of the authorities of the Museum, in order to preserve the vase from future attacks, to keep it in a separate apartment, accessible only by tickets.—*Sunday Times.*

THE MODESTY OF NORTHCOTE.—As the Duke of Clarence was once sitting to Northcote, he asked the artist if he knew the Prince Regent? "No!" was the brief reply. "Why," said the Duke, "my brother says he knows you." "Oh!" answered Northcote, "that's only his brag!"

A few days ago one of the Earl of Lonsdale's gamekeepers shot a young woodcock about half grown, in Melkinthorpe Woods, near Lowther, and saw several other young ones about the same age and size.

THE MUSIC THAT GOD LOVES.—God is pleased with no music from below so much as in the thanksgiving songs of relieved widows, of supported orphans, of rejoicing and comforted and thankful persons.—*Jeremy Taylor.*

FACT FOR SMOKERS.—German physiologists affirm that, of twenty deaths of men between 18 and 25, ten originate in the waste of the constitution by smoking.

CURIOUS IF TRUE.—The following is literally translated from *Le Politique Belge.* The Commissioner Lau (Law?), member of the Court of Insolvent Debtors, has just published his report on the debts of Father Mathew, the temperance apostle, contracted in 1842. The debts recognized amount to 13,000*l.* sterling, upon which a dividend of 4s. 9d. is about to be paid. The declared debts amounted to 27,000*l.* sterling. The bankruptcy of Father Mathew arises from the cost of hiring Covent Garden Theatre!

To Readers and Correspondents.

W. R. B. (Devizes).—*Thanks for the suggestions, which we are unable to adopt, because "leading" the lines, &c. would swell out the matter to an extent which our jealously-guarded space would not conveniently admit.*

J. L. W.—*Any keeper of a circulating library, or bookseller in extensive business, would give the required information, which we are unable to.*

R. W. B. (Manchester).—*We are unable to answer the question respecting the* Novel Times.

ADVERTISEMENTS.

The following is the moderate scale of charges for Advertisements adopted by THE CRITIC.

For 6 lines and under..... 5s.
For every three lines above ..... 1s.

The volumes of THE CRITIC *neatly half-bound, as completed, for 4s. 6d. each, if the numbers be forwarded to the office. The stamped edition may be sent by post with the ends open, and a letter of advice should contain directions how it is to be returned.*

A portfolio, on a novel and convenient plan, for preserving the numbers of the current volume of THE CRITIC *may be had at the office, or by order, of any bookseller in the country, price 4s. 6d.*

THE CRITIC *may also be had in monthly parts, sewed in a wrapper price 1s. 6d. each.*

ADVERTISEMENTS.

LETTERS of the MARCHIONESS BROGLIO SOLARI, one of the Maids of Honour to the Princess Lamballe, with a Sketch of her Life and Recollections of celebrated characters. 8vo. 5s.

Pickering, 177, Piccadilly.

CONTINENTAL TOURISTS.
Just published, price 10s. bound,

COGHLAN'S HAND-BOOK for ITALY, Northern, Central, and Southern, with mode of Travelling, Expenses at Hotels, &c. for an entire Tour.

Also, 2nd edit. of COGHLAN'S HAND-BOOK for CENTRAL EUROPE, through Belgium, Holland, the Rhine, Germany, France, Switzerland, and Channel Islands, with Map of the Railways to the present time. Price 10s. bound, or, both in one, 20s.

London: H. Hughes, 15, St. Martin's-le-Grand.

THE CRITIC,

And Journal of Literature.

SATURDAY, AUGUST 2, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

ADVERTISEMENTS.

PERHAPS a better specimen of the comparative charges of the various journals for the same advertisement will be a statement of the prices actually paid by our publisher during the present week for an advertisement not exceeding five lines. These were—

Times	5 0	Examiner	5 0
Herald	5 0	Britannia	5 0
Chronicle	5 0	John Bull	5 0
Globe	5 0	Spectator	7 6
Athenæum.....	10 0		

It will be seen from this that the *Athenæum* is exactly double the *Times* with a circulation probably not by one-twentieth so large. The *Spectator* has about the same circulation as the *Athenæum*, but its charge was 25 per cent. less, while it was still one-third higher than the *Times*, with a circulation twenty-fold greater. The enormous charges of the *Athenæum* and *Spectator*, so far above those of the other journals, should be known to the advertising public, especially those who reside in the country, or they may chance to find themselves grievously mistaken in their calculations. The question will then be, not so much if these journals be good *media*, as whether they are so much better than other journals as to be worth the enormous price demanded. Their columns crowded, even in spite of such charges, strikingly illustrates the tendency of the English to do as others do, without thinking for themselves. A moment's reflection would satisfy any man that no ordinary journal could be worth the scale required by the two above named. But because some persons are foolish enough to throw away their money thus, forthwith others do the same, and pay, because they pay in company, a greater price to journals of inferior circulation than they would grumble to pay to others far more widely read, to which it is not the fashion to resort for such announcements.

The *Monthly Magazines* are excellent places for advertisements, because they are not only largely read, but they are more permanently before the public eye than the weekly newspapers. The best, undoubtedly, is *Blackwood*, and next is *Fraser*. The charges of the magazines vary considerably, but they are more moderate than might have been supposed from the fact that, unlike newspapers, they are obliged to print so many additional pages for the purpose, and if the circulation be large, the mere paper on which the advertisement stands costs almost as much as would have been the scale charge of a newspaper. *Tait's Magazine* is also an excellent medium for the purpose.

Advertisers are apt to look complainingly at the charge for an advertisement. But have they never calculated the *gain* that it is to them? Suppose, now, that a man has published a book, and desires to make it known in the cheapest way. The cost of printing 2,500 little handbills would be at least 1*l.* 5s. But he goes,—say to a journal office,—pays 5s. and not only procures the printing of 2,500 copies of his announcement, but that which would be still more costly, their introduction to the notice of the very persons he specially desires to address. His direct pecuniary gain is 1*l.*; his indirect benefits are incalculable.

NEW SERIES.—No. 31. VOL. II.

JOURNAL OF ENGLISH LITERATURE.

HISTORY.

Memoirs of the Pretenders and their Adherents. By JOHN HENEAGE JESSE. 2 vols. London, 1845. Bentley.

MR. JESSE is becoming a regular book-maker; falling into the ranks of the booksellers' hacks; writing tomes to order, and getting up any theme that has a popular sound about it. He started a good subject in his *Memoirs of the Stuarts*, he handled it with industry and judgment, and consequently it proved successful. But, not content with one profitable adventure in that quarter, he must needs try another and another, each, of course, more dull than its predecessor, because each was made out of the *leavings* of that which went before. We have had already some six or eight volumes about the Stuarts, ingeniously varied in name, but similar in substance, and now we are presented with two more, and heaven knows what the fertility of Mr. JESSE's pen may yet produce to lengthen out the line.

The Memoirs before us have some interest and a little novelty, but they are not worth the cost of two volumes. They might with advantage have been compressed into a moderate duodecimo, or made a part of the memoirs relating to the same period which have preceded them. This is another of the book-making speculations before described, and, as such, is to be viewed with suspicion; reduced to half its bulk, and we could have cordially commended it to the book-clubs. As it is, we can advise only *public* (not circulating) libraries to buy it.

Mr. JESSE can write very agreeably when it pleases him, and all the original portions of these memoirs are light, lively reading. It is the needless expansion of which we complain, and the spinning out into two volumes a tale that might have been told in one that we find fault withal. Mr. JESSE begins with the birth of the Prince, and traces him to his death, and then takes up his son in like manner, introducing us, as he goes along, to a sort of portrait gallery, on the right and on the left, of the more eminent personages whose names are in any manner associated with theirs. The only real novelty in the work is some unpublished correspondence relating to the rebellion, which had been preserved in the library at Glendoick. "The collection," says Mr. JESSE, "was formerly far more voluminous; but, unfortunately, from feelings of laudable but mistaken delicacy, one of the descendants of the Lord Advocate (probably the late Lord CRAIGIE) dreading lest certain families, who had been concerned in the rising of 1745, might become implicated by the entire collection seeing the light, thought proper to commit perhaps not the least interesting portion of it to the flames. Those letters and documents, however, which still remain, though far from comprising an uninterrupted series of correspondence, will nevertheless be found highly valuable and interesting, from the insight which they give into the measures adopted for the suppression of the rebellion, and the light which they throw on the events of a stirring and memorable period."

Among the personages whose fortunes are narrated by Mr. JESSE is FLORA MACDONALD, the heroine of SCOTT, who, it is well known, emigrated to America with her husband. The close of her history is thus told.

The remainder of her eventful life was passed by Flora Macdonald in the Isle of Skye, where she died at the age of seventy, on the 4th of March, 1790. At her particular request, her body was wrapped in one of the sheets that had been used by the unfortunate grandson of James the Second during the night he rested at Kingsburgh, which, as we have already mentioned, had been presented to her by her mother-in-law, Mrs. Macdonald. She was the mother of five sons, all of whom held commissions either in the military or naval service of the reigning sovereign. The eldest, Charles Macdonald, who was a captain in the Queen's Rangers, was a person highly distinguished for his accomplishments and graceful manners. When the grave closed upon his remains, his kinsman, the late Lord Macdonald, paid a pleasing tribute to his worth. "There lies," he said, "the most finished gentleman of my family and name." Flora Macdonald was also the mother of two daughters, the last survivor of whom—the widow of Major Macleod of Lochbay, in the Isle of Skye—I had the pleasure, some years since, of accompanying in a voyage through a part of the Western Islands. I had also the additional pleasure of hearing from her own lips the tale of her

mother's adventures and escapes with Prince Charles, and of having some of the scenes where they occurred pointed out by her own hand. One of the first questions which she put to me was, "where had I been staying?" When I told her "at Raasay,"—"Ah!" she said, in a tone which plainly told that she inherited the principles of her race, "you saw no *red* roses at Raasay!" This interesting lady was then, I think, in her seventy-fourth year; she had pleasing, and even polished, manners; was full of anecdote of the past, and had still the remains of beauty. She remembered the visit of Dr. Johnson and Boswell to Kingsburgh, and had been the companion of her parents when they emigrated to America. She spoke of her mother as a small, but neat figure; and when I questioned her whether there was any resemblance between them, she told me that they were reckoned so alike, that, half a century before, happening to be looking at a print of her mother in the window of a shop in the Strand, the celebrated General Burgoyne, who chanced to be passing at the time, was so struck with the resemblance, that he accosted her, and taxed her with the relationship. Her mother's escape with Charles Edward was then an event, she said, sufficiently recent to render her an object of considerable curiosity; and consequently, had her identity been proclaimed to the bystanders, she had little doubt, she added, but that she would have been followed by an inquisitive and disagreeable crowd. The few hours which I passed in the society of this interesting lady I have always looked back upon with satisfaction and pleasure. She died a few years afterwards, at an advanced age.

From the letters we make a few extracts.

It would seem that the insurrection took the authorities by surprise, for they were ill prepared to meet it, and for a long time doubted the rumours that reached them on every side, as will appear from the following:—

The Earl of Findlator to the Lord Advocate.

15th August, 1745.

My Lord,—On Monday last, I was alarmed by a letter from my son-in-law, Mr. Grant, informing me of a report that some French ships, with arms, officers, and money, were come to the Isle of Skye, and that the Pretender's son was said to be amongst them, and that many of the Highlanders in that neighbourhood appeared determined to join them. I would immediately have despatched an express to your lordship with this account, if I had not known that Major Grant had sent one to General Cope. The news surprised me extremely, because I had not the least suspicion of any disturbance. The Jacobites in this country, though elevated by the success of the French abroad, have of late had no remarkable caballings that I have heard of. I immediately made what inquiries I could for intelligence, but have not neard any thing considerable. In general, the Jacobites want to keep us secure. Their language is, that it was only two privateers, who seized some victual-ships bound for Ireland, and sent their boats ashore for provisions. But if the Pretender's son is there with arms and money, or any officers from him, I am well convinced that great numbers will soon flock to him; and although some of the Jacobite chieftains should not venture to appear publicly themselves, they will by their demi-vassals effectually send out their men. My humble opinion is, that all care ought to be taken to crush it in the bud, which I imagine may very possibly be effected. As all the well-affected chieftains are now in this country, I am convinced they will be zealous to exert themselves; and if some few regiments were immediately sent north to pursue and bear down the rebels, I think it would be in their power to quell the insurrection before it can be brought to any great length. Yesterday I went to Gordon Castle, and found the duke determined to set out for Edinburgh this day, which he has accordingly done. I used, in the most prudent manner I could, all sorts of arguments to persuade him to stay at home, and effectually to exercise his power and interest to restrain his people from going out; but he said his private business necessarily obliged him to go south. I think that possibly it is not in his grace's power to restrain all his Highlanders; but I am really of opinion that his presence and commands could keep at home the people of Euzie and Strathbogy, in which there are near three thousand Papists, besides other Jacobites; and that he would have great weight with the people of Strathaiven, Glenlivat, and Badenoch; besides, if any of them should disobey him, he could make them feel the weight of his resentment severely. If any of the Marischal family is in Scotland, it will certainly draw great numbers from Aberdeenshire and Mearns. The state of this corner is, that though many of the commons are very well affected, they have no arms. All the arms in the country are in the hands of the disaffected, which makes my situation very bad.

The Earl of Sutherland to the Lord Advocate.

Dunrobin, 11th August [1745].

My Lord,—Your favour is now before me, by which you inform me that the lords justices had intelligence that a report was current at Paris that the Pretender's eldest son had embarked with an intention to land in Scotland, where he expected to be joined by the Highlanders. This intelligence I have many reasons to apprehend is but too well founded. I have had private intelligence to the same purpose within these two days, and have sent to acquaint the Duke of Argyll of it; and I have several reasons to think that the Pretender's son expects to be joined by too many in the Lowlands as well as in the Highlands, and that a general insurrection is designed of the disaffected party, both south and north. It happens greatly amiss, in such an emergency, that his Majesty's firmest friends in the Highlands are destitute of arms and ammunition for their own defence and his Majesty's service, when his most inveterate enemies are too well provided, and threaten, as I am certainly informed, in less than a fortnight's time, to do all the mischief that their malice, armed with fire and sword, can effect, to such of their neighbours as are most attached to his Majesty's person and government. I and Lord Reay, with our vassals, could raise eighteen hundred or two thousand men, and with these could effectually bridle all the public enemies north of us, and do considerable service also against the more numerous enemies on the other hand of us. But what can we do without arms or ammunition? I made early application to Sir John Cope for a proper supply, on the surmises we had of a French invasion near two years ago; but my applications have unhappily been neglected, till now there is danger that a supply will come too late. I am causing to be gathered in and brushed up all the arms in this country, which, between me and Lord Reay, I doubt not will make above two hundred stand, and we shall need at least sixteen hundred more of swords and guns, with proportional ammunition. I pray, by all the regard you and others of his Majesty's ministers have for his Majesty's service and interest, that you will instantly order a sloop here with arms and ammunition as above, to be delivered to me on my receipt. It will be further necessary, my lord, that a proper person have a commission directly sent to him, to act as lord lieutenant of the northern shires. If I am honoured with that commission I shall take the utmost care to fulfil it with equal zeal and fidelity as my grandfather did in the time of the former rebellion. You have inclosed, my lord, a true copy of a contract of mutual friendship I entered into with Lord Reay, in prospect of the invasion and rebellion that seems to be on the point of breaking out. I again entreat, in the most earnest manner, that a proper supply may be sent me of arms and ammunition, as above, without any loss of time. If that supply does not come within twenty days at farthest, it may cost his Majesty abundance of men and money to recover the loss his interest may sustain in the north, which the supply mentioned, coming timeously, might enable me, with Lord Reay's assistance, to prevent. I shall take care, from time to time, to communicate to you and others of his Majesty's servants any motions that may be in the Highlands at this juncture, and take proper measures to get the best intelligence I can for that purpose. I am, with great respect, &c. SUTHERLAND.

BIOGRAPHY.

Memoirs of a Working Man. (*Knight's Weekly Volume for all Readers.*) London, 1845. Knight and Co.

THE volume of this series now before us contains the self-written "Memoirs of a Working Man." These are the memoirs of a very undistinguished life—the life of a man born, living, and destined to die, in a very lowly sphere; a life remarkable for no extraordinary incidents, no startling adventures, cheered with few joys, and those of no exalted character; harassed with many cares, and those the oft-told common-place sufferings which fall to the lot of the labourers, the mechanics, and the base rabble of this fair England. There is nothing here of the romance which made King Cophetua's beggar-maid a heroine, or of that more modern and less innocent interest that invests the Shepherds and Turpins of the Newgate Calendar with dignity. There is nothing but a very plain simple statement of the manner in which the days of a feeble, sickly, yet intelligent poor man have been passed; and yet there is here much shrewd remark, much honest prudence, much food for useful consideration. The healthy craving after intellectual nourishment, mingled with the calm and patient performance of all the duties of a most unintellectual state of existence, manifested by the author of this small volume, is striking and full of admonition. From the perusal of such a book, the great and increasing crowd of readers now happily to be found among the lower classes of society will derive no ordinary lessons of encouragement in every moral and intellectual advance; nor will those of higher

station, if they think aright, find such a memoir uninteresting, however great cause they may see in it for self-abasement in a comparison of the opportunities possessed, and the knowledge attained by the working man and themselves. Men of education, whose whole career has been passed in a kind of literary leisure ; whose very business, perhaps, has something in it of a literary stamp, need at times to cast their eyes upon a picture of existence very different from their own—the existence of rational beings, their fellows and compeers in natural endowments, animated with an ardent thirst after information, naturally equal, if not superior, to their own, yet chained down by a mysterious dispensation to a state of life which has its beginning, its course, and its end, in toil ;—a state by which the mind is cheated of its fair proportions, its energies quelled, its impulses overpowered, its fine and spiritual nature made the slave of a coarse, physical, material necessity. It was the sense of this apparent want of harmony between intellectual attainment and the plodding mechanical condition of the lower orders of the people, that made so many worthy persons believe, a few years ago, that the spread of education among all classes would be necessarily fraught with so much evil. The higher and finer part of man's constitution, if allowed full scope and development, would, it was thought, grow fastidious at the approach of the vulgar labours which are the portion of the sons of poverty, and as the sense grew more dainty, the hand was expected to become less willing to endure employment. Now, to such a theory, these Memoirs are an answer. A poor journeyman tailor, a mere drudge in an art of itself sufficiently, as it is thought, contemptible, is found, by quiet observation and indefatigable industry in the pursuit of book-knowledge, amassing an amount of observation, and acquiring a purity of taste of no trifling excellence, and yet the regular round of tailoring duties is not the less punctually attended to ; nay, the two opposites work so well together, that the poor journeyman actually sends into the literary world, as a proof of the compatibility of his two pursuits, a little treatise, indicating an abundance of technical skill, and bearing the title of *A Manual for the Apprentices to Tailors*.

The nameless subject of the memoir was born in the year 1792, and, at an age so early that he cannot remember the circumstance, was taught by his parents to read. They thus gave him possession of the main requisite for carrying on the system of self-instruction to which he was principally indebted. His schooling was no better and no worse than that of other poor children of the same age and station, and he recalls now the strange ideas held by himself, as a contemplative child, upon a variety of subjects, in the explanation of which he could obtain from those about him no assistance. After spending a year or two at a dame's school, which his mother began to keep when he was five years old, he was promoted to a dissenters' charity school, after an examination to him scarcely less awful than the terrible ordeals of our universities. His account of the matter is a good specimen of the simple style of his narrative.

The school to which I have referred was supported by a congregation of Protestant Dissenters. It consisted of twenty-five boys, who were taught the elements of reading, writing, and arithmetic. They were also partly clothed at the expense of the subscribers. The period for which the boys were admitted was three years. The vacancies in the school were filled up at the close of the year, and it was required of the applicants for admission that they should be able to read in the New Testament to the satisfaction of the managing committee. This regulation involved an ordeal which to me was a rather formidable affair. I dreaded it so much the more because, as I knew but little of its nature or extent, my imagination was at liberty to draw a rather fearful picture. I well remember the subdued feelings with which I wended my way to the place of trial. It was on a winter's evening, when the dreary aspect of every thing around me was in keeping with the solemnity of the business in which I was engaged. It was well for me that my good mother took me under her wing, as otherwise I should certainly have been confounded when I came before my examiners.

These worthy but to me awful personages were assembled in a large upper room of an ancient inn. They were seated around a fire that was blazing cheerfully, and almost eclipsing the light of the candles, which of themselves would have but just sufficed to make " darkness visible." I was too much abashed to allow of my surveying the room very closely ; what I saw of it, therefore, was only by occasional and hasty glances. I observed, however, that the table was well furnished with bottles and glasses, pipes and tobacco, indicating that the company present thought it wise to relieve the cares of business by a little of that which tends to make the heart glad.

I cannot now remember all who were present, but have a clear recollection of several, among whom was the minister of the congregation, an aged, venerable looking man, whose close-fitting, neatly curled wig, and somewhat antiquated dress, accorded well with his age and character. There was also a worthy gentleman, one of the deacons, whose portly figure, powdered head, and commanding aspect filled me with profound awe. He was, however, a kind-hearted and affable man. I could have spoken without much perturbation to either of these good men, had I met him alone and casually ; but to see them all at once in a strange place, and invested with authority to question me, was too much for one so timid as I then was. A novitiate monk in the august presence of his Holiness and a full conclave of Cardinals, or a presumed heretic at the tribunal of the Inquisition, could hardly feel more discomposed than I did when directed to read aloud in the hearing of my assembled judges. I obeyed this dread mandate with much trepidation, but was enabled to do it so as to escape censure. My mother gave such further information about me as was required ; upon which I was unanimously elected, with some expressions of approbation.

Thus ended my much dreaded trial, to my no small relief and satisfaction ; I had passed through the ordeal unscathed, although much frightened, and I could not but rejoice at my success.

I was well satisfied with the treatment I had met with from my examiners, but, as a faithful chronicler, I am bound to state that I was not a little puzzled at a part of their proceedings. They were smoking ; and as I had been accustomed to regard this practice as indicative of intemperate or loose habits, I was greatly surprised at seeing " grave and reverend " men like these wielding the ominous tobacco-pipe. Even the minister was thus employed ;—this was the most inexplicable circumstance of all : I afterward learned that he was an inveterate smoker, which intelligence further increased my perplexity. I feared that all was not right, but I was too poor a casuist to grapple with so knotty a question ; I was therefore compelled to leave it until I should be more equal to the task.

The school in which our author was thus placed was under the governance of two masters ; the chief, besides his scholastic labours, employed himself as a land-surveyor, and the subject of the memoir considered himself fortunate in being selected by him as his helper in the task of measuring estates. The change of scene thus procured, and the traveller's experience obtained in a circuit of twenty miles, though not very great, were sufficient to feed and stimulate the curiosity of an observant, inquisitive boy. Of this master mention is made in the glowing terms dictated by the remembrance of early and continued kindness. The other schoolmaster, whose literary toils among the rising generation appear to have been relieved by the performance of the lighter duties of a cordwainer, was altogether a different person. His portrait is given in colours not so prepossessing as those in which his chief is delineated.

Unhappily he was too fond of strong drink, and was often more than half intoxicated, but contrived to conceal this from the other master. When he was in this state he was very ill-tempered, and was guilty of administering undeserved correction : he did this, moreover, with much severity and indiscretion. I yet retain a clear recollection of his having, when half inebriated, severely punished me with a heavy leather strap upon the palms of my hands. The occasion of this punishment was a very trifling one : I had written as an exercise the word " hyperbole ;" on shewing him my writing, he proceeded to flog me in the way I have described, and that too without telling me where or how I had done wrong. I felt at the time that I was very unfairly treated, and I still think that I might have been far more mildly corrected even had I been blameable.

This incident made an indelible impression upon my mind, and produced one or two rather curious effects in regard to my association of ideas ; during many years from that time I felt an invincible dislike to the luckless word which had been the innocent occasion of my sufferings. Even to this day I am reminded of them whenever I deliberately use this word. Nor is this all, for it were no *hyperbole* to affirm that the formidable leather strap " in gorgon terrors clad " is still occasionally brought to my remembrance, especially when I see a similar weapon. But though I have not forgotten the punishment, I have long ago forgiven my master, of whom, except in this instance, I had no cause to complain. My chief reason for noticing his faults is that I may, by this example, shew the necessity there is that all who have the care of young people should be able to govern themselves : any deficiency here will be very unlikely to escape the

notice of their pupils, who will soon learn to despise such as are wanting in self-respect. The consequences which naturally follow from this state of things are too obvious to need pointing out.

Upon leaving school, "the working man" finds occupation in several little menial offices, until, at length, when not quite thirteen years old, he is made servant to a woollen draper, with the liberal wages of three shillings a week. From this incident the future career of the author took its general complexion. Here he remained for five years, by which time, having become a fairly competent workman, he resolved to go to London in search of employment. An obscure alley in Moorfields was the quiet retreat where he sought for and obtained lodgings. It would of course be tedious, in this short review, to follow our author through all the little successes and failures of his London life; of both of these it seems to have had its fair, and not very much more than its fair proportion. What is, however, very admirable, is the resolute and unflinching manner in which the poor tailor struggled against the attacks of sickness and an enfeebled constitution, the strength of purpose with which he shunned the snares of vice and dissipation, and the warmth of affection with which he devoted himself to the little scraps of knowledge that from time to time fell in his way. All this is told in an unaffected manner that carries with it the warrant of its own truthfulness. There is no attempt to lay claim to any praise for the good actions: that they were done under such and such circumstances, and with these or those feelings or emotions, is all that is narrated. There is a particularity, moreover, in the detail of the little acts of extravagance or economy, that is amusing to all, and will be especially useful to those in the same circumstances and with something of the same tastes as the author. The following is the account of how he conducted the affairs of his housekeeping in very bad times:—

I continued daily to look out for work, but still without success. This gave me considerable uneasiness, and the greater because my stock of money was by this time a good deal reduced. To meet this exigence, I still further reduced my expenditure; so that my charges for living were about as low as those of an inmate of a poor-house. It may not be amiss to present the reader with my usual bill of fare. The account for one day will suffice, as I allowed of no highdays or holidays. Even the slightest expense that was not indispensably needful, was carefully avoided. For breakfast I had a penny roll and half a pint of porter. This I took at a public-house—for two reasons: first, that I might have an opportunity of looking at a morning newspaper; and further, that I might have the comfort of sitting by a good fire—for the wintry season was not far off, and the mornings were already cold. As an impartial and faithful narrator, I am bound to confess that this meal cost me a *halfpenny* more than the sum charged for the provisions, because I preferred the accommodations of a room where I could sit quietly, and without the annoyance of tobacco-fumes. For this privilege I willingly incurred the additional expense, and thus spent many an hour in tolerable comfort, which otherwise must have been spent either in the cold and cheerless streets, or among the noisy and uncouth frequenters of a dirty tap-room. I felt a considerable degree of interest in regard to the course of public affairs, and therefore was the more anxious to see a newspaper every day. I also hoped that some one of the numerous advertisements might be made available in the way of getting employment other than that of tailoring. In this hope I was disappointed; yet the time I thus spent was not quite thrown away, as I hereby contracted a habit of carefully reading advertisements, which I have found to be useful * * * It may be a merely fanciful notion on my part, but I nevertheless seem to learn more of human nature and of the tangled web of human affairs from these sources than I am able to learn from the most laboured statements of either editors or paid correspondents. While these, in order to bring grist to the mill, are forced to comply with party views and to suppress their own; or are induced to mystify plain questions, so that they may seem to be profoundly learned in political knowledge; the advertising parties write for themselves—throw aside the veil of mystery—ask in good plain English for the reader's cash, and generally give a fair view of what is going on in the regions of their inner man. There are, indeed, some cases in which the advertisers employ a few cabalistical phrases in their announcements; but these may be soon interpreted. When *this* is done, the reader will not fail to discover what may, perhaps, help to guard him from becoming a victim to the cupidity, trickery, or base selfishness which may often be partially concealed under cover of very plausible statements. But I am neglecting my bill of fare, in like manner as I then sometimes neglected to get my dinner—that is to say, by having my thoughts fully occupied about other matters. I have but a very slender account to give of my noonday meal, inasmuch as I frequently dined in the style of "Duke Humphrey," and in a similar place. When I did have a dinner, it was made out of a penny loaf unaccompanied by the addition of any thing besides. Of the meal usually called "tea," I say nothing, and for a good reason, namely, that I really have nothing to say, inasmuch as it had no place among my meals. In consideration of my abstinence during the day, I venture to hope for the reader's verdict in respect of my rather plentiful supper. At this meal I allowed myself a sufficient quantity of food; but as to its quality I cannot say much in its favour. It consisted of bread and cheese, porter, and onions—food which I have always much relished, but which was, even then, far too crude and heavy for my feeble digestive powers. It was, however, very palatable, and considerably the more so because of my having had the appetite a good deal sharpened by much previous abstinence, and by exposure to a cold atmosphere.

From London, the working man, after some time, returned to his native village, and thence again to town, settling for some time in each. In due course he passed from the bachelor and the journeyman into the married man and the master. With regard to the former of these two changes we are told very little; nor is the author, generally speaking, very communicative with regard to those domestic histories which are generally the life of narratives of this nature. He chronicles, indeed, the births of his children just as he does the occurrence of national events, and with very nearly the same degree of apparent interest. Of the partner of his domestic joys we hear little or nothing. For this, two very good reasons may be given: first, the working man, in all probability, wrote with a strong practical design; he knew that the good or the harm to be done by unfolding matters connected with the scenes of domestic privacy is every day realized by a thousand others. There would, therefore, have been little novelty and less utility in exhibiting his wife or children as the heroine or heroes of cottage or garret life; in the next place, it may well be that a poor artizan of refined literary tastes and pursuits might shrink from exhibiting the scant, matter-of-fact realities of a working man's home. Whatever the cause, so it is, that we have no picture of any romantic feelings, early attachments, or the devotion of the heart. In their place we have the more valuable detail of the shifts and expedients employed by the working man for the gratification of his ruling desire, the appetite for literary food. Another point worth remarking is, that our working man is a working man to the end of the chapter. From his literary attainments he derives pecuniarily almost nothing. One little book, published by subscription, and a few lectures, delivered at a mechanics' institution, are the only remunerating literary tasks to which he seems to have given himself; so that we have before us a sketch of the history, not of a man, like BURNS, raised above his sphere by intellectual taste and power, but of one who softens the ruggedness of bodily drudgery by the cultivation of his mind, and demonstrates by his example the value of virtuous industry combined with educated taste, not in removing the poor man from the lot assigned to him, but in securing for that lot greater and purer happiness in itself, and higher respect and estimation from the hands of others. The close of the book leaves him located in London, the atmosphere of which best suits the tendency to asthmatic complaints, by which his existence has been, almost from the day of his birth, cheated of the enjoyment of perfect health. It leaves him patiently resigning himself to a premature old age, occasioned by no intemperance or youthful folly, but by the sickly constitution by Providence appointed to him. It leaves him also the father of a small family, intent upon bringing them up to the same tastes and principles as those by which his own life has been softened and improved, respected and encouraged by the kindness of those familiar with his history, but still a working man, and still poor.

We have been hitherto occupied with the private life and adventures of our hero; these, of course, it is the design of the memoir to represent, and with them, after all, is our chief concern. But when, in the course of his narrative, the working man has to speak of public events and characters, his remarks are very judicious, and indicate a very healthy tone of mind and feeling. Thus he gives a very different picture of the opinions and conduct of the really useful members of his own class in times of riot or in disputes between masters and workmen from that which is given either by the presidents of trades'

unions, on the one hand, or the stubborn advocates of martial law on the other. The great majority of industrious and honest workmen have no less interest in peace and quiet than the wealthy mill-owner or manufacturer. In fact, they have a greater interest, because their means enable them to endure a cessation from employment for a much shorter time. They are, therefore, slow to enter upon a contest with their employers; they need oppression to rouse them to it, and with a little kindness they are soon appeased. But, at the same time, they are bound up with and are dependent upon the conduct and the sympathies of their companions. When a strike takes place, nothing can prevent them from joining in it but the most strenuous support and encouragement from their masters. They, in most cases are not supported. They become spectators of scenes of riot and violence, to which they are opposed, but they have no means and no inducement to organize their opposition. Their presence, which it is unsafe to refuse, lends a fictitious semblance of strength to the wrong-headed and the disorderly; the law is outraged, and the guilty, nevertheless, generally escape. In almost every riot, in every conflict between employed and employers, there is a certain measure of blame attaching to both sides. Among the public events noticed incidentally in the Memoirs appears the following:—

The general election, consequent upon the breaking up of Lord Grenville's administration, in the spring of 1807, gave me the means of adding a little more to my knowledge of the world. I could not, indeed, interpret rightly all that I saw and heard, but I could, nevertheless, understand enough thereof to see the instability of popular favour, and the worthlessness of popular applause. The gentleman who had been the favourite candidate of the people, and whom they had joyfully sent into Parliament less than a year before, was now so coldly received by his recent friends, that he thought it prudent to retire from the field without trying the issue of a contest. The watchwords which he so effectively employed at the preceding election, "T——l and the glorious revolution of 1688!" were now powerless, while those of his opponent, "No Popery!" appeared to have an almost talismanic influence. The worthy (?) electors seemed to have undergone a transformation which, to the uninitiated in such matters, was not easily to be accounted for. Except from the speeches and placards of the candidates and their friends, I should not then have discovered that the exercise of the elective franchise involves the discharge of a public duty; neither should I have judged it to be conducive to any real private advantage. From the general aspect of the whole scene I should rather have inferred that it was considered merely as an occasion for indulging in unrestrained intemperance and lawless confusion.

The countenance which I saw was given to these and other immoral practices by respectable men was what I could not understand; and even now I am at a loss to comprehend fully how it is that such men can allow themselves to patronize what has so powerful a tendency to debase the character and to injure the condition of their unreflecting and needy countrymen.

The next public event that attracted my notice was the great military expedition to Copenhagen. Nearly if not all the regiments of the line then in the adjacent barracks were sent upon this service; and I think it was the bustle and excitement connected with their departure that led my master's workmen to take some additional interest in public affairs. Until this time I do not remember to have heard them talk much about matters of that description. Now, however, they clubbed their pence to pay for a newspaper, and selected the *Weekly Political Register* of that clever man the late William Cobbett. This journal was in the form of a pamphlet. It was chiefly filled with the letters of correspondents and the political disquisitions of the proprietor. The only news it contained was that which related to the naval and military operations of the British forces. The *Political Register* was soon thought to be deficient in matters of general interest. It was therefore exchanged for the *Courier*, which in a short time gave place to the *Independent Whig*. From this time the men were warm politicians—not indeed very well conversant with public affairs, but what they lacked in knowledge they made up by a rather large amount of zealous partisanship. When they were too busy to look over the newspaper they employed me as their reader—an office whose duties I found to be very pleasant.

Not only, however, has the working man given his opinion and the result of his observations upon more stirring matters, but he also deals in a great deal of quiet and sensible reflection upon the buildings, the curiosities and the adornments of the different places in or in the neighbourhood of which he is thrown. Accordingly, few of the lions of the metropolis escape without some short comment. The following notices of Westminster Abbey and of Lord Eldon are interesting.

Trade continued to be very dull, so that I could not procure employment except a few trifling jobs on my own account. Thus I had more than enough time for my other purposes. In good truth, I had much more than I desired to have, or than was at all consistent with my well-being; yet, as there was no help for it, I endeavoured to be contented. I employed the greater part of it in reading and walking; and in order to see as much as I could, I varied my walks; but my favourite haunts were, as before, the Royal Exchange, and the banks of the river below London-bridge. Sometimes I rambled westward, and then I rarely omitted visiting Westminster Abbey, for the purpose of seeing the various interesting objects in Poets' Corner. I did not then know of the Cloisters, or I should have availed myself of the facility they afford for a quiet walk. There was free access given to that part of the Abbey which I have named, otherwise my visits there would have been both "few and far between." As it was, however, I put no check upon my wishes, but often spent an hour or two in quietly contemplating the monuments which either public esteem or private affection had there placed in memory of departed genius, learning, or moral worth. It is a place in which, as it seems to me, there may be learned much both of an admonitory and an encouraging character, in which there are numerous and affecting intimations concerning the "vanity of human wishes," and the utter insignificance of all that men deem "good or great," unless it be connected with the practice of moral virtue, and therefore bearing upon the interests of another and a nobler life.

In these western rambles I sometimes looked into the courts of law and equity. In the latter I had one day an opportunity of hearing several long and dry harangues respecting some houses which were claimed by different parties. I was amused by the seeming inattention of the Lord Chancellor (Eldon), as I also was by the contrast between his sombre habiliments and the parchment-like hue of his face. When, however, it came to his turn to speak, I was much surprised by his clear recapitulation of what had been said—stripping it of all its verbosity and tautology; and I was so much pleased by hearing his earnest deprecation of a Chancery suit in the case before him, that I ever afterwards felt a high respect for his lordship, as being an *equitable* as well as an *equity* judge.

In a mind so self-instructed as that of the singular character of whose history we have been speaking, much inconsistency and irregularity is of course to be detected. One peculiarity is very striking, namely, a warm and almost poetical sympathy with, and admiration of, the services, the rites, and the temples of the Church of England, united with a steadfast adherence to the sect of dissenters to which his family had belonged. In the sacred music of the solemn organ, in the sweet sound of the pealing bell, or the majestic melancholy with which it tolls for the departed, he finds constant food for delight and musing. He has a keen sense of the beauties of Gothic architecture, and even a reverence for the persons of the English clergy, and yet in spite of this, he cleaves to a congregation, the very first principle of fellowship with which is the belief that the ceremonies of the church are superstitious and dangerous in their tendencies. We give this as an instance of apparent inconsistency in the man's mind. There are several others of a similar character. One defect of his mind, originating in a bad state of society, is the absence of strong distinctive religious feeling. In calamity his main support is in a philosophical, not a religious resignation. This is connected, in all probability, with the fact that no mention is made of any minister of religion as interesting himself in the spiritual or temporal well-being of the working man. This is bad. The poor man who is to be rendered better and wiser by books of this nature, ought to have his thoughts more frequently directed to Him who careth for the poor. The poor man who is to become a better member of society has a right to somewhat more attention and sympathy from the ministers of religion than this memoir leads us to infer that its author ever received.

VOYAGES AND TRAVELS.

Journal of a Voyage round the World. By Charles Darwin, M.A. F.R.S. London, 1845. Demy 8vo. John Murray.

The author of this very entertaining and instructive book, accompanied, in the capacity of *Naturalist*, the expedition which, in her Majesty's ship *Beagle*, sailed round the world in 1832 and following years. The duty intrusted to Captain Fitzroy—the commander of the ship, and his officers, was to complete the survey of Patagonia and Terra del Fuego, to lay

down correctly the shores of Chili, Peru, and certain islands in the Pacific, and to carry a chain of chronometrical measurements round the world. This undertaking, so important to the interests of physical science, had been commenced in 1826, under Captain KING, and was completed by this expedition in so satisfactory a manner as to leave little more to be desired.

It adds not a little to the lustre which invests our country, that she stands foremost among existing nations in the prosecution of maritime discovery and the investigation of the physical phenomena which appertain broadly to the globe.

The achievements of this nature made a few centuries ago by the Spanish, Portuguese, and Dutch, and later still by the French, stand honourable examples in their history, which their present spirit no longer emulates—or at best but feebly. Next to the British, it is to the Americans and Russians that science is most indebted for discoveries in this way. Their expeditions have been conducted with energy, curiosity, and ability, and judiciously supported with a liberal hand; the result of which has been a considerable, and therefore invaluable, addition to our knowledge of geography, natural history, and the physical laws,—magnetic, tidal, and other, which, affecting navigation, control to a greater or lesser extent the interchange of commodities, of arts and refinement, between the multitudinous inhabitants of the globe. On the utility of such national undertakings, as it must be obvious to the dullest intellect, it were needless to enlarge.

The discoveries made by the officers of the *Beagle* in the sciences they undertook to watch, have appeared in separate publications; those made by Mr. DARWIN, with his notes and remarks, have been edited by British naturalists severally most conversant with the departments intrusted to their care, and, thanks to the munificence of the Lords of the Treasury, who gave a thousand pounds towards the expenses, laid before the public in several volumes. From these, and his journal, Mr. DARWIN has compiled this agreeable book, condensing, and adding occasionally to parts, so as to fit the work for the popular taste; but referring naturalists, for full details, to the large publications which comprise the results of the expedition.

To follow the author throughout his course is impracticable here; we must therefore content ourselves with stating that this volume (there are others to follow) comprises the narrative of his voyage along the shores and his excursions into the interior of South America. His narrative is lively and graphic, his observations acute and marked with judgment, and his style unaffected and easy. We proceed to give a few extracts, which, by their spirit and general character, will convey a fair notion of the work. There is the colouring of nature in our author's description of his first entrance upon

A BRAZILIAN FOREST.

The day has passed delightfully. Delight itself, however, is a weak term to express the feelings of a naturalist who, for the first time, has wandered by himself in a Brazilian forest. The elegance of the grasses, the novelty of the parasitical plants, the beauty of the flowers, the glossy green of the foliage, but above all the general luxuriance of the vegetation, filled me with admiration. A most paradoxical mixture of sound and silence pervades the shady parts of the wood. The noise from the insects is so loud, that it may be heard even in a vessel anchored several hundred yards from the shore; yet within the recesses of the forest a universal silence appears to reign. To a person fond of natural history, such a day as this brings with it a deeper pleasure than he can ever hope to experience again. After wandering about for some hours, I returned to the landing-place; but, before reaching it I was overtaken by a tropical storm. I tried to find shelter under a tree, which was so thick that it would never have been penetrated by common English rain; but here, in a couple of minutes, a little torrent flowed down the trunk. It is to this violence of the rain that we must attribute the verdure at the bottom of the thickest woods: if the showers were like those of a colder clime, the greater part would be absorbed or evaporated before it reached the ground.

In an excursion from Rio Janeiro, Mr. DARWIN passed a spot which had been the place of refuge of some runaway slaves, his account of which we extract:—

Our party amounted to seven. The first stage was very interesting. The day was powerfully hot, and as we passed through the woods, every thing was motionless, excepting the large and brilliant butterflies, which lazily fluttered about. The view seen when crossing the hills behind Praia Grande was most beautiful; the colours were intense, and the prevailing tint a dark blue; the sky and the calm waters of the bay vied with each other in splendour. After passing through some cultivated country, we entered a forest, which in the grandeur of all its parts could not be exceeded. We arrived by midday at Ithacaia; this small village is situated on a plain, and round the central house are the huts of the negroes. These, from their regular form and position, reminded me of the drawings of the Hottentot habitations in Southern Africa. As the moon rose early, we determined to start the same evening for our sleeping-place at the Lagoa Marica. As it was growing dark we passed under one of the massive, bare, and steep hills of granite which are so common in this country. This spot is notorious from having been, for a long time, the residence of some runaway slaves, who, by cultivating a little ground near the top, contrived to eke out a subsistence. At length they were discovered, and a party of soldiers being sent, the whole were seized with the exception of one old woman, who, sooner than again be led into slavery, dashed herself to pieces from the summit of the mountain. In a Roman matron this would have been called the noble love of freedom: in a poor negress it is mere brutal obstinacy. We continued riding for some hours. For the few last miles the road was intricate, and it passed through a desert waste of marshes and lagoons. The scene by the dimmed light of the moon was most desolate. A few fireflies flitted by us; and the solitary snipe, as it rose, uttered its plaintive cry. The distant and sullen roar of the sea scarcely broke the stillness of the night.

Contrasted against the comfort, civility, and convenience enjoyed at an English hotel, a curious description is the following of the accommodation at

A BRAZILIAN INN.

As the vênda here was a very good one, and I have the pleasant, but rare remembrance, of an excellent dinner, I will be grateful and presently describe it, as the type of its class. These houses are often large, and are built of thick upright posts, with boughs interwoven, and afterwards plastered. They seldom have floors, and never glazed windows; but are generally pretty well roofed. Universally the front part is open, forming a kind of verandah, in which tables and benches are placed. The bedrooms join on each side, and here the passenger may sleep as comfortably as he can, on a wooden platform, covered by a thin straw mat. The vênda stands in a courtyard, where the horses are fed. On first arriving, it was our custom to unsaddle the horses and give them their Indian corn; then, with a low bow, to ask the senhôr to do us the favour to give us something to eat. "Any thing you choose, Sir," was his usual answer. For the few first times, vainly I thanked Providence for having guided us to so good a man. The conversation proceeding, the case universally became deplorable. "Any fish, can you do us the favour of giving?" "Oh! no, Sir." "Any soup?" "No, Sir." "Any bread?" "Oh! no, Sir." "Any dried meat?" "Oh, no, Sir." If we were lucky, by waiting a couple of hours, we obtained fowls, rice, and farinha. It not unfrequently happened that we were obliged to kill, with stones, the poultry for our own supper. When, thoroughly exhausted by fatigue and hunger, we timorously hinted that we should be glad of our meal, the pompous, and (though true) most unsatisfactory answer was, "It will be ready when it is ready." If we had dared to remonstrate any further, we should have been told to proceed on our journey, as being too impertinent. The hosts are most ungracious and disagreeable in their manners; their houses and their persons are often filthily dirty; the want of the accommodation of forks, knives, and spoons is common; and I am sure no cottage or hovel in England could be found in a state so utterly destitute of every comfort. In Campos Novos, however, we fared sumptuously; having rice and fowls, biscuit, wine, and spirits, for dinner; coffee in the evening, and fish with coffee for breakfast. All this, with good food for the horses, only cost 2s. 6d. per head. Yet the host of this vênda, being asked if he knew any thing of a whip which one of the party had lost, gruffly answered, "How should I know? why did you not take care of it?—I suppose the dogs have eaten it."

On his way to Buenos Ayres, our author stopped at the *Sauce Posta*, where he witnessed

A TRIAL OF SKILL WITH THE BOLAS.

I staid at this posta two days, waiting for a troop of soldiers, which General Rosas had the kindness to send to inform me would shortly travel to Buenos Ayres; and he advised me to take the opportunity of the escort. In the morning we rode to some neighbouring hills to view the country, and to examine the geology. After dinner the soldiers divided themselves into two parties for a trial of skill with the bolas. Two spears were stuck in the ground thirty-five yards apart, but they were struck and entangled only once in four or five times. The balls can be thrown fifty or sixty yards, but with little certainty. This, how-

ever, does not apply to a man on horseback: for when the speed of the horse is added to the force of the arm, it is said, that they can be whirled with effect to the distance of eighty yards. As a proof of their force, I may mention, that at the Falkland Islands, when the Spaniards murdered some of their own countrymen, and all the Englishmen, a young friendly Spaniard was running away, when a great tall man, by name Luciano, came at full gallop after him, shouting to him to stop, and saying that he only wanted to speak to him. Just as the Spaniard was on the point of reaching the boat, Luciano threw the balls: they struck him on the legs with such a jerk, as to throw him down and to render him for some time insensible. The man, after Luciano had had his talk, was allowed to escape. He told us that his legs were marked by great weals, where the thong had wound round, as if he had been flogged with a whip. In the middle of the day two men arrived, who brought a parcel from the next posta to be forwarded to the general: so that besides these two, our party consisted this evening of my guide and self, the lieutenant, and his four soldiers. The latter were strange beings: the first a fine young negro; the second half Indian and negro; and the two others nondescripts, namely, an old Chilian miner, the colour of mahogany, and another partly a mulatto; but two such mongrels, with such detestable expressions, I never saw before. At night when they were sitting round the fire, and playing at cards, I retired to view such a Salvator Rosa scene. They were seated under a low cliff, so that I could look down upon them; around the party were lying dogs, arms, remnants of deer and ostriches; and their long spears were stuck in the turf. Further, in the dark background, their horses were tied up, ready for any sudden danger. If the stillness of the desolate plain was broken by one of the dogs barking, a soldier leaving the fire would place his head close to the ground, and thus slowly scan the horizon. Even if the noisy teru-tero uttered its scream, there would be a pause in the conversation, and every head, for the moment, a little inclined.

What a life of misery these men appear to us to lead! They were at least ten leagues from the Sauce posta, and since the murder committed by the Indians, twenty from another. The Indians are supposed to have made their attack in the middle of the night, for very early in the morning after the murder, they were luckily seen approaching this posta. The whole party here, however, escaped, together with the troop of horses; each one taking a line for himself, and driving with him as many animals as he was able to manage.

BUENOS AYRES.

The city of Buenos Ayres is large;* and I should think one of the most regular in the world. Every street is at right angles to the one it crosses, and the parallel ones being equidistant, the houses are collected into solid squares of equal dimensions, which are called quadras. On the other hand, the houses themselves are hollow squares; all the rooms opening into a neat little court-yard. They are generally only one story high, with flat roofs, which are fitted with seats, and are much frequented by the inhabitants in summer. In the centre of the town is the Plaza, where the public offices, fortress, cathedral, &c. stand. Here also, the old viceroys, before the revolution, had their palaces. The general assemblage of buildings possesses considerable architectural beauty, although none individually can boast of any.

The great *corral*, where the animals are kept for slaughter to supply food to this beef-eating population, is one of the spectacles best worth seeing. The strength of the horse as compared to that of the bullock is quite astonishing: a man on horseback having thrown his lazo round the horns of a beast, can drag it anywhere he chooses. The animal ploughing up the ground with outstretched legs, in vain efforts to resist the force, generally dashes at full speed to one side; but the horse immediately turning to receive the shock, stands so firmly that the bullock is almost thrown down, and it is surprising that their necks are not broken. The struggle is not, however, one of fair strength; the horse's girth being matched against the bullock's extended neck. In a similar manner a man can hold the wildest horse, if caught with the lazo just behind the ears. When the bullock has been dragged to the spot where it is to be slaughtered, the *matador* with great caution cuts the hamstrings. Then is given the death bellow; a noise more expressive of fierce agony than any I know: I have often distinguished it from a long distance, and have always known that the struggle was then drawing to a close. The whole sight is horrible and revolting: the ground is almost made of bones; and the horses and riders are drenched with gore.

A terrible description is that given by Mr. DARWIN of

A SOUTH AMERICAN DROUGHT.

While travelling through the country I received several vivid descriptions of the effects of a late great drought, and the account of this may throw some light on the cases where vast numbers of animals of all kinds have been embedded together. The period included between the years 1827 and 1830 is called the "gran seco," or the great drought. During this time so little rain fell, that the vegetation, even to the thistles, failed; the brooks were dried up, and the whole country assumed the appearance of a dusty high road. This was especially the case in the northern part of the province of Buenos Ayres and the southern part of St. Fé. Very great numbers of birds, wild animals, cattle, and horses perished for want of food and water. A man told me that the deer used to come into his courtyard to the well, which he had been obliged to dig to supply his own family with water; and that the partridges had hardly strength to fly away when pursued. The lowest estimation of the loss of cattle in the province of Buenos Ayres alone, was taken at one million head. A proprietor at San Pedro had previously to these years 20,000 cattle; at the end not one remained. San Pedro is situated in the middle of the finest country, and even now abounds again with animals; yet, during the latter part of the "gran seco," live cattle were brought in vessels for the consumption of the inhabitants. The animals roamed from their estancias, and, wandering far southward, were mingled together in such multitudes, that a government commission was sent from Buenos Ayres to settle the disputes of the owners. Sir Woodbine Parish informed me of another and very curious source of dispute: the ground being so long dry, such quantities of dust were blown about, that in this open country the landmarks became obliterated, and people could not tell the limits of their estates.

I was informed by an eye-witness that the cattle in herds of thousands rushed into the Parana, and being exhausted by hunger they were unable to crawl up the muddy banks, and thus were drowned. The arm of the river which runs by San Pedro was so full of putrid carcases, that the master of a vessel told me that the smell rendered it quite impassable. Without doubt several hundred thousand animals thus perished in the river: their bodies when putrid were seen floating down the stream; and many in all probability were deposited in the estuary of the Plata. All the small rivers became highly saline, and this caused the death of vast numbers in particular spots; for when an animal drinks of such water it does not recover. Azara describes the fury of the wild horses on a similar occasion, rushing into the marshes, those which arrived first being overwhelmed and crushed by those which followed. He adds that more than once he has seen the carcases of upwards of a thousand wild horses thus destroyed. I noticed that the smaller streams in the Pampas were paved with a breccia of bones, but this probably is the effect of a gradual increase, rather than of the destruction at any one period. Subsequently to the drought of 1827 to '32, a very rainy season followed, which caused great floods. Hence it is almost certain that some thousands of the skeletons were buried by the deposits of the very next year. What would be the opinion of a geologist, viewing such an enormous collection of bones, of all kinds of animals and of all ages, thus embedded in one thick earthy mass? Would he not attribute it to a flood having swept over the surface of the land, rather than to the common order of things?

With this we must conclude our notice of one of the most agreeable and instructive books of travels that have lately been published.

* It is said to contain 60,000 inhabitants. Monte Video, the second town of importance on the banks of the Plata, has 15,000.

FICTION.

Count Konigsmark; an Historical Romance. By Captain CHAMIER, R.N. In 3 vols. 1845. Colburn.

CAPTAIN CHAMIER is a better sailor than writer. He wields the pen in a very slovenly fashion, boldly setting at defiance the rules of rhetoric, never caring to study the graces of composition. But withal he has a spirit in him which compels us to read spite of his manifold defects. He will not let the interest of his story flag for the sake of such a paltry consideration as probability. What matter to him that his hero is plunged into an unheard of scrape from which escape is impossible by any human aid; he has but to invoke a ghost or a witch, and the thing is done in the twinkling of an eye. Nothing stays the gallant Captain in his onward march to the completion of the story he has undertaken. *Inveniam viam aut faciam* is his motto. The more extravagant, the more exciting: the more wonderful the adventures of his hero, the more is he like to engage the regards of the milliners and sentimental misses who will not give a pin for a hero who can not perform impossibilities. To this class of readers *Count Konigsmark* will be a rich treat. For many a long year we have not lighted upon such a tissue of astounding extravagances. The real Count was a remarkable man enough,

but the captain's Count is a devil incarnate. Gifted with fascinations of person and a persuasive tongue, he employs them for the gratification of selfish passions and a bad heart. The captain takes him through numberless intrigues, perils, escapes in love and war; mingles him with murders, makes him a gambler, carries him to various parts of the world, everywhere winning hearts and cutting throats; thus making him an excuse for introducing a multitude of personages whose names have a sound in our ears as associated with other times.

We cannot say of such a work that it is without interest, but undoubtedly it has no pretensions to repute as a literary production. It is of the same class with the monster melodramas of the minor theatres, and, like them, it excites the mind even while we disapprove the principles developed, and ridicule the palpable absurdities and inconsistencies. The captain occasionally paints from personal recollections of places, and then he does so vividly and truthfully; but when he gives the rein to his imagination, it fairly runs away with him. This novel will serve excellently well to beguile a dull morning at a dull watering-place, but for sober readers who have no leisure for indiscriminate reading, it cannot be recommended. Judicious library-keepers will therefore be guided in their judgment, whether to order it or not, by a consideration of the class of customers they are required to supply.

The Bosom Friend; a Novel. By the author of "The Gambler's Wife," &c. In 3 vols. London: Newby.

THIS is the third or fourth novel from the pen of Mrs. GRAY which we have had occasion to review during the two years of THE CRITIC'S existence. Such facility of writing is of evil promise. It argues a dilution of thought incompatible with the attainment of excellence. Hence it is that Mrs. GRAY does not improve with practice; on the contrary, she falls off. Her plots are more and more carelessly, because hastily, constructed; her characters are less finished, and therefore less life-like; and her dialogues lose their spirit, for want of concentration. She is fast degenerating into the second class circulating library scribbler, emulating the inanities of the once famous Minerva press school; she strains after excitement, plunges deeper into the melodramatic strain, and substitutes an unwholesome cant in phrase for the really virtuous in act and in sentiment. *The Bosom Friend* is an endeavour to take advantage of the recent revival of "No Popery" feelings. It repeats the old stories about the Jesuits; paints them as the impossibilities of craft it was once the fashion with the ignorant to imagine them; and with these she has associated an ultra-romantic Italian lady, full of passion and nothing else, and as ready to murder as to love. Mrs. GRAY'S name ought to have been a guarantee that a novel to which it is appended might be ordered without regret. But she has not been enough regardful of her own reputation, and therefore we cannot recommend this to the library or the reader, save in the last resort, when all better books are exhausted.

POETRY.

Poems. By an UNDERGRADUATE. London: Pickering.

"I DO not care to be told," observes the author, "that various inconsistencies occur in the course of the following pages. I do not regard this as an object attained, but the *error*—if such it be—*is one I am aware of, and against which I might have guarded, had I deemed it of sufficient importance.*"

Never was a worse confession made by an author. If it be not of sufficient importance to avoid an error, it can be of little or no merit to preserve an excellence. We are not pleased with such off-hand ways of dealing with poetry, and the readers of THE CRITIC are aware that it has been our aim to put a stop to this daily increasing folly. It is beneath no man's dignity to write, and beneath no man's attention to correct the smallest fault he may commit in his communings with such semi-spiritual and semi-mortal maidens as the muses. Our author, an undergraduate, in walking through the wilderness of Greek and Latin languages, has doubtless found pleasure on coming to that green and fertile spot where poetry nestles. He has, we say, found the pleasure, and then, like a big boy who amuses himself with marbles, he affects to hold that as of no importance from which he derives the entertainment. But the excellencies and the defects of poetry are of importance to all men who write and the more so to our author, since his stanzas are highly creditable. The book before us is a mere tract, and we shall not rob it by extracts, since it can be purchased at a trifling cost. Though a small book, it has a large infusion of the spirit of poetry. All written poetry is a transfer of the feelings from the inward to the outward representation, and from this circumstance the painter and the poet are kindred souls. This outward representation, which is language, our author is skilled in giving; nor, in saying this, do we forget that he evinces thought in his compositions, which more than counterbalances the trivial errors which he *might* have guarded against had he "deemed it of *sufficient importance!*"

RELIGION.

The Ideal of the English Church. A Sketch by the Rev. R. MONTGOMERY, M.A. London, 1845. Smith and Elder.

THIS is a very clap-trap production. It professes to be mainly derived from two previous works by the same author; and, with an affected coyness and reserve, declines to mention the particular reasons which caused its publication at the present juncture. It consists of some half-dozen rambling chapters, arranged without method and without connection, full of capitals and italics, and notes of admiration, and all the adjuncts which belong to what has so happily been termed the "forcible feeble" style in literature. Mr. WARD'S *Ideal of a Christian Church*, the much talked of and much reviewed book, which procured for its author a deprivation of his academical degrees, was a work betokening great originality and power of mind, together with a very considerable amount of force and eloquence, although unfortunately perverted by a great want of judgment and that calmness of reflection necessary for the proper pursuit of truth. Mr. MONTGOMERY'S book—despite its taking and deceptive title—does not attempt to grapple with such an antagonist. It contents itself with shewing the world what is the stuff out of which are made the sermons which delight the Percy-street congregation,—in what inflated language the poetical mind of Satan MONTGOMERY loves to unfold itself. The following childish piece of declamation is in the same key as the rest of this very weak pamphlet.

Since Christ is "the All in All" of true Religion—*may we venerate our own ecclesiastical mother*, THE APOSTOLIC CHURCH OF ENGLAND. Let the adherents of the Romish schism in this country pray for her downfal; let those, whose Papal yearnings for a spurious catholicity are not satisfied with our Church, strive to betray her interests, distort her doctrines, and abuse her services after a Jesuitical fashion; let the unbelieving radical imprecate curses on her powers and prerogatives, and the political Dissenter plot and scheme for her ruin; or, lastly, let the morbid victims of Trentine Theology, mutter their treason and whisper their dislike against her formularies and creeds:—but be it our privilege, as it *is* our duty, evermore to say, "Peace be within thy walls;"—when we "forget thee," may "our right hands forget their cunning!" And why should we not thus supplicate the God of heaven to protect our venerated Zion, when her Orders and Sacraments, her Rites and Ceremonies, her Services and Chants, her Symbols, Articles, and Homilies, do each and all, with unvarying fidelity and firmness, maintain this blessed doctrine,—that "Christ" is "All and in All." But in order to illustrate how truly she does respond to the theology of Scripture, let us venture to *contemplate the great principle of her constitution.*

MISCELLANEOUS.

Essays, Letters, &c. by Percy B. Shelley,

(CONCLUSION.)

WHILE resident at Geneva, SHELLEY met with MONK LEWIS, and they passed much of their time together. SHELLEY records in his journal that LEWIS had a *penchant* for ghost-stories, although professing to discredit them; he possessed quite a stock of them. SHELLEY has preserved five, from which we take two of the most curious.

LEWIS'S GHOST STORIES.

The tale was of a lady in Germany.

This lady, Minna, had been exceedingly attached to her husband, and they had made a vow that the one who died first should return after death to visit the other as a ghost. She was sitting one day alone in her chamber, when she heard an unusual sound of footsteps on the stairs. The door opened, and her husband's spectre, gashed with a deep wound across the forehead, and in military habiliments, entered. She appeared startled at the apparition; and the ghost told her, that when he should visit her in future, she would hear a passing-bell toll, and these words distinctly uttered close to her ear, "Minna, I am here." On inquiry, it was found that her husband had fallen in battle on the very day she was visited by the vision. The intercourse between the ghost and the woman continued for some time, until the latter laid aside all terror, and indulged herself in the affection which she had felt for him while living. One evening she went to a ball, and permitted her thoughts to be alienated by the attentions of a Florentine gentleman, more witty, more graceful, and more gentle, as it appeared to her, than any person she had ever seen. As he was conducting her through the dance, a death-bell tolled. Minna, lost in the fascination of the Florentine's attentions, disregarded, or did not hear, the sound. A second peal, louder and more deep, startled the whole company, when Minna heard the ghost's accustomed whisper, and raising her eyes, saw in an opposite mirror the reflection of the ghost, standing over her. She is said to have died of terror.

A young man who had taken orders had just been presented with a living on the death of the incumbent. It was in the Catholic part of Germany. He arrived at the parsonage on a Saturday night; it was summer, and waking about three o'clock in the morning, and it being being broad day, he saw a venerable-looking man, but with an aspect exceedingly melancholy, sitting at a desk in the window, reading, and two beautiful boys standing near him, whom he regarded with looks of the profoundest grief. Presently he rose from his seat, the boys followed him, and they were no more to be seen. The young man, much troubled, arose, hesitating whether he should regard what he had seen as a dream, or a waking phantasy. To divert his dejection, he walked towards the church, which the sexton was already employed in preparing for the morning service. The first sight that struck him was a portrait, the exact resemblance of the man whom he had seen sitting in his chamber. It was the custom in this district to place the portrait of each minister, after his death, in the church.

He made the minutest inquiries respecting his predecessor, and learned that he was universally beloved, as a man of unexampled integrity and benevolence; but that he was the prey of a secret and perpetual sorrow. His grief was supposed to have arisen from an attachment to a young lady, with whom his situation did not permit him to unite himself. Others, however, asserted that a connection did subsist between them, and that even she occasionally brought to his house two beautiful boys, the offspring of their connection. Nothing further occurred until the cold weather came, and the new minister desired a fire to be lighted in the stove of the room where he slept. A hideous stench arose from the stove as soon as it was lighted, and, on examining it, the bones of two male children were found within.

At Venice he met Lord BYRON, then residing in the city of the sea. At that time he says of the noble poet: "He is changed into the liveliest and happiest-looking man I ever saw." It will be seen that subsequently they met again.

In the library at Ferrara are deposited some

INTERESTING MSS.

There is here a manuscript of the entire *Gerusalemme Liberata*, written by Tasso's own hand; a manuscript of some poems, written in prison, to the Duke Alfonso; and the satires of Ariosto, written also by his own hand; and the *Pastor Fido* of Guarini. The *Gerusalemme*, though it had evidently been copied and recopied, is interlined, particularly towards the end, with numerous corrections. The hand-writing of Ariosto is a small, firm, and pointed character, expressing, as I should say, a strong and keen, but circumscribed energy of mind; that of Tasso is large, free, and flowing, except that there is a checked expression in the midst of its flow, which brings the letters into a smaller compass than one expected from the beginning of the word. It is the symbol of an intense and earnest mind, exceeding at times its own depth, and admonished to return by the chillness of the waters of oblivion striking upon its adventurous feet. You know I always seek in what I see the manifestation of something beyond the present and tangible object; and as we do not agree in physiognomy, so we may not agree now.

SHELLEY excels in description of works of art, and few minds were so sensitive as his to the presence of the beautiful. As a specimen of his power in this difficult task we will select, spite of its length, a very masterpiece of pictorial writing.

DESCRIPTION OF THE NIOBE IN THE GALLERY AT FLORENCE.

Of all that remains to us of Greek antiquity, this figure is perhaps the most consummate personification of loveliness, with regard to its countenance, as that of the Venus of the Tribune is with regard to its entire form of a woman. It is colossal: the size adds to its value; because it allows the spectator the choice of a greater number of points of view, and affords him a more analytical one, in which to catch a greater number of the infinite modes of expression, of which any form approaching ideal beauty is necessarily composed. It is the figure of a mother in the act of sheltering, from some divine or inevitable peril, the last, we may imagine, of her surviving children.

The little creature, terrified, as we may conceive, at the strange destruction of all its kindred, has fled to its mother, and is hiding its head in the folds of her robe, and casting back one arm, as in a passionate appeal for defence, where it never before could have been sought in vain. She is clothed in a thin tunic of delicate woof; and her hair is fastened on her head into a knot probably by that mother whose care will never fasten it again. Niobe is enveloped in profuse drapery, a portion of which the left hand has gathered up, and is in the act of extending it over the child in the instinct of shielding her from what reason knows to be inevitable. The right (as the restorer has properly imagined) is drawing up her daughter to her; and with that instinctive gesture, and by its gentle pressure, is encouraging the child to believe that it can give security. The countenance of Niobe is the consummation of feminine majesty and loveliness, beyond which the imagination scarcely doubts that it can conceive any thing.

That masterpiece of the poetic harmony of marble expresses other feelings. There is embodied a sense of the inevitable and rapid destiny which is consummating around her, as if it were already over. It seems as if despair and beauty had combined, and produced nothing but the sublimity of grief. As the motions of the form expressed the instinctive sense of the possibility of protecting the child, and the accustomed and affectionate assurance that she would find an asylum within her arms, so reason and imagination speak in the countenance the certainty that no mortal defence is of avail. There is no terror in the countenance, only grief—deep, remediless grief. There is no anger:—of what avail is indignation against what is known to be omnipotent? There is no selfish shrinking from personal pain—there is no panic at supernatural agency—there is no adverting to herself as herself; the calamity is mightier than to leave scope for such emotions.

Every thing is swallowed up in sorrow; she is all tears; her countenance, in assured expectation of the arrow piercing its last victim in her embrace, is fixed on her omnipotent enemy. The pathetic beauty of the expression of her tender, and inexhaustible, and unquenchable despair, is beyond the effect of any other sculpture. As soon as the arrow shall pierce her last tie upon earth, the fable that she was turned into stone, or dissolved into a fountain of tears, will be but a feeble emblem of the sadness of hopelessness, in which the few and evil years of her remaining life, we feel, must flow away.

It is difficult to speak of the beauty of the countenance, or to make intelligible in words, from what such astonishing loveliness results.

The head, resting somewhat backward upon the full and flowing contour of the neck, is as in the act of watching an event momentarily to arrive. The hair is delicately divided on the forehead, and a gentle beauty gleams from the broad and clear forehead, over which its strings are drawn. The face is of an oval fulness, and the features conceived with a daring of a sense of power. In this respect it resembles the careless majesty which Nature stamps upon the rare masterpieces of her creation, harmonizing them as it were from the harmony of the spirit within. Yet all this not only consists with, but is the cause of, the subtlest delicacy of clear and tender beauty—the expression at once of innocence and sublimity of soul—of purity and strength—of all that which touches the most removed and divine of the chords that make music in our thoughts—of that which shakes with astonishment even the most superficial.

It has been the fashion to ridicule the tale that KEATS died of a broken heart, from mortification at the damnatory notice of his poems in the *Quarterly Review*. But there is more truth in the report than the world was willing to believe. SHELLEY, who watched his decline and tended his death-bed, wrote a letter to the editor of the homicidal Review, which, however, was not sent; but it contains a very interesting account of

THE LAST DAYS OF KEATS THE POET.

Poor Keats was thrown into a dreadful state of mind by this review, which, I am persuaded, was not written with any inten-

tion of producing the effect, to which it has, at least, greatly contributed, of embittering his existence, and inducing a disease from which there are now but faint hopes of his recovery. The first effects are described to me to have resembled insanity, and it was by assiduous watching that he was restrained from effecting purposes of suicide. The agony of his sufferings at length produced the rupture of a blood-vessel in the lungs, and the usual process of consumption appears to have begun. He is coming to pay me a visit in Italy; but I fear that unless his mind can be kept tranquil, little is to be hoped from the mere influence of climate.

And a note appended to a subsequent letter thus narrates

THE DEATH OF KEATS.

I hasten to communicate to you what I know about the latter period and closing scene of the pilgrimage of the original poet from whose works, hitherto unseen by me, you have favoured me with such a beautiful quotation. Almost despairing of his case, he left his native shores by sea, in a merchant vessel for Naples, where he arrived, having received no benefit during the passage, and brooding over the most melancholy and mortifying reflections; and nursing a deeply-rooted disgust to life and to the world, owing to having been infamously treated by the very persons whom his generosity had rescued from want and woe. He journeyed from Naples to Rome, and occupied at the latter place lodgings which I had, on former occasions, more than once inhabited. Here he soon took to his bed, from which he never rose more. His passions were always violent, and his sensibility most keen. It is extraordinary that, proportionally as his strength of body declined, these acquired fresh vigour; and his temper at length became so outrageously violent, as to injure himself, and annoy every one around him. He eagerly wished for death. After leaving England, I believe that he seldom courted the muse. He was accompanied by a friend of mine, Mr. Severn, a young painter, who will, I think, one day be the Coryphæus of the English school. He left all, and sacrificed every prospect, to accompany and watch over his friend Keats. For many weeks previous to his death, he would see no one but Mr. Severn, who had almost risked his own life, by unwearied attendance upon his friend, who rendered his situation doubly unpleasant by the violence of his passions exhibited even towards him, so much, that he might be judged insane. His intervals of remorse, too, were poignantly bitter. I believe that Mr. Severn, the heir of what little Keats left behind him at Rome, has only come into possession of very few manuscripts of his friend. You will be pleased with the information that the poetical volume, which was the inseparable companion of Keats, and which he took for his most darling model in composition, was the *Minor Poems of Shakspeare*.

At Ravenna, SHELLEY again fell in with

LORD BYRON.

Lord Byron is very well, and was delighted to see me. He has in fact completely recovered his health, and lives a life totally the reverse of that which he led at Venice. He has a permanent sort of liaison with Contessa Guiccioli, who is now at Florence, and seems from her letters to be a very amiable woman. She is waiting there until something shall be decided as to their emigration to Switzerland or stay in Italy; which is yet undetermined on either side. She was compelled to escape from the Papal territory in great haste, as measures had already been taken to place her in a convent, where she would have been unrelentingly confined for life. The oppression of the marriage contract, as existing in the laws and opinions of Italy, though less frequently exercised, is far severer than that of England. I tremble to think of what poor Emilia is destined to.

Lord Byron had almost destroyed himself in Venice: his state of debility was such that he was unable to digest any food, he was consumed by hectic fever, and would speedily have perished, but for this attachment, which has reclaimed him from the excesses into which he threw himself from carelessness and pride, rather than taste. Poor fellow! he is now quite well, and immersed in politics and literature. He has given me a number of the most interesting details on the former subject, but we will not speak of them in a letter. Fletcher is here, and as if like a shadow, he waxed and waned with the substance of his master. Fletcher also has recovered his good looks, and from amidst the unseasonable grey hairs, a fresh harvest of flaxen locks put forth.

A few days afterwards he writes:—

L. B. is greatly improved in every respect. In genius, in temper, in moral views, in health, in happiness. The connection with La Guiccioli has been an inestimable benefit to him. He lives in considerable splendour, but within his income, which is now about 4,000*l.* a year; 100*l.* of which he devotes to purposes of charity. He has had mischievous passions, but these he seems to have subdued, and he is becoming what he should be, a virtuous man. The interest which he took in the politics of Italy, and the actions he performed in consequence of it, are subjects not fit to be *written*, but are such as will delight and surprise you.

And again, from Pisa, on the 14th of September:

We expect Lord Byron here in about a fortnight. I have just taken the finest palace in Pisa for him, and his luggage, and his horses, and all his train are, I believe, already on their way hither. I dare say you have heard of the life he led at Venice, rivalling the wise Solomon almost in the number of his concubines. Well, he is now quite reformed, and is leading a most sober and decent life, as *cavaliere servente* to a very pretty Italian woman, who has already arrived at Pisa, with her father and her brother (such are the manners of Italy), as the jackals of the lion. He is occupied in forming a new drama, and, with views which I doubt not will expand as he proceeds, is determined to write a series of plays, in which he will follow the French tragedians and Alfieri, rather than those of England and Spain, and produce something new, at least, to England. This seems to me the wrong road; but genius like his is destined to lead, and not to follow. He will shake off his shackles as he finds they cramp him. I believe he will produce something very great; and that familiarity with the dramatic power of human nature will soon enable him to soften down the severe and unharmonising traits of his *Marino Faliero*.

But here we must reluctantly pause. Already have we been tempted beyond the limits allowed to a *new edition*; but we hope that the intrinsic beauty and interest of the extracts will be admitted as an excuse for a departure from accustomed plans. The doing so is the best proof that could be given of the estimation in which we hold these collected remains of one of the truest poets the world has ever seen, and proportioned is the gratitude due to Mr. MOXON for having offered it to the admirers of genius in a form so accessible to those who must consult economy in their book-buyings.

JOURNAL OF FRENCH LITERATURE.

The Catacombs of Rome. By PAUL L. JACOB, Bibliophilist. 2 vols. 1845.

WE always take up the works of M. JACOB with pleasure, under the gratifying surety of finding not only much to amuse, but also much to instruct in his pages. Novel-writing is not with him the business, but simply the recreation of his life of learned labour. His fictions are always based upon some solid foundation, derived from worm-eaten and dusty tomes, whose very aspect would serve to scare the crowd of mere novelists who are his contemporaries. The last time we saw him was at the *Bibliothèque Royale*, with an illuminated MS. of ancient ballads before him; and a delicious half-hour we passed before our leave-taking with the urbane and courteous student. The name of the present little work promised well, and we opened it with eagerness. *The Catacombs of Rome; an Episode in the Life of a French Painter;* and a charming companion, as well as an admirable artist, is M. Hubert Robert, who is unfortunate enough to incur the hatred of Monsignore Badolfo, the Grand Inquisitor, by painting his portrait in a large picture of "Susannah and the Elders," where his depraved, cunning, and mean physiognomy contrasted with the calm and beautiful countenance of Father Alexander, an humble and pious monk of a mendicant order, and the classical and faultless face of Seïla, a young Jewess, of whom the artist has, still more unfortunately, become deeply enamoured, and by whom he is equally beloved. To deepen the feud between these unequal adversaries, the fair and virtuous heroine has been dishonestly wooed by the Inquisitor, and only saved from ruin by the timely interposition of her artist-lover; and hence, also, the idea of the painting. Seïla has determined to become a convert to Christianity, in which communion her mother died; and Father Alexander, the good friar already named, has undertaken to instruct her in her new faith, and subsequently to unite her to her lover. Conversion is the leading idea of the simple-hearted father, whose zeal in the cause proceeds solely and beautifully from his thorough conviction that there is no salvation beyond the pale of his own church; and in furtherance of his scheme of universal charity and brotherhood, he not only accepts the gentle Seïla as a pupil, but flatters himself that he shall also snatch from ruin the soul of Marco, a young Hebrew, whose father is gatekeeper of the Ghetto, or Jews' quarter, and who is one of the most desperate characters in Rome. This dark spirit is, in his

turn, beloved by a Christian woman, beautiful, passionate, and fallen; but, nevertheless, a skilful illustration of the axiom that "the human heart is not all evil." Our first extract shall be a masterly scene in the foul and filthy hovel of the gate-keeper. Marco believes, after a furious scuffle, in which the old man is beaten down upon his bed without sense or motion, that he is his father's murderer. He has been absent from the hovel since the event.

A JEWISH HUT IN THE GHETTO.

When he returned to the low room in which the gatekeeper was compelled to remain night and day, he glanced darkly towards an old piece of ragged tapestry which hung across the entrance of a recess, and then seated himself beside a table of dark oak, on which a metal cup and a jug of wine were awaiting him. He thrice filled and emptied this capacious cup, after which he leant his burning forehead upon his icy hands. A long groan sounded from the recess, but Marco did not stir; he seemed to sleep—he was reflecting—he was combating with his evil passions.

The chamber in which he sat betrayed a misery of long standing. Smoke had completely blackened the ceiling and the bare walls, upon which were hung a few cooking utensils of iron and pewter, worn and rusty; the table, a chest of worm-eaten wood, and three or four wooden stools, were the only furniture of this damp fetid lodge, whose uneven and miry floor was constantly exposed to the exudations of a neighbouring aqueduct; a brazier of brown clay, still full of warm cinders, replaced in the most bitter season the stoves and grates which were at that period almost unknown at Rome. Behind the tapestry in front of the recess, of which portions hung in ribands, and where you could scarcely have stood upright, was a miserable pallet-bed which the son had shared with his father since his mother's death. * * * Marco did not sleep, but he had ceased to drink. He was a tall young man, well built, with those elegant and slight proportions, those picturesque attitudes, and those harmonious movements, which characterize the population of the Transtiverian suburb—a generous and uncorrupted population, proud of its origin, and jealous to preserve itself from all admixture with the degenerate Romans. The countenance of Marco would never have betrayed his Jewish blood; his features, admirably regular, and attractively expressive when they did not reflect some sordid passion, would have been worthy of those antique statues which appear to have been executed after a type created rather by art than after a living model; but his large piercing eyes were often lighted up by flashes of menace, or lowered with fierce and deadly rage. His thick eyebrows, which almost met when he frowned, threw a fatal shadow over his fine face; while his mouth, with its thin lips, contracted into a smile at once melancholy and bitter, during which his teeth were closely clenched. Marco wore the costume of the Transtiverians; the velvet jacket and breeches, the long gaiters of yellow leather, the girdle of speckled silk about his waist, the red cravat with long ends, and the conical hat of grey felt. This costume was more cleanly and more carefully selected than could have been expected from the state of poverty in which he lived.

Suddenly two small pebbles rattled against the glass of the solitary window which looked upon the Jews' square. At this well-known signal, which was almost drowned in the uproar of the storm, Marco shuddered, sprang up, listened, and ran to open stealthily the gate of the ghetto, which he had not double-locked, and had left unbolted. He admitted a woman wrapped in a cloak of brown cloth, which she threw off as soon as she had entered the hovel of the porter. It was Nisida.

During the conversation which ensues, the fair frail one makes her lover promise that he will submit to a public baptism at the church of St. John de Lateran, after which she pledges herself to become his wife; and, playfully asserting that Jews always possess hidden wealth, she insists upon a pearl necklace and ear-rings, and a hundred piastres, as a wedding present from her enamoured bridegroom. They are at this point of the conversation, when

Some one knocked loudly at the gate of the ghetto, but this time the dogs did not bark. The storm had probably frightened them, and forced them to remain in their kennels. Marco made a sign to Nisida to conceal herself behind the tapestry of the recess, and, despite the repugnance which she felt to appproaching a dead Jew, she obeyed; but as she did so she uttered a faint scream, which Marco did not hear, for he had hastened to the gate. After exchanging a few words with the new-comer, Marco left him to make his way to his own dwelling, and returned to the lodge. His brow was no longer so gloomy, nor his look so dark.

"There, coquette," he exclaimed, throwing five pieces of gold on the table—"there is your wedding-dress."

But there was no answer, save that of a thunderbolt which had fallen in the Ghetto, and shaken at the same instant the sky, the earth, and the houses, as though they had been visited by an earthquake and the eruption of a volcano. Marco heeded not the shock, but at once rushed to the recess. A hideous spectacle froze up his faculties; the tapestry had been thrust aside, and was held back by a thin and livid arm; the gate-keeper, Capricola, looking like a spectre risen from its tomb, half-naked, his countenance cadaverous and immobile, his eyes fixed and gleaming, and his long white hair dishevelled, was kneeling upon the bed, and pressing with so much force the throat of the young girl, who had fainted, that he had left the print of his bony fingers in the flesh, and had almost strangled his unhappy victim. Marco tore her from his hands, pushing him back with so much violence that he fell with his head hanging over the edge of the bed; then, taking poor Nisida in his arms, who gave no sign of returning consciousness, he sought to re-animate her with kisses and caresses.

"May the curse of heaven be the only inheritance you may have of me!" muttered the old man, who endeavoured vainly to recover his equilibrium, and who felt the blood rushing to his head, and whistling in his ears.

"Nisida, my own, my beloved!" cried Marco, whose despair was even greater than his desire of vengeance; "wake up; recognise me! Oh, miserable old man!—I will smother him with my own hands."

"May the Christians revenge me and punish you, son ungrateful and accursed!" repeated Capricola, still struggling to rise.

"If he should have killed her!"— said Marco, alarmed at the long insensibility of Nisida, "the murderer is there, and yet I spare him!"

"Go, dog, marry thy Christian woman," growled the dying man, who, far from recovering a horizontal position, rendered his position only the more painful by each successive movement, and who already touched the floor with his scull; "marry her, and bring Christian sons into the world. Cursed be ye both, and they after ye! Cursed, cursed, cursed!"

The groans of Capricola, accompanied by a frightful rattling in the throat, had more power over the syncope of Nisida than the tender beseechings of Marco; but it was under the empire of an indescribable terror that she recovered her senses, and saw herself, bathed in cold damps, and trembling from head to foot, supported by her lover. At first she believed herself still to be in the presence of the corpse, which she had seen start suddenly into life, in order to seize her. By the voice of Marco she was reassured, and she threw herself into his arms, without daring to look back upon the old man, whose death-rattle was still audible.

"Fear nothing, dear Nisida," said Marco fondly, "I am here to protect you."

"Oh, Marco! I thought that the demon was dragging me down—down"—she answered with wild energy; "it was the old Jew!"

"How now!—come—to me!—help!" muttered Capricola in an expiring voice, "in mercy, help me!"

"Poor Nisida, I would give all my blood to spare you one pain, one annoyance, one regret!" whispered the son of the dying man.

"I seem still to see him before me," murmured the young Roman woman, whose alarm was still unappeased; "he glared on me with eyes gleaming with rage and hatred. He laughed to display his long yellow teeth, as though he would have devoured me."

"Think of it no more," said Marco, affecting a gaiety which he did not feel, "it was a bad dream. The dead have not yet learned to rise again. Look! see these fair golden pieces which are now yours."

"Help—help—help!"—gasped Capricola, who no longer distinguished objects, save through a bloody veil—"I am dying;—help! I shall die if you leave me here—help!—my son! Marco! have pity on me!"

"Do you hear?" whispered Nisida in terror, as she listened to the blended prayers and groans; "the old man is come back to earth, and asks for prayers. He is come to announce to us his own damnation!"

"Tales and follies!" replied Marco, endeavouring to drown in a peal of forced laughter the expiring voice and rattle of Capricola; "I promise you rich laces, as you covet them; you shall have, moreover, jewels, rings, necklaces, ear-rings——"

"Ear-rings! necklaces! rings!" echoed Nisida, still not daring to turn her head towards the bed, where the old man was still writhing. "Ha! It is the virgin who punishes me, because I have profaned the Holy Week by entering the house of a Jew."

"Marco!—help! help!" once more moaned out the agonizing voice, as the near and palpable approach of death overwhelmed the wretched victim with its terrors: "I will pardon thee—I will turn my curse into a blessing—help! help! help!—come, come to me, and I will pardon thee!"

"It is for me to curse thee in my turn!" cried Marco, in a deep and passionate accent; "leave me in peace, old man, and die."

Capricola did not speak again, but the frightful rattle still went on. Nisida at length ventured to look behind her, but she instantly closed her eyes, with a shriek of horror, when they fell upon the wretched old man. His body lay stretched across the bed, but his head rested on the floor; his face was purpled and contracted by the convulsive efforts which he had made to raise it, and his haggard eyes were bloodshot and distended. She rushed from the room before Marco could foresee or prevent her purpose, and, running to the gate of the ghetto, where the key was still in the lock, she disappeared. Her lover had not followed her so closely as to entertain a hope of her being overtaken. He called after her again and again; the awful voice of the storm, which had not diminished, was the only answer to his supplicating and despairing cry.

This culprit son subsequently murders the good father Alexander, in order to possess himself of a sum of money which the monk had collected among the pious for the reparation of his monastery. The murder is, through the machinations of the Grand Inquisitor, attributed to Seïla and her father, who are accordingly conveyed to the dungeons of the Inquisition. The actual malefactor, who has at once carried the bag of money to Nisida for the purchase of her marriage finery, is adopted by other zealous priests, and the ceremony of his reception into the Church of Rome takes place on Easter Sunday.

BAPTISM OF A JEW IN ROME.

A considerable crowd of people had collected early in the morning in the neighbourhood of Saint John *in fonte*, although this small church cannot contain more than 400 or 500 persons, and that the places are reserved for foreigners of distinction, who are furnished with tickets. But a report had spread that the neophyte, after having received baptism, would go bare-headed and bare-footed, covered with a shirt of white serge, to make the great pilgrimage of the seven basiliques; that is, to visit in succession the churches of St. John de Lateran, of St. Paul *extra muros*, of St. Sebastian, of St. Lawrence, of Ste. Mary the Greater, of Santa Croce in Jerusalem, and of St. Peter, which are distant three leagues from each other.

The great door which opens upon the square of the Lateran palace remained closed, but another door was open in the interior of the convent appertaining to the basilique, and affording ingress to the church of Constantine. The crowd was immense at this door, and cries and imprecations resounded, which the holiness of the spot did not suffice to control. The foreigners, although at that period less numerous than at present, exhibited as much eagerness to witness this baptism as though it had been some profane exhibition; and the Roman clergy, who are accustomed to this demonstrative curiosity on the part of strangers, favoured the introduction of the ladies, and made room for them round the balustrade of the baptismal fonts. The tumult which was observable throughout the assembly gave no indication of a religious ceremony. Among the privileged assistants was Nisida, dressed in her richest garments, and adorned with all her jewels; her toilette only, however, announced a festival, for her pale and anxious countenance betrayed a heart ill at ease. She constantly glanced towards the oratory of Pope St. Hilary, by which the Christian neophyte was to enter, surrounded by the canons of Saint John de Lateran; then she dropped her eyes, and continued her interrupted prayer, grasping the beads of her rosary in her trembling hands. She was the only female present who wore the Roman dress, and she had obtained the favour of being present at the baptism of Marco, because Marco had exacted that she should be a witness to the ceremony. Her costume of bright colours, her characteristic beauty, and more than all, her emotion and her grief, attracted many looks, and occasioned many commentaries, to none of which she vouchsafed the slightest notice. It was soon known that she represented the family of the Jew proselyte, and it was believed, from her pious and retiring manner, that she was deeply interested in his conversion * * * A partial silence having been established among the spectators, who were crowded closely together, four Swiss soldiers, wearing the speckled uniform of the sixteenth century, forced, with some difficulty, a narrow passage through the throng, for the procession of the catechumen, which was composed of twelve canons in robes of white linen, and of four choral children with the cross, the gospels, the patena, and the censer. The Archdeacon of St. John, in pontifical robes, the episcopal mitre on his head, and the crosier in his hand, to recall to the memory of the pious the fact that the Pope St. Silvester had baptized the Emperor Constantine in that same church fifteen centuries before, walked at the side of the neophyte, whom he held by the hand, in order to present him at the font. Marco himself had no other clothing than a tunic of white serge, which fell in large folds to his feet, but left his chest and his arms uncovered. A thick veil of white worsted, thrown over his bare and shorn head, enveloped all his body, and swept the floor. Behind him came two priests carrying the holy oils and the sacred cloths.

When the clergy composing the procession had reached the baptismal fonts with the catechumen, the latter, still veiled, knelt before the archdeacon, whom the canons disembarrassed of of his mitre and his golden cope, in order to wind a linen round his head, and to attire him in a cope of white, embroidered with silver. The sponsors were then desired to stand forth; they had been selected by the Pope himself from amid the princely families of Rome. The Jew was still prostrate on the marble pavement, and his face had not yet been seen. Silence had at length spread over the whole crowd, and nothing was audible save the smothered sobs of Nisida, who prayed with fervour in an undertone, and who beat upon her breast as though she were performing penance. * * * The archdeacon next desired the catechumen to rise, but Marco obeyed only when the command was repeated. The veil which nearly covered him was removed, and all eyes were turned on him at the same instant, while the sinister expression of his face produced a general impression of pain and disappointment. Each had hoped to read upon his face a feeling of repentance, of contrition, and of joy; and saw there only the index of cold and disdainful indifference; his brows were knit, and his eyes flashed with defiance. He appeared unconscious of the ceremony in which he was the chief actor, and of all the objects around him he seemed to see nothing save Nisida praying by his side. As he gazed fixedly upon her, the expression of his features changed by degrees, and ere long became serene and even radiant. As to his baptism, he did no more than follow slowly and abstractedly the instructions which he had received, and which were again repeated one after the other. Several times he manifested symptoms of impatience while submitting to them, and it was only by a supplicating and tender look from Nisida that he was more restored to the docility and resignation which were necessary: nevertheless, he did not reply to any of the sacramental questions of the archdeacon, and one of the assistant priests was compelled to answer for the reluctant neophyte, whom every one believed to be dumb.

We cannot conclude without one more extract; and, in order to make it understood, we must briefly remark, that, to prove the innocence of Seïla and her father of the murder of the friar Alexander, it is necessary that his body should be found. Strong suspicion having arisen in the mind of the French artist that the foul deed was committed by Marco, while accompanying the monk on the road to Tivoli, he explores it in every direction without success, and ultimately convinces himself that the victim has been precipitated down one of the numerous pits formed by the breaking in of the earth above the abandoned catacombs in that direction. He accordingly resolves to explore them, if practicable, within a given distance,—he finds the body, but loses himself in the subterranean Necropolis; exhausts his provision of light; and, in a state of temporary madness, from hunger and despair, lies down beside the corpse to die. Meanwhile, the body of a supposed saint has been discovered in the catacomb of St. Cyriac, which is to be exhumed with great pomp by the Grand Inquisitor in person. We need scarcely say that Hubert Robert is saved at the eleventh hour. We will, therefore, at once proceed to extract an account of the ceremony, which must be novel to, and cannot fail to interest, the greater portion of our readers.

EXHUMATION OF A SAINT.

The basilique of St. Lawrence, constructed by Constantine, is situated a mile beyond the walls. This patriarchal church stands above the *cemetery* of St. Cyriac, in which a number of martyrs, and, among others, St. Lawrence, were interred. This cemetery, since the catacombs of St. Sebastian have ceased to furnish holy bodies as relics, has the privilege of supplying them abundantly; for its sepulchres are still full, and it would appear that the barbarians who descended into most of the catacombs in search of hidden treasure, never penetrated into these, whether because the entrance was not then known, or because the difficulties of the way had arrested the most intrepid. In fact, the galleries of these catacombs, which appear to have been excavated by the Christians during the persecutions, are sometimes so low and so narrow that a man can scarcely traverse them when bent double. They are not quarries open for emolument and exportation, according to the habit of ancient Rome; they are subterranean paths excavated by incompetent hands, in the sole view of rendering the burial-place inviolable.

A prolonged sojourn in this cemetery is mortal to the living; for, although the air is not mephitic, the respiration exhausts itself in a dense atmosphere laden with warm exhalations, which wither as though they had escaped from the crater of a

volcano. There nevertheless exists a pious congregation of workmen, who consecrate themselves to the labour of the catacombs. These worthy people, who entitle themselves brothers *della Fossa*, ought surely to have a prodigious remuneration in heaven; they are always in a state of grace upon earth, and they enjoy the singular privilege of being permitted to communicate without being absolved in confession by a priest, as though they were themselves priests; but, in compensation, they expose themselves to the certainty of dying of consumption in the space of two or three years. Their mission consists in removing the soil which encumbers the galleries, and in seeking the holy bodies; for the church does not recognise as saints all the dead entombed in the catacombs, and thus tacitly agrees with the learned, who believe with reason that the greater part of the catacombs were destined, long before the era of Christianity, to receive the bodies of slaves, beggars, still-born children, and criminals, who had no right to the honours of the stake. The brothers *della Fossa*, whose number is limited to twelve, in memory of the twelve apostles, pray in an under-tone as they work, and know no greater happiness than the discovery of a martyr or a confessor, indicated by a slab of marble closing the tomb, an inscription and the sign of the cross engraved on the marble, a phial of incrusted blood at the feet of the corpse, or palm-branches painted in fresco round the sepulchre. * * *

The chief of the congregation of the holy office had entered the catacombs to *raise* the body of the saint; the body of the said saint was so well preserved that the traces of its martyrdom could still be distinguished; unfortunately, her relics were not to remain in Rome, the holy father having promised them to the King of France. It was, however, hoped that the Congregation of Relics would reserve the several objects discovered in the tomb—the remains of the shroud, the phial of blood, and even some portions of the bones, which would, without doubt, perform great miracles. Already, it was said, a paralytic had walked, and a blind man had seen. It was, therefore, in the hope of such miracles that many infirm and sick persons had dragged themselves so great a distance in order to be the first to salute St. Valeria, and to share in her favours. Faith gave strength to those who had felt exhausted by age or ill-health. Some were there who had not left their beds for months, and who had been standing without rest for hours. * * * The brothers *della Fossa*, dressed entirely in white, their heads folded in a linen cloth, preceded the clergy; some carried large resinous torches, whose smoke formed a species of canopy above them; others bore a spade upon their shoulders and a pickaxe in their hands. Behind them, the chief of the Congregation of Relics, in whose presence the exhumation of the holy body must take place, walked, surrounded by white penitents, laden with empty boxes and reliquaries; and in their suite came other penitents of different orders, belonging to twenty distinct congregations. Ultimately were seen two grave-diggers, chosen specially to touch the holy body, and who, for this purpose, were honoured by the benediction of the pope, who had absolved them from all their sins. One held a silver hammer in his hand; the other an enamelled shovel. They were both caparisoned in pale blue silk, with silver embroidery representing the instruments of the Passion. In their suite two deacons of the chancelry brought a chest of cedar-wood inlaid with ivory, in which St. Valeria was to be placed under a triple lock and the seal of St. Peter. A score of the graduates of the Vatican, penitents, magistrates, chamberlains to the pope, chaplains, &c. named by the pope to assist at the ceremony, and having a right to the indulgences, filed off two by two, each holding a branch of olive and a lighted taper. Monsignore Badolfo, representing the Pope, was the last in the procession, with the exception of two clerks bearing his train. * * * The chanting became more fervid, and the *cortège* came to a pause. It had arrived near the holy body. Among all the tombs, open or otherwise, in the gallery, appeared one, larger than the rest, still sealed by a piece of marble, on which was seen this inscription, surmounted by a cross: *Sub signo requiescit ad vitam eternam.* On each side of the tomb were inserted in the soil two lamps and two phials, rendered dense by time. Every eye was fixed upon the marble which hid the holy body. The chanting continued; the master of the ceremonies exerted himself to assign to each individual his proper station; the brothers *della Fossa* were ranged in single file, along the partition wall within which was the saint; opposite to them stood the penitents, forming a second line; the great dignitaries, heads of the congregations, and pontifical officers were grouped on the right and left. Monsignore Badolfo, always attended by his officers of honour, with their silver maces and red rods, and assisted by his cross-bearers, approached the tomb, bowed and fell upon his knees. * * * * * * * * * * Then he rose, and the ceremony commenced. He took from the hands of one of the grave-diggers already mentioned, the silver hammer, and slightly beat upon the marble slab, murmuring, *Aperite portas Domini;* then he gave back the hammer, and the other grave-digger presented to him the enamelled shovel, containing a little earth. Badolfo threw this earth against the marble three several times, saying, *In nomine Patris, et Filii, et Spiritus Sancti.* Again he knelt in the attitude of prayer. The chanting became louder, expressive of the joy of the faithful collecting the relics of a martyr. Then the brothers of the grave worked to open the tomb; they detached the cement which secured the marble lid; they shook the lid carefully; they prepared to remove it, and every one prostrated himself at the sound of the bell rung by the master of the ceremonies. The chanting did not cease, although the tomb was laid bare.

But what was the general surprise and consternation, when each perceived that the grave was empty, and did not contain even the vestige of a bone!

Œuvres Choisies de E. Scribe, de l'Académie Française.
Tomes 2 à 5. 1845. Paris and London.

Some time since we noticed the first volume of this elegant edition of M. Scribe's select works. We owe some apology for not having given earlier attention to the succeeding volumes, which were received soon after. The publisher has exercised good judgment in thus presenting to the reading public a selection of the best of the voluminous writings of the dramatist whose ingenuity and wit have been so unblushingly copied, without acknowledgment, by the playwrights of every other country. By the readers of French literature in this country such a collection, thus elegantly printed, and sold at a price so moderate, cannot but be heartily welcomed. The elegance and liveliness of the dialogues can only be appreciated in the original language; no translation can do them justice; their spirit escapes in the process of conversion from the tongue in which they were conceived to our ruder dialect. We recommend every student of the French language or literature to procure this edition of M. Scribe.

JOURNAL OF AMERICAN LITERATURE.

Headley's Letters from Italy.
(conclusion.)

From Genoa Mr. Headley proceeded to Naples, and of course visited Vesuvius and the other sights of that magnificent country. To these we shall not follow him, but prefer some less hackneyed themes. Still he finds the same disappointment in the appearance of the

WOMEN OF NAPLES.

You have heard of the bright eyes and raven tresses and music-like language of the Neapolitans; but I can assure you there is nothing like it here, *i. e.* among the lower classes. The only difference that I can detect between them and our Indians is, that our wild bloods are the more beautiful of the two. The colour is the same, the hair very like indeed, and as to the "soft bastard Latin" they speak, it is one of the most abominable dialects I ever heard. I know this is rather shocking to one's ideas of Italian women. I am sure I was prepared to view them in a favourable, nay, in a poetical light; but amid all the charms and excitements of this romantic land, I cannot see otherwise. The old women are hags, and the young women dirty, slip-shod slatterns. Talk about "bright-eyed Italian maids!" Among our lower classes there are five beauties to one good-looking woman here. It is nonsense to expect beauty among a population that live in filth, and eat the vilest substances to escape the horrors of starvation.

But it is otherwise as to *form.*

In form the Italians excel us. Larger, fuller, they naturally acquire a finer gait and bearing. It is astonishing that our ladies should persist in that ridiculous notion that a small waist is, and, *per necessita*, must be beautiful. Why, many an Italian woman would cry for vexation, if she possessed such a waist as some of our ladies acquire, only by the longest, painfullest process. I have sought the reason of this difference, and can see no other than that the Italians have their glorious statuary continually before them, as models; and hence endeavour to assimilate themselves to *them;* whereas our fashionables have no models except those French stuffed figures in the windows of milliners' shops. Why, if an artist should presume to make a statue with the shape that seems to be regarded with us as the perfection of harmonious proportion, he would be laughed out of the city. It is a standing objection against the taste of our women the world over, that they will practically assert that a French milliner understands how they should be made better than Nature herself.

Rome was the next attraction, and our tourist arrived in time to witness the ceremonies of Holy Week. The scene of the benediction from St. Peter's is briefly but vividly described, and the effect is heightened by one of those touches which shew the poet and the artist.

THE BENEDICTION.

To imagine it well, you must place before you a magnificent church, with the paved ground gently sloping up to the flight of steps that lead into it. From each corner imagine an open colonnade running down in a semicircular form, inclosing a vast area, and you have the front of St. Peter's. The centre of the area was kept clear by the military, ranged round it in the form of a hollow square. Between the upper file of soldiers and the church steps, stood the living mass that waited the benediction. Behind the lower file were crowded the countless carriages. The open colonnades, and the top of one of them, are given to strangers. In the front of the church, over the main entrance, there is a gallery, covered with a crimson cloth and shaded by an immense piece of canvass. Into this gallery the pope advances, and blesses the people. * * * Nearly under me were a group of pilgrims, ragged and dirty, lying along the steps, unconscious of all around—their staves leaning across them, their head on their hand, and they either nodding or fast asleep. One boy held my attention for a long time. He lay on the hard stone, in deep slumber, with his father asleep beside him. Suddenly there was the blast of a trumpet, and the father started from his repose, and, supposing the Pope was about to appear, roused up his boy, so that they might not lose the invaluable blessing. The tired, ragged little fellow rose half up, and then fell back again heavily on the steps, sound asleep. The Pope did not appear, and the father, too, was soon in deep slumber beside his boy. What were their dreams, in the midst of this pomp and splendour? They had wandered far from their quiet home, to receive the blessing of the Holy Father. Reckless of the magnificence around them—of the crowd—the ocean-like murmur that went up to heaven—they had fallen asleep under the shadow of St. Peter's. That boy, ragged and dirty as he was, had also *his* dreams, and his palace and objects of ambition; but they were all far away, and many a weary mile must be traversed before he would be amid them again. What a change, to be waked from that quiet dream by the sound of trumpets, and instead of his own rude hut by the mountain stream, to find the lofty cathedral before him, and the rumour of thousands around him!

At length the Pope appeared—engaged in a short prayer—stretched out his hands over the multitude that sunk to the earth, — and pronounced the benediction. The long lines of soldiers kneeled in their ranks, and all was silent as the grave. But the last word was scarcely spoken, before they were on their feet—drum and trumpet pealed out their joy—the cannon of St. Angelo answered them, and the bells threw in their clang to swell the jubilee—the multitude began to sway and toss and disperse—and all was over.

One of the most impressive ceremonies of the Holy Week is

THE CHANTING OF THE MISERERE.

The ceremonies commenced with the chanting of the Lamentations. Thirteen candles, in the form of an erect triangle, were lighted up in the beginning, representing the different moral lights of the ancient church of Israel. One after another was extinguished as the chant proceeded, until the last and brightest one at the top, representing *Christ*, was put out. As they one by one slowly disappeared in the deepening gloom, a blacker night seemed gathering over the hopes and fate of man, and the lamentation grew wilder and deeper. But as the Prophet of prophets, the Light, the Hope of the world, disappeared, the lament suddenly ceased. Not a sound was heard amid the deepening gloom. The catastrophe was too awful, and the shock too great to admit of speech. He who had been pouring his sorrowful notes over the departure of the good and great seemed struck suddenly dumb at this greatest wo. Stunned and stupified, he could not contemplate the mighty disaster. I never felt a heavier pressure on my heart than at this moment. The chapel was packed in every inch of it, even out of the door far back into the ample hall, and yet not a sound was heard. I could hear the breathing of the mighty multitude, and amid it the suppressed half-drawn sigh. Like the chanter, each man seemed to say, "Christ is gone, we are orphans—all orphans!" The silence at length became too painful. I thought I should shriek out in agony, when suddenly a low wail, so desolate and yet so sweet, so despairing and yet so tender, like the last strain of a broken heart, stole slowly out from the distant darkness and swelled over the throng, that the tears rushed unbidden to my eyes, and I could have wept like a child in sympathy. It then died away as if the grief were too great for the strain. Fainter and fainter, like the dying tone of a lute, it sunk away as if the last sigh of sorrow was ended, when suddenly there burst through the arches a cry so piercing and shrill that it seemed not the voice of song, but the language of a wounded and dying heart in its last agonizing throb. The multitude swayed to it like the forest to the blast. Again it ceased, and the broken sobs of exhausted grief alone were heard. In a moment the whole choir joined their lament and seemed to weep with the weeper. After a few notes they paused again, and that sweet, melancholy voice mourned on alone. Its note is still in my ear. I wanted to see the singer.

Among the interesting sights of Rome are two plain tombstones. One in the English burying-ground bears the epitaph—

PERCY BYSHE SHELLEY.—'Cor Cordium.'
"Nothing of him that doth fade,
But doth suffer a sea-change
Into something rich and strange."

The other, in an adjoining cemetery, is a small marble slab, half hidden amid the long grass, on which is writ, "This grave contains all that is mortal of a young English poet, who on his death-bed, in the bitterness of his heart, at the malicious power of his enemies, desired these words to be engraved on his tombstone, 'Here lies one whose name was writ in water.' Feb. 28, 1821." It is the grave of KEATS. But his name is inscribed upon the record of his country's genius.

It was with eager curiosity that Mr. HEADLEY, full of the recollections of *Corinne*, went to hear

AN IMPROVISATRICE.

An Urn was left at the door, in which every one who wished dropped on a bit of paper the subject he wished her to improvise. This Urn was to be handed to the Improvisatrice, from which she must draw, by chance, the number of topics she was to render into verse during the evening. I sat all on the "*qui vive*," waiting her appearance, expecting to see enter a tall, queenly beauty, with the speaking lip and flashing eye uttering poetry even in their repose. I expected more, from the fact that these inspired birds are getting rare even in Italy, and this was the second opportunity there had been of hearing one during the entire year. Well, at last she came, a large, gross-looking woman, somewhere between thirty-five and fifty years of age, and as plain as a pike-staff. She ascended the platform somewhat embarrassed, and sat down: the Urn was handed her, from which she drew seven or eight papers, and read the subjects written upon them. They were a motley mess enough to turn into poetry in the full tide of song. I looked at her somewhat staggered, and wished very much to ask her if (as we say at home) she did not want to back out of the undertaking. However, she started off boldly, and threw off verse after verse with astonishing rapidity. After she had finished, she sat down, wiped the perspiration from her forehead, while a man, looking more like Bacchus than Cupid, brought her a cup of nectar in the shape of coffee, which she coolly sipped before the audience, and then read the next topic and commenced again. Between each effort came the coffee. Some of the subjects were unpoetical enough, and staggered her prodigiously. The "spavined dactyls" would not budge an inch, and she would stop—smite her forehead—go back—take a new start, and try to spur over the chasm with a boldness that half redeemed her failures; sometimes it required three or four distinct efforts before she could clear it. The large drops of moisture that oozed from her forehead in the excitement formed miniature rivulets down her cheeks, till I exclaimed to myself, well there is *per*spiration there, whether there be *in*spiration or not; and after all, who can tell the difference?

We do not remember to have read before of the Artists' Fête, of which we have here a long and curious account. It is held in the quarries of Rome: the dining-hall is an old forsaken ruin hard by. At eight o'clock the procession forms, headed by the president, dressed fantastically, and followed by many hundreds of artists and their friends, each in the oddest costume his purse or fancy can furnish, some on foot, some on mules, some on donkeys: the more *outré* the appearance, the more in keeping with the scene. To the quarries they go, and the president is there enthroned.

Around him were flags of every description and ornaments of no description. He had on a necklace made, I should suppose, of a huge Bologna sausage, with pieces a foot and a half long, putting out at intervals all round it, at the end of each of which stood an imp striving with all his might to fill it with wind. At his side stood a drummer, that looked more like a griffin than a man, beating rapid and hurried beats upon his drum, while at every pause arose the chorus of some wild German song. Before him, in the dirt, were all sorts of divinities waltzing—two-thirds drunk. Round and round they would spin, ankle deep, in

the powdered clay, until they came on the broken rocks with a jar that made my bones ache even to see.

And in this entire abandonment to unlicensed revel the day is passed.

Quitting Rome with reluctance, our traveller journeyed towards Florence, visiting all objects of interest on the route. Among the rest was a church of the little town of San Giovanni. He saw cased within the wall a human skeleton, no mason's work surrounding it, but among the naked, jagged stones, it stood erect and motionless. A few years since, when the church was under repair, the workmen had occasion to pierce the wall, and struck upon the skeleton. The attitude indicates a death of agony; and an English physician who was present declared that he must have died of suffocation, and that he had evidently been built in alive, beginning at the feet.

At Florence, Mr. HEADLEY notices especially the works of two American artists as remarkable for their indications of genius. One of them has lately received its meed of approbation in England, where art receives more patronage than in America; and therefore we may boast the possession of her first great work of sculpture—the Greek Slave, by Mr. POWERS. Of this beautiful statue the following anecdote is told:—

THE GREEK SLAVE.

An American, who had suddenly acquired great wealth by speculation, took it into his head to travel, and finding himself at length in Florence, made a visit to Mr. POWERS's studio. Looking over the different statues, his eye rested on the Greek Slave. "What may you call that are boy?" said he. "The Greek Slave," replied Mr. Powers. "And what may be the price of it?" continued our Yankee. "Three thousand dollars" was the answer, as the artist gazed a moment at the odd specimen of humanity before him. "*Three thousand dollars!*" he exclaimed,—"you don't say so, now. Why I thought of buying something on you, but that's a notch above me. *Why, statiary is riz, ain't it!*"

Mr. POWERS has another statue, an Eve, which our traveller describes as equally, if not more admirable.

Powers's Eve is a woman with a soul as well as heart, and as she stands with the apple in her hand, musing on the fate it involves, and striving to look down the dim and silent future it promises to reveal, her countenance indicates the great, yet silent struggle within. Wholly absorbed in her own reflections, her countenance unconsciously brings you into the same state of deep and painful thought. She is a noble woman—*too noble to be lost.*

The artist told him that no less than thirty different females had stood for this statue.

Another promising sculptor from America is Mr. BROWN. His most famous work is

THE INDIAN BOY.

In it Mr. Brown has endeavoured to body forth his own nature, which is full of "musing and melancholy." The boy has gone into the woods to hunt, but the music of the wind among the tree tops, and the swaying of the great branches above him, and the mysterious influence of the deep forest, with its multitude of low voices, have made him forget his errand; and he is leaning on a broken tree, with his bow resting against his shoulder, while one hand is thrown behind him, listlessly grasping the useless arrow. His head is slightly bent, as if in deep thought, and as you look on the face, you feel that forest boy is beyond his years, and has begun too early to muse on life and on man. The effect of the statue is to interest one deeply in the fate of the being it represents. You feel that his life will not pass like the life of ordinary men. This effect, the very one the artist sought to produce, is of itself the highest praise that could be bestowed on the work.

But there has arisen suddenly, unexpectedly, and almost as it were by inspiration, an artist who promises to surpass all modern sculptors. He is by birth an Italian, though a Frenchman by extraction. His history is too interesting to be omitted. His name is

DUPRE, THE SCULPTOR.

Originally a poor wood engraver, he designed and executed last year, unknown to any body, the model of a dead Abel. Without advancing in the usual way from step to step, and testing his skill on busts, and inferior subjects, he launched off on his untried powers into the region of highest effort. A year ago this winter, at the annual exhibition of designs and statues in Florence, young Dupré placed his Abel in the gallery. No one had seen it—no one had heard of it. Occupying an unostentatious place, and bearing an unknown name, it was at first passed by with a cursory glance. But somehow or other, those who had seen it once found themselves after awhile returning for a second look, till at length the whole crowd stood grouped around it, in silent admiration—our own artists among the number. It became immediately the talk of the city, and, in a single week, the poor wood engraver vaulted from his humble occupation into a seat among the first artists of his country. A Russian princess passing through the city saw it, and was so struck with its singular beauty, that she immediately ordered a statue, for which the artist is to receive four thousand dollars. Many of the artists became envious of the sudden reputation of Dupré, and declared that no man ever wrought that model, and could not—that it was moulded from a dead body, and the artist was compelled to get the affidavits of his models to protect himself from slander.

I regard this figure equal, if not superior, in *its kind* to any statue ever wrought by any sculptor of any age. It is not proper, of course, to compare it with the Venus de' Medici, or Apollo Belvidere, for they are of an entirely different character. The dead son of Niobe, in the Hall of Niobe, in the Royal Gallery, is a stiff wooden figure compared to it. The only criticism I could utter when I first stood over it was, "*Oh, how dead he lies!*" There is no marble there, it is all flesh—flesh flexible as if the tide of life poured through it—yet bereft of its energy. The beautifu martyr looks as if but just slain, and before the muscles became rigid and the form stiff, had been thrown on a hill side, and with his face partly turned away, and one arm flung back despairingly over his head, he lies in death as natural as the human body itself would rest. The same perfection of design and execution is exhibited in all the details, and the whole figure is a noble monument of modern genius.—Being a new thing, and hence not down in the guide-books, most travellers have passed through Florence without seeing it.

But it is time to conclude, although we have not exhausted a tithe of the passages we had marked. We will add only Mr. HEADLEY's judicious

ADVICE TO INVALIDS.

And here let me say to those who visit Italy for their health, to ascertain well beforehand what ails them. For invalids of a certain character, such as those troubled with pulmonary affections, this climate will doubtless often be found very beneficial; but to dyspeptics, and those afflicted with the whole tribe of nervous diseases, it is the very worst climate they could possibly visit. The air is too stimulating, and produces constant excitement, where the very reverse is needed. The consequence is, that most of the Italians themselves, who in our country would be nervous dyspeptics, are here lunatics. *A sensitive nervous system cannot endure the stimulating air and diet of Italy.* I have tried it for nearly a year, and now leave it sooner than I designed, and far worse than when I entered it.

With this we bid adieu to one of the most intelligent and agreeable travellers we have met for many a day, assured that the specimens we have presented will recommend the letters from which they are taken to the further acquaintance of our readers.

THE TOURIST.

[All the world travels now-a-days. Great, therefore, will be the utility of a periodical to which every Tourist may communicate such of his experiences as to routes, sights, conveyances, inns, expenses, and the other economies of travelling, as may serve his fellow-tourists. To this design we propose to devote a distinct department of THE CRITIC, and we invite communications of the class described relative to travelling both abroad and at home.]

Hand-Book for European Tourists, &c. By F. COGHLAN. London, Hughes.

Mr. COGHLAN'S *Hand-book* has at least one advantage over MURRAY'S, that it is much cheaper, and more condensed. The traveller contemplating a tour from the north to the south of Europe must carry with him a complete library of MURRAY. Mr. COGHLAN relieves him from this burden by his *Hand-Book*, which in one volume comprises a complete guide to Belgium, Holland, the Rhine, Germany, Switzerland, Italy, and France. Thus he adapts himself both to pocket and portmanteau. Necessarily his information is not so full as MURRAY'S, but it is not less accurate. The traveller's most pressing wants are consulted; routes, hotels, prices, tariffs, are fully given. There is, too, an introduction to the sights of each place; and here it is that Mr. COGHLAN gains in space; for, instead of a history of the places described, he contents himself with indicating to the tourist what there is worth seeing, and where it is to be

found. To these attractions he adds some useful practical advice, the results of his own experience, and a list of all the steam-packets and of the continental railways. The edition before us, being quite new, brings down this information to the latest moment.

SKELETON TOUR FROM VIENNA TO SWITZERLAND ACROSS THE TYROL.

TO THE EDITOR OF THE CRITIC.

SIR,—"An Inquirer" wishes to know the most picturesque route from Vienna across the Tyrol into Switzerland. I came down the Danube in the summer of 1842, and walked in the Tyrolese and Salzburg Alps during the summer months of 1843. The first part of the journey from Vienna should without doubt be performed by steam, as the chief beauties of the Danube lie between Vienna and Linz, including many objects of historical interest; amongst these the castle of Dürrenstein, where Cœur de Lion is said to have been confined. The first part of the voyage is a little tame, the Danube flowing in a wide stream through level banks; but the scenery gradually improves as one goes up the stream; the left bank, although flat, is backed in the extreme distance by the snowy ranges of the Noric Alps; the right is broken into vineyards. About half-way up to Linz, as far as I can recollect, the river flows between perpendicular rocks in a deep, solemn stream. The heights are covered with large pines, which give them a most savage character. The river abounds in whirlpools, caverns, and islets formed by fragments which have dropped from the heights. On arriving at Linz, the traveller should make for the Austrian Switzerland. There is a horse-railroad to the head of the Traun See, which he may readily cross and proceed to Ischl, a place well worth a stay of some days for the sake of its baths and excursions in the surrounding mountains. The rest of the journey depends on whether the traveller intends to walk or to ride, or to combine both. There are stellwagens (a species of omnibus) on all the great roads in the Tyrol, by which the pedestrian may readily assist himself. From Ischl he will go to Salzburg, not omitting the ascent of the Guisberg, which has a châlet at the top, and furnishes a magnificent mountain panorama. From Salzburg, Berechtesgaden should be the next point. The salt-mines at Hallein should not be forgotten. I ascended the Watzmann there, a mountain about 10,000 feet high, bivouacking on the Alp half-way, but the summit is very dangerous. Two ways are open to the pedestrian from Berechtesgaden, one over the Konigsee and the snow-covered wilderness of rock called the Steinernes Meer, into the Pinzgauer Thal, the other through the Hirsch-brecht Pass and the Hohl-wegen, a tremendous pass, choked with blocks as large as an ordinary house, to the Lake of Zell and the Pinzgauer Thal. This valley gives views of the Venediger Horn and Great Glöckner, though the weather did not allow me to see much of them. Visit the waterfalls about Kriml, climb the pass of the Gerlos (by no means difficult, but exceedingly fine), and drop down the Zillerthal (famous for fair women) into the valley of the Inn. The straight carriage-road from Salzburg to Innsprück is by Reichenhall, but the detour by Berechtesgaden will amply repay the trouble. Follow the course of the Inn; visit Hall and its salt-works; put up at the Golden Eagle at Innsprück, a thorough German house; from Innsprück proceed to Switzerland, through the Vorarlberg, with wheels. The pedestrian may vary this tour by keeping up his acquaintance with the river Inn somewhat longer, instead of leaving it at Landeck. I walked through the Finstermünz Pass, a scene of slaughter in the French war, and traced the Inn to the three lakes, where it rises at the top of the Engaddin valley, a walk of about three days from the place where I quitted the Innsprück and Meran road. In this valley there is no accommodation but in private houses in some of the villages. The people speak Romaunsch, but a different dialect from that spoken in the valley of the Ober Rhein. I dropped down from the sources of the Inn on Chiavenna, in Lombardy, and passed the Splügen into Switzerland; but there is another way, over the Julier Pass to Chur. Though the scenery at the sources of the Inn is most singular and beautiful, and one mounts the valley imperceptibly to near the verge of the perpetual snows, finding the slope to Chiavenna a most surprising change at the crest of the pass, I would scarcely advise the passage of the Engiadina, as it is most fatiguing, and somewhat monotonous in its grandeur, unless the pedestrian has much time to spare, and is willing to rough it in every sense.—I remain, &c.

A GENTLEMAN TRAMPER.

AGENCY.—Travellers on the continent are continually in need of a respectable and safe agent in England to whom they may consign goods, or by whom their baggage may be forwarded to its destination abroad. Mr. Goddard's office in the Old Jewry well supplies this want, and there those who purpose making a tour can readily obtain every kind of information they may require relating to the countries they are about to visit, and whatever assistance they may need.

ART.

THE SCHOOL OF DESIGN.

IN our last number we gave a summary of the proceedings, with the report of the committee, at the annual meeting, for transaction of business and the distribution of prizes, of the Government School of Design.

Owing to an inadequacy of talent, or of downright negligence, or of both, in some of the masters, a spirit of dissatisfaction, which ripened into insubordination, displayed itself a short time ago among the students of at least one department of the school, which led, we believe, to the resignation of one of the masters and the expulsion of several students. As the circumstances are not before us, we are without the means of judging which party is in the wrong, therefore refrain from making comment upon the quarrel until the public shall be in possession of *the facts*, which ought unquestionably to be laid before them. But whether the students or the masters were most to blame, there certainly is no falling-off, but, on the contrary, an improvement, in the merit of the works this year exhibited.

Hitherto our manufacturers have been compelled to resort to France and Belgium for their designs in most of the branches of ornamental art. Large sums of money were thus drained annually from the country, which, had these schools been earlier established, would have benefited a large and deserving class of both sexes at home. Few acts of the Legislature of late years have done so much for the interests both of the manufacturer and the artist as the establishment of a school, which, by especially cultivating ornamental art, enables the one to find the market for the talent he requires at hand available on the instant, and opens to the other a new and profitable field for the exercise of his abilities. Already have some of the leading upholsterers, glass and china manufacturers availed themselves of native talent by purchasing the right to certain of these designs, and, in some cases, securing the exclusive services of the artists themselves.

Among the works to which prizes were awarded, we noticed a design for a pyx, another for an antique vase, and a third for a chandelier, all of which exhibited happy powers of invention, and were of a rare beauty. Some of the drawings for lace were remarkable for gracefulness of line; and there were designs for shawls, carpets, paper-hangings, and table-covers, which struck us equally by the novelty and boldness of their ornaments, and the happy taste which had governed both composition and colouring.

In concluding our remarks upon this subject, we would urge upon the Government the desirability of giving larger prizes than hitherto they have awarded. This year the amounts distributed varied from thirty shillings up to eight guineas. It is not enough to say that the *property* of the design is in the artist, and that therein should lie the substantive return to his exertions. No. Heighten as far as possible the inducement to genius to put forth all its powers, and you may be sure of a handsome return; appear careless or indifferent about it, as you do by giving a *thirty-shilling prize*, and competition flags; there is small thanks to you if any thing above mediocrity responds to your demand. What we wish to see is a fair proportion between the value of a design and the labour expended on it, and the amount of the prize for the department within which the design falls.

THE CHINESE PAGODA AT KEW.

THIS lofty and elegant structure having fallen into a state of decay, her Majesty's Commissioners of Woods and Forests have very properly determined on restoring it; and in order to complete the undertaking as fully and exactly as possible, they have availed themselves of the example afforded in Mr. BURFORD's charming panorama of Nanking, where (as stated in our notice of that picture) the famous Porcelain Pagoda stands correctly figured—the sketch having been made on the spot. The pagoda at Kew was built (if we remember rightly) from the design of Sir WILLIAM CHAMBERS. In his day

much less was known of Chinese architecture than is the case at present, hence some irregularities and errors are visible in this structure, which as far as possible will be removed. The scaffolding is erected round the Pagoda, and the work of alteration and restoration commenced. We are glad of this; for it would have been a regretful thing to lose an edifice which forms so interesting a feature in the surrounding landscape, one too, that familiarizes the eye of the spectator with a style of architecture, which, though foreign to European notions, is harmonious in its proportions and graceful in its form.

MUSIC.

MUSICAL NEWS.—Most of the distinguished professors who assisted in giving brilliancy to the season just ended are now quitting London. Sivori has undertaken a short provincial tour, for which most liberal offers have been made to him, and will afterwards visit Hamburgh, where a special engagement awaits him, thence proceeding on a journey through the German states, which may occupy him till the commencement of the next London season, when he is again expected in this country. The new reputation he has acquired here by his exquisite performance of chamber music will cause his presence to be desired by all true lovers of the art. The sisters Milanollo, after a performance before her Majesty, left London last week for Brussels, and it is hoped will revisit us next year. M. Sainton has availed himself of the vacation at the Royal Academy of Music to pass a few weeks in Paris, after which he will return, having accepted a permanent engagement from the directors of that institution to give instructions on the violin, which will probably naturalize him as one of the resident professors of this country. His broad and vigorous style is well calculated to advance the pupils. M. Vieuxtemps has departed, some weeks ago, in a manner somewhat abrupt, having left unfulfilled several engagements into which he had entered, the cause of which has not yet been publicly explained. No one disputes his merit, and all will regret that too great sensitiveness to the rivalry of others should ever disturb so excellent a position. M. Godefroid, the celebrated harp player, left town yesterday; M. Gras and Madame Dorus Gras about a week since, with the intention of visiting the principal places in the south of France. The Brussels company, who have distinguished themselves so greatly by the performance of French operas as to be referred to by the amateurs of London as a genuine school of art, are on the point of leaving us; the concerts of all kinds have ceased, and after the few days more have expired in which her Majesty's Theatre will be the sole musical attraction of the metropolis, nothing will remain to invite the connoisseur in that delightful art. On the whole, it may be said that London has made decided progress in this season, and that in proportion as audiences have become more fastidious, performances have improved.

THE DRAMA AND PUBLIC AMUSEMENTS.

ITALIAN OPERA.—The only circumstance connected with her Majesty's theatre which calls for remark this week is the production of a new ballet by the indefatigable PERROT, with TAGLIONI for its heroine. It is entitled *Diane*, and has for its story the amour of the *Casta Diva* with the shepherd of Mount Latmus—happy shepherd he, if the Great Diana of the Ephesians were as charming a personage as her impersonatrix. *Of outward form*, at all events, the likeness *is most elaborate*, however of *inward less exact*. The daughter of Jove and Latona, we are told, was "generally represented as a healthy, active maiden, in a huntress's dress, with a handsome, but ungentle countenance." Now, TAGLIONI looks the picture of health, and her activity is unquestionable; as to the huntress's dress, she was semi-attired in one which, we will bet a cool thousand, Artemis never saw the equal to at the Olympian *Magasin des Modes* (there was but one establishment of the kind, owing to the little demand for dresses there), though in fashion it is classically correct to a fold, being copied from the noble statue of Diana Venatrix in the Louvre. TAGLIONI, perhaps, can hardly be called handsome, as to features, but then her countenance is not ungentle; oh, no! if ever countenance of goddess or mortal, in the antique world or our own, was characterized by gentleness *par excellence*, that countenance is TAGLIONI's. Her smile is one of the very pleasantest things in nature—or art. PERROT himself was *Endymion*, and danced as one dancing with TAGLIONI must needs dance, supposing him only to possess a certain amount of executive competency, and PERROT is a master of his art. At the close of the sketch—for it is only a sketch, unhappily—bouquets were rained at TAGLIONI's feet, with a profusion entirely regardless of expense; and the applause throughout was enormous, but not greater than TAGLIONI merited; and let us in justice add, not greater than PERROT merited, both as author and as dancer.

HAYMARKET.—This theatre continues open, notwithstanding the cession of CHARLES MATHEWS and his wife. Mr. HUDSON has most efficiently replaced the former, both in *Young Revel*, and as *Young Goldthumb*, in *Time Works Wonders;* and Miss JULIA BENNETT, succeeding to Madame VESTRIS's part in the latter play, acts it very nearly, if not altogether as well, and looks it infinitely better. WEBSTER himself has taken CHARLES MATHEWS's part in *Used Up*, and fills it in a manner so satisfactory to the audience as to render it additionally unnecessary to him to go any great lengths in the way of concession to the insurgents. At the same time we shall be very glad to find matters arranged between the parties, for though Mr. WEBSTER, it is manifest, can manage without Mr. and Mrs. C. MATHEWS, yet their names looked auspicious in the bills, and their acting was *pretty to observe*, as Mr. Pepys has it. The *casus belli* is stated to have been CHARLES MATHEWS'S refusal to take the part of *Young Revel*, as being *infra dig.;* but we imagine there must have been some graver matter in dispute; in all probability the contemplated permanence of the Haymarket season operating against the fulfilment by Mr. MATHEWS and Madame VESTRIS of their engagement at the Surrey. JERROLD has undertaken to have another comedy ready for next season, to be attended, we hope, with as full success as that which *Time Works Wonders* has realized. For the latter play, the author already cannot have received less than a round 1,000*l.*, "and there's pippins and cheese to come;" while, for his next production, he is to be still more amply remunerated. As far, therefore, as this ornament of English literature is concerned, the lamentation about no encouragement of native talent does not hold good; and we doubt much whether, as a general fact, it is justified. The matter is, that native talent, in common with foreign talent, where it does exist, is no sooner acknowledged—and the acknowledgment on the part of the public is neither tardy nor ungrudging—is too apt to set up preposterous pretensions; not merely to claim due encouragement, but to grasp at all the merit and all the money, and if its bad ambition be not satisfied, to run rusty and sulk in its tub.

DRURY-LANE.—The Brussels company gave their farewell performance on Friday night. The opera selected was *Les Huguenots*, and never was that admirable work more admirably executed. The entire *troupe* seemed to have formed a resolution to leave a profound impression on the English public, and they fully succeeded in this purpose. There was a crowded attendance. We earnestly hope that the company may be able to give us an annual visit. We should imagine that the more favourable time for them would be the months in which the Italian Opera does not present its all-powerful attractions. True, the period suggested would not be the London season, *par excellence;* but there are always in our metropolis, at whatever time of the year, wealth and taste, and *ennui* enough to furnish an overflowing audience for the largest theatre within the bills of mortality, if there be aught worth seeing or hearing on its stage.

VAUXHALL GARDENS.—A third grand masquerade and carnival *al Fresco* has been given at these gardens, and we are glad to say with great success. The whole resources of the immense establishment were brought into combined operation, and the result was certainly a most magnificent and amusing affair. The illuminations were as fine as any we ever witnessed, even at Vauxhall; and the fireworks, under the highly competent direction of Mr. DARBY, were exceedingly brilliant. JOEL, heretofore HERR JOEL the sifleur, now Signor JOEL IL DIAVOLO, made his descent on a single wire, very wonderful assuredly, and very entertaining to those who like such exhibitions, among which number, however, we, being nervous, do not count. However, there were entertainments enough for every variety of taste and temperament, and, universally welcome, there was MUSARD, with his perfect *orchestre*, so perfectly directed by him, and his charming waltzes and quadrilles, and polkas and galops, as powerful in their motive influence as the magic fiddle in Grimm's story. Here is a programme for you:—*Quadrilles*—La Syrène, Les Tambours de la Garde, Les Hongroises, Les Etudians de Paris, La Tulipe Ouragueuse, Les Diables de l'Opéra, Quadrille de 1845 (composed, by order of her Majesty, for *the* Court ball), Bonhomme Dimanche, La Part du Diable, Zanetta, Puritani, Espagnol, Le Roi des Ménétriers. *Waltzes*—Brussler Spitzen, Brandhofen, La Somnambula. *Polkas*—Die Schonste, Vauxhall, Nationale, and the Grand Galop des Bals de l'Opéra, with an ample selection, besides, from the most popular productions of STRAUSS, LANNER, and LABITZKY. If here be not matter for dancing, where shall you seek it? There was a Yager brass band, moreover, conducted by Mr. T. LEWIS, who performed in excellent style a variety of pieces. The refreshments which fell more immediately under our observation were decidedly eligible, and the prices, pursuant to the new and most judicious system, place them within the reach of all the frequenters.

ROYAL POLYTECHNIC INSTITUTION.—The celebrated diver and swimmer, Captain STEVENS, is at present giving some most interesting lessons in the art of swimming at this institution. The illustrations or experiments are exhibited in the person of his son, a boy of only eight years of age; and really his graceful and pleasing attitudes while immersed in the water, and the facility with which he swims and dives, render the whole a most interesting exhibition, unattended also by the slightest cause of pain to the most sensitive visitor. Dr. RYAN'S lecture on steam-boiler explosions continues to attract large audiences, and this perhaps may justify the directors in keeping it so long before the public. We were much pleased to find that Dr. RYAN has introduced into his lecture Mons. BOUTIGNY'S experiments connected with the action of water on red-hot plates of metal, as we have no doubt that many anomalous explosions may be thus satisfactorily explained. The recently-invented apparatus of Earl ROSSE for indicating the action of the feed-pump of the boiler was also beautifully and simply explained by the lecturer, and elicited the warm approbation of a most respectable and numerous audience, which quite filled the theatre of the institution. We find that Professor BACHHOFFNER, in his lecture on the atmospheric railway, traces the invention of the principle to a Mr. MEEDHURST, who wrote on the subject some twenty years ago. Verily there is nothing new under the sun!

ORIGINAL CONTRIBUTIONS.

STANZAS FOR MUSIC.

THE FORGET ME NOT.

When from the earth the sable night
With fairy step hath pass'd away,
And yellow streams of golden light
Proclaim the faint approach of day;
Then, as I turn my wand'ring eyes
To one endear'd and hallow'd spot,
A little flower, of lustrous dyes,
Shall softly breathe Forget me not.

And shall its short and simple prayer
To me be whisper'd all in vain?
Shall it not ev'ry morning bear
Some still more sweet and soothing strain?
Yes—though the rival buds reveal
Some thought that Time perchance may blot,
Fond memory's light shall gently steal
Around this pale Forget-me-not.

E. M. R.

CRITIC OF TRADES, INVENTIONS, ETC.

[Every person feels the want of an *honest* informant to direct him where the best commodities of all kinds are to be purchased. New inventions for use or ornament are daily produced, which would be cordially welcomed if their merits were made known. An advertisement alone cannot be trusted. An impartial reporter is wanted in whom the public can confide. This department of THE CRITIC will endeavour to fulfil that duty. To aid the design, correspondents are requested to inform our readers of any new production for use or ornament they may try and prove, of the places where the best commodities of any kind are to be procured, and so forth. Of course no anonymous communication will be attended to.]

THE "ELECTRIC GUN."—In consequence of a communication made by Mr. Beningfield, the inventor of this instrument, to the authorities of the Ordnance, a deputation from the committee of the Royal Artillery at Woolwich, accompanied by Colonel Chalmers, the secretary, attended on Saturday at the piece of ground on the south side of King-street, Westminster, where the gun is placed, to see the experiments. As the gun is not made an object of public exhibition, and as the inventor does not allow any close inspection of his invention, it may not be without interest to those who have no opportunity of seeing it to describe, in the words of Mr. Beningfield himself, its appearance, powers, and properties. It was seen by many persons in Jersey, but in London by only a very few friends of the inventor, and a few scientific and military men. The barrel is placed "on a small carriage running upon a pair of wheels, and may be drawn by one horse at ten miles an hour. When in position, it has a third wheel attached, by which it traverses with ease and steadiness. It is light and elegant in appearance; the barrel for discharging the bullets is over the body of the machine, being about five feet from the ground, so that the engineer who works it can take a true aim; it is supplied with balls by two chambers, one of which is fixed, the other a moveable one, which is called the volley chamber, and may be made to contain any quantity of balls. From 1,000 to 1,200 balls could be discharged per minute. These volleys are shot off in quick succession, and while being reloaded, the stationary chamber continues to supply the barrel, so that a constant discharge is maintained. The bullets are five-eighths of an inch in diameter (those used in the experiments on Saturday were not so large); but in actual service, the apparatus being but little enlarged would discharge balls one inch in diameter with increased force. The bullets now used are calculated to kill at the distance of a statute mile; they pass freely through a three-inch plank, which in volley-firing is torn to atoms by their force, but if discharged against an iron target they are dashed to pieces, and if into a solid log of wood are often found welded together, appearing to be united by a semifusion." In the experiments on Saturday the distance of the target was forty yards from the gun. At that distance the effect was tremendous; a three-inch plank was perforated, and the balls which struck the iron target flattened as thin as half-crowns —indeed, to mere plates of metal—and frequently beat to atoms. The rapidity of the discharges was very surprising; and the discharges were kept up without intermission apparently as long and as continuous as the engineer thought fit. What the report of the deputation will be of course cannot yet be known. To the engineers, and to the military and naval officers who have been present at the trials, the results have been satisfactory, and the most unqualified praise has been given to the inventor, and the highest testimonials of the efficacy and importance of the invention. The cost for keeping the machine in a continual discharge for eighteen hours, resting a few minutes every four hours, has been estimated at 10*l.*; during which time more bullets would be discharged than from the fire of two regiments of musketry firing at their greatest rate of quickness.

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

PHENOMENA OF CLAIRVOYANCE.

OUR anticipations that we should glean much valuable information from the very curious and interesting case of clairvoyance which we have described in the last two numbers of THE CRITIC have not been disappointed. The boy has been submitted to experiments of various kinds, with results that have astonished all who have witnessed them. In two ways has progress been made. Many thoughtful minds, of influential station, whose opinions guide others, have seen and satisfied themselves that clairvoyance is a truth in nature. But that which is of yet greater importance to science than the opinion of any man, however he may sway the minds of his fellows, is the insight we have succeeded in obtaining into the *modus operandi* of the faculty, and the startling conclusion to which it appears to lead. We are not at this moment in a position to lay before the public all that has occurred during the past week relating to both of these lines of progress. Neither is yet completed, though the goal is in sight. As to the first, if we are not much mistaken, conversions of distinguished opponents of Mesmerism to a perfect convicion of its truth will be proclaimed by those who have had the honesty to make trial for themselves, and possess the moral courage to avow a change of opinion, effected by facts that cannot be disputed. As to the second, we can this week do no more than state that we have good reason to suppose that we are upon the very threshold, if not actually in possession, of a discovery that will startle the world. We are loath to announce it until it shall be confirmed by a greater number of experiments than we have been yet able to make. But if our present surmises should prove to be correct; if further research should exhibit the same results as past trials, then shall we have succeeded, by investigation of the case we have recorded, in ascertaining the true seat of the faculty of clairvoyance; and if it be as we have reason to believe, then follows the most interesting result—that clairvoyance is not a faculty peculiar to the mesmeric or the somnambulist state, but that it is possessed by everybody, being only

quickened and exalted in mesmeric patients, in like manner as in them is every other mental faculty exalted.

Again we say, we have not sufficiently established the fact by experiment to justify its positive announcement. As yet it is only a case of strong probability; but if further inquiry should ever so slightly confirm the views that have flashed upon us in the course of the series of experiments now in progress, we will at once ask the aid of all the readers of THE CRITIC in an investigation which must change the face of physiology.

In the mean while we throw out one curious circumstance for the reflection of the thoughtful. We have closely examined the boy again, as to the manner of his seeing the objects inclosed in the card-case and wrappers, whether or no it seemed as if he was looking through a transparent medium. His description deserves to be noted. He says that his eyes feel as if they were drawn up into his forehead; then a blue light comes before them; then he sees the box; then that disappears, and he sees the packet inclosed in it; then one fold of the paper vanishes, then another, and so on until the word or thing in the centre is perceived. The word does not come into his mind all at once, but letter by letter, and every fresh *surface* interposed between him and the object offers a fresh obstacle and increases the difficulty. He has so many more distinct visions and vanishings. The objects disappear as he fixes his attention upon them, precisely as when we fix the eye steadily upon several objects at a distance; the outer ones of the circle of sight first become luminous, then vanish, until nothing is visible but the single spot in the centre of the field of vision. The power comes and goes in flashes, each one lasting only for a minute or two.

We shall of course continue to lay before our readers the results of the careful experiments now being made into a subject as important as it is interesting.

CLAIRVOYANCE.

Plymouth, July 21, 1845.

SIR,—It is a matter of great importance that the truth of clairvoyance should, if possible, be established beyond the possibility of a doubt, and I know of no means so likely to accomplish this as the publication of a series of cases, narrated just as they occurred, and well authenticated by names and dates. An accumulation of evidence of this description from various parts of the country, by parties wholly unknown to each other, must carry conviction to every unprejudiced mind. The case which you have published in the last number of THE CRITIC is an admirable commencement of such a series, and will, I hope, be followed by equally clear and explicit narratives from many of your correspondents. I send you one which was perfectly convincing to myself, and which was open to none of the ordinary objections on the score of possible collusion and deception.

A lady residing in Plymouth has under her care a youth about thirteen years of age from Mexico. He was suffering severely from a complaint somewhat of the nature of erysipelas, and it was determined to try the effects of Mesmerism upon him. He proved a very susceptible subject, evinced many of the higher phenomena, and in a few weeks was entirely cured by mesmeric treatment. He soon gave indications that he possessed the power of clairvoyance, and many very satisfactory results were obtained. I resolved, however, to place the matter beyond the possibility of doubt; and for this purpose I took with me one evening a gentleman who had only just arrived in Plymouth, who was a stranger in the town, and wholly unknown, not only to the boy, but to every member of the family under whose care he resided. Tom was speedily put into the mesmeric state, and placed *en rapport* with my friend. The following scene occurred:—

"Do you know where I am staying in Plymouth?" "No." "I am lodging in Park-street. Do you know where that is?" "No." "It is in that direction (taking Tom's hand, and pointing it in the direction of the street). "Oh, yes, I see it—I'm there." "Now go with me to the house." "Yes, I'm there—I'm there." "Go in;—Are you in the passage?" "Yes." "On which side is the parlour-door?" "On the right." "Go into the parlour; whom do you see?" "A lady." "How many persons are there?" "Only one—a lady." "What is she doing?" "Sitting at a table reading." "Has she a dark or light complexion?" "Dark." What colour is her hair?" "Black—very black." (This was said with great emphasis.) "How many windows are there in the room?" "One." "Describe the furniture." This he did correctly, with one mistake only; he said the table was round, instead of square, but corrected himself almost instantly.

His answers were precisely correct, and given without any hesitation; a lady was sitting alone reading in the room, and her hair was of a jet black.

All possibility of doubt or deception in this case was absolutely destroyed, and it alone would have demonstrated to my own mind the certain existence of the faculty of clairvoyance.

On another occasion I took a sheet of writing-paper, and going to the farthest end of the room, I printed with a pencil the word LONDON in Roman capitals, about three-quarters of an inch high. I was careful not to press hard enough to leave any indentation by which the slightest clue could be obtained by touch. I turned the paper downwards, and brought it to the boy with the printed side underneath. I placed his finger on the spot, and asked him what I had *written* there. The moment his finger touched the spot, he exclaimed sharply, "It isn't written—it's printed." "Well," I said, "what is it?" "London," was the immediate reply. He was equally correct with the word "Tom."

He played at cards with the greatest ease and delight, and it made no difference whether his eyes were bandaged or not. He was frequently requested to name a card before it was turned up, and seldom failed. On one occasion his antagonist remarked that Tom must win, for that he held all the knaves. "No," said Tom, "you have one." His opponent maintained that he had lost them all. "I am sure," said the boy, "that you hold one, it is the third from the bottom in your hand." The gentleman examined his cards and found that the boy was perfectly correct.

As he regained his health and strength, his powers of clairvoyance gradually declined, and have now almost wholly disappeared.

Such is a narrative of one of those cases which demonstrate the existence of a faculty or power which has thus far baffled the researches of every inquirer; but there can be no question that inquiry and investigation have been greatly limited and cramped by the senseless clamour which has been directed against clairvoyance.

The determined scepticism of some, and the groundless fears of others, have driven from the field of inquiry many of the best physiologists of the day. Facts, however—those stubborn fellows—will tell their tales and exert their influence, and THE CRITIC will render good service to Mesmerism by bringing into one channel a variety of testimony confirming the *truth* of clairvoyance. Its *why and because* may be an after-consideration.

EDMUND FOY.

PHRENO-MESMERISM.

TO THE EDITOR OF THE CRITIC.

SIR,—I feel certain that all your readers, whether believers or sceptics, would be ready, like myself, to express their gratification at the interesting collection of mesmeric phenomena which you are presenting from time to time in the columns of THE CRITIC, and to admit the general fairness and ability of your editorial comments thereon, as well as the cautiousness you recommend and practise in your experiments and deductions from them.

On one branch of the subject, however, I would respectfully suggest that you seem, like many others, to have jumped to a hasty conclusion; and that is in considering that the well-known phreno-mesmeric experiments have necessarily proved or corroborated the truth of phrenology. Having been myself for some years a firm believer in the general principles of that science, and also in many of the wonders of Mesmerism, I should be glad enough to arrive at the same conclusion; but it appears to me that the experiments necessary to decide the question must be conducted in a manner different from those hitherto exhibited. The reason for this view is simply this: that the experiments so far have been conducted by persons acquainted with phrenology, and as one of the theories of mesmeric clairvoyance supposes the patient sees into the mind of the operator (or person *en rapport*), it follows that the supposed manifestations of phrenological organs might be only, as it were, the echo of the intentions of the latter, and might not arise from any internal excitement of the particular portions of the patient's brain.

Now this is a point of great importance, and it seems to me a topic worthy of the consideration of your Society for the Investigation of Mesmerism, as an humble member of which I would suggest that the experiment in question should be tried with the necessary precautions, and the result announced in THE CRITIC.

Let both patient and operator be ignorant of phrenology, and let the latter excite such portions of the patient's brain as may be pointed out to him (by means of a plain bust) by a person acquainted with the position of the organs, who should not, of course, mention them. The result would, I have no doubt, be interesting to many of your readers, as well as

Your obedient servant,

Halifax, July 29, 1845. M. H. RANKIN.

To Booksellers.—*A stamped copy of* The Critic *sent regularly to any Bookseller, for his own use, at the cost of stamp and paper only, on prepayment of* half a year's subscription, at least (4*s.* 4*d.*), *which may be transmitted in penny postage stamps.*

Booksellers *and Keepers of Circulating Libraries are requested to communicate to* The Critic *the results of their experience as to books and classes of books most in demand, and other similar information. Books wanted to purchase inserted in the weekly list without charge.*

BOOKSELLERS' CIRCULAR.

There is some slight stir in the publishing world, and just as people are all hastening away to spread themselves over the face of the earth, our wise publishers begin to bring out new books. Many are noticed in this Critic, others are in the hands of our reviewers, who, being instructed to observe impartiality, give notice, and we transfer the warning to our readers, that they will not undertake to do justice to books committed to them if they are expected to peruse the pages and compose their criticisms within two or three days of their issue. But, perhaps, our readers may ask, how then do others contrive occasionally to give a notice of a book on the very day of its publication? The fact is, that the other literary journals are either the property or under the control of publishers. Proof-sheets of their works are sent to the editor while they are passing through the press; he or his contributor writes the notice as the sheets are put in type, so that as fast as the printer proceeds, the writer of the review keeps pace with him, and they both conclude their labours at the same moment. This system is, of course, entirely incompatible with faithful criticism. But that is a quality not looked for, nor would it be permitted. The object is to push the book into a sale whether it be good or bad. For the public, therefore, there is simply a choice between an honest guide pausing to survey the ground before he points the path, or a dishonest one, who affects to lead that he may pick your pocket.

In furtherance of the design of The Critic to present the English reader a Journal of Foreign as of Home Literature, arrangements have been made for adding to those which already appear in our columns a record of the current literatures of Italy, Spain, and Portugal.

OPINION OF THE CRITIC.

TO THE EDITOR OF THE CRITIC.

Sir,—I have been a subscriber to The Critic from the commencement. Heartily approving, as I do, of its principles, and as the best medium the bookseller and library-keeper ever had of gaining much useful knowledge with little trouble (no trifling desideratum with men otherwise actively employed), you may, I think, confidently rely upon their support *generally*; individually, at least, you shall have all that can be given by

Your well-wisher,

Sleaford, July 26, 1845. J. Smedley.

REGISTER OF NEW PUBLICATIONS,

From July 26 to August 2.

NOTICE TO BOOKSELLERS.

A Register lies at The CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* The Critic, *and no charge will be made either for registration or for publication in* The Critic. *Particulars forwarded* by letter *will be duly inserted.*

LIST OF NEW BOOKS.

Abercrombie's (John) Pathological and Practical Researches on Diseases of the Brain and the Spinal Cord, 4th edit. 12mo. 6s. cl.—Autobiography and Correspondence of Sir Simmons d'Ewes, Bart. edited by J. O. Halliwell, esq. 2 vols. demy 8vo. 1*l.* 8s. cl.

Barbarie Predicate a Roma, nel Secolo Decimo-nono, scritto da Raffaele Ciocci, 12mo. 3s. 6d. swd.—Burgh's (Rev. W.) New Marginal Readings and References on the Four Gospels, fc. 8vo. 4s. cl.

Chalk's (Elizabeth) Peep into Architecture, with Illustrations, square, 4s. cl.—Cosin's (Bishop) Collection of Private Devotions, 13th edit. royal 32mo. 5s. 6d. cl.—Credit, the Life of Commerce, by J. H. Elliott, 12mo. 4s. cl.

Days and Seasons, a new vol. of Church Poetry, 18mo. 4s. 6d. cl.

Fortunes of Hector O'Halloran, by W. H. Maxwell, 8vo. 9s. cl.

Gertrude, by author of "Amy Herbert," edited by the Rev. W. Sewell, B.D. 2 vols. fc. 8vo. 9s. cl.—Goldsmith on the Doctrine and Practice of Equity, 3rd edit. crown 8vo. 9s. bds.

Harrison's (Rev. B.) Historical Enquiry into the Interpretation of the Rubric, 8vo. 10s. 6d. cl.—History of our own Times, by the Author of "Court and Times of Frederick the Great," Vol. II. post 8vo. 10s. 6d. cl.

Kennaway's (Rev. E. C.) Sermons Preached at Brighton, fc. 8vo. 7s. 6d. cl.

Loudon's (Mrs.) First Book of Botany, with Illustrations, 2nd edit. 18mo. 1s. cl. swd.

Memoirs of the Life of John Constable, esq. R.A. by C. R. Leslie, R.A. with engravings, fc. 4to. 1*l.* 1s. cl.—Marco Visconti, by Grossi, 2 vols. in 1, 12mo. 5s. cl.—M'Farlan's (J. M.) Version of the Prophecies of Ezekiel, retaining the Order of the Hebrew Original, 8vo. 5s. cl.—Memoirs and Correspondence of George, Lord Lyttleton, 2 vols. 8vo. 1*l.* 4s. bds.—Minstrel Love, by Baron de la Motte Fouqué, nine original designs, 12mo. 7s. cl.—My Marine Memorandum Book, a Novel, by Hargrove Jennings, esq. 3 vols. post 8vo. 1*l.* 11s. 6d. bds.—Magic Goblet (The), by Emilie Carlen, Vol. II. imp. 32mo. 2s. swd. (Clarke).—Murray's Hand-Book for Spain, 2 vols. crown 8vo. 2 large maps, 1*l.* 10s. cl.

Nicholl's (Rev. B. E.) Practical Sermons, 12mo. 6d. cl.

Ocean-Work, by the author of "Breakfast-Table Science," 18mo. 2s. 6d. cl.

Practical Manual of Photography, by a Practical Chemist and Photographist, 12mo. 1s. 6d. swd.—Pulpit (The), Vol. XLVII. 8vo. 7s. 6d. cl.—Prince of Orange (The), a Tale of the Dutch Protestant Revolution, 3 vols. post 8vo. 1*l.* 11s. 6d. bds.

Selectæ è Profanis Scriptoribus Historiæ, &c. new ed. 12mo. 3s. 6d. cl.—Stevenson (Rev. John), Christ on the Cross, an Exposition of the XXII. Psalm, new edit. post 8vo. 7s. 6d. cl.—Stevenson (Rev. John), The Lord, Our Shepherd, an Exposition of the XXIII. Psalm, post 8vo. 5s. cl.

Thiers' History of the Consulate and Empire, translated by D. F. Campbell, esq. Vol. IV. (Colburn's Edition), 8vo. 5s. cl.—Thoughts on the Holy Spirit and his Work, by the author of "Thought upon Thought," 1 vol. royal 12mo. 5s. 6d. cl.

Walpole's (Horace) Memoirs of the Reign of George III. Vols. III. and IV. 8vo. 1*l.* 8s. cl.—Willis's (N. P.) Dashes of Life with a Free Pencil, 3 vols. post 8vo 1*l.* 11s. 6d. bds.—Wolski's (F. A.) New French Grammar, with Exercises, 12mo. 3s. 6d. bds.—Wood's (Helen) Conversations on English Grammar, 7th edit. 12mo. 3s. 6d. cl.—Worsley's (W.) Six Discourses on the Principles of Unitarianism, 12mo. 3s. bds.

BOOKS WANTED TO PURCHASE.

No charge is made for insertion in this list. Apply to the Publisher of The Critic, stating prices.

Farey on the Steam Engine.

The 4th number of the "Mathematical Associate and Enigmatical Entertainer," published about 1830-1, by Sherwood and Piper.

The Poet Campbell.—Sir Robert Peel has appointed Mr. Archibald Campbell, nephew of the poet, to an office in the Customs, as a token of his respect for the memory of Mr. Campbell.—*Standard.*

GLEANINGS.

Singular Instance of Canine Sagacity.—A singular instance of canine sagacity and affection was discovered the other night in an unfrequented part of the beautiful Den of Craighall. A bitch of a superior description, belonging to Mr. Walker, Cassindilly, has several times had young dogs, which were always drowned. On these occasions she evinced great uneasiness and distress; and on the present resolved, if possible, to secure her young and rear them in safety. For some time past she had been observed to leave the farm and return at regular intervals for her food; and so anxious did she appear to keep her retreat secret, that she was often known to go out to a high place near the farm and wait until she saw her road clear, when she would run off in some new direction, for she was never known to take the same road twice. Once or twice she was noticed about Craighall, and after search it was found that she was rearing her young family in a hole in one of the old quarries, at a distance of two or three miles from the place where she received her food! As a reward for her fidelity and attachment, her young have been taken under charge by Mr. Brown, the keeper of the Den, and food has been supplied to her, so that she continues to nurse the pups in the place where they were born. There have been many applications for the pups, which are dogs of a first-rate appearance.—*Fife Herald.*

THE CRITIC,

And Journal of Literature.

SATURDAY, AUGUST 9, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

JOURNAL OF ENGLISH LITERATURE.

PHILOSOPHY.

The Anatomy of Sleep; or the Art of procuring sound and refreshing Slumber at Will. By EDWARD BINNS, M.D. 8vo. Second Edition. London, 1845. John Churchill.

WHEN we reflect how large a portion of human life is passed in sleep, how important is its purpose, how necessary its recurrence to the animal and mental economy, both in health and disease, and how various and multiplied are the antagonistic influences opposed to it, in the shape of sickness, anxieties and troubles, we become sensible of the value of a judicious inquiry into its peculiar nature and properties, since from such only may we hope for a result which shall place within our power the means of commanding this refreshing agent when most needed, and at the same time a knowledge how to regulate the use of it so as best to serve the interests of the mind and body.

Many as have been the writers who have considered this subject, from GALEN down to BICHAT and MACNISH, little light has been thrown by them on this most curious and interesting and important inquiry; they have speculated and doubted, theorized and experimented enough, yet nothing determinate has followed—the true physiology of sleep, like the *elixir vitæ* of the alchemists, remains to be discovered.

The genius of MACNISH—no common one—though devoted with earnestness and zeal to the investigation, failed to penetrate, much less solve the mystery; he produced an entertaining rather than an instructive work, adding little to what was already known, and less that was of practical utility.

Nor can we compliment the author of the book before us upon having accomplished more than his predecessors, or furthered in a material degree our knowledge of the subject. The very title of his book is an unhappy one. "The Anatomy of Sleep," or the "Art of procuring Slumber," as though the latter sprung from and were a natural consequence of the former; with the same propriety might he have written a treatise on human anatomy, and styled it "the theory of life." But the aim of the writer, whether he have succeeded or not, must not be overlooked; it does honour to his heart. Considering sleep, as Lord BACON esteemed it, "the true balm of life, the *medicatrix naturæ* to whose *vigilance* (rather an awkward expression) we are indebted for that condition of mind and body which is termed *health*," Dr. BINNS has, in the work before us, communicated to the world the secret of procuring it in sickness and in health, at all times, in all places, and under any circumstances, at will.

This discovery, he candidly avows, is not his own; the honour of it belongs to the late Mr. GARDNER, the hypnologist,—a curious and clever invalid—from whom he purchased it for a pecuniary consideration, and now, contrary to the advice of his friends, he promulgates it for the benefit of the world. So far does our author's belief extend, that he says—"If it be possible to lengthen life by artificial means to an indefinite period—and with Lord Bacon, Darwin, Herder, Munro, and Richerand, we see nothing in the body itself which precludes this hope—it must be by the subjugation of the cerebral organs to the faculty of sleep; or, in other words, by acquiring the exercise of that property at will by which the vital powers are permitted to progress in nutrition and assimilation, unfettered and uninterrupted by the secretion of thought." Though we cannot agree with the author in his inference, that by sleep only can so desirable an end be obtained, nor, indeed, that with this frail body it can be achieved at all, there can be no doubt that the possessing of a means whereby sleep may be insured at pleasure, must materially diminish human suffering, and conduce, in a degree, to the preservation of health; and that therefore, to make such a discovery public is to confer a boon and benefit on the human family at large.

By far the greater portion of the volume before us is taken up by considerations and descriptions, which, though not altogether foreign to the expressed intention of the book, contribute so little to advance our knowledge of the main subject as to be, perhaps, better suited for separate publication—as where the author gives different recipes for the removal of tan and freckles from the face, a description of spectres, and of the four modes of death, &c.—than for a book of this nature.

The *arcanum*, to promulgate which is the avowed object of the author in undertaking this work, is contained in a few lines at its end. We do, however, no more than justice to the writer, when we say that he has pointed out very clearly in the early part of the book the distinction and connection which exists between animal and mental life; the former having its seat in the ganglionic system, the latter in the brain. For the information and benefit of our readers, and at the same time to further the benevolent purpose of Dr. BINNS, we transfer to our columns the plan he recommends

TO PROCURE SLEEP AT WILL.

Let him turn on his right side, place his head comfortably on the pillow, so that it exactly occupies the angle a line drawn from the head to the shoulder would form, and then slightly closing his lips, take rather a full inspiration, breathing as much as he possibly can through the nostrils. This, however, is not absolutely necessary, as some persons breathe always through their mouths during sleep, and rest as sound as those who do not. Having taken a full inspiration, the lungs are then to be left to their own action—that is, the respiration is neither to be accelerated nor retarded too much, but a very full inspiration must be taken. The attention must now be fixed upon the action in which the patient is engaged. He must depict to himself that he sees the breath passing from his nostrils in a continuous stream, and the very instant that he brings his mind to conceive this apart from all other ideas, consciousness and memory depart, imagination slumbers, fancy becomes dormant, thought ceases, the sentient faculties lose their susceptibility, the vital or ganglionic system assumes the sovereignty, and, as we before remarked, he no longer wakes, but sleeps. For the instant the mind is brought to the contemplation of a single sensation, that instant the sensorium abdicates the throne, and the hypnotic faculty steeps it in oblivion.

It will happen sometimes that the patient does not succeed on the first attempt; but he must not be discouraged. Let him persevere, taking in full inspirations and expirations thirty or forty times, without attempting to count them; for if he does, the act of numeration will keep him awake; and even should he not succeed in inducing very sound sleep, he will, at least, fall into that state of pleasing delirium which is precursory of repose, and which is scarcely inferior to it. Many trials have satisfied us of this.

Sponging the body before retiring to rest, whether in winter or summer, and rubbing the surface afterwards with a coarse towel, are preliminary steps which conduce much to sound sleep.

If sleeplessness be the effect of severe pain, an anodyne, under the advice of the medical attendant, may be taken; but this, if possible, should be avoided. If from cold feet, a blanket at the foot of the bed, between the sheets, will give the necessary heat; or, what is as effective, sponge the feet with a coarse towel dipped in water, then dry them well, and put on a clean pair of worsted socks. This precaution should be taken by all persons who are liable to colds, coughs, and asthmas, and East and West Indians should never, till they have become acclimatized, sleep without them.

On no account should the bed be placed so that the rays of light from the window will fall upon the eyes, or be allowed to stream in upon them horizontally. In such cases, sound sleep is nearly impossible.

In a note we are informed that since the publication of the first edition of this work, several persons have declared they could not induce sleep by this method. To these and all such as fail in the attempt, the author offers an assurance that they do not give it a fair trial. As in Mesmerism, continued attempts are necessary; the patient who resists for a time, we are told, eventually succumbs to the influence of sleep in this manner produced. Among a number of gentlemen mentioned who have found the prescribed means effectual are the names of

Prince ALBERT, Sir F. BUXTON, Sir J. ANDERSON, SHERIDAN KNOWLES, and Drs. LITTLE, HURST, and BALBIRNIE. As nothing can be simpler than the plan recommended, our readers can test its value of themselves; if it succeed, that "honour due" will be awarded by all to the inventor, and to him who makes the discovery public, we are sure.

In the chapter devoted to the subject of dreaming we have looked in vain for a satisfactory explanation of this curious faculty: the author supplies us with a description of what we think, see, hear, and imagine, which, from personal experience, we all knew before, but not a word from himself can we find in explanation of this curious phenomenon. A number of interesting and remarkable cases are given of premonitory and other dreams, from which we extract the following:

DREAM OF SIR THOMAS WOTTON.

In the *Life of Sir Henry Wotton*, by Izaak Walton, we find a dream related of Sir Henry's father, Thomas Wotton:—A little before his death he dreamed that the University of Oxford was robbed by townsmen and poor scholars, and that the number was five; and being that day to write to his son Henry, at Oxford, he though it worth so much pains, as by a postscript to his letter, to make a slight inquiry of it. The letter was written from Kent, and came to his son's hands the very morning after the night in which the robbery was committed, for the dream was true, and the circumstances, though not in the exact time. And when the city and University were both in a perplexed inquest of the thieves, then did Sir Henry Wotton shew his father's letter. And, by it, such light was given to this work of darkness, that the five guilty persons were presently discovered and apprehended, without putting the University to so much trouble as the casting of a figure.

DISCOVERY OF A MURDERER.

There is a remarkable case recorded of a man who, on the the investigation of a late murder committed in the North of Scotland, voluntarily came forward, and swore that he had had a dream, in which was represented to him the spot where the pack of the murdered man, a pedlar, was to be found. On searching, it was discovered very near the spot, and the first impression was, that he had murdered the man; but on conviction of the real murderer, he was acquitted on his confession, and the manner in which his dream is explained seems satisfactory. He and the murderer had passed several days together subsequent to the murder in a constant state of intoxication, and it is supposed during that period the fact of the murder, and the place where the pack was hid, were communicated to him. This is a reasonable and sensible explanation. It did not suit, however, the views of many persons, who looked upon it as a direct interference of Providence, to discover the murderer; as if it would not have been better for Providence to have excited this dreamer in the first instance to prevent the murder, by which the life of an innocent man would have been spared, rather than permitting the murder to be perpetrated, merely that a guilty man might be punished!

It is the opinion of our author that dreaming and insanity are closely allied. He grounds this belief on the fact that maniacs and dreamers are, in common, inundated with a superabundance of ideas, have a concatenation of impressions which invert order, escape arrangement, and defy control—a conclusion unwarranted, we opine, by any thing more than these similarities. It will surprise some of our readers to learn that so clear and just a thinker as FRANKLIN was a believer in the efficacy of dreams. He asserted that he had been several times assisted in dreams on the issue of affairs in which he had been engaged during the day. LA FONTAINE made verses in his sleep. ROUSSEAU composed the beautiful air which is called his *Dream*, while lying asleep on the benches of the theatre at Venice; and TARTINI composed the *Devil's Sonata*, as he stated, in a dream. From the first volume of the *Causes Célébres* the author has taken the following story of two lovers who, prevented by an accident from marrying, after the supposed death of the lady, fled from France and lived together happily abroad.

Two men in trade, who lived in the Rue St. Honore at Paris, nearly equal in circumstances, both following the same business, and united in the closest bonds of amity, had each of them a child, much about the same age. These children were brought up together, and conceived a mutual attachment, which, ripening with years into a stronger and more lively sentiment, was approved by the parents on both sides. This young couple was on the point of being made happy, when a rich financier, conceiving a passion for the young maiden, unfortunately crossed their inclinations by demanding her in marriage. The allurements of a more brilliant fortune seduced her father and mother, notwithstanding their daughter's repugnance, to consent to the change. To their entreaties, however, she was obliged to yield, and sacrificed her affections by becoming the wife of the financier. Like a woman of virtue she forbade her earlier lover the house. A fit of melancholy, the consequence of this violence done to her inclinations, by entering into an engagement of interest, brought on a malady, which so far benumbed her faculties, that she was thought by all her friends to be dead, and was accordingly consigned to the grave. The former lover, conceiving and hoping that what he had heard of her death might only prove a syncope, or fit of lethargy, as she had been before subject to these complaints, bribed the grave-digger to convey the body to his house in the night time. He then used every means recommended for restoring suspended animation, and was at length overjoyed at finding his efforts prove effectual.

It is not easy to conceive the surprise of the young woman on her resuscitation, when she found herself in a strange house, and, as it were, in the arms of her lover, who informed her of what had taken place, and the risk he had run on her account. She then comprehended the extent of her obligation to her deliverer, and love, more pathetic than all his persuasions to unite their destinies, determined her, on her recovery, to escape with him into England, where they lived for some time in the closest union.

At the end of ten years they conceived the natural wish of revisiting their own country, and at length returned to Paris, where they took no precaution whatever of concealing themselves, being persuaded that no suspicion would attend their arrival. It happened, however, by chance, that the financier met his wife in one of the public walks. The sight of her made so strong an impression on him, that the persuasion of her death could not efface it. He contrived it so as to join her, and notwithstanding the language which she used to impose upon him, he left her with the conviction that he was not deceived.

The strangeness of this event gave more charms to the woman in the eyes of her former husband, than she had for him before. He acted with such address, that he discovered her abode, notwithstanding all her precautions, and reclaimed her with all the regular formalities of justice. It was in vain that the lover maintained the right which his cares for his mistress gave him to the possession of her—that he represented her inevitable death but for him—that he (the husband) ought even to be accused of homicide, for want of having taken proper precautions to assure himself of her death—and a thousand other ingenious reasonings, which love suggested to him, but without the desired effect. He found that the judicial ear was against him, and not thinking it expedient to await the result of a definite judgment, he fled with his mistress into a foreign country, where they passed the remainder of their days without further molestation.

We close our extracts from this chapter on France and premature interments with the singular case of Sir HUGH ACKLAND.

Sir Hugh Ackland, of Devonshire, having died, as was supposed, of fever, was laid out, and the nurse and two of the footmen appointed to sit up with the corpse. Lady Ackland, with a view to their comfort, sent them a bottle of brandy, when one of the servants saying to his companion that as his master dearly loved brandy, when alive, he was resolved to give him some now that he was dead, poured out a bumper, and emptied it down his throat. A gurgling immediately ensued, accompanied with spasmodic action of the throat and chest. The other footman and nurse, terrified at the noise, ran down stairs, while he who had exhibited the brandy attempting to follow, precipitated himself headlong after them. The noise of the fall, and the cries of the nurse and footman, awakening a young gentleman who slept in the house that night, he got up, and going into the room where the corpse lay, to his great surprise, saw Sir Hugh sitting upright. Having alarmed the servants, the baronet was removed into a warm bed, and the family apothecary and physician summoned. In a few weeks he was perfectly restored, and lived several years after, and when he really died, left a handsome annuity to the facetious footman who had saved his life.

We conclude our extracts with the following story of a somnambulist who was taken by the ship's company to which he belonged for a ghost, and who at last walked overboard and was drowned.

When on a voyage to New York, we had not been four days at sea, before an occurrence of a very singular nature broke our quiet. IT WAS A GHOST! One night, when all was still and dark, and the ship rolling at sea, before the wind, a man sprung suddenly on deck in his shirt, his hair erect, his eyes starting from their sockets, and loudly vociferating that he had seen a ghost. After his horror had a little subsided, we asked him what he had seen? He said he saw a figure of a woman dressed in white, with eyes of flaming fire; that she came to his ham-

mock and stared him in the face. This we treated as an idle dream, and sent the frantic fellow to his bed. The story became the subject of every one; and the succeeding night produced half-a-dozen more terrified men, to corroborate what had happened the first; and all agreed in the same story, that it was a woman. The rumour daily increasing, at length came to the ears of the captain and officers, who were all equally solicitous to discover the true cause of this terrific report. I placed myself night by night beneath the hammocks, to watch its appearance, but all in vain; yet still the appearance was nightly, as usual, and the horrors and fears of the people rather daily increased than diminished. A phantom of this sort rather amused than perplexed my mind; and when I had given over every idea of discovering the cause of this strange circumstance, and the thing began to wear away, I was surprised one very dark night, as seated under the boats, with a stately figure in white stalking along the decks! The singularity of the event struck my mind that this must be the very identical ghost which had of late so much disturbed the ship's company. I therefore instantly dropped down, from the place I was in, to the deck, on which it appeared, when it passed immediately very quickly, turned round, and marched directly forwards. I followed it closely, through the gallery, and out at the head-doors, when the figure instantly disappeared, which very much astonished me. I then leaped upon the forecastle, and asked of the people who were walking there if such a figure had passed them? They replied, No! with some emotion and pleasure, as I had ever ridiculed all their reports on this subject. However, this night's scene between me and the ghost became the theme of the ensuing day. Nothing particular transpired till twelve o'clock, when, as the people were pricking at the tub for their beef, it was discovered Jack Sutton was missing. The ship's company was directly mustered, and Jack was no where to be found. I then inquired of his messmates the character of the man; and, after a number of interrogatories, one of them said, that Jack Sutton used to tell them a number of comical jokes about his walking in his sleep. Now the mystery was unravelled; and this terrific ghost, which had so much alarmed all the sailors, now proved to be the unfortunate poor Jack Sutton, who had walked overboard in his dream.

The first fellow who spread this report, and who shewed such signs of horror, was found on inquiry to be a most flagitious villain, who had murdered a woman, who he believed always haunted him; and the appearance of this sleep-walker confirmed in his mind the ghost of the murdered fair one; for, in such cases, conscience is a busy monitor, and ever active to its own pain and disturbance.

Here we take our leave of a book which, though, as we have before stated, it contains little that is new, abounds in readable and interesting matter. To persons unacquainted with that most delightful of sciences—physiology—this volume will furthermore convey instruction, and that, too, in a most agreeable manner. We should add that the notes to this work, furnished by the Right Honourable Earl STANHOPE, display a vast extent of reading, and a familiar acquaintance with the various branches of science comprehended and alluded to in the text.

BIOGRAPHY.

Memoirs and Correspondence of George, Lord Lyttelton, from 1734 *to* 1773. Compiled and edited by ROBERT PHILLIMORE, late Student of Christ Church. In 2 vols. London: Ridgway.

GEORGE, Lord LYTTELTON, is a remarkable proof of the instability of fame. Few men during their lives have filled a larger space in the eyes of their contemporaries. At once statesman, orator, philosopher, poet, historian, theologian, he mingled extensively in politics, was a leader of parties, and wrote books which were read and admired in their day. But his name is scarcely thought of now in connection with the history of his time, and his books are never opened save by those who deem that the value of a book lies in its antiquity. The reason of this must be that he was not really a great man; his position was fortuitous, the result rather of a happy combination of circumstances than of any transcendant merits of his own; and we think the conclusion of reason is substantiated by a review of his history.

But although the repute of Lord LYTTELTON among our generation is very far indeed below that which he enjoyed during his life, the memoirs of such a man are worth collecting, were it only for the sake of preserving traits of the distinguished persons of his age by whom he was surrounded. Mr. PHILLIMORE has enjoyed unusual advantages in this respect, for he has had access to the MSS. at Hagley, where he found a large mass of correspondence, from which he has taken such portions as were of the most general interest, or which seemed to throw light upon the character, habits, or modes of thought of the writers.

It is to these parts of the volumes on our table that we purpose to direct the attention of our readers. The politics we leave to historians and those who enjoy the intrigues of cabinets and the scandal of courts. Suffice it for us to observe here, that LYTTELTON's first appearance in public life was at the early age of twenty-five. For a long time he did nothing to distinguish himself, but he became a useful and active partisan, contributing severe articles to a popular publication entitled *Common Sense*, and by his *Letters from a Persian in England to a Friend in Ispahan.* He curried favour with the Prince of Wales by the basest arts, stimulating him in a course of opposition to the king. Hatred of WALPOLE, then minister, seems to have been his ruling motive, and when at length the premier was compelled to resign his long and not inglorious rule, LYTTELTON was not a little mortified that he, who had so greatly contributed to the victory, was not invited to share the spoils. He was excluded from the ministry that succeeded the downfal of Walpole. But his chagrin was not of long duration. Again there was a change, and in 1774 he obtained a place in the new administration as one of the Lords of the Treasury. It was a coalition government—gathered from all parties, without one principle of cohesion. Its duration was brief, and for some years afterwards LYTTELTON hovered between office and opposition, always a man of mark and influence, but not of sufficient power to be worth buying at his own price. Ten years afterwards, in 1755, his ambition was gratified by appointment to the office of Chancellor of the Exchequer. But for such a post he was entirely unfitted by the construction of his mind and the habits of his life. In a twelvemonth he discovered his incapacity, and retired under cover of a peerage. In the Lords he made a speech now and then, as if to remind the world that he was still in existence; but he took no active part in politics, and seemed to care very little for party.

During all this portion of his life he never abandoned the pursuit of literature, nor, amid the intrigues of party, did he for a moment cease to cultivate the acquaintance of the choicest spirits of his age. Himself an author of no small repute, he loved the society of authors, and, absent, he kept up a correspondence with them. The extent of this pleasant association is stated by Mr. PHILLIMORE in his preface.

His acquaintance with Pope began before his expedition to the continent, and from the period of his return to England to the death of that poet, in 1744, he appears to have been among the most welcome and most honoured guests who sought the classic bowers of Twickenham; and surely they were a brilliant company. Deeper and purer philosophy, alas! might well have been drunk at other fountains; but poetry, wit, learning, eloquence, and genius of many kinds, flowed here in no scanty streams. Here, too, high birth and great station aided by their wealth, and encouraged by their advice, the development of those gifts in others which largely adorned themselves. Here it was that Bolingbroke, Chesterfield, Bathurst, Pulteney, Orrery, Horace Walpole, Wyndham, Marchmont, Murray, Queensbury, Cobham, and his kinsman, "young Lyttelton," mingled in all the gaiety and freedom of social intercourse with Pope, Gay, Thomson, Glover, Mallet, Hammond, Moore, and sometimes Swift—at an earlier period, with Kneller, the painter of his day—and foreigners of no mean note, Algarotti, Voltaire, then rising into celebrity as the author of the *Henriade*, and the illustrious Montesquieu. About this time, Lyttelton wrote his *Advice to Belinda, or to a Lady*, a poem, as appears to me, of great merit. "It contains," says Dr. Johnson, "much truth and much prudence, very elegantly and vigorously expressed; and shews a mind attentive to life, and a power of poetry which cultivation might have raised to excellence."

It is from the correspondence of these and other personages of equal fame that we propose to glean our specimens of these memoirs.

LYTTELTON was a poet, as he deemed; that is, he wrote verses faultless in feet and rhyme, and thickly interspersed with the slang of poetry. They were, however, read and praised in their day, although it may be questionable how much of the eulogy was due to admiration of the verses or to flattery of the verse-maker. But if of questionable genius

himself, he has the still rarer merit of recognising it in others. He was an especial patron of THOMSON, procured for him a pension of 100*l.* a year, and subsequently an office worth 300*l.* a year. This readiness to acknowledge worth in others will compensate for many a weakness and affectation in himself.

In a letter to POPE, LYTTELTON gives the following curious sketch of

BATH IN 1739.

I am so vastly recovered by these waters, that I can now enjoy the kindness of my friends without fearing they should suffer by their concern for me. I can hardly think of being ever ill again, after drinking down health another month, and must desire you for the future to consider me as being, next to the royal family, the most incapable of sickness, pain, or any bodily infirmity, of all the men you ever knew, excepting only the immortal Dr. Cheyney, who desires his compliments to you, and bids me tell you that he shall live at least two centuries, by being a real and practical philosopher, while such gluttonous pretenders to philosophy as you, Dr. Smith, and my Lord Bolingbroke, die of eating and drinking at fourscore. The doctor is the greatest singularity, and the most delightful, I ever met with. I am not his patient, but am to be his disciple, and to see a manuscript of his which comprehends all that is necessary, salutary, or useful, either for the body or the soul! Lord Burlington has left Bath a great deal sooner than I had hoped, or he intended, for fear of my lady's catching the small-pox, which is very much here, and a bad sort. I refer you to him for all the news this place affords, which he will give you much more agreeably than I can, and must beg you to make my compliments to Lady Suffolk, Mr. Murray, and Mrs. Blount, the last of whom I am particularly obliged to, and would always have her see with your eyes, that she may not only be very partial to me, but perceive, notwithstanding all her modesty, that there is none of her sex upon whose friendship I set a greater, or perhaps equal, value. George Grenville is in a fair way of recovery; the waters agree with him, and he mends in all respects. Cheyney says he is a giant, a son of Anak, made like Gilbert, the late Lord Bishop of Sarum, and may therefore, if he pleases, live for ever; his present sickness being nothing but a fill-up, which Providence gave him for his good, to make him temperate, and put him under the care of Dr. Cheyney. When we tell the doctor that he always has been temperate, a water-drinker, and eater of white meats, he roars like a bull, and says we are all liars; for had he been so, he could not have had an inflammation, which he is ready to prove by all the rules of philosophy, mathematics, and religion. Lord Orkney may just keep life enough to be in pain a year or two longer: I am sorry for him with all my soul, for he is a man of great merit to the public, and who has been little rewarded in proportion to the services he has done. Adieu, my dear Mr. Pope; take care of yourself, that we may have some eminent men left among us, and to make a great part of the happiness of your most faithful and obliged humble servant,

G. LYTTELTON.

On LYTTELTON'S marriage he received many letters of congratulation, some of which are here preserved. Here is one from Lord CHESTERFIELD. It is an interesting specimen of the elegant epistolary style of the accomplished courtier.

Bath, June the 19th, 1742.

Dear Lyttelton—The newspapers inform me that you are married; but what shall I say to you upon that occasion? Is it necessary, or is it not rather superfluous, for me to tell you the wishes I form for you in this the most important period of your life, when you have so long known the sincere part I have taken in the most common occurrences of it? To wish you joy were frivolous—that is certain and present; but whenever that does decline, as from its nature it one day must, may all its sweetness turn to strength or as Thomson says, may it mellow into friendship; and may that serener and more lasting state so insensibly succeed your present tumultuous one that the transition may not be perceived. This will and must happen if Mrs. Lyttelton be (what for both your sakes I heartily wish her) like yourself. * * If she has a head to discern merit and a heart to value it, and if she brings but with her the truth, the tenderness, and all the other virtues she'll meet with, even my wishes for your mutual happiness can neither exceed or survive it. Pray make my compliments to her, though I have not yet the honour of being known to her. While you are not only not content with your own existence, * * * here am I, enjoying, if I may use that expression, my non-existence, not without some satisfaction; for when the quicker pleasures of the senses are at an end, the quiet ones, till then despised, become a comfortable resource.

LYTTELTON had earnestly advised his friend THOMSON to marry, as appears by the following reply received from the poet only a few months before his death.

Kew Lane, Decr. 14th, 1747.

Dear Sir, — I should have answered your kind and truly friendly letter some time ago. My not having answered it hitherto, proceeded from my giving it mature and deep consideration. I have considered it in all lights, and in all humours, by night and by day, even during these long evenings—that the result of my consideration is not such as you would wish. My judgment agrees with you, and you know I first impressed yours in her favour. She deserves a better than me, and has as many good and worthy qualities as any woman; nay, to others, and I hope too men of taste, she had charming and piquant ones. But every man has a singular and uncontrollable imagination of his own. Now, as I told you before, she does not pique mine. I wonder you should treat that objection so lightly as you seem to do in your last. To strike one's fancy is the same in love that charity is in religion. Though a woman has the form, and spoke like the angels; though all divine gifts and graces were hers, yet without striking the fancy, she does nothing. I am too much advanced in life to venture to marry, without feeling myself invigorated and made as it were young again, with a great flame of imagination. But we shall discuss this matter more fully when I have the happiness of seeing you at full leisure. What betwixt judgment and fancy, I shall run equal risque of never entering into the holy state. In the meantime I wish to see you once more happy in it. Forgive me if I say, it would be an ungrateful frowardness to refuse the bounty of Providence because you have been deprived of former enjoyments. If you cannot again love so exquisitely as you have done, so much the better; you do not then risque being so miserable. To say that one cannot love twice is utterly unphilosophical, and give me leave to say, contrary to my own experience. Can there not be more objects than one for the same passion? If so, why cannot the passion be renewed when I find a new object? The flame of any love was never so strong yet as to burn out the heart; so far from that, the powers of the mind rather grow by exercise. The truth is, it is not a former passion that prevents a second. It is on the hardening of the heart from years and harsh untender business. If you could get so much master of your just grief as to think of a second match, I may be tempted also to try to be happy with you. I wish you joy of the sun's now turning his all-enlivening and beautiful face towards us. May the genial spirit of the returning year animate and cheer you and yet again make you happy! Than which nothing can give greater pleasure to yours,

J. THOMSON.

As marriage is the theme, let us take a letter by a very great man addressed to LYTTELTON, in answer to an epistle of congratulation on his recent nuptials.

PITT ON MARRIAGE.

31st October, 1754.

My dear Sir George,—Your warm and kind assurances of the joy you receive from an approaching event, full of every happiness and honour to your friend and servant, is a circumstance of additional pleasure and satisfaction most sensibly felt. I am indeed a most happy man. You, who know what it is tenderly and passionately to love the object of your perfect esteem and entire confidence, will best be able to estimate this happiness truly. I can add, if I may without vanity, that I have the pride as well as joy to find every taste of my mind, and more serious purposes of my life, correspond to those of Lady Hester Grenville. Would I could add, that my nature was as free from defects and weaknesses. I write this from Marlborough, so much happier than when your letter reached me, as I am nearer to the source of every felicity. My obligations to Lady Hester are indeed infinite: for what, my dear Lyttelton, have I to lay at her feet, in return for the invaluable present her goodness makes me, but a fortune very far from tempting and a health shattered and declined? The manner in which you receive my warmest wishes for your brother William's fortune and figure is most obliging. Nothing could add to it but adopting so kindly the idea I ventured to intimate concerning Bewdley. Many, many cordial thanks to you for all your kind wishes for my welfare in general, which you do me the honour to express so largely. Accept in return of the warmest and sincerest wishes of my heart for all you wish to yourself of honour or of advantage. Give me leave to comprehend all Hagley in this letter of grateful thanks. I would do myself the honour to write to Lady Lyttelton separately, but that I know this will give her less trouble as well as more pleasure coming to her through you.

I am ever your affectionate and happy friend,

W. PITT.

If Miller is with you, my kindest remembrance to him.

The stately and somewhat inflated style of BOLINGBROKE is curiously shewn in the next letter, which was a reply to an inquiry touching his health. It shews that it was a natural manner with him, and not a mere affectation.

Battersea, August the 20th, 1747.

Dear Sir,—Mr. Lynn tells me that you desire to be informed of the state of my health, it is reasonable, therefore, that I should say something to you on a subject which I should have thought otherwise of too little importance to have troubled you about it. My pains and my lameness continue, but they are both diminished since the humour, whatever it be that causes y^m^, is removed from the reins, and fallen into the thigh and knee. I shall set out on Monday for the Bath, in a confidence the physicians give me that those waters will destroy the cause, if it be rheumatick; and that if it be gouty, they will drive it into an extream part, where it may spend itself more safely at least. If I am disappointed in this confidence, I must submit necessarily, and I will endeavour to submit chearfully. All the dispensations of Providence, whether general or particular, are imposed by infinite power, and directed by infinite wisdom. Resignation is as reasonable as necessary. If I am not disappointed, if physical evils can be removed or softened, I may hope to slide smoothly into my grave, forgetting or forgiving, and sure to be soon forgotten. The whole stock of moral evil which severity of government, inveteracy of party resentments, negligence or treachery of relations and friends, could bring upon me, seems to be at last exhausted. In this temper of mind I wait for my own dissolution, and wish I did not foresee another. Your friendship will be an honour to me when I am dead, as it is an advantage and pleasure to me whilst I live. I can say the same of only few besides you. I do not overvalue myself, for I value myself att a very low rate; but the truth is, y^t^ I do not value my contemporarys att an higher, and that I shall think myself going out of much bad company when I dye: from a generation of men among whom every principle and habit y^t^ stands in opposition to public and private morality, prevails. Whilst I live in the same country with y^m^ and continue proscribed by y^m^, I shall keep in mind a passage in one of Cicero's letters, *semi liberi saltem simus, quod assequemur et tacendo et latendo.* I hope you was so kind as to let Mr. Pelham know that I am his servant and much obliged to him for giving bread to a man from whom Wager took it away most unjustly. Make ye most of this vacation, amuse yourself, and lay in a new stock of spirits against ye time that you return to publick business: you will have occasion for them all. I am, most faithfully dear s^r^, your most humble and obedient servant,

H. St. J. Bolingbroke.

(*To be continued.*)

Autobiography of Heinrich Zschokke. London, 1845. Chapman and Hall.

Heinrich Zschokke, although still alive, and enjoying the honours won by a life devoted to the service of his fellow-men, belongs to a past generation, and his memoirs carry us back to times and events that have already become the property of history. To English ears the name will be unfamiliar; for, as yet, Englishmen have condescended to a very slight acquaintance with the literature and the literary men of their neighbours. But this indifference is happily passing away; and as familiarity with the productions of foreign genius extends at home, so will the name of Heinrich Zschokke become more and more known and honoured.

The publication of his autobiography will much help to spread his reputation, and attract attention to the other productions of his capacious intellect. It is in itself a work of extraordinary interest, abounding in curious and instructive matter. It is the candid revelation of a mind that can afford to be honest, and that tells with the simplicity of truth alike of its weaknesses and its virtues, its failings and its triumphs. It is rich in lessons of practical wisdom; it is invaluable as inciting, by example, to that self-denial without which there can be no gain, and for that self-reliance without which there can be no greatness. Such a mind resolutely struggling against the disadvantages of low birth and narrow fortune,—educating itself by force of its own industry and resolute will,—rising by degrees above the depression of circumstances,—mastering its own fate by its own stern resolves, and finally asserting for itself its superiority over all artificial distinctions, and having its claims recognised by the world, is a spectacle, the contemplation of which must be a wholesome and delightful occupation.

Heinrich Zschokke was born at Magdeburgh in 1771. Both his parents died before he was ten years old, and he was consigned to the care of persons who had no sympathy for his tastes, which exhibited themselves at a very early age. He was thoughtful, pensive, retiring, and almost shy. He loved to walk, and read, and write alone; and because he preferred the promptings of his own active mind to the tasks of the schoolmasters, he was pronounced idle and dull, and was even expelled from one of the schools, lest his example should infect the other scholars. He thus pictures the sufferings of his childhood:—

Whenever I mentioned strange fancies like these to those around me, I was harshly reproached, and my childish expressions were called mad or blasphemous; or, what wounded me more than the bitterest reproaches, I was unmercifully laughed at. I became timid and silent, but did not give up my theories, because I had no others offered me to supply their place. And when gradually my busy boyish brain spun new cobwebs and castles in the air, nobody knew or cared any more about it, for I never said any thing more on the subject. I was considered as a wrong-headed fellow, who would never come to any good; as an untaught, idle, untidy little vagabond, given to laughing and crying at improper times and places; now credulous even to silliness, now mistrustful, to my own detriment; sometimes obstinate, sometimes foolishly docile. In all this there was, doubtless, a good deal of truth; but I remained what I was, because nobody took the trouble to understand me. Whenever I wanted an explanation for any thing, I had to invent one for myself. What appeared important and serious to other people, often seemed insignificant and ludicrous to me. Forms of politeness, empty compliments, stiff ceremonies, and social forms, were particularly obnoxious to me, and I considered them all so many forms of gross deceit. I had seen plenty of hypocrisy and servility in the daily intercourse of grown-up people with one another, and this made me sceptical as to all their professions. I became all the more silent and reserved, because my honest simplicity was everywhere matter of derision and laughter.

He had a brother and a sister, both his elders, who did not love him, and yet his heart burned for an object to love; he could not accommodate himself readily to their coarse habits and commonplace talk, and they could not understand his yearnings after books, and pens, and solitary musings. If he would not share their sitting-room, they would not give him candle and fire in his bedroom; and even when he had stealthily carved a lamp out of a turnip, the windows betrayed the student, and the luxury was taken from him. All this threw him backward upon himself, and luckily served only to give him self-reliance, where a lesser mind would have been soured and depressed for ever. He complained of the unfriendly rule of his sister to his guardian, and, repulsed by him, he appealed to the government officer whose business it is to see that trustees do their duty. The appeal was successful; he was removed from the scene of his cares and sent to school. Here his mind speedily expanded under the influence of congenial minds. His master encouraged his tastes, and threw open his library to the unrestrained enjoyment of the youth.

My old rector, Emeritus Elias Caspar Reichard, with whom I lived, and who is well known in the literary world as the unwearied translator of Latin, English, and Danish works without end, granted me free access to his learned retreat. This was a large, gloomy, ill-lighted room, surrounded by well-filled bookshelves. In the midst of these sat the deaf old man, from morning till night, at a large table loaded with folios and octavos, and made himself amends for the loss of intercourse with the living by familiarity with the thoughts and languages of the dead. He was then employed at his continuation of Hauber's "Bibliotheca Magica, for the Destruction of Superstition." Yet the good man, as I soon found, was himself not quite free from the diseases he profesed to cure. It is not easy to dust any thing without becoming dusty. He occasionally used me as his journeyman while occupied over his learned works; sometimes I was to translate single passages for him; sometimes to compress the quintessence of some voluminous folio into a small compass. I readily did this, and was rewarded by free permission to range unchecked in the fertile wilderness of his library. With insatiable hunger I devoured whatever chance or curiosity threw in my way, without choice or discrimination; poetry, astronomy, philosophy, geography, history, theology, and fiction. I wrote out for myself many volumes full of extracts. The life of the rector appeared to me the most enviable on earth. I resolved that I too would become a learned man, and would earn for myself an enduring name in the world. In Reichard's works I saw with proud complacency much of my own work printed word for word. I read these passages over and over again, with a curious fervour of admiration: the very letters seemed to me more beautiful than those of other words.

A reading so miscellaneous as this has been often reprobated as worthless, if not actually pernicious. We are not of that opinion. There is a period in the life of the mind having literary tastes when indiscriminate reading is essential to its

healthfulness. It is the season when the emotions and the imagination are in bloom, and thought, more tardy of growth, is just budding. Each needs its own element. The stores of poetry and of fiction—the pomp of words—the harmony of numbers attract the one; the other, as it unfolds day by day, is enchanted by the long, dim, mystical vistas that open to it on every side, all of which it pants to explore. At this era of the mind's history, books and their contents are novelties; every new page is a new treasure, and there is neither weariness nor disappointment. It is only when we have devoured many books, that we begin to find how much of them are mere repetitions one of another; how largely poetry is made of a conventional language which has sound, but no substance; how much of formula there is—how little of originality. In that omnivorous reading-fit, the young mind stores away huge piles of information, which lie there unregarded and forgotten until accident demands its use, at some distant period, when out it comes fresh from its hiding-place, a prompt, vigorous, and invaluable ally. We never have seen or heard of an indiscriminate reader in his youth who did not turn out a mind of larger capacity and more practical usefulness than the most systematic student that ever lived. The one becomes, perhaps, a better scholar, which usually means a greater pedant, but the other is the greater MAN.

Moreover, like all who *both* read and think, ZSCHOKKE began by plunging into scepticism. This seems to be the inevitable road to the truths of religion with all who are not content to take a creed upon trust. First doubt, then unbelief, then larger views, a glimmering of light from the invisible world, a faith in things not seen, and finally heaven revealed. But from the beginning of this painful pilgrimage, ZSCHOKKE endured the struggle between feeling and principle, which all who have felt will admit to be the severest trial of the thoughtful mind. He wished to believe, but could not; he abhorred his unbelief, but it clung to him. The wisdom that reconciles faith and reason is slow in coming, and it had not yet thrown its light into the glooms of his troubled spirit.

Still he struggled onwards. His hopes were now centred in the University. But he was told that he was too young. He replied that Magdeburg was too small for him, and in the pride of his self-confidence he resolved to quit it, and throw himself upon the world. He wandered about the country gaining a precarious livelihood partly by teaching, partly as a strolling player and dramatic poet, not, however, relaxing his pursuit of learning, for even then he mastered the Hebrew language. At the end of two years he tired of a wandering life, and entered himself at the University of Frankfort-on-the-Oder.

A remarkable fact is here disclosed by the candour of the autobiographer. He registered himself for the faculty of theology, although still retaining his scepticism. But his studies were as diversified as usual. He dived into philosophy, read jurisprudence, mastered many of the sciences. Nor was his pen idle. During his university life he wrote several works, among them poems and dramas, one of which was of the most popular plays of its time, and at the age of twenty-two he took degrees and honours.

The great object of his young ambition obtained, he paid a visit to Magdeburg, where he was received with much favour, and was so popular as a preacher, that he was tempted to remain there for some months. But his love of change was still upon him. He again returned to the University, and became a private tutor with great success. His account of himself when preaching, as at that period he did, a creed he disbelieved, is full of instruction, for the excuses he framed are the very same with which thousands who do likewise seek to quiet their own consciences.

THE SCEPTIC IN THE PULPIT: MAGDEBURG.

I may remark, that I never entered the pulpit but in the most solemn glow of emotion, with a fervent resolution to kindle into pious enthusiasm the hearts of my hearers. In the pulpit, doubt and terror vanished; I rejoiced in the sunshine of faith, like the most earnest Christian. I endeavoured to speak in that tone of respectful compassion and tender pity with which I fancied that Christ must have regarded his ignorant and benighted fellow-mortals. My only object was to awaken and improve my hearers. I was too much possessed by my feelings to become a dry teacher of morality, and too keenly alive to the absurdities of creeds to become a fruitless doctrinal orator. As the announcer of eternal truths and hopes, standing in perfect harmony with the laws of nature and reason, whose disciple I was, I thought it no sin to clothe these in biblical phrases and doctrines, which in my heart I disbelieved. My readers will probably wonder how I, with my doubts and more than doubts, could dare to enter a Christian pulpit—nay, could even pray with an appearance of fervour which won the sympathy of my congregation, and could address them boldly and zealously on religious topics. Yet I was no hypocrite. I said to myself that the grown man must bend to children before he can raise them to him. I remembered that Christ himself frequently used the language of Israelitish prejudice and custom; that Paul condescended to adopt the phrases of those whom he wished to convince; and that thousands of noble-minded men, to whom I could not venture to apply the name of hypocrites, are still in these enlightened days compelled to do the same.

After three years thus spent at the university, he felt a desire to see more of the world, and he set forth on a sort of tour through Germany, France, Switzerland, and Italy. At this time the French Revolution was stirring Europe to its centre. Like all the best spirits of the time, he was at first flushed with the expectation of a reign of human happiness under the protection of liberty and equality; like them, he was doomed to speedy disappointment. In Switzerland he found the people grovelling in superstition; in Paris, running riot in license.

Paris and Schlaberndorf destroyed my dreams of Republican felicity. In the old Swiss aristocracies I had seen mere withered formality held together only by the united selfishness of nobles, ecclesiastics, and civic dignitaries; in the French Republic, nothing but a caricature of freedom, formed by the juxta-position of anarchy and despotism. The huge superscriptions of the public buildings expressed the condition of the world-capital with bitter satire. "*Liberté, Egalité,*" was everywhere the word; but beside the desecrated names grinned out the mocking addition, "*ou la mort!*" through the thin veil of white paint recently drawn over it. Freedom and equality, guarded by cavalry and infantry, with loaded cannons and files of troops before the gates of the Directorial palace itself, was the most impious of lies.

On his way to Italy, he was stopped by an accident at Berne. To pass the time, he called on NESEMANN, the Principal of Reichenau. The institution was declining, and an offer was made to him to purchase it. He did so, and by his zeal and ability speedily restored its reputation and its pupils. But his attention was not limited to his own affairs. He exerted himself in the spread of education, and wrote some popular treatises on political affairs, for which he was formally admitted as a citizen of his adopted country. In the civil broils that followed he was involved, and was compelled to fly, and the opposite party gratified their vengeance by affixing his "name and picture" on a gallows as a significant hint how they would treat the original if they could catch him.

But the tide soon turned. He was elected Governor of Unterwalden soon after it had been desolated by the French, and his exertions to retrieve the miseries of the people were unwearied. A letter written at this period admirably exhibits the energetic character of the man.

The Duke of Chartres was schoolmaster at Reichenau before me, and now the simple schoolmaster has been made, not duke, indeed, but proconsul. Such is revolution! I am well contented with the tricks of fortune, and can testify, on my own experience, that the so-called grievous burden of greatness is not so very insupportable after all. Yet, I can assure you, my dignity is no sinecure. I sit all day either on horseback, at my writing-table, or in the council-chamber; I hear reports and pleadings, issue orders, review troops. More than one night I have only been able to lie down for an hour or two in my clothes. I believe that a man with pure intentions, and provided with a little general intelligence, firmness, and knowledge of the world, who is determined to see everything with his own eyes, and knows how to animate the activity of others by his own activity, may always do some good at the head of a state. The hands, feet, talents, and virtues of others, stand everywhere at his disposal. Like that of most statesmen, indeed, mine must be a very negative merit. I cannot create national happiness; I can only clear away a few hindrances here and there; the rest I must leave to the people themselves.

Would that you were here, dear friend! It is not the ashes and the graves of Unterwalden, it is not the curses and the tears of the destitute, that sometimes sink my hopes almost to despair. But when I have daily before my eyes the causes of these things; the naked brutality of passion, the law-sanctioned

stupidity and ignorance of the people, the ruthless Vandalism of the French, the irreligious fanaticism of all classes, and the universal trampling on all that is truly divine in humanity—oh, how can I be otherwise than cast down? I dare not express what I feel.

Yet, though I cannot often be very happy, you must not think me unhappy. A fresh youthful spirit, at peace with God and itself, is easily contented, and will quite as often smile as weep, at the mad doings and attempts of the world. And when I feel depressed, I am soon refreshed by conversation with Pastor Buesinger, and with Pestalozzi. I think I told you before, that the benevolent Pestalozzi has undertaken the charge and education of the orphans and poor children in the city of Stanz, being provided by Government with money for the purpose. Pity it is that the genuine nobility of this man's nature will not stoop a little more to the petty conventionalities by which men are judged by the world: will not wear a neat coat or smooth hair, for instance. Then he would be generally respected and admired, without being envied; for talents and virtues are not objects of envy. When I came here no one would visit Pestalozzi at all. He was considered as a mere poor devil, or good-natured imbecile. On that account, I often walk arm-in-arm with him in public promenades and conspicuous places, by way of defiance to civic ultra-gentility. I also frequently act as his valet, brushing the rough hat and coat, or correcting the obliquely buttoned waistcoat, before we appear in public.

This stirring public life continued till NAPOLEON chose to settle the government of Switzerland according to his own fashion. ZSCHOKKE shortly afterwards married, and retired into private life in Canton Argau, and devoted himself to literary pursuits. He wrote histories of Switzerland and Bavaria, divers treatises on theology, having emerged from scepticism to religion; established a journal, and has lived to see his children's children, and to enjoy a sound mind in a sound body to his present age of seventy.

To us the most interesting part of his autobiography is the narrative of his early struggles; to the general reader, the most attractive will be that of his public life, which brought him in contact with so many of the most eminent personages of the time, of whom he has preserved some curious memorials, and many new anecdotes of the revolutionary war. Here is one:—

The Austrian general, Count Bey, endeavoured a few weeks later to enter Unterwalden by the mountain-passes. It was a rainy day. The enemy was soon driven back with the loss of eight hundred prisoners. Among these prisoners was General Bey himself. An adjutant of Loison's, Captain Badin, had been his victorious opponent. Loison was, meanwhile, playing trictrac with me at Stanz; when, on receiving news of the victory, he mounted on horseback and hastened after his troops. During his absence, some French officers led a man in Austrian uniform before me, who had an old peasant's hat on his head, was covered with mud from top to toe, and, half frozen with snow and rain, was shivering in every limb. It was General Bey himself. After I had provided for his present wants by furnishing him from my own wardrobe with linen, clothes, and refreshment, he related to me the somewhat ridiculous mischance through which he had lost the battle and been taken prisoner. In order better to overlook the movements of his troops, he had climbed a neighbouring hill; but on the wet slippery ground, he had lost his balance, and, rolling down the opposite side, he at length found himself at the feet of some French drummers and soldiers, who were leisurely conversing with one another. They raised him very civilly, quietly took away his sword and money, declining, however, the proffered watch, and then led him before Captain Badin. Such is the fortune of war! Loison reaped all the glory and profit of the day by merely playing trictrac at home; Captain Badin remained Captain Badin.

And another, illustrating the fearful consequences of familiarizing men with scenes of slaughter:—

MILITARY AMUSEMENT.

However fierce was the fury of General Loison on learning this atrocity [the murder of a soldier], it never hurt his conscience at all to shed innocent human blood, for no reason or use whatever, so long as the enemies of France alone were the sufferers. He was riding one day for amusement with me, near the village of Treil, on the shores of the Waldstätter Lake, where a French battery was stationed: in the village on the opposite side of the lake the Austrians were encamped. In order to amuse me by making the Austrian troops march out, he ordered grenades to be thrown into their camp. On both sides cannonading began; and I distinctly saw through the telescope two men fall in the ranks of the Austrians before I could persuade the laughing general to stop his murderous game. Another day, Lecourbe had despatched his general-adjutant, Porson, towards Schwyz, with troops from Lucerne, to destroy an Austrian battery and carry off its boats. I went across the lake with Loison to witness the encounter. The fight was already begun, and the enemy driven back into the village. Whilst Loison, tired out by the heat of the sun, enjoyed his noonday nap under the shade of a tree, I went on among wounded men and corpses to Insgebohl, in order to be nearer the place of action. The sole gain at last consisted of a couple of bad boats and a small field-piece. After the heroic deed was accomplished, I inquired somewhat bitterly of Loison, as we returned, "And is it for the sake of this paltry booty that so many lives have been sacrificed on both sides?" He stared at my ignorance, and replied, "Oh, no! Don't you know, it's all for Porson's sake, that he may get favourably noticed in the next army bulletin?" Thus, it was for the sake of one man's paltry ambition that so many had suffered and died. The consciences of pious barbarians are reconciled to every atrocity by a few superstitious ceremonies; those of *civilized* barbarians, by the thought of gold or *glory*.

With the following summary of his experience of a long life, divided between action and reflection, valuable as the conclusions of a man who has both seen much and thought deeply, we will conclude this imperfect notice of a work that deserves to be largely read, and which is peculiarly fitted for the book-club.

I have had, like every other mortal, my portion of the burden of human sorrow. The first weight of an affliction might shake or bear me down for a moment, as it might any man, but with increased elasticity of spirit I rose again, and bore my appointed burden without murmuring; I will say more, although ordinary people may shake their heads incredulously. An earthly sorrow was not even always unwelcome. It weaned me from too great trust on the transitory, and made known to me the degree of strength and self-reliance which I yet retained in the season of the passions.

There is—of this I am, and have long been thoroughly convinced—no evil in the world but sin! The consciousness of guilt alone spins the black threads that run through the many-coloured web of life even to the grave. Not God is the creator of our woes, but man himself, in his self-pampering, in his over-estimation of pompous nothingness, his fostering of selfish desires. He cries like a child who cannot have every thing its own way, and at seventy years of age is not yet a man. He weeps, and complains, and despairs, because God does not *obey him*. But every external misfortune is as worthy a gift of God as every external good. I too, like other men, have suffered from the most bare-faced ingratitude; but I suffered without repining, for I had not acted as I had done for the sake of their gratitude. Friends have deceived me; I felt no anger against them, I had deceived myself in them. I bore misconstruction and persecution calmly, because I knew how discordant were opinions, and how vehement their attendant passions. The hardships of poverty I have endured without a sigh; I had learned, from my own experience, that outward poverty brings inward wealth. I have known the loss of moderate, but hardly-earned wealth; such losses never embittered a single day; they only taught me to work and be economical. I have been the happy father of happy children; twelve sons and a daughter were mine, and I have sat with a bleeding heart by the death-bed of four of these sons. I felt in the last breath they drew, that "divine sorrow" which illumines the soul!

SCIENCE.

Photography made Easy. By a Practical Chemist, &c. London, 1845. Mackenzie.

A LITTLE treatise on the use of the daguerreotype, whose instructions are so clear that the merest tyro may comprehend them in a moment. It is so small, that it may be kept in the box with the apparatus, for use at any moment.

VOYAGES AND TRAVELS.

A Tour through the Valley of the Meuse; with the Legends of the Walloon Country and the Ardennes. By DUDLEY COSTELLO. London, 1845. Chapman and Hall.

STEAM on the ocean and steam on the land will, in twenty-four hours, convey the smoke-dried inhabitant of the metropolis of the world to the fine old Flemish city of Liége. Having peeped into the Cathedral, visited the market at day-dawn, sauntered in the Boulevards, greeted the statue of GRETRY, and surveyed the museum, the traveller usually speeds to the train and whizzes away to Aix or to Cologne, anxious to find himself

among the scenery of the Rhine, so famous in song and story—beautiful, certainly, but by no means equal to its fame.

The summer tourist, seeking a track not trodden by everybody, will feel himself indebted to Mr. COSTELLO for having discovered a new one, easily accessible, abounding in beauty, uninfested with travellers, who pass it by in happy unconsciousness that they are leaving behind them a district as picturesque as any in Europe north of Switzerland. Instead of hurrying onward to the Rhine upon the railroad, Mr. COSTELLO advises that it be reached by another route which he has explored, and which is the theme of the very agreeable volume before us.

As he stands upon the bridge at Liége the visitor sees before him a valley extending between the hills that rise crowned with wood and dotted with villas on either hand. That is the commencement of the valley of the Meuse. From the neighbourhood of this bridge departs (daily we believe) a steamer for Namur. There is a choice between that and a highway on the banks, or he may change from one to the other as his mind inclines him. But whether he prefer steamer, carriage, or his own sturdy legs, the tourist must not omit to step aside from the main route to visit the caverns of Han-sur Lesse and the Abbey of St. Hubert, in the Ardennes. Having seen the wonders of the one and the beauties of the other, he returns again to the river, passes through Arlon and Luxembourg to the city of Treves, which has recently attracted the notice of Europe by the strange spectacle it has exhibited of a pilgrimage in the nineteenth century, undertaken by hundreds of thousands of persons to the shrine that boasts the possession of the Holy Coat. Treves lies on the banks of the Moselle, and having satiated curiosity there, the traveller will find another steamer ready to convey him down the Moselle to the Rhine, which he enters at Coblenz. Thus it appears that by the route described by Mr. COSTELLO, the tourist will explore three rivers, the Meuse, the Moselle, and the Rhine, and pass through a continuous succession of the most picturesque and beautiful scenery in Europe, without sacrificing a single object of interest. He merely substitutes for the tame, flat, uninteresting beaten track to Cologne and up the Rhine, a fresh and charming path through an adjoining district, meeting the Rhine at the very point where its own beauties begin. The route is longer by some five or six days, but there can be no question as to its superior claims upon those who measure their enjoyment by other standards than the distances they traverse.

But Mr. COSTELLO could scarcely have made a respectable volume even out of such materials, if he had confined himself to descriptions of things seen and instructions to those who may be tempted to follow in his footsteps. His tour is amplified by devices familiar to book-makers. No small part of it is compilation. He stops to tell the history of every place of note, to collect the legends belonging to it, or to record anecdotes of personages whose names are accidentally associated with it. This manner of writing a tour adds more to its bulk than to its value; a guide-book, a gossiping guide, and some acquaintance with the literature of the land explored, are all that is needful for producing any number of pages the publisher may deem desirable. Mr. COSTELLO has used his privilege to the fullest extent, and if he escapes censure for too much borrowing, it will be only because he does it so agreeably. As instances of this, it may be stated that he pauses before Liége to give us its history from the earliest times to the present. Then he dedicates a chapter to the language and literature of the Walloons, illustrated by translations. The superstitions of the people occupy a third chapter, and biographies of famous personages, and legends attached to remarkable places, are introduced at every opportunity. We do not adduce this by way of censure, but simply to exhibit the true character of Mr. COSTELLO'S volume, and perhapsas proof how much and various is the information it contains.

Such a work cannot be analyzed, nor could we attempt to follow the author through his tour so as to preserve a connection between the extracts by which we purpose to shew the character of a publication which deserves an order for the book-club and a place in the circulating library.

A scene at Dinant will exhibit Mr. COSTELLO'S powers of lively description.

Besides the chances of war, the church has run several risks from fire, and on one occasion was almost buried beneath a mass of rock which fell from the heights under which it is built. This catastrophe befel when the church was full of people, during the funeral ceremony of one of the principal citizens.

A few days after our arrival, we found that the apprehension of a similar accident was entertained throughout Dinant; a deep crack having suddenly made its appearance on the surface of the rock impending over the church and neighbouring houses. To prevent the mass from falling unawares, it was resolved at once to dislodge the most suspicious-looking fragment; and the whole town was in commotion to witness the operation. The market-place, the bridge, and the opposite shore of the Meuse, were crowded with gazers, and eager heads were thrust from every window that could command a view of the spot. The inhabitants dwelling on the dangerous side of the church were obliged to evacuate their dwellings, and the result was looked forward to with the greatest anxiety. Many wise heads were shaken, and not a few of the alarmists predicted the entire destruction of the church and buildings adjacent. One old woman fell on her knees, and, with many tears and lamentations, put up prayers for the preservation of her abode; and one could not but sympathize with her solicitude, though some who professed themselves acquainted with the precise position of the rock declared that there was no real danger.

We had intended that day to visit the ruins of the castle of Montaigle, about six miles off, in the district Entre Sambre et Meuse, and stopped on the bridge to witness the engineering experiment. At the hour appointed, a workman was lowered by cords from the parapet of the citadel; and there, suspended over an abyss some three hundred feet deep, with apparently no resting-place for his foot as he swung from point to point, he plied both pick-axe and lever for about half an hour, till the threatening mass was sufficiently loosened for the *grand coup*. He gave it at last; and down it thundered an avalanche of stone, shivering in its descent into a thousand splinters as it encountered the unequal surface of the rock below, but falling perfectly harmless, the direction given to it having been well calculated. A cloud of dust rose as it fell; and when that had cleared away, the workman was seen standing on a narrow ledge at the foot of the walls of the citadel, busily engaged in smoothing the surface of the rock from whence the enormous fragment—which, it was supposed, weighed about forty thousand pounds—had been detached. The people shouted with exultation; the devotee clasped her hands and wiped her eyes; and we ascended the steep winding road that led to the heights opposite Dinant, but stopping frequently to gaze upon the rock, where the miner was still unconcernedly at work.

Tourists are men; they must eat and drink, and they are not averse to information what are the good things of the district through which they wander. Here then is an account of the

FARE AT DINANT.

The means of living at Dinant are worth a passing comment. Nothing can equal the richness of the milk, the bread and butter are both excellent, the water is delicious, and the eggs and vegetables are plentiful and cheap. The Meuse and the many streams that water the valleys produce abundance of fish,—trout, grayling, and perch; and, for those who are fond of them, the ditches yield crawfish of enormous size, the largest being sent to Brussels, and often sold in the market there for twenty francs apiece. Hares, partridges, pigeons, *grèves*, and *gelinottes* are abundant, and of exquisite flavour; the mutton of the Ardennes vies with its venison, and for the epicure there is one dish that is incomparable; this is the *jambon de Bastogne*, which we found so good that we begged the *chef* to give us his receipt for curing it, and here it is:—"The ham is cured in a brine of salt, saltpetre, and aromatic herbs, viz. a few bay-leaves, wild thyme, a handful of juniper berries, and a little garlic. It is steeped for about six weeks, and then dried in the smoke of the chimney, over a wood fire. When wanted for dressing, it is buried in the ground for twenty-four hours, and then boiled, with the addition of the same aromatic herbs in the water. After boiling, the bone is taken out, and the ham is pressed under a heavy weight." As a corollary to the dressing, it may be added, that it often happens that the ham, when produced at table, disappears at one sitting. As the late Lord Blayney did not think it beneath his military dignity to tell how hams were boiled in hock at Bayonne, this simple notice of the treatment of the ham of the Ardennes may be permitted here.

He pronounces the beer of the Low Countries to be execrable, and we heartily agree with him. That of Louvain is the only tolerable drink.

To the stay-at-home reader, the most attractive portion of the volume will be Mr. COSTELLO'S ample researches into the legends of the country, and the superstitious and strange customs of the people. For instance,

WALLOON SUPERSTITIONS.

Again: the superstitious opinions which are generally held by the Walloon people are common to all the Belgian peasantry, as they originally were to all the nations claiming a northern origin. They believe much in omens, among which several that are local may be enumerated. For instance, to meet a priest when on the way to accomplish any unusual undertaking, is held to be significant of its failure; and the experimentalist invariably turns back, looking upon his day as lost. Perhaps this superstition may arise from the supposition that the priest, as a spiritual director, is sent in opposition to the undertaking. The cries of owls, the howling of dogs, the crossing of forks, the spilling of salt, and the number of thirteen at a feast, are here, as everywhere in the north, received omens. There are few who like to throw reeds into the fire, because they look upon them as contributing towards the support of oxen, and an ox was present at the birth of our Saviour—a *sequitur* which might save many other objects from conflagration! They are very careful in placing the bed of a dying person, lest the rafters of the room should be in a contrary direction, for they think that if so, the agonies of death would inevitably be protracted. In washing linen they are careful not to say, the *lessive* "boils," but that it "plays," otherwise the linen would be destroyed. To take a wren threatens misfortune or death in the family of the captor. The value of a caul is universally recognised, and the child that is *né coëffé* is looked upon as "born to good luck." Precious stones are supposed to possess, beyond their value in the market, uncommon virtues—the turquoise preserves the wearer from falls and other accidents; the magnet possesses properties still more precious; and the aerite is considered invaluable in the detection of thieves. The mode employed to discover them is by grinding the metal to dust, and mixing it with bread, which is given to the suspected person, who, if he be "a true thief," is unable to swallow it. Diamonds, emeralds, and pearls—*precious* stones, indeed, among peasants—were formerly used to detect infidelity—a fact that might readily be supposed if the peasants' wives wore them. On Easter Sunday it was, in many places, the custom to breakfast on two eggs laid on Good Friday, in order to keep off fever. Perhaps if those who frequent the Kermese at Easter were to drink rather less, the result would be no less satisfactory. There are many persons who still abstain from eating meat after Lent, to ward off the tooth-ache: an equal abstinence from sweetmeats would doubtless be as effectual. On Christmas-eve the yule clog is burnt, and a fragment carefully kept and put under the bed, to act as a preservative against lightning, in the same way as the willow-branch, blest on Palm Sunday, is kept in a sacred corner. If the custom of affixing formularies against the incursions of rats and mice has vanished, and the prayer against the wolf has fallen into desuetude, we may easily believe that cats and mousetraps are more useful than heretofore, and wolves less frequent; but the peasants in some remote villages still smear the walls of their houses with chalk in the form of a cross, to guard them against fire. It may be presumed that those who adhere to this custom have no faith in the efficacy of fire insurances, or are unable to pay for their security. At the town of Fosses, in the province of Namur, a superstition exists which induces the women of the country round, at the period of the annual fair, to flock thither with osier-wands, with which they touch the image of St. Bridget—a saint highly venerated there. When they return home, they touch their cattle with the same wands, either to cure their ailments or preserve them from the murrain. Although the mountainous districts of all countries are the strongholds in which a belief in the intercourse with the world of spirits finds refuge, there is yet no want of this kind of faith in the lowlands. For instance, at Willsbeeck, Vyve St. Bavon, and other villages near Courtrai, a curious custom is observed which obtains in other parts of Belgium. When a person dies, the clergy of the parish come in procession to conduct the body to the place of interment. If on their way they come to a spot where four roads meet, the bearers of the coffin set down their load, kneel in silence, and utter a short prayer. Their reason for doing so arises from the belief that those who have quitted this world may yet return to it; but as there might be some difficulty in the dead man finding his way home again, his friends pray for him in the cross-roads, that he may hit upon his path the more readily, and not be misled by evil spirits—"Kwaedegeesten." But at Oostmallen, near Turnhout, a far more extraordinary custom exists, for which it would be difficult to assign a satisfactory reason. When the husband dies, his widow seats herself astride upon the bier, and in this demonstrative manner accompanies the corpse to the grave! The ceremony called the Court of the Cuckoo, which used to take place annually at Polleur, was, however, among the most singular observances of the whole country. Polleur is a very ancient village, near the famous castle of Franchimont, at the bottom of the valley watered by the Hægne, lying between Verviers and Spa. Here, on the first Sunday after the 15th of August, was celebrated this remarkable fête; and the concourse of people who came to it was immense. A mock court of justice was formed, with a regular president, and the members assembled, in the first instance, at the principal cabaret of the village, situated close to the bridge which joins the commune of Polleur to that of Sart. From the cabaret the court adjourned to the bridge itself; and here were summoned to appear before the tribunal all those husbands whom their wives had deceived or beaten, or who had proved too complaisant in exercising their marital authority, or to whom, in short, was attached any ridiculous mark of notoriety. The proceedings began with pleadings of the most burlesque description,—not very dissimilar, perhaps, to those called "judge and jury" clubs in London,—and the strangers who looked on were often appealed to, and absurd questions asked of them, not always of the most delicate nature, which provoked peals of laughter from the assembled crowds. The accused, who were of course always found guilty, were then condemned to pay a fine, the proceeds of which were expended at the cabaret; and now and then, to give variety to the scene, the delinquent was compelled to get into a cart, which was backed off the bridge till it reached a stagnant dung-pit, where it was tilted over, and the unhappy inmate was half smothered in a bed which was of any thing but roses. To close the proceedings out of doors, the last married man in the village was brought before the court, and the fact being clearly proved against him, he was very summarily thrown over the bridge into the waters of the Hægne; a process which, however, only insured him a good ducking. The remainder of the day was passed in the cabaret—*how* it is scarcely necessary to say. There was another curious feature in the ceremonies of the "Cour du Coucou:" this was the exhibition of a banner on which was painted the likeness of a monster called "La Bête de Staneux." It represented a kind of centaur, half woman and half horse, with the tail of a lion. The hair was long, and floated down the back, and the feminine conformation very fully developed. The figure held a bow in its left hand, and an arrow in its right. This picture was exposed to view in the cabarets of the village, and continued to be produced in public until 1789, when the fête of the "Cour du Coucou" was suppressed. From time immemorial it had been carefully preserved in the parish church; but it was only during the last sixty years that the curates had allowed it to be seen beyond its walls. At the same time there was also paraded a figure rudely carved in wood, which ordinarily stood in the porch of the church: this image was burnt. According to the most received opinions, the Bête de Staneux was supposed to represent the ancient goddess of the Ardennes, where Diana, under various forms, was worshipped. The people of Polleur have a tradition that the exhibition of the picture was made to commemorate the victory gained by their ancestors over a monster that formerly infested the forest of Staneux, hard by. There was, at one time, scarcely a house in the village of Polleur that did not possess a small framed picture of the Bête de Staneux.

Further particulars of these remnants of a past era lingering in the very heart of European civilization will not be unwelcome:—

The dwarfs are generally located in caverns and subterraneous places: they are called in Flemish *Halvermannekens* and *Kaboutermannekens*—names which sufficiently express their presumed appearance. The inhabitants of the village of Hasselt, in the Campine, say that a great number of these dwarfs came into that part of the country on the occasion of a great war; that they dwelt in holes dug in the ground in the middle of a wood; and that they sometimes came into the village to ask for one thing or the other, but never did harm to any one. When the wives of these dwarfs became old, their husbands, giving them a small fresh loaf, made them enter a hole in the ground, and carefully closed the aperture: the credulous peasants add, that the poor old she-dwarfs were quite content to die in this manner.

At the village of Gelrode, the country people shew a hill, called *Kabouterberg*, in which are excavated several caves, and gravely declare that these grottoes were the abodes of dwarfs, who served the miller who dwelt there; and that when the latter was desirous of wetting his grindstone, he had only to place it at the door of his mill, with a slice of bread and butter and a glass of beer, and in the night a dwarf came, who, for this trifling reward, performed the work, and the miller found the stone ready when he wanted it. The same assistance was given him when he wanted to have his linen washed. It is related also, that at a village near Mechlin, a miller—the favoured race, apparently—being engaged in sifting flour, and not having time to finish his task, put off the rest to the following day; and going home, accidentally left behind him a slice of bread and butter, which had formed a part of his supper. Next morning he was very much astonished to find that the flour was sifted, and the bread and butter gone. He resolved to repeat the experiment; and the same result ensued. On the third night, curious to know who the labourer could be who worked at

night for such slight payment, he hid himself behind some sacks of flour; and about midnight saw a little dwarf make his appearance, perfectly naked, who immediately set to work. The miller, a modest man (a rarity in Brabant), and moved with pity at the nakedness of the laborious dwarf, added, on the following night, a complete suit of clothes to the unsifted flour and bread and butter; after which, the good little spirit never shewed himself again without being dressed from head to foot.

With one other short extract we conclude.

BELGIAN SPORTSMEN.

It was on the 3rd of September that we arrived at Dinant—the first day of the shooting season in Belgium—and it was not without difficulty that we succeeded in getting an apartment, the house being full of sportsmen. If we had not been told that this was the case, we might have guessed it from the endless howling of the *chiens de chasse*, who, locked up in their masters' bedrooms, gave utterance to every description of canine melody, rendering sleep impossible till long after midnight, when the festivities of the chasseurs, no less riotous than their dogs, broke up. If there is one thing more than another that distinguishes a modern Belgian from his kind, it is his excessive fondness for making a noise. No time or place appears to have any influence in subduing his clamorous tendencies, as if to howl and shout like an *enragé* were the great aim and object of his existence. These sportsmen, who were chiefly from Brussels, gave us another taste of their quality as soon as day began to break, and if they exercised their lungs to the same extent when they got to the field, unless the birds were deaf, their sport must have proved a blank.

FICTION.

The Countess Faustina: a Novel. Translated from the German of the Countess Ida Von Hahn-Hahn, by A. E. I. In 2 vols. London, 1845. Ollivier.

The rapid spread of the taste for foreign literature, as evidenced by the increase of translations, which would not be attempted were they not found to be popular, is a matter for sincere congratulation, and gives hope that the attempt of The Critic to gratify and foster that taste is not based upon erroneous calculations of the direction of the public mind. But in the infancy of this taste, it is of very great importance indeed that it should be encouraged by introduction to the best productions of continental genius. Its ultimate utility will much depend upon the wholesomeness of its present food. Translators and publishers should use more than common vigilance to keep out of sight the mere dregs and dross which belong to the literature of all countries, but which a stranger may be apt to mistake for specimens of its purest ore. For this reason we consider that the translator of the *Countess Faustina* has been unfortunate in his choice. The Countess Hahn-Hahn is not among the most able, the most interesting, or the most commendable of the German school of novelists, and this is far from being the best of her novels. She has affectations of thought and expression that are especially distasteful to English habits. She not only attempts the philosophical and the mystical in season and out of season, but she does it clumsily; and it generally happens that she is really the most shallow when she thinks herself the most profound. Such a style is not suited to the taste of our countrymen; and we are told by Germans that she is not a favourite even with her own people.

The *Countess Faustina* is a wild and fanciful creation, altogether beyond the regions of reality; but neither conceived nor sustained with the power of genius which sometimes can make even monsters such as these appear natural, and give us a human interest in their fortunes. She is intended to represent the authoress's *beau ideal* of a genius—it may be, her imaginary notions of herself; for we suspect she sits, or thinks she sits, for her own picture. The countess prides herself on her independence, and sets opinion at defiance. But with genius she mingles a pretty considerable share of very human passions. She loves after what she thinks a spiritual fashion, which to our eye seems more like the ordinary fashion; and her capacious soul, being too big to be filled by a passion for one man, becomes shared by two: her affections are alternately given to the one present, and he seems to have the mastery until the other comes, and then this takes his turn; and when both are absent, she is again in a state of perplexing oscillation between the pair. Our suggestion for such a state of things would have been, that she should practise the independence she boasts so largely, set the laws against bigamy at defiance, and marry both of them. But Hahn-Hahn has not the courage thus to dispose of her heroine and followers. One goes away, and distance so turns the scale in favour of the other that she takes to him, well knowing that it will be the death of him who has departed, and whom she protests she adores with all her soul, though she coolly kills him by taking his rival. He dies as he threatened—in her presence; she is smitten with remorse, makes her favoured lover miserable too, then takes to a convent, and dies in her turn; and thus ends this very romantic and improbable story. The translator has done ample justice to his original, and it is much to be regretted that he should not have been more happy in his choice; we hope he will make a better one next time, for he has excellent capacities for the office.

As a specimen, and in proof of our comments, we take one passage.

A LOVE SCENE.

Faustina gazed speechlessly upon him, and then passed her hands over her eyes, as if to certify herself that she was awake. "Nothing! for you love me, and Andlau you love no longer. If you still loved him, your eyes would only have fallen upon me with the same kind but indifferent glance which you bestow on all—" "Ah! that were indeed impossible!" exclaimed she. "Now, Faustina, I love you: you know it, I have told you so, and you must be aware of it without words; but having told you so, never will I give you up! for nothing binds you to another from the moment your heart is unbound from him; and to be untrue to yourself, to retract, to talk of the necessity of self-sacrifice, is the proof of an exhausted love, that no longer feels within itself the energy to heave an old world from its axis, and poise for the beloved one a new world in its stead. He who has said to a woman, 'I love thee!' and is not prepared to follow her in any path, should it seem to lead even to hell,—joyfully prepared; because he feels confident of transforming that hell into a heaven of love,—he is a coward, Faustina; and a coward is not capable of love! I am no coward; I have the courage to reconcile you with every thing, with the past and the future, and with every tie that has hitherto wounded or oppressed you. You are my wife, Faustina." "Oh, but I were then so miserably false!" said she, gloomily. "And what would you be if you remained hesitating between two men, fascinating both, belonging partly to one, wholly to neither? and what would you be if you turned back with a divided heart to him whom you first loved, and said, 'I love another, but I will be true to thee?' You love the beautiful, the good, and the elevated, wherever you find it, Faustina: this makes you so worthy to be loved; and you are too much under the influence of the present to attach yourself permanently to any individuality, unless it have the power to overwhelm you irresistibly: this makes you weak. I will not defend this weakness, lest you should accuse me of sophistry, or suspect me of speaking for my own advantage; but believe me, if you were my sister, I should still say what I now reiterate: falseness is a divided, incomplete, vacillating existence; it is a discord in the soul; annihilate it by some sharp decision, some irrevocable step, and you have set yourself free, restored your balance, dismissed the disturbing element, and grasped that which is essential. Decide! decide, Faustina!" exclaimed Mario; and the calm equanimity with which he had hitherto spoke was suddenly changed into the most passionate agitation. "Decide now—instantly—on the spot! in half an hour I must leave this room, and it depends on you whether I ever enter it again or not. For since our confession of love has been uttered, things cannot now go on as they have done." "And why not?" interrupted Faustina; "you are so strong, Mengen, you can be all things." "All things human, Faustina; nothing superhuman. I love you, and love thirsts to be one with the beloved object. To be near you, to live under the fascination of your loveliness, and not to feed this wish greedily with every breath as with the air that surrounds me; for this I am not strong enough. But if you have the conviction that your ties to Andlau can still afford to you and to him their former satisfaction, I will now sever myself from you for ever; this, indeed, I can do. But my love for you will not therefore end: so long as my heart beats, it will beat for you; so long as my eyes can open, they will watch over you; so long as a drop of blood flows in my veins, it belongs to you; so long as I continue in the path which I selected in childhood, followed in youth, and with which I am as it were blended in manhood, I must follow you. You belong to my inmost being, Faustina; for it is through you that I have arrived at the comprehension of love; And shall you not love me enough to belong to me wholly? Oh, that I will never believe; and if you were to say 'No' in word, and 'No' in deed, still I would not believe you!" "There you are right, Mario!" exclaimed she. "Now you have decided, Faustina,

you will be mine! Angel, I thank thee, thou lovest me!" Mario's voice trembled, and his eyes were moist as he thus spoke; every trace of that self-possession had melted away which had made him appear so cold, so clad in steel, that it might have been thought his heart remained passive beneath his iron breastplate. Faustina gazed upon him; joy and sadness, bliss and sorrow, swelled in her bosom; she saw that his happiness was in her hands: that moment overpowered her, the present was triumphant; she forgot the past, and thought not of the future. She did not speak; but taking his two hands, she folded them together, and laid them on her neck as a yoke; then she said: "Do you understand me Mario?" But Mario answered not; and Faustina for the first time witnessed the outbreak of a passion, in comparison with which her own fervour seemed to her cold and colourless. "Can love, then, really make you blessed?" asked she. "Your love can, Faustina," answered Mario; "and yet I sue for one more proof of it." She raised her eyes and gazed upon him in astonishment, as he took her by the hand and led her into her room. There he released her hand as he placed her at a writing-table, and said imploringly, "Now write, Faustina." "O God!" said she, groaning as she sank into a chair, "I cannot write." "Then I must do so," said Mario, calmly, "Are you mad?" exclaimed she, distractedly. "No, no other hand than mine shall plunge the dagger into his heart; for that is what I am doing, and I know it." "Yes," said Mario, "into his or mine." Faustina's teeth smote convulsively together, and her hands were icy cold. Mario continued: "The half hour is almost expired, Faustina—write! You must decide. This torture will cease when decision is made. The irrevocable flows as soothingly over the pangs of hesitation as oil over the agitated waves. I do not wish to control your will; I only require you to express it. Write, Faustina!" She was completely mastered by him. The cool deliberation with which he fenced his passion, as a shield before a naked breast, abashed her, the waverer. "Yes," said she, "you are confident, because you are Godlike in your truth"

PERIODICALS AND SERIALS.

ANOTHER pile of these has accumulated upon our table, and, according to custom, we proceed briefly to notice the most remarkable features.

The Oxford and Cambridge Review is a new adventure—a monthly periodical devoted to the doctrines, religious and political, of Young England. It is edited with much judgment, and the contributors are men of great ability. The subjects selected for the opening number are such congenial themes as Mr. D'ISRAELI's *Sybil*, "European Diplomatists," and "The Condition of the Poor Question." In general literature there is a delightful article on "The Prospects of Poetry," and an elaborate notice of the works of the author of *Whitefriars*, which appear to us to be lauded much beyond their worth. This review deserves more support than it can hope to obtain. The market is overstocked with monthly magazines.

The Journal of the British Archæological Association, Nos. I. and II. afford the best evidence that the attacks of the *Athenæum* have entirely failed to extinguish the society whose records are here preserved. It would appear, indeed, to be more flourishing than ever, and if it do no more than give to the world such a periodical as that before us, it will deserve the support and thanks of the community. We cannot, of course, attempt to enumerate the vast variety of subjects here treated of; but besides the very interesting proceedings of the association, it contains articles on many recently-discovered antiquities, and researches into relics of old times, all profusely illustrated with engravings. The essay on *Medieval Architecture* is especially curious, for the facts are mainly taken from illuminated MSS.

The Builder is a periodical devoted to building, and the sciences and arts therewith connected. It is published in weekly numbers and monthly parts, at a very moderate price, and is illustrated with useful engravings. It contains every kind of information relative to its subject, and is conducted with great energy and ability.

Dolman's Magazine for July and August continues to exhibit steady improvement. It is, as our readers are aware, devoted to the learning, literature, and theology of the Roman Catholics, and highly creditable it is to those whom it represents. The romance, entitled *The Countess Clemence*, especially deserves praise for the power it exhibits. The lively commentary on passing events, under the title of "a Peep at all things and a few others," is an attractive feature of this magazine.

The Dublin University Magazine for August is particularly good. The reviews are fewer, the original articles more numerous, than usual. Among the latter are some more of the "Stray Leaflets from the German Oak;" a third number of the Poetical Remains of Mrs. JAMES GRAY; a paper full of curious learning, called "Miscellanea Mystica;" another, exhibiting a fine taste for poetry, on ARIOSTO, and a clever tale, entitled "The Treasure Box." The political article is a reply to that on Ireland in the last *Quarterly Review*. Dr. WHITLEY STOKES is the subject of "The Portrait Gallery," with a memoir. From the remains of Mrs. GRAY we take a little poem that has more substantial merit than will appear on a first perusal.

FRAGMENT.

We are bold hunters, hunted still,
  Straining and panting out of breath,
Chasing our own uncertain will,
  Chased by our certain death.
From the young child, who loves to chase
  A shadow on a green hill-side,
And the bold boy who loves the race
  Kept by a torrent's tide,
Marking his progress by the flowers
  He flings upon the eddying stream,
Unto the youth, in summer hours
  Chasing some fond love-dream—
All hunters are, each hunted flies,
  Following the rainbow-light of fame,
Or chasing joy 'neath April skies,
  Or honour's nobler game.
All fleeing from the thought of grief,
  Or from the phantoms of remorse,
Or from the truths that tell how brief
  Shall be their earthly course.
All every nerve and sinew strain
  Whilst the earth slides their steps beneath;
And all are chased, and all o'erta'en
  By the stern hunter, Death.

Douglas Jerrold's Shilling Magazine for August continues the editor's clever novel, "St. Giles's and St. James's." Other articles appropriate to the design of this magazine are "Gardens for the Poor," "Unfashionable Movements," and "The Hedgehog Letters." "A History for Young England" is an admirable specimen of the manner in which a history that tells truth ought to be written.

The Art Union for August contains all kinds of information relating to art and artists, and is profusely adorned with engravings and woodcuts of great beauty. It is undoubtedly one of the best conducted periodicals of the time.

George Cruikshank's Table Book lives by virtue of the wonderfully fanciful engravings, of which one is contained in each number. That inimitable picture saves the work from the destruction which would certainly await its very inferior literary contents. The engraving in the August number is entitled "Social Ornithology—Annual Emigration of Birds," and pictures an infinite variety of the genus John Bull taking flight over the Channel. It is full of the richest humour.

The Connoisseur is a new monthly record of the fine arts, containing articles on art, music, a large engraving, and an original piece of music. The illustration in this number is a copy from MURILLO. The original papers are written by persons who understand what they are about.

Hogg's Weekly Instructor is one of the very few imitations we ever saw that at all approached the original. It is in shape, size, type, and general aspect, a fac-simile of *Chambers's Edinburgh Journal;* and the articles are extremely well written and judiciously selected,—not quite so well as in its original, but still very much better than is found in any English periodical.

Mores Catholici, Part IX. proceeds in the same strain as its predecessors, earnest, pious, and full of the most extensive learning.

Dr. Young's Lectures on Natural Philosophy, Part VI. continues the subject of "The Nature of Light and Colours," thence it passes to the "History of Optics," the fixed stars, the solar system, the laws of gravitation, appearance of the celestial bodies, practical astronomy, the tides, &c. It is illustrated by many plates, and the typography is beautiful. This edition of so famous a work should be added to every library.

Knight's Political Dictionary, Part VII. opens with the word "Divorce," and proceeds to "Emigration." Each article is written with care and research, and, when completed, it will be a valuable contribution to the library of reference.

The O'Donoghue; a Tale of Ireland, No. VI. continues one of HARRY LORREQUER'S best novels, with two engravings, as clever as the work they illustrate.

MISCELLANEOUS.

The Practice of Angling, particularly as regards Ireland. By O'GORMAN. In 2 vols. Dublin, 1845. Curry and Co.

Two volumes about angling! The reader will wonder how this can be—by what art O'GORMAN has contrived to fill some 700 pages with instructions how to catch fish with a rod and line. The plan is simple enough. His teachings are in-

terwoven with his piscatory adventures, his adventures with anecdotes picked up by brook-side or at the dinner-tables of his friends. Sometimes he ventures upon a scrap of philosophy, now and then he peeps into history, and we catch him occasionally at the encyclopædia. He makes a fair start, and for awhile keeps to his subject; and it being one with which he is peculiarly conversant, all that he has to say about it is instructive to the angler, and will interest even the general reader. Thus, while he is narrating the results of his experience as to the best rods and how to use them—wheels, lines, hooks, flies, feathers and their colours—salmon-fishing, stroak-all-fishing, and trout-fishing—his discourse is edifying; but, with the volatile genius of his country, he speedily wanders away from his theme after any will-o'-the-wisp that dances before his fancy, and he discourses to us on the apathy of the gentry; moralizes on IZAAC WALTON; tells a story about a bet; describes a pilgrimage to Connemara and a journey to Glandelough; relates an anecdote of Mr. PHILLIPS; in the same chapter treats of such heterogeneous topics as the weather, his writing-master's opinions, Scripture and Joshua, intolerant notions, and his own opinions on the weather and changes of the moon. Thence he turns to Lord BYRON; volunteers advice on things in general; paints a tremendous festive catastrophe and its consequences; pays a visit to the battle-field of the Boyne; dedicates an entire chapter to philosophy and piety; recals the various good and promising anglers he has met with in his excursions; and although chapter the 48th is headed "Conclusion," such is O'GORMAN's propensity to talk, that he cannot conclude, but afterwards rambles on through five more chapters before he can persuade himself to lay down his pen.

It is fortunate for those whose duty it may be to wander through these pages, that O'GORMAN, though a very talkative, is a very pleasant companion. His heart and soul are in his craft; his experience is large, and he has a boundless fund of anecdote, the result of observation aided by a retentive memory. His manner is cheerful, his language always apt, and often forcible. The lover of angling, as he reads on, will not only glean much useful information, but will be delighted with pictures that bring back to him days of tranquil joy dreamed away in rich meadows, by river sides, amid buttercups and daisies, or of spirit-stirring rovings through wild mountain glens, seeking the adventurous trout in his remotest dwellings. Even such a frolic as this makes our pulse throb again in the joy of remembered mischief.

We had only just commenced, when a large flock of tame geese flew very swiftly over the river, and in a direct line with our cross-line. We most unfortunately raised our hands, and instantly had three of them firm. It is impossible to describe the scene—splashing, swimming, flying, running up and down the river for nearly an hour; and to complete our confusion, at my companion's side, a set of outrageous women, hearing the noise and outcry, came down, and if they could have got stones, would have annihilated him, charging him as the cause of the state their geese were in. At length (but not until the geese were nearly dead) I contrived to land the line, and with great difficulty extracted the flies.

Such a work as this can only be exhibited by extract, and the portions to be selected for the entertainment of the general reader are not those which relate to its proper object. We must resort to the extraneous matter; but be it known that we do so from no disrespect for O'GORMAN's instructions in angling, which are admirable, but simply because of the readers of THE CRITIC; to one who will be interested in the author's teachings, there will be twenty who will prefer his anecdotes.

THE WALLS OF TROY.

We were one evening on a hill which overlooked a circular plantation near the river. Mr. P——— asked me if I could tell what this was; I replied that I could not even guess; so away we went to explore it. It was surrounded by several walks, and a very deep narrow trench bounding each walk. there being four or five lines of walks and trenches. We walked round and round, and when we got near the river, where we expected to get out, there was no egress. It was getting late, and after some difficulty, having fortunately taken a pretty correct observation of the place of entrance, we made our way to the road. During our exploring, I had slipped once or twice, as if something had tripped me, but did not mind it.

Next day when Mr. Browne, the steward, was questioned as to the place, he raised up his head and eyes exclaiming, "O Lord; what brought ye into that place, it is called the Walls of Troy, and ye had great luck that we had not to draw ye forth by ropes, for all those narrow walks are undermined at every three or four yards! Several ladies, indulging in the curiosity so natural to their sex, have slipped into these traps; Mr. St. George himself slipped in, and we had to get long boards across the different drains, and ropes to lug him out." Then turning to me, "This was an invention of a countryman of yours of the name of Burke, a very ingenious but mischievous fellow, who formed this place when the Marquis of Sligo was in the habit of staying here, and it was Burke's greatest pleasure to send men and women into it, on some frivolous pretence, and they had regularly to be lugged out with ropes."

How we escaped I cannot say, but suppose the roots of the grass had attained a kind of consistency capable of sustaining a tolerable weight, nor did we make any further experimental trips to the labyrinth.

Many of our readers will be edified by

O'GORMAN'S WEATHER WISDOM.

When the wind changes from a good point, say south or west, to north or north-east, the angling is bad till it is fixed for some days, after which the fish rise freely, and will take small trolls, such as loaches, salmon fry, gravelin, roach, little eels, &c. I have been much surprised to see salmon rise in rather dead flats, with scarcely any wind, when north-east, and in a bright sun, and sometimes better than in cloudy weather.

When you can see far into the water, the fishing is invariably bad. When a great glut of rain impends after a drought, fish will not take when there is thunder in the air, trout or salmon will not take, but pike often will, though it is thought that lightning destroys them, as they are often found floating or dying after great thunderstorms. The weather at such times puts a complete end to trout and salmon fishing.

In rivers the best winds are those which blow against the currents, particularly if they run west or south, as the Shannon and Fergus for the most part; and the best days are those with rattling showers, and light, well-coloured clouds, that impart a healthy tinge to the waters—of this appearance every good angler is a judge.

In spring, salmon take finely at the tail of a hail shower, and so they will on a blowing hazy day. During the prevalence of rainbows I have ever found angling useless on lake or river, and so it is on a harsh dry day when it blows hard.

In February or March, salmon take in the heat of the day; when the sun gets warmer, from about eight to eleven in the morning, and from about three in the evening till nightfall; but in the peal season (June and July) you cannot be out too early, nor do they take so late as the larger fish; in the Shannon we were always out at four in the morning, and fished till eleven, then lay by till after two, after which we continued till sunset, I mean for the peal or small salmon. These observations will equally apply to lake fishing, but trout will rise much later than salmon, often all through the night.

At the changes of new and full moon, fishing is bad. On this point J——n H——n disagrees with me, he pretending to have had sport at those times, but I decidedly think he is wrong. When the moon shines visibly and unclouded during the day, the effect is bad. This occurs from the second quarter to full. The best time of the moon is after the full, and until it assumes the appearance I have described.

O'GORMAN informs us that the largest pike he ever killed weighed 32 lbs.; he had a trout of 4lbs entire in his maw. Another pike laid hold of a trout 6lbs. weight, which Sir M. O'LOGHLEN, late Master of the Rolls, had hooked; but this was nothing to an adventure of O'GORMAN's in Dromore.

A large pike was hooked, and nearly exhausted, when he was suddenly seized and carried to the bottom. Every effort was made for nearly half an hour to bring this enormous fish to some shore (where we might perhaps have induced him to *take a large roach*), but to no purpose; when, finding our efforts unavailing, we succeeded at last, by making a noise with the oars, and pulling at the line. In getting up the pike we had been playing, it was all torn as if by a large dog; and this pike actually weighed *seventeen pounds!* the fish which held him so long must have been a monster indeed!

Dr. JOHNSON's smart saying, "a fool at one end and a worm at the other," has called down upon him the vials of O'GORMAN's wrath. He is an "unmannerly literary brute," —"could any reasonable man living read his greatest work—*The Rambler*—for an hour together, without getting the headache?" Upon this, O'GORMAN launches into a dissertation on the philosophy of angling, and the moral training it affords. According to him, an angler

Must be a philosopher—must know something of astronomy—must have quickness of intellect, great perseverance, good temper, decision, and sharp sight; he ought to be a good rower, and swim well; for he may at times have occasion to exert his aquatic energies for self-preservation. How often is philosophy necessary! A hook gets beyond the barb into your hand, finger, or perhaps your nose or lip. You can't get it out; if you are alone, bad enough; if in company, you must get the tying carefully cut off, after which the hook must be turned out point foremost and the other way.

He needs also patience, perseverance, decision of character, "particularly if he angles for large fish, where weeds and rocks abound." "You must or ought to have good temper, particularly if you fish with bunglers or beginners." And here are some remarks on

ANGLERS AS MEN.

I will now conclude this long chapter by a cursory notice of anglers as men; and I do assert that I have almost invariably found them persons of good and charitable dispositions, possessing mild, though firm tempers, sharp and intellectual minds; incapable of committing base and ungenerous actions; much inclined to the heavenly passion of love; free from the debasing vice of avarice; lively and light-hearted; agreeable and intelligent. The very pursuit, while it demands the possession of intellect, must sharpen it. Were I to select the professions among the members of which I have met the best men, and the most skilful anglers, I would certainly name the army and the law; I mean the highest branch of the latter; as for the attorneys, with many honourable exceptions, they are an incorrigible race. Indeed I have rarely seen any of them who could angle at all, perhaps only one; and he was a sinister biped (left-handed). They are, for the most part, devoted to wordly gain; and as Giles Daxon used to say, will never give a direct answer to a question.

Few merchants are good anglers. I have met but two or three; one, a near relation of my own, who now, however, thinks such a practice beneath his crown and dignity. Let us charitably hope that is, because he has not time.

But the best of friends must part. Reluctantly we bid adieu to O'GORMAN, commending him to the regards of all who practise the art of angling.

Remember Me; a Token of Christian Affection. Third Edit. Darton and Clark.

A PRETTY little pocket volume of pieces, in verse and prose, entirely original, and many of them of great merit. It is so small, so beautifully printed and neatly bound, and its contents are so thoroughly *wholesome*, that it will be an admirable book for a present to the youthful reader.

JOURNAL OF FRENCH LITERATURE.

From Day to Day. By FREDERIC SOULIE. 2 vols.

IT is with sincere pleasure that we find ourselves enabled to notice a work by M. SOULIE in the pages of THE CRITIC. In the present tale there is not a single objectionable passage. The clever author has developed his talent brightly and purely, without any of those mephitic vapours of licentiousness and vice in which he ordinarily loves to indulge. As is usual with him, however, he commences the book by what assumes to be a letter to a friend, in which he attempts to justify his habitual style of writing and tone of morals; but his arguments, like all those which seek to uphold an unworthy cause, are full of false conclusions and hollow sophistry. Thus, in the introduction of a book so pure that no English female need object to read it, we find the plague-spot which denotes that the contagion is not yet conquered, in such fallible and paltry phrases as these:—

You ask me for a novel; I am grieved, but you take me absolutely unprovided. Nearly a year has elapsed since any one has related to me the least little scandalous and immoral story which would supply material for a novel, by the suppression of half its naughty details; for you well know—you in whose ear I have sometimes whispered the origin of those recitals, which revolt the honesty of rogues, the morality of worn-out libertines, and the virtue of women who have exhausted their vices—you well know that the *fruitful imagination* of the novelist generally limits all its endeavours to saying only half, and that the least hideous half, of what he knows; to calling things by their least startling names; and to giving an appearance of probability to the ugly virtue by which they are surrounded.

Is not this deplorable? Is not this hateful? When we look around upon the wondrous world which a beneficent GOD has given to his creatures—when we pause to gaze upon the soft and downy cheek of infancy, the fresh and joyous brow of childhood, the kindling eye and lip of generous and loving youth—when we see these before us, in all their glow and in all their glory, are we to turn away in gloomy horror, and to exclaim to our own hearts—"Faugh! the foul rottenness of the soul's canker lurks beneath all this apparent purity and brightness?" No, no!—we can better afford to weep over the one perverted spirit, which, reversing the splendid privilege of the prism, invests every object upon which it rests with the loathsomeness of its own associations. M. SOULIE must not deceive himself. The rakes and demireps to whom he makes such scornful allusion are the only readers at all likely to consult their proper tastes in the perusal of the loose books which he has poured forth so copiously. Those who yet care to remember that "none can touch pitch and not be defiled," seldom venture to open one of his works until they have ascertained that they may do so without danger; and such will be glad to hear that, in this instance, they can be offended only by the introductory letter whence we have drawn our extract, and which is in about as good keeping with the tale itself as a gilt clasp to a string of oriental pearls.

Having premised thus much, we will now proceed to notice the volumes to which it is appended. The design is novel enough. The writer is supposed to give an account of passing events in a particular circle as they arise; and thence his title of *From Day to Day*. His heroine is a spoiled beauty, whose really noble nature is obscured by self-will. She is the orphan of a plebeian, who has amassed an enormous fortune by frauds of all descriptions; and when the story opens, she is, at 16, the ward of a celebrated lawyer, who, as well as his amiable wife, loves her with paternal tenderness. The gold-dust which, as an heiress, she is enabled to throw into the eyes of the other sex, has surrounded her, despite the infamy of her father's memory, with a crowd of suitors, and, among others, the Marquis de Bellestar is a constant visitor at the house of her guardian, M. Simon. Here is a portrait of the noble suitor:—

A FRENCH MARQUIS OF THE NINETEENTH CENTURY.

The Marquis Alexander de Bellestar was a handsome man of about twenty-seven years of age; very well poised upon two muscular legs; displaying, beneath a waistcoat of orientally gilded velvet, a broad and deep chest; and disguising very imperfectly under a pair of tight gloves the development of a herculean hand. * * * He availed himself of the approach of the new year, and the many obligations which it imposes upon a young, wealthy, and popular bachelor, to offer his homage to his friends in the shape of New Year's gifts,—to parade the most extensive acquaintance with all the varied and elegant trifles which at such a period must necessarily occupy the attention of a lady. New carriages, old china, Buhl furniture, ancient and modern hangings, the rich crystals of Bohemia, the new crystals of Montcenis, cachemires, laces, jewels of Marle—he had seen all, judged all, and if he had not purchased all, it was only because he was at a loss for some one whom he might surround with all the splendour of these marvels.

The heart of Sabina Durand does not, however, declare itself a captive to this elaborated eloquence of the purse; and she is as little moved by the visions of magnificence which he evokes, as by his fortune of twelve millions. The poor marquis becomes her butt. In the office of M. Simon toils a young man, a certain M. de Prosny, whose father has been utterly ruined by the villainous parent of the pampered heiress. Sallow, melancholy, and reserved; patient externally, under his trials, but inwardly embittered by a life of hopeless and obscure labour, Sylvester de Prosny is, nevertheless, the hero of the tale; and his original hatred of, and subsequent passion for, the beautiful and high-spirited Sabina—his love for the daughter, and his contemptuous and proud shrinking from the name of the man by whom his high-born family were beggared, and his noble father compelled to die upon a miserable pallet—form the mainspring of the tale. We will not enter into any detail of its plot; but rather present to our readers one or two extracts which will enable them to appreciate the vigorous and flowing style of M. SOULIE.

RICH AND POOR.

Look—in yonder dim alcove, where a soft and shaded light is

burning—upon that young girl, fairer than the lawn which covers her; beautiful with that beauty for which no man has a name; her head resting on her hand; her elbow buried in the pillow; her eyes widely opened, and fixed unconsciously upon some object before her; her whole frame at once motionless and full of agitated feeling. The hangings of violet-coloured velvet which inclose her room have the effect of a frame, designed to display with greater effect the ethereal whiteness of the floating muslin which undulates in numerous folds around her couch.

In the midst of this chamber is a table covered with a rich cloth, fringed with gold, and upon it are scattered various books, magnificently bound, with their clasps enriched with precious stones. On the mantel are some costly bronzes. Opposite stands an antique cabinet, filled with the delicious fancies of yesterday's fashion; here and there you see a low chair, silky, pliant, and made to roll noiselessly over a luxurious carpet. From the ceiling hangs, by its gilded chain, the lamp which illumines this small and sumptuous nook.

Of what can she dream, that pure young girl, who lies wakeful there, absorbed in a long and wordless reverie?

Look to a distance—yonder, at the end of that court-yard—into the large room paved with square tiles. Curtains of white calico hang before the windows, which are formed in the front of the sloping roof. Opposite to the stone chimney, where a mere handful of cinders are slowly mouldering away, is a deal table, upon which a young man leans his arm. At the upper end of the chamber is an uncurtained bedstead of walnut-wood, bare and chilly to the eye; four or five rush-bottomed chairs, miserable, despite their cleanliness; a faded paper, half detached from the wall, which undulates with every breath of wind that enters through the crevices of the ill-fitting-door and windows; and tell me of what that motionless young man is dreaming, with his eyes fixed and dilated thus. The space spread before the dreamer's vision is divested of every object which is really present, and is filled, as his imagination dictates, with a thousand charming or hideous images; with consolation and despair alike. Of what, then, can he dream, that poor young man, in this miserable dwelling?

He is dreaming of the pure young girl on whom you lately looked; she is dreaming of the poor young man whom you now see.

To increase his wretchedness, De Prosny is the support and home-companion of a vixen aunt, the sister of his father, whose fortune was absorbed in the wreck of the family. The character is admirably drawn, although ultimately somewhat overcharged. We will introduce her to our readers. She has just attended mass at the church of St. Vincent-de-Paule, attended by her nephew, where her devotions, if the pattering of prayers in which her lips only are engaged may be so called, have been disturbed by the arrival of a young and beautiful girl, accompanied by an elderly female domestic, to whom De Prosny resigns his seat, and whom he recognizes as the ward of his employer; the service is concluded, and the disinherited heir is preparing to conduct his irritable charge to their squalid home.

A HARPY.

"Pray," asked Mdlle. De Prosney, as she took the arm of her nephew, "who was the tall gawky you placed beside me in your chair?"

At such a question, uttered in that hateful tone, which conveys more bitterness than the very words of which it is the vehicle, Sylvester saw the necessity of caution. He knew, that the name of Durand would at once draw down an avalanche of abuse and recriminations which he was morbidly anxious to avoid. Besides, he wished to be at liberty to think a thousand bitter things of Sabina; he was quite willing himself to accuse her of all the wrongs which her father had bequeathed to her; but he could not support their utterance by his aunt. He consequently hesitated, and replied uneasily:—

"She was a young lady whom I have seen in the house of M. Simon."

"Ah!" said his aunt, fixing her eyes full upon his face.

"She is the daughter of one of his clients."

"Who comes to church without her mother?"

"I believe that she has lost her."

"And her father allows her to walk about alone?"

"I have heard that she is an orphan," said Sylvester, anxious to escape the questions of his aunt.

"And what is the name of this orphan?" asked Mdlle. de Prosny.

Sylvester hastily pushed away an old woman, who was near him, exclaiming, as he did so: "Do look where you are going; you have crushed my foot." The poor old crone had not touched him.

"Where did you learn to speak in such a tone to women?" demanded Mdlle. de Prosny; "is it because she is old, you are unpolite? Had she been a minx like the other, you would have asked her pardon for having trodden on you."

This was said as they left the church, and the temper of Sylvester was now scarcely under his control. He hoped that by some happy accident the attention of his aunt might be directed to another subject, when he had the mortification of seeing Mdlle. Durand standing upon the pavement, waiting for her carriage. A footman had gone to seek it, and the paupers, who soon collected about the church, had surrounded her with all the eagerness of hope.

Sabina was emptying her purse when her chariot arrived, making its way through the midst of the foot passengers who were thronging round the doors. She sprung hastily into the vehicle, and in turning towards her servant to give him her directions, she perceived Sylvester. A deep blush spread over her forehead. Sylvester bowed unconsciously, and the young lady returned gravely his salutation.

Sylvester looked towards his aunt, and saw in her ungracious eye the lightning which precedes the tempest.

"Humph!" said the old maid; "an orphan who keeps her carriage, and who comes to church with an elderly woman, who is not her mother, what is such an orphan generally called?"

Sylvester affected not to hear; but his aunt had nails in her tongue, and she continued to flay her nephew in order to make him cry for mercy.

"So things occur now-a-days. Is it not shameful that such—"

"Aunt!" exclaimed Sylvester, indignantly, "how dare you insinuate any thing against that young lady? It is dreadful."

"Nevertheless, it is strange to see a single woman alone at church—but, however, as you answer for her—and pray what is the name of this embodied virtue?"

This was the most startling question.

"She is called—I really do not recollect."

"Oh! you do not know the names of the women to whom you resign your place beside me. You do not know the names of the women who blush when you bow to them. You do not know the names of the clients of your office—of the orphans who drive their own carriages? Very well, very well."

"Why, aunt —"

"You understand, Sylvester," said the old woman, "that there are certain things I will not know—"

"Aunt—"

"And if your intrigues do not interfere with your profession—"

"Really aunt—"

"Only, another time, arrange your rendezvous in such a way that I may not be made a cloak to them."

Here was enough to exasperate a more patient man than Sylvester. He abruptly released the arm of his aunt, and advanced a pace or two. Anger rendered Mdlle. de Prosny motionless. Sylvester conquered himself and returned.

"Aunt," said he, in an altered voice, "I beg of you not to indulge in any ungenerous suspicion of the young lady whom you have just seen; she is guiltless of all that you have inferred against her, and it would be infamous to repeat such observations."

The accent of Sylvester was so determined and so calm that it arrested a flow of invectives which were boiling on the lips of Mdlle. de Prosny; but she would not yield, and replied, "All the better for her if she comes of a good family."

Sylvester shivered; for, by one of those instincts with which malevolence is so admirably gifted, Mdlle. de Prosny had at last discovered the point where the unknown lady was vulnerable. She had felt the shiver of her young kinsman, and continued ironically, "All the better for you, my lad. It is not without precedent for a lawyer's clerk to find a good dowry with which he may purchase a business; and when the girl who brings it is pretty, why, it is better still."

These words awoke a world in the mind of Sylvester. They presented to him the idea of his own name associated with that of the unworthy Durand.

"Leave the lady in peace, I beseech of you!" he exclaimed with violence; "you cannot guess how much you annoy me by talking in such a strain as this."

This dialogue had brought de Prosny and his aunt to their own door.

"I must go to the office," said Sylvester; "good morning, aunt, good morning."

Mdlle. de Prosny was conscious that she could not retain her nephew, but she was quite aware that she had succeeded in touching on a subject in which he was deeply interested.

"I thought," said she, tartly, "that Christmas-day was a day of rest; but I do not wish to interfere with any one's arrangements."

Sylvester made no reply, and his aunt added sneeringly, "I am talking of business arrangements, of course."

Prosny walked away, and the old woman stood for a moment on the door-step looking after him, and then she muttered,

"I shall know what it is all about!—I shall know!"

Our space warns us to conclude, which we will do by a couple of extracts, taken almost at random, which appear to us to be highly illustrative of M. SOULIE's mode of thinking. They are a specimen of those discursive paragraphs, upon which we have already remarked, as so distinctive a feature in the French novelists; and we shall then take our leave of M. SOULIE, happy to have been enabled to follow up one of his fictions from end to end without encountering cause for condemning the work as inadmissible in all moral or refined society.

MORAL MECHANISM.

Sylvester was at this moment like certain theoretical mechanics, who dream of an immense result—who foresee it—who amuse themselves by admiring it beforehand, and who, enamoured of their own genius, neglect an ugly little wheel which does not fit well, but of which they disdain to take notice. "It is the business of the workmen," say they; and when the hour is come for the realization of their magnificent projects, all is lost in consequence of the despised obstacle, which might have been so easily overcome.

Is not this also the history of a great many of our political notabilities, who have marvellous ideas in favour of their fellow-creatures? Great men who, were they to suffer no interference, would, say they, render, by one stroke of the wand, the people free and docile, moral and energetic, laborious, economical—every thing you could wish. Put into their hands the mechanism of government, and all these sublime theories of humanity fall before the most insignificant, bad passion which tends to oppose the success of their project.

TRUE SYMPATHY.

How many of you who read me feel sincere pity for those sorrows which only affect the life through the heart? It is true that when you hear of the ruin of a man who is exiled from his family, or from his country—of one who has lost all he loved by death—of such, in short, as are smitten by tangible misfortunes, you pity them; you would be ashamed to refuse them your pity. But he who suffers only in his mind; he who has created within himself an anguish in which no fellow-man has part; he who has nursed hopes only to lose them; who raises a cry of treason where he has never had the guarantee of an oath; he who willingly accepted yesterday the position which to-day appears odious to him, without the operation of any visible change;—such a man is considered mad, sometimes ridiculous, almost always unreasonable; and yet it is with him that you should weep and groan.

LITERARY GOSSIP IN PARIS.

From our Correspondent.

Nothing of any moment has occurred in our literary circles, if I except the failure of the *Tour de Babel*, at the Français. Never was any more complete; yet, nevertheless, the name of the *pièce de chère* is kept afloat by the resolute determination of the play-going public to learn the name of the author, who modestly shrinks from such universal notice. From several quarters letters have reached the editors of the different journals, in which the various writers disclaim the paternity of this modern "confusion of tongues," while the real *Simon Pure* preserves an absolute silence. In England you would not seek to disturb his *incognito*; you would have been satisfied to judge the man by his works, and to consider yourselves well rid of all acquaintance with a monstrously dull personage; but here it is quite the contrary. It is difficult to decide upon what principle they have adopted such a creed, but it is nevertheless certain that the Parisians consider themselves *entitled* to ascertain the identity of every individual who ventures to become a denizen of the *monde artiste*. No "great unknown" is suffered to walk masked in the promenades of Paris, and the consequence of this somewhat tyrannical exaction of the gossip-loving idlers is, as in the present instance, the dragging to light an unlucky victim who has already been sufficiently hissed and hooted in effigy. It is really laughable to see how gravely the journals assert that the coyness of the unhappy play-wright can ultimately avail him nothing, for that "sooner or later the secret must be known, and the author abide his fate!"

A philanthropist has just addressed to the Government a very remarkable report on the subject of premature burials. There is assuredly nothing in the climate of this part of France which can excuse the indecent haste with which human creatures are cast into the grave; and we were, therefore, less surprised than shocked at the numerous and *well-authenticated* instances cited by the writer of the report, of individuals preserved from the most frightful of all deaths at the moment when busy hands were adjusting the shroud, or, still more frightful! as the coffin was about to be lowered into the grave. And these are the record of the *saved!* Human nature shudders and revolts from contemplating the possible number of the *lost!* A most fearful example of the latter contingency is related in a French journal. "Last winter," says the *Observateur Français*, "a young and beautiful *artiste* died almost suddenly, under the violence of a painful and dangerous malady. A young man, who was deeply afflicted by her death, was describing her last moments to a physician, who told him that in similar cases he had frequently seen lethargy assume the appearance of death. These words overwhelmed his auditor with mingled hope and terror. The lady had been interred on the previous evening, and before the tomb could be opened, it was necessary to go through certain tedious formalities, and to obtain an authorization conceded with difficulty. Half-wild and heart-broken, calculating with agony every moment as it passed by, the unhappy young man at length received the desired permission, and flew to wrench open the coffin which contained the body of the object of his affections. He was accompanied by his friend the physician. The poor girl was indeed dead, but she was yet warm! She had been buried two days—she had been dead less than two hours!"

Truly it was time that some lover of his species should loudly and boldly protest against the useless and inhuman haste with which the Parisians bury their dead; and we sincerely trust that the exposure of this barbarous system will induce its reformation. There is no consistency at present between the heartless hurry in which they huddle the remains of those who have been nearest and dearest to them into the earth, and the hyper-sentiment which wreathes the tumulus raised above the departed with bouquets of roses and garlands of *immortelles*. It is sickening to reflect upon what a grave of horror some of these mourners *may* have scattered their flowers and shed their tears!

JOURNAL OF GERMAN LITERATURE.

(From our Correspondent.)

No work of great historical interest has of late made its appearance in the world of German literature. Several volumes, biographical and statistical, we may name as bearing indirectly on history, but nothing which has excited much interest or attention. *Lebens-bilder aus dem Befreiungskriege*, edited by Herr VON HORMAYR, is now completed by a third volume, which is said not to equal either of the others in the value of its information. The work may really be divided self into two distinct parts, and those by no means of equal importance. The first, which in fact gives the volumes their name and credit, consists of letters, &c. from the most celebrated characters of that period—STEIN, GNEISENAU, GRUNER, NUGENT, MUNSTER, and others. This part is inestimable among publications of this nature; and for the editing of these documents HORMAYR deserves the gratitude of all students, whether he was actuated thereto by mere motives of personal interest, or by a love of imparting truths so important to history. The other half of the work is, on the contrary, the production of HORMAYR'S pen alone, that is to say, with the exception of some few papers which had previously been published; it is wholly wanting in those characteristic letters which give so much interest to the preceding volumes; and the remarks and reflections with which it is filled are written in a spirit so trite and commonplace as almost to ruin the effect of the entire work; it would have been infinitely better had they been omitted altogether. Some journals had attacked HORMAYR with the statement that the papers obtained from MUNSTER were only intrusted to him under a promise of their not appearing before the world at large; but this, though at one time the case, was afterwards overruled, and the consent of MUNSTER himself gained to their publication. Dr. FABER was, we believe, the chief accuser of HORMAYR in this affair. HORMAYR is unquestionably a man who entertains an amazing opinion of himself. His talents, in some respects, are great; he took an active part in the war of the Tyrol freedom, but he is in error when he conceives himself to have been the soul of the enterprise—the grand centre of action at that exciting period. His attempts in the year 1813 to re-act the same part, the Austrian government compelled him to expiate by a long imprisonment. Some time later he entered the Bavarian service, and has become so incorporated with this nation, that in these three volumes, filled to overflowing with abuse of the French policy at that time adopted by the princes of Germany, not even the slightest syllable of condemnation is to be met with regarding the conduct of Bavaria. But this circumstance was not wanting to convince the world that calm judgment was not Herr VON HORMAYR'S *forte*.

Briefe aus und nach Kurland während der Regierungsjahre des Herzogs Jacobs, von OTTO V. MIRBACH. To give the history of a small and unimportant district in such a style as shall secure the interest of the reading public, as well as be worthy the attention of the learned, is no easy task. MIRBACH has selected the form of letters, with the idea that they would only be

read by his friends in Kurland; but the result has proved that his book has gained a more enlarged circulation than he expected. The letters are not confined to the subject of Kurland alone; some are from Poland, France, Holland, and Russia; containing, with historical notices, observations on the customs and manners of these several people, forming altogether a work of much interest.

The writer has commenced his letters with the year 1672, a period when Kurland bore a closer relation to the western powers of Europe than it has since done. Holland was then threatened with war by the united monarchs of France and England, Louis XIV. and Charles II., with whom the king of Sweden afterwards combined. In her need, Holland applied, through the Prince of BRANDENBURG, to the Duke of COURLAND, with whose permission some regiments were despatched to aid the distressed country, under the command of the hereditary prince, afterwards Duke FREDERICK CASIMIR. There was not much to be said concerning the military exploits of the Courlanders at this period. The editor perhaps selected it, as forming a connecting link between the country and other matters of interest. The nobles spent their days in hunting and carousing, the peasants in hard labour and endurance. One point, however, was remarkable, the extreme ease with which animosity was extinguished in the case of duels which had terminated in blood. "One nobleman was killed by another in a duel; the survivor walked before, attired in long black garments, between two friends of the deceased, with his arms extended, and the naked sword in his hand; the corpse was borne before into the church, where it was set down. The priest performed the burial service; the survivor stood still between the two friends, who now held their swords crossed before him. Over them the brother of the dead man and his murderer gave each other the hand, took their evening meal together, and remained good friends as they had been before. The business was henceforth completely settled and done away with.

"Even now the peasantry of the country are in any thing but an enviable condition; but formerly the tyranny and oppression under which they laboured were severe in the extreme. The nobles had power of life and death over them. One noble would assemble a small council of two or three others, and the body passed judgment upon all such offences as had been made against them. Sentence, either of cutting off a hand or the head, or hanging up the delinquent on the nearest tree, was always executed on the spot."

The historical parts of this book are well worthy of attention. Herr VON MIRBACH has made ample use of the best resources with regard to Courland's former connection with Sweden and Poland, and the life and character of Duke JAKOB.

THEODORE MUNDT has, some time since, published a work which, if it did nothing else, secured him most lengthy reviews in all the foreign journals; but it certainly did one thing more, it proved the wonderful versatility of his genius, even though it be not the best specimen of talent which he has given to the world. The title is *Geschichte der Gesellschaft in ihnen neuern Entwickelungen und Problemen*—(The History of Society in its new Problems and Developments). MUNDT is a writer of astonishingly varied capabilities; from the first poetical direction taken by his young mind, from the novels and romantic tales in which it found vent, years have gradually turned it to the tendencies which are now so evident in all he writes, and which were indeed foreshadowed in his very earliest efforts. From criticism and polemics he passed into the field of didactics, when he published his *Die Kunst der Deutschen Prosa*. His mind strengthened by this labour, he applied more readily to the task of acquiring useful knowledge, that here, too, he might have the reputation of one who had not toiled in vain. It has often been questioned where the real form of this strange Proteus is to be discovered; whether in poetry, politics, philosophy, criticism, socialism, or in what; for in all these, and many more varied pursuits, he has given evidences of no contemptible power; in all these, too, one hears the same voice, now raised to a higher tone, now lowered, alike in his first as in his latest works. But taking and comparing his numerous labours, which subject at length will prove to be the object of his life, the study where his head and heart will find themselves really at home, it is difficult to say. In his last work, the many collateral subjects to which a history of society necessarily leads are all treated in his own peculiar style. To those who are acquainted with his writings, the impetuosity of his decisions, the one-sidedness of his views, will be familiar at a glance. With regard to historical facts, he is said to have been, once or twice, singularly at fault; nevertheless, with the highest genius, no man can be infallible. The spirit of polemics, of late so prevalent in Berlin, is manifest throughout the entire work, which indeed bears strong marks in form and colour of its native soil; the very turns of rhetoric are alone sufficient to indicate this. If nothing of originality can be found within it, one cannot peruse it without being both instructed and amused. It might, perhaps, be more in adaptation to his powers, great though they be, were he to withdraw from these social and political discussions, and, leaving them to others, return to the fields where he has already won so many laurels.

THE TOURIST.

[All the world travels now-a-days. Great, therefore, will be the utility of a periodical to which every Tourist may communicate such of his experiences as to routes, sights, conveyances, inns, expenses, and the other economies of travelling, as may serve his fellow-tourists. To this design we propose to devote a distinct department of THE CRITIC, and we invite communications of the class described relative to travelling both abroad and at home.]

The Hand-Book to Paris. 9th edition. London, 1845. Strange.

THIS useful little volume contains within a small compass a complete Guide to Paris, with full instructions to the traveller what he must do, where go, and what pay, from the moment of starting from London to his return thither, after a visit of three or four weeks. The utility of this volume mainly consists in its convenient size, which permits of its being carried about without the burden to hand or pocket of the larger and more costly Hand-Books. Its accuracy may be presumed from its popularity.

SKETCH OF A TOUR IN THE TYROL.

Being a reader of THE CRITIC, I lately observed a request from "An Inquirer," supported by a similar request from the editor, for some such reader to furnish him with a sketch of the most picturesque route from Vienna, across the Tyrol, to Switzerland, naming places, distances, time, and conveyances. Now as I travelled, during the summer of 1842, through, I believe, nearly all the finest scenery of the Tyrol, setting out from Vienna and quitting the Tyrol on the side of Switzerland, I feel bound to comply, as well as I am able, with the request. I shall therefore endeavour to sketch a tour, by making which the most picturesque scenery in the Tyrol may be seen, and which, if fully completed, would occupy about two months. Though it may be longer than every tourist may wish to make, he may curtail it; or, if it should not be long enough, he may extend it so as to suit his own time and inclinations. It cannot, however, be performed by any but the pedestrian, with his knapsack (and the lighter this is the better), and by one who is able and willing to undergo occasionally a pretty hard day's work in walking, for which, however, he will always be amply repaid. It is impossible for any other kind of tourist to see in perfection the scenery of the Tyrol, which almost rivals Switzerland in grandeur and sublimity, and excels it in richness and picturesque beauty. He ought also to be able to speak a little German. I shall add such short notices of the places and objects to be seen on the route as may give the tourist some little idea of what he may expect to see, and partly guide him as to what he should inquire for; I refer him for further details to *Murray's Hand Book of Southern Germany*, which is indispensable to the tourist in the Tyrol, and which should be well studied. He may in general depend upon the references there given to the inns. The tour I am about to sketch is what my fellow-traveller and myself accomplished in the time I have mentioned. It is, therefore practicable for other pedestrians. He will find the Austrian notes for five florins each the most convenient money.

Commencing, then, at Vienna, I shall proceed as well as I can. I shall presume that the tourist has descended the Danube from Linz to Vienna; he may, therefore, return by the eilwagen. By this conveyance my companion and myself left Vienna on the 16th August, 1842 (quite late enough in the season), at one o'clock in the afternoon, and reached Linz at eleven in the forenoon of the following day, having travelled all night, except one hour allowed for supper at St. Pölten. We passed through the towns of Mölk and Ems (in the former of which the splendid monastery of that name is situate, and which deserves a visit from any one that has time to stop here—we did not visit it), and crossed the river Traun, at Ebersberg. The tourist should ascend the hill behind the town of Linz, and near Jagermeyer's Garden, to enjoy the view thence of the town, the winding of the Danube, and the Salzburg and Styrian Alps; should visit one of the 32 towers erected by Prince Maximilian—the one usually shewn to strangers is about a mile and a half from the town—and he should observe the peculiar head-dress of the women here, which is like a golden helmet. From Linz, by far the most picturesque route to the Tyrol is through the Salzkammergut, which contains some very fine scenery. For the purpose of seeing this, we left Linz at one o'clock in the afternoon, by a railway train drawn by horses, and passed Wells and Lambach; the road is uninteresting till we approached the falls of the Traun, when we left the train with a party, who there agreed for a carriage to take us forward. The tourist who wishes to see the falls should endeavour to do the like, as the train does not stop here. We walked through a wood to the falls (forty-two feet high), of which the effect is grand;

beautiful clear green water rushing and foaming over the ledge of rock. The scenery around is very picturesque. There is a remarkable canal here, by which the boats pass to avoid the falls; it is formed of wood, and the water shoots along it with almost the swiftness of an arrow.

We arrived at Gmunden at nine o'clock in the evening. The Traunstein is a very fine, bold object on approaching the town, which is very prettily situate at the foot of the Lake of Gmunden. The manners of the inhabitants here are rather primitive. The tourist may expect the Kelnerinn to kiss his hand when he pays his bill, and he will here see glass applied to a purpose to which I dare say he never saw it applied before.

At eleven o'clock next morning we went on board a steam-boat, and proceeded up the lake; the Traunstein being on our left, rising precipitously from the water. The scenery of the lake is beautiful and picturesque. We arrived at Ebenzee, at the head of the lake, at twelve o'clock, got into an omnibus, and, having been driven along the banks of the Traun, which runs here through a beautiful valley, we arrived at the town of Ischl at two o'clock. This is a much frequented watering-place, and very fashionable. We saw here the Queen of Saxony and the Archduchess Sophia of Austria. It is beautifully situate, and surrounded by lofty mountains. Many excursions may conveniently be made from this place. We made one on foot to St. Wolfgang, by way of Wirer's Waterfall, the Schwartzen See, and Wirers Shrub, and were much pleased. We walked up the beautiful valley of Ischl, with its fresh green meadows, nearly to the Brannkweinhaus, when we ascended the mountains by a steep path to Wirer's Waterfall, which, in the state we saw it, scarcely deserved the name of a waterfall; and having ascended further, we reached the Schwartzen See, a very secluded, romantic lake of dark-looking water; then turning to the left, by a path leading through a magnificent chasm in the mountain, we descended to St. Wolfgang, seeing the cascade called the Wirer's Shrub, near which the scenery is very grand; on both sides precipitous rocks of great height, covered with firs wherever it was possible for them to grow, and in front fine mountain peaks. A good dinner may be had at the village of St. Wolfgang, which is prettily situate by the side of the lake of the same name, and of beautiful green water. The church should be visited, where are to be seen the shrine of St. Wolfgang, also a curious old carved altar-piece, and a chapel built on a rock protruding into the church through the pavement. On the outside of the church we saw a small vaulted chapel, containing a great number of skulls and other human bones; three or four of the skulls in glass-cases, some decorated with flowers, others with the names of their former owners and dates of their deaths. We ascended to the chapel on the hill, passing a great many shrines, and had there a fine view over the lake, the scenery around which is very beautiful. We arrived again in Ischl about seven o'clock in the evening, after a beautiful walk of twenty-one miles.

The tourist, before leaving Ischl, should forward his heavy luggage by post to Salzburg to await his arrival there. He may then proceed in the morning on foot up the beautiful valley of the Traun, and at the end of nine miles he will arrive at Steg, having passed through the villages of Lauffen and Goisern. He may here hire a boat, and be rowed up the very fine lake of Halstadt, the head of which is very grand; the mountains rise precipitously from the water's edge, and those that bound the south end rise to the height of perpetual snow. He will land at the village of Halstadt, the houses of which are built on the side of the hill like swallows' nests, one above another, and are approached by steps. There is no carriage-road to the village, and only difficult foot-paths. He must visit the old church consecrated in 1320, which contains a singular altar-piece, in style like the one at St. Wolfgang.

In a vault under a chapel here we saw some hundreds of human skulls, piled in a heap; one of them a burgomaster's, some scoured white and flowers painted on them, and the name of the deceased marked; the nearest relatives of whom, we were told, dig up their remains after having laid a certain time in the churchyard, scour and place their skulls in the vault, together with the crosses that were over their graves.

He may return down the lake as far as Gosauzwang, and there part with the boat. Gosauzwang is an aqueduct, 130 feet high in the centre. He may then walk through the magnificent pass into the beautiful and secluded valley of Gosau, where on the left will be seen the Donnerkögel, a mountain 6,000 feet high, with a very picturesque serrated summit. He will arrive in the evening at the village of Gosau, seven miles from Gosauzwang.

He should not omit next morning to make a short excursion to the Vordersee. He may obtain a char at the inn, from which the very civil landlord will drive him for half an hour up the valley. He must then walk three miles through a forest to the lake, ascending considerably. He will here have presented to him a sight that will much astonish him. The view of the lake and the surrounding mountains, with the very beautiful glacier hanging on the side of the mountain at the head of the lake, is magnificent. This excursion will only occupy about three hours. After making it, the tourist may set out again from Gosau for Abtenau, distant twelve miles. He will cross over the pass of Geschütt, covered with pines, and through the village of Russback. In the evening, if he have time, he may loiter into the churchyard at Abtenau, where he will see that all the crosses over the graves have a small pan-like vessel hanging from them, and will probably observe women filling some of these vessels with holy water, and sprinklig it over the graves of their departed friends.

Leaving Abtenau early in the morning, he will walk through a pass into the very beautiful and picturesque valley of the Lammer; and on arriving near Golling, he should turn off to the left into the valley of the Salza, to see the Oefen, where the river Salza rushes through amongst rocks, wearing them into singular cavities, and to a great depth. It is altogether a scene of great wildness and grandeur.

Near here is seen the entrance to the pass Lueg, and the fort that guards it. It is a fine pass, having the Hohe Göhl on one side and the Tannen Geberge on the other, both high mountains. He may then return into the road to Golling, where he will soon arrive, having walked from Abtenau, about sixteen miles. Here he may dine. And I may remark, that the Germans dine very early, about twelve or one o'clock, and I think the pedestrian will experience the advantage of dining when he rests during the middle of the day, and that he will find himself better by abstaining from drinking any spirituous liquor whilst he is walking. I never found any bad effects from refreshing my mouth with a little cold water, and immediately continuing my walk; it should, however, be drunk sparingly. In the evening he will be able to reach Hallein, nine miles further, the valley of the Salza having opened considerably, shewing beautiful green meadows. Before he leaves Hallein, the tourist should on no account omit to visit the salt mines there, as they are considered the best specimen for a visit of the many salt mines in this district. He will obtain permission and a guide by applying at the post. He must ascend the hill behind the town for three-quarters of an hour, when he will reach the Durnberger Einfährt, where he must put on, over his own dress, the costume that will be found for him there, consisting of a pair of white linen overalls, a white jacket, a stiff cap, a short leather apron to be turned behind, and thick leather gloves. Then with a torch in his hand he and his guides will enter one of the galleries, like a tunnel, and after proceeding about 1,000 yards into the mountain will come to the first descent or shaft, about 350 feet, and will slide down sitting upon two poles, which are laid about a foot apart from each other, and from the top to the bottom of the shaft, holding by the right hand (on which he must take care to have his leather glove) a rope as a support, and to check his too speedy descent. He will then proceed along three other galleries, and down as many shafts, when he will come to a chamber, which he will find illuminated all round the sides with candles lighted expressly for him, and sparkling with the crystals of salt, and nearly filled to the roof with water, quite salt. He will here find a boat and boatman ready for him, that will remind him of old father Charon and the passage of the Styx. In this boat he will be drawn by means of a rope across the chamber. He will pass along another gallery and down another shaft. Some of the shafts, being perpendicular, are descended on ladders. He will then have to mount upon a wooden horse, which will be drawn forwards by one man in front, and pushed on by another behind, through a very narrow passage, at such a pace as will not a little astonish him, particularly if he be possessed of weak nerves; he must sit very steadily, and take care of his head. He will thus ride, perhaps, about a mile and a half to the exit from the mine a little above the town. He should then descend to the town, and visit the boiling-house, where the water is separated from the salt by evaporation in large pans, the salt having been previously dissolved from the sides of the chambers of the mine by filling them with water, and the liquid drawn off in wooden pipes.

(To be continued.)

ART.

Mr. Herbert, we may announce, has received a commission for the Hall of Poets, in the new parliamentary buildings.

DISCOVERY OF ANCIENT STATUES AND BAS-RELIEFS.—In the month of June, as we learn by a letter from Rome of the 18th ult, some workmen, in making a cutting for the railroad now in the course of execution near Ostia, discovered three statues, with several bassi-relievi. One of these statues, which is of Greek marble, is considered a *chef d'œuvre*. It represents a female, whose form is evident, through the most delicately sculptured drapery. The other two, although very fine, have not the same perfection of art. Some days afterwards several

cinerary urns were found near the same spot. Two of them are ornamented with bassi-relievi of the finest workmanship; the figures, though very small, are so exquisitely finished, that the veins, muscles, nerves, and all the minutest details are exhibited. Besides these, there have been taken up several pieces of green and yellow marbles, and also a stone on which is engraved—"*Minutius C. C. triginta in agro et vigintiquinque in fronte possit*," the interpretation of which we take to be, that Minutius placed thirty of these statues in the grounds of his villa, and twenty-five in front of the building itself.

Baron Bosiof, the eminent sculptor, was on Tuesday morning found dead in his bed, to which he had retired the previous night in good health. He was in his 77th year. The deceased was officer of the Legion of Honour, Knight of St. Michael, and Member of the Institute.

THE DRAMA AND PUBLIC AMUSEMENTS.

ITALIAN OPERA.—TAGLIONI'S benefit attracted of course a full attendance; the pit more especially was crowded to inconvenience. The entertainments selected were varied and excellent: in addition to the ever delightful *Barbiere*, there were selections from *Anna Bolena*, and from *Linda di Chamouni*, while the dancing was on a scale of the greatest liberality. CERITO and LUCILE GRAHN executed several of their most popular feats, and the heroine of the evening gave us, among other famous cherographic displays, the celebrated *pas* from the *Sylphide*, the *Mazurka*, the *Pas Tyrolien*, the *Pas de la Chasse de Diane*, and as much as was feasible of the *Pas de Quatre*. On Saturday TAGLIONI appeared for the last time in England; a sad announcement to make, and the more so that in no respect does she exhibit the least falling off in her wondrous powers. For all that appears, she might dance on for the next ten years to come, without affording less gratification to her spectators, or more to her rivals. But she is the best judge on this delicate point; none but the wearer knows where the shoe pinches; and none but TAGLIONI herself can understand why she should retire. For, reasons of policy apart, surely six months in the year, say, to herself, for some time to come, would afford ample space for the *dolce far niente*, rendered still *più dolce* by the triumphs of the other six. However, if the Lago di Como should really turn out to have more charms for her than the capitals of Europe and their acclamations, we have still the Graces Three, CERITO, CARLOTTA GRISI, and LUCILE GRAHN, who may console us, not poorly, for the absence even of TAGLIONI; to whom, in her retirement, whether temporary or permanent, be all happiness. *Vivat et valeat!*

HAYMARKET THEATRE.—Another version, and we are inclined to think the best, of the *Caudle Lectures*, has been produced at this theatre, with decided success, BUCKSTONE and Mrs. CLIFFORD being the hero and heroine of the piece, or rather, Mrs. W. CLIFFORD being the heroine and BUCKSTONE her unhappy victim. How well the lady fills her part may readily be appreciated by all playgoers, acquainted, as they must be, with the awful presence she can assume when "'tis her cue to fight." She really acts the "woman of spirit" with a truth to nature, nay more, with a gusto, which at times create in our mind a painful feeling of sympathy with *her* Mr. Caudle; and yet again, when she has got quite her own way, she has an exceedingly good-natured twinkle of the eye, and a heartiness of laugh, which restore our equanimity, by giving us reason to hope that by a little management and judicious yielding the said *Caudle* may get on pretty well. Mr. HUDSON has appeared in the character of *Sir Lucius O'Trigger* with much applause, fully merited. There were, of course, among the audience many who had seen poor POWER'S masterly delineation of the same part; but even these, we must think, could not have been otherwise than pleased with Mr. HUDSON'S performance; while to those who never saw the fine actor whom the fierce Atlantic so prematurely tore from us, Mr. HUDSON will be more than satisfactory. This gentleman's versatility is really quite surprising, and he has, at the same time, the excellent judgment to attempt no part to which he does not feel himself competent. We do not go the length of saying of him *nihil tetigit quod non ornavit*, for he has been called upon to fill parts his predecessors in which have left no room for improvement; but we can fairly say that we have seen him succeed to no *rôle* his impersonation of which has suggested comparisons which need be "odious" to him. If the man of sense we take him to be, he will be nowise annnoyed at being told that he is not equal to POWER; the man of commendable ambition he evidently is, he may well be gratified at the assurance which, in common with, we believe, all our brother critics, we give him,—that, as the representative of Irish characters, he is, of the actors of our present time, the next best to POWER; and yet Mr. COLLINS is exceedingly good in this line. Almost every stage Hibernian we have seen has been a dead failure, an absurd exaggeration; a mere botheration of bombast and bad brogue. Mr. HUDSON'S Irishman would be recognised across the Channel. Another attraction at the Haymarket has been the celebrated pianist LEOPOLD DE MEYER, whose reception has been such as to call for an extension of his engagement. JOHN PARRY commences a series of his entertainments on Monday.

PRINCESS'S THEATRE.—The season at this elegant and well-managed place of entertainment has all but terminated; after one or two more evenings, the doors close until reopened for the winter campaign. Meanwhile we have to notice that Mr. COLLINS made his appearance on Tuesday, as *Sir Patrick O'Plenipo*, in KENNY'S comedietta of *The Irish Ambassador*, and was well received in the part. It is one which POWER created, and which no one we have since seen has been able to approach him in; but still Mr. COLLINS'S impersonation of the blundering diplomatist is a meritorious and amusing affair. Mr. COLLINS'S conception of Irish characters partakes of the merit we have above assigned to Mr. HUDSON, in a freedom to a great extent from the absurd exaggeration and noise which the majority of stage Hibernians conceive to be the *beau ideal* of a son of "The Gem." The *Syren* has been pursuing the successful tenor of her way; *Mrs. Caudle*, on Tuesday, gave her *Lecture* for the thirty-third time, and *The Court Ball* was danced for its forty-fourth night. These, in conjunction with the fact of a good house, were favourable indications; and we hope that Mr. MADDOX has as much reason to be pleased with the public, as the public with him. Mr. H. RUSSELL gave his entertainments on Wednesday, in addition to *Don Cæsar de Bazan*, *A Court Ball*, *Catherine and Petruchio*, and *Mrs. Caudle*, a liberal programme in all conscience.

ADELPHI.—Miss WOOLGAR took her benefit on Wednesday, on which occasion Mr. WEBSTER gave his efficient aid. The entertainments selected were *Sweethearts and Wives*, *the Pretty Girls of Stilberg*, &c. Miss WOOLGAR'S merits were recognized by a very good house.

SADLERS' WELLS.—The *Gamester* is being played here with, of course, Mrs. WARNER and PHELPS in the principal characters, ably supported by Mr. BENNETT and Miss COOPER. After the tragedy, we were presented with *Simpson and Co.* and *The Married Bachelor*, amusing farces, very amusingly performed.

POLYTECHNIC INSTITUTION.—Dr. RYAN has been lecturing at the Polytechnic Institution on the spheroidal state of bodies, and its application to steam-boilers, and on the freezing of water in red-hot vessels. The above experiments were exhibited at Cambridge a short time since by M. BOUTIGNY. The Doctor first proceeded to show that a drop of water projected upon a red-hot plate does not touch it, but that a repulsive action is exerted between the plate and the fluid, which keeps the latter in a state of rapid vibration. At a white heat this repulsion acts with the greatest energy, whilst it ceases and the ordinary process of evaporation takes place at a brown-red heat. The temperature of the water whilst in the spheroidal state is found to be only 96 deg. and this temperature is maintained so long as the heat of the plate is kept up. To bring this water to the boiling point (212 deg.) it is therefore necessary to cool the plate. Several experiments were made in proof of this necessary cooling to produce ebullition. The red-hot plate with its spheroidal drop was removed from the spirit-lamp, and after a minute or two the water began to boil, and was rapidly dissipated in steam. The application of the principles involved in these phenomena to the tempering of metals was then explained. If a metal to be tempered is in a highly incandescent state, the necessary hardening will not take place on plunging it into water. It is therefore necessary that a certain temperature should be observed. Experiments were made to show that the repulsive power of the spheroidal fluid existed not merely between it and the hot plate, but between it and other fluids. The bursting of steam-boilers came next under consideration, and it was shown that many serious explosions may be referred to the phenomena under consideration, and also many cases of explosions have occurred during the cooling of boilers and withdrawal of fire. These experiments, the learned lecturer informed his auditors, were not new, as they had been exhibited many years ago in Paris, London, and America. The concluding experiment, however, he said was really new, which he performed in the following manner:—A deep platina capsule was brought to a glowing red-heat, and at the same time liquid sulphurous acid, which had been preserved in the liquid state by a freezing mixture and some water, were poured into the vessel. The rapid evaporation of the volatile sulphurous acid which enters into ebullition at the freezing-point produced such an intense degree of cold that a large lump of ice was immediately formed in the red-hot vessel. In repeating these experiments, Dr. RYAN used an apparatus much larger than has been before employed, and was thus enabled to freeze masses of ice, sufficiently large to be seen by his large audience.

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

THE CASE OF CLAIRVOYANCE.

IT is the purpose of this department of THE CRITIC fairly and truly to record all experiments into the phenomena of mesmerism, whether they succeed or fail—whether they prove to be genuine or counterfeit. The truth and the fact are all we seek.

The experiments into the case of alleged clairvoyance described in the two last numbers of THE CRITIC have been continued, but we are bound in honesty to say with results by no means so satisfactory as those which had been previously elicited. The boy has been detected in practising a deception in one case. It will be unnecessary to detail the very ingenious contrivances adopted for the discovery of this; they were perfectly conclusive, and, indeed, the fact was confessed by the boy himself. The result of that experiment was, that the boy had opened the box for the purpose of reading the contents, removing and restoring the string by which it was fastened.

This discovery, however, must be taken at its true value. It proves this, and nothing more than this, that he will play a trick sometimes. It does *not* prove, as was too hastily concluded by the gentlemen who assisted in the experiments, that all the previous investigations were invalidated also. It may be that the faculty is possessed, and yet that when it does not operate the boy might play a trick rather than appear to fail. If there be any truth at all in mesmerism, certain it is that no feature of the mental condition of the patient is more universally witnessed than the development of self-esteem, and consequent excessive anxiety to do or appear to do what is required of him. Hence, in the ordinary phenomena, the tendency to guess answers when the patient has not the *knowledge* of the object sought.

On close examination of the boy after this discovery he made a clear breast of it. He frankly admitted that on this and on *some* other occasions, when the faculty was not readily excited, or he could evade the intense mental effort requisite for its exercise, and it appeared easy to open the box, he had been tempted to do so to learn the contents. But he makes the most solemn asseverations that he has done this only occasionally, and in such circumstances alone; and that the greater portion of the trials made with him, and all of those we had previously recorded, were fair and honest, and he calls upon us to test him again and again by every device ingenuity can suggest, and imposing any conditions we please that may render imposition impossible. He says that he cannot always be sure that he is in the state to possess the faculty, but he promises that in future when he cannot see he will say so at once.

This request is so reasonable that it would be unjust to him and unjust to science not to accede to it. Before a final judgment is passed upon the case, a series of experiments will be carefully tried and accurately noted, which must place beyond further question the true character of this case. The results, whatever they may be, shall be fully submitted to our readers. In the meanwhile they must suspend their judgments as to the whole case, for, of course, the discovery of a deceit so far affects previous observations, that they are only of negative value. It is necessary to start afresh, with tests prepared with the full knowledge that deceit has been practised, and therefore may be again resorted to, and with resolve to guard against it by rendering it physically impossible, as by boxes nailed or locked, or by packets sealed or tied. If these be read, the fact will be proved beyond a doubt, even though, where there was an opening for stratagem, it was resorted to. Nor shall it be determined by one or two trials only, but by many; nor by the success or failure of a single day. But the reader must remember that, in a case of this nature, it is the positive, and not the negative, evidence that is of value; one clear case of reading a word inclosed in a box that could not have been opened will establish the fact of the existence of the disputed faculty as conclusively as if it were done five hundred times, while no number of failures, no number of detected impostures, prove that it does not exist; they serve only to diminish its probability and to call for the stricter investigation.

However, as we said before, the readers of THE CRITIC shall have the details of the entire series of experiments about to be instituted under the new conditions required by the discovery we have narrated; and, until then, we suspend commentary, waiting more satisfactory materials.

Since the above was in type, and just as THE CRITIC was going to press, some more experiments were tried. They were, as it will be seen, successful, and establish the fact that there are powers of perception either more exalted or different in kind from those exhibited in the ordinary state.

The following are the experiments:—

Thursday, August 7.

EXPERIMENT THE FIRST.—G. G. was mesmerised; three gentleman present. The word "solicitor" was cut from a printed paper. The eyes of the boy were then held firmly closed by the hands of one of the experimentalists, over whose hands those of another of the gentlemen was placed. The word was placed upon the boy's knee, under his open hand, and upon that hand was set the hand of one of the party. At first he said he thought the word was "gazette," but in about three minutes he named the word "solicitor."

EXPERIMENT THE SECOND.—His eyes were closed and covered in like manner, and the words "the Sixth," cut from a printed handbill, were presented to him. After some effort, he said the words were "the Strand," or something like it. Being asked to name the letters he perceived, he said he saw T, H, E, S, I; the rest looked like N D, but he could not quite see them.

EXPERIMENT THE THIRD.—While another test was being prepared, the boy went to the mantel-piece. Upon the edge of it was a small piece of paper, which had been fastened to it accidentally by some wet wafers, and in removing the sheet the paper so fastened by the wafers had been torn off. It had remained there for many months. The boy said he saw some letters on the paper under the wafers. The three gentlemen looked at it with great care, but neither of them, with the utmost attention, could discern any thing save the wafers. Presently the boy said, "there are the letters N, E, W." On carefully damping and lifting the paper, it was found to be as he had said. The paper was again inspected, and even when held to the light, instead of being, as before, fastened by two wafers to an opaque painted mantelpiece, the letters could not be seen. The boy then tried, without success, to read a small word held at the other end of the room, and invisible to the rest. Being much exhausted, he was wakened.

It is worth noting, that at the beginning of the experiments the operator, by some half-dozen passes over the ears, entirely deprived the boy of the power of hearing any voice but his own. Throughout the experiments this was curiously shewn. No exclamations or surprises of the others produced the slightest effect, but the lowest whisper of the operator was instantly heard. The boy went out to speak to his fellow-clerks, but he complained vehemently that none of them would answer him, and asked how it was that they had lost their voices. The sense was fully restored by breathing upon the ears.

Another delicate phrenological test was tried. The boy was sent with a message into another room. He repeated the message, and went to perform it. As he was going, eventuality and language were gently breathed upon. He went out, and both the substance and the words of the message were entirely forgotten. While he was looking perplexed and anxious, and making all sorts of guesses, the finger was silently passed over, but so as not to touch, eventuality and memory. Immediately their powers returned, and the message was delivered with perfect accuracy.

This boy says that the power of clairvoyance comes and goes with him periodically. Will our readers direct their observations to this, with a view to ascertain if such be the case generally? We much suspect that in this particular it partakes of the nature of epilepsy. If so it be, the frequent failures of clairvoyants, without any apparent cause, will be accounted for.

TO THE EDITOR OF THE CRITIC.

SIR,—The world will owe you much for the manner in which you have brought forward the subject of clairvoyance. Mesmerists, and especially those who, like myself, have been contending for

what they knew to be facts, through good and evil report, must rejoice to see the advances making, through your means, to the fair investigation of the subject. If you will allow me space for the publication of the following cases and brief remarks, it may forward the elucidation of truth, which is evidently all you seek; and some of them particularly bear upon the view you have hinted in your last paper, and which is in accordance with much that is known, and with what reason must infer. Mesmerism cannot *create;* it may call into action or increase the faculty, but the faculty and its organ or instrument must have previously existed.

CASE 1.—A sealed package was prepared, in March last, by a medical gentleman, utterly impervious to ordinary vision, with any amount of light, even chemical, behind it. One of my somnambules, about half an hour after having been mesmerised, at a *séance* during which he had been lucid—being in his natural state, waiting to sit down to dinner—said he could see into a box if given him. The package was put into his hand—there appeared a violent mental effort; he then described the number of covers, their colour; said a card was in the last, and wrote down the name, describing the peculiarity in the shape of one letter; it was opened by Mr. Vandenhoff, in the presence of twenty persons, and found to be correct.

CASE 2.—Another patient has frequently—that is, six or seven times—succeeded in telling, *while awake*, what letter was placed in her own hand, and once or twice when it was in the hand of another person.

CASE 3.—A word was inclosed in a box by a nobleman, and given to a somnambule in the mesmeric state, at my house, there being several other noblemen present. No one, except the person who had written the word, had any knowledge of what was in the box; the letters were told, one by one, without any word being spoken, to lead (if such a thing were possible) to successful guessing. Similar results have followed upwards of thirty experiments. I shall be happy to shew the words, and give the names of the parties who have made the experiments; but not being authorized, I feel that it would not be right to publish them.

CASE 4.—On Friday last, Aug. 1, at the house of a gentleman of fortune, I mesmerised a somnambule. A gentleman present was placed *en rapport;* I had never seen him, nor had the patient, before; he did not believe in Mesmerism; he mentally conducted the somnambule to his house, asked her to describe the appearance of it; she did so, and said there was a brass plate on the door. I thought this rather unlikely from the style of the person. She said there were three words. I asked her to try and read them. *He* said if one was read it would satisfy him; she then said the first was the shortest, and in about two minutes made out the letters *Sir*. The gentleman making the experiment was a well-known baronet; his own name and title were on the plate.

These facts, Sir, although important to prove the faculty, do not of themselves lead to practical utility; but if they are admitted as possible, who will suppose it more difficult to look through the pores of a human body, and observe the condition of any of the internal parts than to see letters through opaque coverings, &c.; and thus the experiments will lead to the application of this power to the highest conceivable end—the relief of the sufferings of the afflicted; and ere long medical men will *refer* and *defer*, as the men they strive to emulate, Galen, Hippocrates, Celsus, &c. did, to somnambulic prescriptions and diagnosis in the treatment of disease. In conclusion, will you allow me to say that I believe the majority of phreno-mesmeric experiments prove much more the magnetic power than the truth of phrenology. There is, however, an intimate connection between the two sciences; in fact, the power of mesmerising and the faculty of lucidity must depend upon phrenological conditions, and therefore we must only hope to arrive at any thing like certainty or exactness in the practice of Mesmerism when we study it in connection with phrenology. The two sciences may be regarded as the physiology and psychology of the brain. I should be happy to learn if you, Sir, or any of your correspondents, have made any observations with regard to the organization of powerful Mesmerisers and lucid somnambulists. I have paid much attention to this subject, and as my opportunities of observation have been extensive, have collected many facts bearing on this point, and if you think it likely to be useful in advancing knowledge, I shall be most happy to communicate them to you.

I remain, Sir, yours obediently,

27, Duke-st. Manchester-sq. W. J. VERNON.

P.S. I forgot to mention that the most lucid cases which I have had the opportunity of questioning appear to penetrate at once through all the coverings, but the letters or things tremble or dance before them. One of the most intelligent describes it as though the letters were on a piece of ivory in a basin of water, which is much agitated. This leads to mistaking letters, and putting parts of different letters together, and striving to find out what they most resemble. When they stand still, as they do sometimes for an instant, the whole word is pronounced rapidly, and then they are always right.

TO THE EDITOR OF THE CRITIC.

SIR,—Allow me to mention that at page 232 of the *Seeress of Prevorst* will be found a correct account of the Ghost Story you have extracted from Shelley's works, as it was copied from the journal of the minister who saw the apparition; together with the names of the parties concerned, and an attestation of the authority from which the story is derived.

The opinions published in his new work called *The Anastacis*, by the Rev. Mr. Bushe, of New York, wherein (being an eminent Hebrew scholar) he maintains, on the authority of the scriptures, that when the fleshly body falls off, the spiritual one survives and takes on its form, seem to be a first step towards an explanation of the numerous stories of apparitions which we find rife in all countries and all ages; some of which rest on authorities, which it is surely very difficult to set aside; and on confirmatory evidence, which we should not so hastily reject, if the thing to be proved were less discordant with received opinions. These phenomena have been hitherto *all* classed under the head of spectral illusions; and it is difficult to *produce* the evidence necessary to show that this classification would admit of revision, because everybody is afraid of exposing themselves to the ridicule of that wise part of the world which decides so easily on questions they do not understand and have never investigated.

But if I am not mistaken, the time is fast approaching, when the apparitions described in *The Seeress of Prevorst*, and other similar histories, will be shewn to belong to some class of phenomena, of the theory of which we are yet utterly ignorant.

I remain, Sir, your constant reader,

Aug. 5, 1845. CATHERINE CROWE.

We have received a letter from Mr. SPENCER HALL in reply to Mr. BRAID, wherein he explains very fully some of Mr. BRAID'S allegations, and denies others; but as a correspondence of this nature neither forwards our knowledge of Mesmerism, nor can be amusing to our readers, we have been compelled to decline inserting it.

BOOKSELLERS' CIRCULAR.

No topic of special importance to the bookseller has occurred during the week. The Literary Intelligence and Reviews will convey all the information interesting to them.

THE PRICE OF BOOKS.

TO THE EDITOR OF THE CRITIC.

SIR,—From the commencement of THE CRITIC till now, I have been a constant reader and great admirer of it; and, with one exception, there is none of the varied periodicals which I receive to which I give a more cordial welcome than your own.

I have long felt it to be a most annoying thing, when, on seeing a work noticed, of which I should like very much to have a copy, I was perfectly in the dark as to the probable *cost* of it. I am well aware that, as the law is constructed, it would be deemed illegal were you or others to append or prefix the price of books to your reviews; because all literary notices, which at the same time furnished *prices*, would be looked upon and charged as *advertisements*. I believe that, generally, proprietors of literary journals have no desire for a change in the existing system, *because*, were they legally privileged to give the price of the volumes which they reviewed, they would, in consequence, lose no slight number of advertisements in the course of a year—many publishers merely sending a presentation volume to a favourite editor for review, without accompanying it with instructions to announce the new publication in his advertising columns. Honestly, I consider the system of reviewing to be at a somewhat low ebb in Britain, and the services of an impartial critic to be invaluable,—especially in these days when books are teeming as plentifully from the press as money from the Mint, and the difficulty of being able to detect the genuine metal from the counterfeit is consequently augmented. It certainly, therefore, seems that the least acknowledgment which a publisher can make to an impartial journalist is to instruct him to *advertise* those books which he wishes him to review. I am perfectly aware, however, that there is a good deal of *jobbing* connected with our present systems of advertising and reviewing, the consequence of which is, that favours are generally retained for those who can be relied on to give favours in return,—no matter whether merited or not. A journal, such as your own, whose independence elevates it beyond the influence alike of publisher and author, need not place much reliance on either of

THE CRITIC,
And Journal of Literature.

SATURDAY, AUGUST 16, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

JOURNAL OF ENGLISH LITERATURE.

BIOGRAPHY.

Washington. By M. GUIZOT. Translated by PAUL PARNELL, Esq. E. Painter.

ONE of the most interesting spectacles which can engage the thoughts of social man is that of nations or collective bodies emerging, like the ancient Romans, from comparative obscurity and weakness to distinction and greatness, and as such exerting a vast moral influence over the interests of other states and the destinies of the world. We have here what M. GUIZOT would style one of the grand *facts* of history combined with all the pleasing adventure of the novel. Next to this, and akin to it, is the rise to glory and immortality of the distinguished patriot, whose character and career appear, and actually are, coeval and co-existent with those of the land honoured by being the scene of his nativity. Biography thus becomes the most striking and the most entertaining part of history, as well as that most easily understood. The comparison is at once pleasing and useful, and in the present instance necessary.

The progress of the United States, like that of most colonies, is closely identified with the history of the mother country. It has been remarked by many distinguished Americans, as well as Englishmen, both at the time of the civil war and subsequently, that America owes her freedom to the favourable opinion entertained of her claims at home both in and out of Parliament. This contributed alike to form, regulate, and propel the enthusiasm of her population for a cause in which, to use the words of M. GUIZOT, they believed "resistance founded upon historical right and upon facts,—upon the right of reason and upon philosophy." In accordance with this is the whole past history of the mother country and her dependencies, and therefore M. GUIZOT justly observes, in the paragraph after that last quoted:—

> It is the honour of England to have deposited in the cradle of her colonies the germ of their liberty. Nearly all, at their foundation, or soon after, received charters which conferred on the colonists the franchises of the mother country.
>
> And these charters were no vain snare, no dead letter, for they established or admitted powerful institutions, which provoked the colonists to defend their liberties, and to control power whilst they partook of it: the voting of the subsidies, the election of the great public councils, trial by jury, the right of assembling and acquainting themselves with the affairs of the commonwealth.
>
> Thus the history of these colonies was but the practical and laborious development of the spirit of liberty, growing strong under the colours of the law and the traditions of the country. We may call it the history of England herself.

M. GUIZOT does not, however, at the commencement of his work allude, as he should, to the distinctive character of the emigrants, the majority of whom were Whigs and Puritans. CROMWELL himself, as it is well known, had fully prepared for a voyage across the Atlantic, in the days, if any such were numbered in his history, of his sincerity and enthusiasm. Had the other party been more, or this less numerous, the revolution might have been nothing but an unsuccessful insurrection. It was thus that their religious creed, and the firmness of their faith, and the fire of their religious emotions, proved an invaluable assistance to the success of their arms, and ultimately insured them victory. The novels of FENIMORE COOPER will illustrate and prove the truth of our position. It is necessary to distinguish between the influence exerted by the mother country and the progress of society in the colonies themselves. M. GUIZOT evidently does not make sufficient allowances for the latter. According to ROBERTSON, whose history of America, as it is one of the most interesting, is also one of the most correct, the colonies were, during a long period and at different intervals, left much to themselves, whilst at others the government at home seemed more careful and jealous of their own powers, and more willing to meddle or to interfere with the colonies, and such was most certainly the character of the British government prior to the commencement of hostilities.

In page 12 M. GUIZOT evidently contradicts what he had already advanced as to the mutual influence and feeling reciprocated between the mother country and her dependencies, when he observes:—

> Besides this, it was no longer with the crown alone, but with the crown and the mother country united, that the colonies had now to do. Their real sovereign was no longer the king, but the king and the people of Great Britain, represented and confounded in the Parliament; and the Parliament regarded nearly all the colonies with the same eye, and held towards them the same language, that the kings which it had conquered had held not long ago towards themselves.

Speaking of the origin and moral character of the dispute, M. GUIZOT observes,—

> In reality, it was a question of right and of honour, not of property and material interest. The taxes were light, and imposed on the colonists no suffering. But the colonists were men to whom the sufferings of the soul are the most bitter, and who only taste repose in the bosom of satisfied honour. "Of what are we treating, and of what are we disputing? Is it of the payment of a tax of threepence per pound on tea, as too heavy? No: it is the right only which we dispute." Such was, at the commencement of the quarrel, the language of Washington himself, and the public feeling—a feeling, in truth, as politic as it was moral, and which evinces as much wisdom as virtue. The numerous public unions which were formed at this period in the colonies afford a spectacle useful to contemplate; unions local or general, accidental or permanent; chambers of burgesses or of representatives; conventions, congresses, and committees. Men of the most different dispositions there met together; some, full of respect and attachment to the mother country—others, passionately prejudiced in favour of that American country which was being born under their own eyes, and by means of their own hands; the one party afflicted and disquieted, the other ardent and confident; but all governed and united by one and the same sentiment of dignity, one and the same resolution of resistance; allowing freely the variety of their ideas and impressions to clash, without producing any disagreement, deep-seated or durable; but, on the contrary, feeling for each other a mutual respect in their reciprocal liberties, and canvassing together the great business of the country with those conscientious regards, that spirit of management and justice, which insure success, and make it to be least dearly purchased. In June 1775, the first Congress assembled at Philadelphia, resolved to publish a solemn declaration to justify the assumption of arms. Two deputies, one from Virginia, the other from Pennsylvania, Jefferson and Dickenson, formed part of the committee instructed to compose it. "I prepared (says Jefferson himself) a declaratory resolution. Mr. Dickenson thought it too violent; he preserved the hope of reconciliation with the mother country, and was unwilling to hurt it by offensive words. He was a man so honest and so talented, that even those who did not partake in his scruples had a great respect for him. We begged him to take the resolution and to remodel it in such a manner as he could approve of. He prepared a completely *new* edition, preserving only the four last paragraphs, and half of the one preceding. We approved it, and reported it to the Congress, which adopted it; thus giving a signal mark of its esteem for Mr. Dickenson, and its extreme desire not to proceed too quickly for any respectable portion of the assembly. The submissiveness of the resolution was generally displeasing, and the pleasure that Mr. Dickenson felt at seeing it adopted gained him a good many voices. After the vote, although all remark was out of order, he could not refrain from rising and expressing his satisfaction, by concluding with these words: 'There is in this paper, Mr. President, but one word of which I disapprove; that word is *Congress*.' Upon which Benjamin Harrison rose and said, 'For my part, Mr. President, there is in this paper but one word of which I approve; that word is *Congress*.'"

The time was one most fortunate for the insurrectionists. Lord NORTH was at the head of the administration, Great Britain had attained her zenith of glory, and was thus an object of envy on the Continent, and political science and liberal opinions had been diffused both at home and abroad, engen-

dering a proudly ambitious spirit that could not endure to submit to mere hereditary rule and precedent. Nothing was wanted but an unrelenting and unyielding courage at home, and gradual steps of courageous progress, with patience, energy, and activity in the scene of the war. And these were richly manifested by the Crown and the colonies; the former being as rash and precipitate as the latter were prudent, united, and steadfast. But one thing more was requisite, without which, probably, all would have failed, and that was a leader combining talent, and courage, and principle, and unyielding perseverance. A number of great men they had, both civil and military, already honoured by their fellow-citizens; but these were not sufficient. Amongst the chiefs there must still be a chief, and such was found in WASHINGTON.

He was young, still very young, and already great hopes were entertained of him. Employed as officer of militia, in some expeditions on the western frontier of Virginia, against the French and the savages, he had amazed equally his superiors and his companions—the English governors and the American population. The first wrote to London, to recommend him to the favour of the king; the others assembled in the temples, to invoke the divine protection on their arms, and heard with pride Samuel Davies, an eloquent preacher, exclaim, whilst he was extolling the courage of the inhabitants of Virginia, "I must mention to you one glorious example: that heroical young man, Colonel Washington, whom Providence has preserved in so signal a manner, doubtless, for some important service that he is called to render to his country."

WASHINGTON has superior claims to esteem over any of his contemporaries or descendants in fame. Equal and superior in the sterner, though perhaps deficient in the more brilliant powers, he far excels in the moral, in which he stands alone in his glory, the only modern adorning public life with all the moral splendour of young Greece and Rome. Let us compare him with NELSON, NAPOLEON, or BYRON, and he grows more riveted in our esteem and admiration at every step. NELSON had, indeed, a transparency of intention and straightforwardness of purpose; but this only served to bring out and testify to his restless and aspiring spirit. NELSON had the most implicit faith in himself, and greater daring, with sleepless vigour. Impossibilities were to him but difficulties, and difficulties lost their monster aspect to his sanguine view. He believed it with Hotspur to be—

"an easy thing
To pluck bright honour from the pale-faced moon."

War seemed to be his chief craving and reward. Not but that there was some real patriotism, as his letter to Mr. SUCKING, after the siege of Bastia, proves, wherein he says, "Every man who had any considerable share in the reduction got something; I only am without reward, and my money I find not repaid me; nothing but my anxious interest to serve my country makes me bear up against it; but I am sometimes ready to give all up." But these words were contradicted by others; such as—"I am now but a post-captain, but shall soon be on the top of the tree." "I shall shortly have a Gazette of my own." "Pity! I shall soon be envied."

Of Lord BYRON, his friend and encomiast MOORE says,—"That sort of vanity which is almost inseparable from genius, and which consists in an extreme sensitiveness on the subject of self, Lord BYRON, I need not say, possessed in no ordinary degree." We need not refer to the character of NAPOLEON. How different, how superior, and how isolated in this respect is the character of WASHINGTON, of whom M. GUIZOT says—

He did nothing which he did not believe to have reason and right to rely upon; so that those of his actions which had not a systematic character humiliating to his adversaries, had, nevertheless, a moral character which commanded respect.

There prevailed, moreover, the most profound conviction of his perfect disinterestedness. To this great intellectual luminary men willingly confided; this mighty force, which attracted all souls, and insured at the same time their interests, that they should never be given up as a sacrifice, or as instruments to personal and ambitious views.

Like other eminent men, however, he was not to be exempt from suspicion and slander. M. GUIZOT says, speaking of the latter part of his presidentship, "even his integrity was infamously attacked," and then notices the American press, which has ever been distinguished for its scurrility.

As regarded the attacks of the press, he adopted this language: "I did not believe—I could not imagine until lately—that it was within the bounds of probability, hardly within those of possibility, that while I was using my utmost exertions to establish a national character of our own, and wished, by steering a steady course, to preserve this country from the horrors of a desolating war, that every act of my administration would be tortured, and the grossest and most insidious representations of them be made, and that, too, in such exaggerated and indecent terms as could scarcely be applied to a Nero, to a notorious defaulter, or even to a common pickpocket. But enough of this. I have already gone further in the expression of my feelings than I intended."

M. GUIZOT throughout the work takes the part of the colonists against England, though he is careful to conceal any direct feeling of hostility towards our country, for which he has professed such a warm predilection. Like his other works, we have here extensive knowledge combined with powers of accurate generalization, but no indication of genius. His political like his historical knowledge, is the result, no doubt, of close and careful study; but his political principles, so far as they can be gathered, appear to be traditional rather than philosophical or moral, derived from that motley school which sprung up in France after the Restoration. M. GUIZOT has given almost equal attention to the claims of the biography and the history, the latter of which we have not space to analyse. It is pleasing to see ministers of state and public men directing their energies to a sound and healthy literature, especially connected, as it is in the present instance, with their own experience, guidance, and improvement. They may here learn in the closing words of our author:—

One weighty fact belonging to the character of a free democratical society we cannot fail to notice: the aversion of the most eminent men, even of the best among them, to any interference with public business. Washington, Jefferson, and Madison longed ardently for retirement; as if in this state of society the task of government was too hard for men capable of measuring its extent and desirous of acquitting themselves worthily.

To these alone, however, this task is suited, and ought to be confided. Government, in all times and in all places, will be the grandest employment of the human faculties, and consequently that which requires the loftiest souls to undertake it. It is thus to the honour as well as the advantage of society, that they should be drawn out and yoked to the administration of affairs. There are no institutions, no guarantees which can supply their place.

And as for them, let them remember that with all men worthy of this destiny, every feeling of fatigue or sadness, legitimate though it may be, is still a weakness. Their mission is to labour; their recompense is the success of their work, and this is only to be attained by toil. Often is it their lot to die, pressed down by the weight of their task, long before they can receive its recompense. Washington did receive it. He deserved, and he tasted success and repose. Of all the great men that have ever existed, he was at once the most virtuous and the most happy. The Almighty has no higher favours to grant in this transitory world.

We have only to add that Mr. PARNELL has performed his office with fidelity and elegance, and this is the highest praise that can be awarded to a translator.

SCIENCE.

Plain Directions for obtaining Photographic Pictures, &c. &c. By JOHN H. CROUCHER. London: Sherwood and Co.

THIS is the first of a series of scientific manuals announced by Messrs. WILLATTS, the opticians. It contains full instructions for the employment of all the apparatus connected with the Daguerreotype, and the large family of scientific instruments that owe their births to it.

The Philosophy of the Water-Cure. By JOHN BALBERNIE, M.A. M.D. &c. Bath: Burns and Goodwin; London: Simpkin and Co.

THE practice rather than the philosophy of the water-cure. The author has given a very minute account of the modes of treatment adapted to different diseases, and, like all votaries, he deems his nostrum a panacea. There can be no doubt that, in many cases, cold water, drank in quantities, and accompanied by abstinence from other sources of intemperance, may be

servicable. But it is doubtful whether the cure is to be attributed to the water or the abstinence. We should be inclined to infer the latter. But this is a matter for experiment and experience, and such books as that before us, though not to be implicitly relied upon, are useful as contributions to the store of facts, and as suggestive of further inquiries.

VOYAGES AND TRAVELS.

Narrative of a Mission to Bokhara in the years 1843—1845, *to ascertain the Fate of Colonel Stoddart and Captain Conolly.* By the Rev. JOSEPH WOLFF, D.D. LL.D. In 2 vols. London, 1845. Parker.

THE history of the brave mission of the Rev. J. WOLFF, its origin, its progress, its results, are already so familiar to the public through the medium of the newspapers, by which they were from time to time recorded, that it will be a waste of words to repeat them in the columns of THE CRITIC. The complete narrative is now given to the world by the missionary himself, the outline filled up with the minuter details, shades of character thrown in to give it colour, and inferior personages, only named in the brief descriptions previously published, introduced more intimately to the reader.

The form of a diary has been adopted, but whether with advantage we have some doubt. The relative conveniences and defects of this mode of travel-writing have been already more than once indicated in THE CRITIC, and these volumes amply prove and illustrate the argument. The journal conduces to accuracy, but it has the stiff and formal aspect of the catalogue; it accumulates facts, but it does not impress those facts on the reader's mind. So with Dr. WOLFF's narrative. It is too matter-of-fact; it wants buoyancy and grace of language, and a certain glow of imagination necessary to paint the impression of one mind upon another. We trace the man upon his generous mission day by day, and almost footstep by footstep, our interest sustained by the noble object he is pursuing, and, even although we already know the disappointment that attended it, we cannot help going on with beating heart, and bidding him God-speed. But in this lies the principal charm of the publication. As a mere book of travels, it is dull and unattractive; it wants the elements that give an interest to a tour; the descriptions of places and persons are deficient in graphic skill; they are hard and dry, and convey no distinct and life-like images to the reader's mind. Nevertheless, it would be impossible for a narrative of a mission in countries so little known and among people so strange to be otherwise than a curious and acceptable addition to the library of travel. We say only that it has not answered our expectations—that it is not, as a whole, what it should and might have been.

This premised, we turn to the details of the narrative. Dr. WOLFF commences with a brief memoir of himself, and a sketch of his previous wanderings in the East. As is well known, he was educated in the Jewish persuasion, but very early in life he was instructed in the truths of Christianity by by F. LEOPOLD, Count of Stolberg, the poet. He was afterwards introduced to Pope PIUS VII. and entered the Collegio Romano, and subsequently the Propaganda at Rome. But his conscience revolted against some of the practices he witnessed, and having protested against them, his banishment from Rome was decreed. He fled to the convent of Val Saint in Switzerland, and there his objections gathered strength, until the year 1819, when he formally separated himself from the church of Rome. Repairing to England, he went to Cambridge, and under Professor LEE studied Persian and Arabic, while by the Rev. C. SIMEON he was induced to join the Church of England.

In the year 1821 he began, and accomplished in 1826, a mission among the dispersed Jews in Palestine, Egypt, Mesopotamia, Persia, Krimea, Georgia, and the Ottoman Empire. From 1826 to 1830 he laboured in the same good work among the Jews in England, Scotland, Ireland, Holland, and the Mediterranean. In 1830 he proceeded to Turkey, Persia, Turkistaun, Bokhara, Affghanistan, Cashmere, Hindostan, and the Red Sea. His opinion of the prospects of Mahometanism and Buddhism is worth noting.

The Hindoos will be converted, but Muhammedans destroyed. We find hundreds of Hindoos already converted by the zeal of Roman Catholic and Anglo-Catholic missionaries, but we do not find six Muhammedans, especially among the Turks. I can only trace two Persians and one Arab. Buchanan was misinformed wholly by the infamous apostate Sabat.

It was during this last excursion that he first met with Lieutenant Conolly at Cawnpore; and India is also indebted to him for having first laid before the British public the history of the Thug system, and so producing the vigorous measures which have succeeded in its almost entire extirpation.

In 1835 the Doctor returned to England, where he spent some months, and then departed on another missionary tour through Malta, Egypt, Abyssinia, whence he sailed for Bombay, and thence to the United States of America. His large experience gives weight and worth to a remark which he throws out in the course of his sketch of these earlier portions of his busy life.

It is a remarkable fact, that among all nations where religion is enforced by the civil law, sects will arise, who, if I may so express myself, have two religions, one outwardly observed to avoid exclusion from civil privileges, and the other the religion of the heart, and which they in secret practise. Thus, for instance, the very Beni Hobab, of whom we have spoken, confirm this; the Shamseea (Worshippers of the Sun), in Mesopotamia, outwardly profess Muhammedanism, and in secret are worshippers of the sun. The Daouddee, or the believers in the divinity of King David, among the Bakhtyaree in Persia, the Georgians in Bokhara, though for centuries resident there, inwardly are Christians, outwardly Muhammedans. Full sixty thousand Jews in Spain are outwardly Roman Catholics, but regularly meet in secret, and exclaim, "Hear, Israel, the Lord our God is one Lord:" which expression forms their password with each other; and I was struck with amazement to find even in the United States of North America that many of the Indians, especially among the Cherokees, have adopted outwardly the Protestant religion, in order, as they hope, to prevent Congress from sending them further into the interior.

Returning to England in January 1838, he was received with many marks of public respect, and wearied and enfeebled by eighteen years of wanderings and privations, he resolved to take orders, and spend the rest of his days in the calm retirement of an English clergyman. He was nominated incumbent of Lenthwaite, near Huddersfield, with an income of 24*l.* per annum, collected by pew rents.

When the reported imprisonment of STODDART and CONOLLY excited public interest, and anxiety had been elicited for an inquiry into their fate, and their release if still alive, Dr. WOLFF offered his services to the committee; and his knowledge of the country, the people, and the language, together with his character of clergyman, at once marked him as the man for the enterprize. It will be unnecessary to detail the various difficulties that impeded the final arrangements—these will be found set forth with much minuteness in the narrative; enough that they were finally overcome, and the Rev. JOSEPH WOLFF, on the 14th of October, 1843, quitted the shores of England upon his dangerous and doubtful mission.

The results of his labours are well known. He found that STODDART and CONOLLY had indeed been murdered, and, after narrowly escaping a like fate, he returned to England with the information he had gathered, and the two volumes on our table narrate his adventures and observations in the course of this visit to the Bokhara.

We will not attempt to track him step by step through his journey; the sketch we have given of it will be a sufficient introduction to the most curious and novel of the passages which we had scored for extract, and which we shall collect indiscriminately, inasmuch as each has an independent interest.

He met with a cordial reception from the Bedouins. Of the Sheikh HASSAN, he relates that he introduced to him his wife, who was barren, that he might bless her. "He told me he had married four wives, and divorced three from the same cause, but this one he sincerely loved; she, however, often threatens him that she will tear out his beard if he takes another wife."

In Abyssinia he was taken for a prophet.

To my utter astonishment, one day while I was conversing with Hyloo and the priests and the people about religion, they all shouted out, "He is our Aboon in disguise." They fell down at my feet, kissed them, and implored my blessing, and desired me to spit at and upon them. I was compelled to perform such an extraordinary sputation, that my throat was completely dry. They compelled me to submit to have my feet

washed, and for them to drink the water of ablution. Protestations were useless; but as it is a crime for an Aboona to smoke, I ordered my pipe and smoked, but even this would not convince them; they said it was a feint to deceive them. Hundreds of cows were brought to me as a present, and corn, milk, &c.; and so matters went on until we reached Adwah. The people actually carried me on their shoulders.

At Tabreez he found the *Times*, *Herald*, *Post*, and *Chronicle*.

Arrived at Bokhara, he was immediately surrounded by open enemies and treacherous friends. One of them has received his special reproach.

AMEER SAROG.

I was both amused and annoyed by that fool and knave, Ameer Sarog—so named because he was born on the same day as the former Ameer of Bokhara. That silly fellow, though above sixty years of age, was daily weeping and lamenting his disappointment in love. He said, "I have three wives, and I wish to have a fourth, and I could have succeeded in marrying her if my other wives had not intrigued, and if the parents of that beautiful woman had not demanded such a sum for her. I at last shall be obliged to hang myself." This horrid fellow murdered a merchant in his house, and robbed him of all his property. Dil Assa Khan, and the villains that accompanied him, took from me by force the tea and sugar and provisions which I had taken with me from Meshed, and sold them to the people of the caravan. They compelled me to give them money for purchasing sheep and other victuals, which they pocketed.

As a companion picture, take the interview with Dil Assa Khan:—

My villain escort, Dil Assa Khan, then came up to me and said, "You ought to enter Bokhara dressed as a poor man." I replied, "Villain, liar, and man-seller (for strong terms alone are effective in the East), leave me. The Assaff-ool-Dowla will assuredly put you to death when we reach Meshed." Dil Assa Khan turned deadly pale. Shouts of "Selaam Aleikoom" from thousands rang upon my ear. It was a most astonishing sight. People from the roofs of the houses, the Nogay Tatars of Russia, the Cassacks and Girghese from the deserts, the Tatar from Yarkand or Chinese Tartary, the merchant of Cashmeer, the Serkerdeha or Grandees of the King on horseback, the Affghauns, the numerous water-carriers, stopped still and looked at me; Jews with their little caps, the distinguishing badge of the Jews of Bokhara; the inhabitants of Khokand, politely smiling at me; and the mullahs from Chekarpoor and Sinde looking at me, and saying, "Inglese Saheb;" veiled women screaming to each other, "Englees Eljee, English Ambassador;" others coming by them and saying, "He is not an Eljee, but the Grand Derveesh, Derveesh Kelaun, of Englistaun."

But he found his way to the presence of the king, and this is the account of

THE RECEPTION.

Previous to our entrance, one of his Majesty's Makhrams appeared before me, and said, "His Majesty condescends to ask whether you would be ready to submit to the mode of Selaam," (for Stoddart Saheb refused, and drew his sword). I asked, "In what does the Selaam consist?" He replied, "You are placed before his Majesty, who will sit upon the Bala Hanah (from whence Balkan is derived), and the Shekawl (Minister of Foreign affairs) will take hold of your shoulders, and you must stroke your beard three times, and three times bow, saying at each time 'Allah Akbar, Allah Akbar, Allah Akbar,'—'God is the greatest, God is the greatest, God is the greatest;' 'Salaamat Padishah,'—'Peace to the King.'" On being asked if I would do so three times, I said, "Thirty times, if necessary." Entering the gate, we were desired to sit down upon a stone seat, and after a few minutes' delay were ordered to send up our letters.

The letters were sent up, and then they were commanded to follow.

His Majesty was seated in the balcony of his palace, looking down upon us: thousands of people in the distance. All eyes were bent on me, to see if I would submit to the etiquette. When the Shekawl took hold of my shoulders, I not only submitted to his doing so to me three times, but I bowed repeatedly, and exclaimed unceasingly, "Peace to the King," until his Majesty burst into a fit of laughter, and of course all the rest standing around us. His Majesty said "Enough, enough, enough." We were then ordered to retire. The Shekawl, an officer who answers to our Secretary of State for Foreign Affairs, then assured me that his Majesty had smiled upon me, and exclaimed, "What an extraordinary man this Englishman is, in his eyes, and his dress, and the book in his hand."

His Majesty is about five feet six inches high, rather stout, black eyes and small, of dark complexion, with a convulsive twitching of the muscles of his face; his voice not remarkably powerful, but rapid in intonation; his smile appears forced. He has the whole appearance of a *bon-vivant*. His clothes are quite those of a common mullah, without any pomp or decoration. He has deprived the mullahs of all their power, and taken the executive into his own hands. On his accession to the throne he killed five of his brothers: two of them, it is reported, were murdered in the territory of foreign powers, viz. one of them at Khokand, and the other at Orenbourg, in Russia. After the death of his father, Turah Zadeh was the eldest, and had actually taken possession of Bokhara; however, Nasir Ullah, the present king, retired to the fortress of Karshi, and his friend, who was the Hakim Beyk, remained at Bokhara, and gained over the people of Bokhara by his learning, talent, integrity and wealth, in favour of Nasir Ullah. After he had thus gained the inhabitants, he sent word to Nasir Ullah to come with troops to the gates of Bokhara. As soon as he appeared the gates were opened, and Turah Zadeh murdered, and Nasir Ullah ascended the throne. The second brother was murdered in the arms of his mother. Omar Khan, a third brother, had the good fortune to escape, and he wandered about in the whole of Turkistaun, spent some time among the derveeshes of Mowlana and Jelala Adeen, in the Turkish empire, performed, under the garb of a derveesh, his pilgrimage to the Kaaba at Mecca, to the grave of Muhammed at Medina; returned again to the Khunkaar (Sultan) of Stambool; and when I, in 1832, was in the desert of Mowr, seated in the tent of a Jew, a derveesh entered the tent of my Jewish host, and soon after an usbeck came in, and stared at the derveesh, and exclaimed suddenly, kissing his feet, "God preserve Omar Khan, my padishah of Bokharah, son of Ameer Hyder Behadur." Omar Khan said, "Betray me not;" and thus Omar Khan, wandered about in the desert of Mowr, and made an alliance with the King of Khiva; and I heard after this that he was slain in battle against his brother the present king. It is also said that the present king poisoned his own father.

This agreeable gentleman was evidently a practical joker. He submitted a number of questions to his visitor, evidently by way of ridicule, among which were—"Are you able to awake the dead?" "When will the day of resurrection take place?" But the good Doctor answers all as gravely as if they were put in an earnest desire for information.

This was the account given to him of

THE MURDER OF STODDART AND CONOLLY.

At last from fear, Stoddart said he would become a Mussulman, and according to the Muhammedan religion, if a person says he will turn Mussulman, he must either do so or die. He became a Mussulman, and a short time after openly avowed again the Christian religion. At last it was agreed that he should write to England to be acknowledged as the accredited agent of Great Britain at the court of Bokhara, and that the King of Bokhara should be the acknowledged sovereign of Turkistaun, &c.; and Colonel Stoddart promised that in four months an answer should arrive from the Government of England. Though at his (Stoddart's) request Japar Khanas (post-houses) were established from Bokhara to Sarakhs, which did not exist either at Bokhara or in the land of Turkistaun from the time of Afrasiab, *fourteen months* elapsed, and no answer arrived. During the time that Colonel Stoddart was at Bokhara, Captain Conolly went from Organtsh (Khiva) to Khokand, where he stopped a considerable time, exciting both countries to wage war against the Ameer of Bokhara. He at last arrived at Bokhara, announcing himself as a British agent, without having any letters from the British Government; and whatever Colonel Stoddart had agreed to he upset, announcing to the King of Bokhara that the British Government would never interfere with the affairs of Turkistaun, and all that Colonel Stoddart had agreed to went for nothing. Thus it was clear that Colonel Stoddart was a liar. During the stay of Conolly and Stoddart they took every opportunity of despatching, in the most stealthy manner, letters to Cabul; and on this account his Majesty became displeased, and both Captain Conolly and Colonel Stoddart were brought, with their hands tied, behind the Ark (palace of the King), in presence of Makhram Saadat, when Colonel Stoddart and Captain Conolly kissed each other, and Colonel Stoddart said to Saadat, "Tell the Ameer that I die a disbeliever in Muhammed, but a believer in Jesus—that I am a Christian, and a Christian I die." And Conolly said, "Stoddart, we shall see each other in Paradise (Behesht), near Jesus." Then Saadat gave the order to cut off, first the head of Stoddart, which was done; and in the same manner the head of Conolly was cut off.

The most atrocious attempts were made to extort money from his fears. Very Eastern is this scene:—

Dil Assa Khan entered my room with eight Mervee, and he began thus, saying, "What an Englishman are you! How stingy! Todd Saheb, at Heraut, gave to the Hazarah, near Heraut, two thousand five hundred tillahs (ducats) for one horse. Pottinger Saheb gave every year thirty thousand tillahs to Yar Muhammed Khan, and do you think that I shall be satisfied with two hundred tillahs? Two hundred tillahs are good for nothing. It is for that reason that I have played the traitor, which I never would have done, if you had given me three thousand tillahs!"

Then his people began: "And what have you done for us? You ought to have given two hundred tillahs to every one of us, and thus you would have exalted the Queen of England, and made her name immortal. Instead of this, you gave us only a few tengas (pence) to pay for our bath. Do you think that the Ameer will let you go from here without our interceding for you? Far from it. Abdul Samut Khan himself tells us that you ought to make us comfortable."

Abdullah, my servant, entered then my room and said, "The whole town of Bokhara speak with certainty that the Ameer will put you to death, for it is the wish of Abdul Samut Khan, and all the Serkerdeha (grandees); and the King of Persia, being a Sheah, has no influence at Bokhara; but if you satisfy our demands, we will save your life." I turned them all out of the room.

Then a tailor of Abdul Samut Khan entered, saying, "Abdul Samut Khan has given to-day one hundred tillahs to the Shekhawl; he does every thing for you, but you must spend your money; if not, he will fail in his trouble." I turned him out of my room.

Then Ameer Sarog, and Kaher Kouli, who had behaved exceedingly well for a while, so that I gave them a testimonial for their good conduct, said, "Mullah Youssuf Wolff, tillahs (ducats) are sweet; we dream of tillahs day and night, and we dreamt last night that you, on your return to England, sate near your monarch, and all the grandees of your country kissed the hem of your garment. The most beautiful women crowded around you, and desired to be your wives, and you took the daughter of the Queen as your lawful wife. * * * * You will live in the finest palace, except the Queen's, and be fanned by dancing girls; and if you shall say to her, 'Oh, my Queen, cut off the head of this or that person,' she will immediately follow your advice. Both of us, Kaher Kouli and I, Ameer Sarog, dreamt this at one and the same time, and therefore it will become true."

Then the guards entered, and told me that they would admit any one in case that I gave them money. This I was forced to do.

Dr. WOLFF conversed much with intelligent Affghauns, and he learned from them the true cause of our treatment by that brave people. They

Ascribed the disaster of the British army, and the indignation of the people of Affghaun against the army, to the conduct of several British officers, whose names I forbear mentioning, and who shocked the feelings of the natives by their introducing into the country the "vices of Europeans," and by the liberties they took with Affghaun women.

And it must be admitted that there is truth and justice in the language of the indignant Affghaun who figures in the following anecdote.

An Affghaun in open daylight put to death an Englishman at Candahar; he was brought bound before Major Rawlinson. The Major addressed him, "Why have you murdered that Saheb?" The Affghaun answered, "I would kill you if my hands were not bound." The Major, "Why so?" The Affghaun replied sternly, "What business have you infidels to enter our home? You infidels have no business in our home. Affghanistaun belongs to us, and it belonged to our ancestors. What business have you in our home?" An Affghaun present turned to Major Rawlinson, and in order to save the criminal said to him, "Major, he is mad." The murderer heard him, and said, "I am not mad; I am full of understanding: these infidels have no business in our home." Upon which the Affghaun paid the penalty of his crime by death.

Here is another trait of Eastern manners.

Muhammed Taki, the astrologer from Heraut, who came with Abbas Kouli Khan from Persia, for the purpose of getting, by the Shah's influence with the Ameer, his wife, who had been made a slave of by the Türkomauns, both recovered her, and, besides this, received one hundred ducats from the Ameer. When he came to the garden of Jesman-Doo, to our surprise, without his wife, Abbas Kouli Khan asked him, "Where is your wife?" He replied, "I have looked in the stars for two or three nights successively, and seen one star with a black tail, from which I perceived that misery is *entailed* upon her, and therefore I have resold her for forty ducats and a beautiful high-bosomed slave girl, only seventeen." I never saw in my life a man so incensed as Abbas Kouli Khan. He rose from the ground, cast away his galyoon with such violence that it broke to pieces, and said, "God burn you and your stars. You rascal, you did not look on the stars, but on the money and the beauty of the young girl. I spit in your beard." The astrologer went out quite mortified.

A note on a peculiar faculty of the Türcomauns is curious.

An extraordinary power of smelling in a Türkomaun, Khan Saat, from Sarakhs, was indicated to me here. He said, drawing up his nostrils, "I smell a caravan of Usbecks;" and a few hours a caravan from Organtsh arrived full of them. It is remarkable how the Türkomauns know, by the footsteps in the desert, the person who has been there, nay, the very tribe of Türkomauns that has passed. When Türkomauns or Calmucks saw people talking from a distance, I frequently heard them say, "Let us draw our ears." They then lie down on the ground, and hear from a distance what even two persons whisper together, and relate the exact conversation.

It will be seen from these passages that there is a great deal of interesting matter in this work, which may be commended to the book-club.

FICTION.

The Whiteboy; a Story of Ireland in 1822. By Mrs. S. C. HALL. In 2 vols. London, 1845. Chapman and Hall.

THIS, the second of Messrs. CHAPMAN and HALL'S series of novels intended to innovate upon the *established* form of three volumes, and the *established* price of a guinea and a-half, is a worthy successor to *Mount Sorel*, with which the enterprise was begun. The entire success of the experiment is proved by the communications of the various booksellers, who from time to time have recorded their experiences, in our columns. It is now proved that a first-rate novel may be printed in two volumes instead of three, and sold at twelve shillings instead of thirty shillings, with advantage to author and publisher, as well as to the public; and we believe that the lowest remunerating point has not yet been reached.

The Whiteboy is one of Mrs. HALL'S best works, and it has a value beyond its mere merits as a novel. It is written with a purpose—a generous, a patriotic purpose—to probe, or rather to exhibit, the sources of the ills of Ireland and to suggest remedies. Her knowledge of her country and countrymen enables her to contribute largely to the one, while the mental character of her sex, limiting the range of thought to the circle of the perceptions, disables her from much advancing the other.

Whether the design, which adds thus to the value, will increase the popularity, of *The Whiteboy*, is another question. Experience, we believe, has proved that didactic novels are not generally so successful as others. There is an aversion on the part of those who read for amusement to be entrapped into instruction, and they who seek knowledge look upon it with suspicion when mingled with a fiction. But if any writer can conquer this prejudice, Mrs. HALL will do it. Her didactic design is conveyed so unobtrusively, insinuated rather than declared, that the reader scarcely notices it, and she contrives always to frame so attractive a plot, and to excite such an interest in the personages by whom it is conducted, that the attention is absorbed by these, and the lessons intended to be taught by the tale are not perceived until the whole is imprinted upon the memory, when the tendencies of the entire machinery become distinctly visible.

Mrs. HALL asserts that at the bottom of Irish discontents, the true cause of the disappointments that have attended all attempts at conciliation, the source of the ceaseless agitation and the fuel that feeds the cry for repeal—which to an Englishman sounds so much like madness—lies a traditionary belief that the soil was taken from the Irish people by robbery and confiscation, and that there can be no justice for Ireland which does not include the restoration of the lands to the descendants of their original owners. Such an idea is very likely to sway a people so imaginative as the Irish; it is an intelligible, practical proposition, and believing that repeal will accomplish it, they cling to repeal with an enthusiasm difficult to be understood by those unacquainted with that power of the emotions and deficiency of the reasoning faculties which distinguish the Irish character.

The remedies she suggests do not exhibit the same sagacity. The best of English landlords, were he to create a Paradise upon his estates, so far as respects the substantial welfare and real happiness of his tenants, would fail to remove the hostility of the Milesian to the Saxon, simply because the former begins by assuming that the latter is in wrongful possession of his property, and the greater the vigilance and exertion of the landlord, the more would the tenant be reminded of his ideal loss, and his imaginary wrong rankles in his mind, colouring all his views, and distorting the fairest deeds of the man whom he deems his spoiler and supplanter.

Such are the views which the novel of the *Whiteboy* is intended to illustrate. The materials for the story are very like those which make up the greater portion of Irish fictions, or rather, we should say, of the fictions about Ireland and the Irish. There is a kind landlord, a demon in the shape of a middle-man, a sharp attorney, a personage to do the mystery and bring things about that can be made practicable by no ordinary means, officers of the army, officers of excise, officers of justice, and a sort of chorus or crowd of peasantry in the background. This staple of an Irish novel Mrs. HALL has been unable to throw aside, probably because without them the tale would not be Irish; but they are used with great dexterity and skill, and she throws in touches of her own, sketches from nature under new aspects, traits of the heart as it is in the world rather than as painted in books, which give to ordinary materials a new aspect and an added value which imparts even to commonplaces the air of originalities.

The Whiteboy is one Lawrence Macarthy, boasting royal descent, but proud as he is poor; a man who is ashamed to beg, unwilling to work, reckless of confusion, in which he could lose nothing, and might gain. With the too common impulse of such men to avenge upon society the consequences of their own follies, he joins the Whiteboys, and associates with him a retired officer, who is tempted mainly by a passion for Macarthy's sister. We will not mar the reader's pleasure by anticipating the plot. But of the characters who figure in it we must name two or three as drawn with masterly skill. Foremost of these is the Whiteboy himself. Macarthy is an admirable life-like portraiture of the class from which he is sketched. His faults are, as in nature, mingled with virtues, which flash out at moments when they are least exhibited, and then the mind relapses into its habitual recklessness and disregard of moral obligation.

Of an opposite hue is the character of the young English squire, Edward Spencer, who dares to think that property has its duties as well as its rights, and visits his estates to see those duties done. He contrasts strongly with the resident landlords, who are painted with a stern pencil, but not in quite such dark colours as they have been represented by other Irish novelists.

Another admirably conceived and powerfully sustained character is the middle-man, Abel Richards, a very personification of cunning, selfishness, meanness, and grovelling hypocrisy.

After such remarks, it is almost unnecessary formally to recommend the *Whiteboy* to all book-clubs and circulating libraries; and that our readers may have a glimpse of the style and tone of the composition, we subjoin two or three striking passages in illustration of our remarks.

The feelings that once prevailed among the ascendancy party, though now happily extinct, are well shewn in this description of

A MAGISTRATES' MEETING.

Before the entire party—who, after various messengers had been despatched for them, came dropping in by twos and threes—were assembled, he took occasion to tell his host the outrage he had witnessed on the road.

"My dear Sir," exclaimed one who was amusing himself by tossing fragments of oaten bread into a dog's mouth, "the fact is, you are new to the country, and do not understand our ways."

Edward turned so abruptly round on the speaker, while his deep intelligent eye inquired more eloquently than words could have done the meaning of what he had said, that the Dean laid his hand on his arm.

"The fellow, depend upon it, deserved what he got, or he would not have got it it," added the speaker.

"But his life has been taken, Sir," replied Edward; "and surely the military are not suffered to rough-ride through a country and butcher whom they please."

"Really, Sir," said a blustering, burly, jovial-looking 'squire in top-boots, a blue coat, and buff waistcoat, "Really, Sir, where we have so much to investigate that is important, I cannot see the use of occupying time about what is not—bothering and confusing one thing with another."

"Easy, easy, my good friend," interrupted as jovial and good-tempered "a spark of the Emerald" as any in the hall. "Easy, I say. From the notes Mr. Spencer made on the spot, which our reverend friend the Dean has just shewn me, I'm thinking its one of my tenants that's shot, and one that never was a gale behind; and I must have it seen into immediately."

"But, Sir," observed Edward, "what does it matter whose tenant he was? he was a man and a subject."

"A Papist rebel, I'll go bail," interrupted a voice.

"Well, Sir, said Edward, "and if he was, he had as good a right to the protection afforded by the laws of his country as either you or I—he had a right to a fair trial."

"Bathershin!" exclaimed the same rough and thundering voice.

"I do not understand what the gentleman means," observed Edward, with a look of inquiry to the Dean, who only smiled.

"What do you mean by calling a tenant of mine, a 'Papist rebel?'" said the gentleman who was, with Dean Graves, looking over Mr. Spencer's notes.

"What I say," replied the county colossus, as, striding forward from amid a group who indulged in the bad habit of standing round the fire or the fire-place, he marched across the room, and looked the querist full in the face. "A Papist rebel, I'll go bail," he repeated; "and as to such a fellow having a right to a fair trial, or a trial of any kind, I deny it *in toto*. A trial! Cock a Papist up with a fair trial, indeed! If I had my own will and way, I'd soon quiet the country: I'd shoot 'em like so many rats!"

"I dare say you would," observed the person he addressed, and who seemed rather to shrink from coming in contact with one who appeared to Edward half giant, half savage; "but you would'nt like a good paying tenant of your own to be shot, Mr. O'Driscoll."

"It shall certainly be investigated," repeated Edward: and his quiet, calm, determined tone had a peculiar clear and impressive sound, following, as it did, the rolling thunder of the giant's brogue, and the sharp clamour of the eager speaking of the past minute. "I ask not concerning any man's faith—"

"Don't ye, though?" interrupted the giant. "Bedad, my boy, you've a great deal to learn, then."

The feelings of the peasantry, on the other hand, are exhibited in this sketch of

A WHITEBOY MEETING.

There was a breathless silence while the huge "Munster man" heaved himself forward; and though he stood upon no elevation, he was taller than Lawrence, who kept his position on the tomb; his enormous proportions made the more slender figures of the two leaders appear like those of boys. Byrne took off, first his hat, then his wig, which he must have worn because his father did so before him, for his hair was abundant, though somewhat frosted by time; he then looked round with a sheepish look, throwing a sidling glance over the crowd, which now appeared distinctly; for several, following Murtogh's example, had kindled torches of bogwood, that, as the wind lulled, burnt steadily enough. He spoke in English, and "Doyle of the Cars" translated his words into Irish, for the benefit of those who did not, as Master Mat would have said, understand "the Vulgate." He spoke slowly, as if resolved to curb his natural impetuosity.

"Boys," he said, "boys! I am no great hand at speech-making, though I believe it's pretty well known that I'm a good hand at the fist. Boys, what I have done is well understood by yez all. The blue wathers of my own lake could have informed (only they'd scorn it), ten years agone, where the process-server slept—who darkened my door a living man, and left it a dead one. He had his pistols and his *cutlash*, and above all, he was armed with the law at his back. I—I had *this*," and he held forth his clenched hand, that could have felled a Goliah; "these bones aginst his pistols, his cutlash, and his law. I never saw tithe-gatherer, taxman, or soldier, that would force me to turn my back."

"We belive all that," interrupted Lawrence, knowing, that if he got upon his feats of strength, there would be no termination to his harangue; "we know that, good Byrne; but the night is passing, and our friends have far to go."

"Young blood wants patience," answered the man. "Hours will pass, and friends will wait. But there's enough said; all know me, and all know Saint Columbkill's and Pasthorinis' propheeies, which are working round, glory be to the Lord! plain as the sun at noon-day. There's only a little management needful, to trap every one of our persecutors and their myrmidons. Why, look, boys, it's asy, and natural, and it shews how small a

light may kindle a great fire. Look now, all the men in Munster and Leinster couldn't have saved our strange captain's life last week, an' he lying wounded in Labbig Owen's bed over there in Glen Flesk, but for the wisdom of Macarthy, and the 'cuteness of Murtogh, the Macarthy's foster-brother. Murtogh's a jewel, so he is!" said Byrne, pressing his hand down upon Murtogh's head with the fondness of a father for a child, though Murtogh staggered beneath the affectionate pressure. "Murtogh's a jewel! There was more than ye know of, wishful that the captain should be left to lie asy; and one who, maybe, afther all, will turn out nothing but a bird of two weathers, would have given his breath to save him. But nothing could turn the devil's pack from the devil's hunt; and what did Murtogh, wild as he looks—faix it's proud I'd be of ye, if ye war my boy, Murtogh dear—but I've no boy now."

"No, poor man, God help you, you have not," exclaimed a sympathising voice, for the strong man remembered when he had two sons, who had been "sacrificed" to the offended laws of their country.

"Oh, to see the nature of him, and he such a giant!" exclaimed another.

"Mr. Byrne, Sir," said a third, "keep a good heart; for every drop of blood that was in their bodies we'll have a life yet."

"Thank yez all for yer mercy, God bless yez, ye'r the right sort any way," he replied; "only the wakeness comes over me mighty strong, so it does, when I think of them; sometimes, I see 'm as plain as light—the rosy twins, sleeping on the white bosom of the mother who died, as ye all know, under the—"

His emotions prevented his utterance, his huge features became convulsed, he struggled to speak; one of his friends handed him a noggin of whiskey, he drank it off, and then, apparently relieved, returned to the subject which the remembrance of his own sorrow had drawn him from.

"Well, my friends (for friends yez are to every heart in trouble), well, what did he do, but he took the 'Natural' on himself,—the 'cutest lad in all Cork took the 'Natural' on himself,—and tumbled on before them just as a partridge or a lark (poor innocent birdeen) would do before a hound, just to 'tice it from its nest. Well, boys, he was the finest fool ye ever saw, and bore all the little innocent divarshin, such as prodding him with bagnetts and the like to make him jump and twist faces for their divarshin—most wonderful!"

"They'd have spitted me in earnest to make me spin like a cockchafer once," put in Murtogh, "but for Mr. Spencer, God reward him, who has a heart to the poor, though he didn't know me from Adam." * * * *

Byrne recommenced his explanation, which the few words of Lawrence had interrupted.

"Now, boys, attend to me, draw round—that's it. We all know the character that the lakes of Inchageela and these mountains have got; well, dears! you know the pass of Keim-an-eigh; you know how the rocks stand up each side of the mountains, and how the stones grew big as they grew old; you know its twists and turns, and how the ancient holly and yew-trees stand about, and the ivy makes hiding-places; you know, that when you get in you don't see ten yards afore ye the way to get out. Now, boys, this is it; the morning after next, I've reason to know, the cut-throat soldiers mean to scour the country, and here's a list of the gentlemen (and Black Aby among them) that's to meet 'em at the end of the pass."

There was a rush forward, every face was turned towards Byrne; countenances deeply marked by strong and vehement passions, throbbing with anxiety, were all upturned towards him.

"I'll read my list in a minute, boys, as soon as ye'll hand me over one of them bog-lights, for the sight isn't what it was in my ould eyes; but before I begin that, or go any farther, so as to spread my plan before yez—how we'll belay them—tempt them—and set 'em and finish 'em, nor let one escape—give the ravens their prey, and thicken the mountain-streams with the blood of our tyrants—I'd be just glad to know on yer faith an' yer hope of salvation, if ye'r all book-sworn, in the face of God, man, and yer country? the true, free oath, which if every man present doesn't subscribe to, we know how to make him. I ask ye again, as yez shall answer before the Almighty at the last day, are yez all sworn, boys?"

But though Byrne spoke at the top of his voice, he was answered by one less powerful, but more clear and more distinct, than his own—"No!"

In conclusion, we take a scene in which Mrs. HALL has availed herself with powerful effect of the popular superstition of

THE BANSHEE.

Lawrence, to whom every foot of the coast from Cork Harbour to Cape Clear was perfectly known, remembered how deep the water was at either side of the narrow peninsula they must pass to reach the shore, and which jutted from the base of the proud headland, a natural and most picturesque pier: the coast-guard had rendered the almost perpendicular ascent from this "pier," to the cliff-head, more secure, by cutting steps, fixing posts at convenient distances, and connecting them by a rope: the pier itself was tolerably broad—broad enough, at least, for two persons to walk abreast; and though washed over at high-water, it was by no means as "slippy" as might have been expected. No boat could have approached beneath the promontory, but for this freak of nature—casting her rocks into the heaving ocean, which, in the calmest times, rolled with a mighty swell beneath. As they drew near, the boat was lifted silently upon the crest of the intermediate wave, called emphatically "the death wave," and then descended so rapidly into the trough of the sea, that Ellen raised her eyes to the solid-looking mass of leaden-coloured water with an hitherto unknown feeling of terror: the sensation was quite new to her—as it must be to all who for the first time mount and sink upon this awful swell. * * * * Abel Richards had frequently partaken of and distributed what was deemed in those days necessary to "keep up the spirits," or to "stimulate exertion." Its effects became gradually more and more visible; it had for some time swelled his exultation into insolence, and while it thickened his articulation rendered him more lavish of his words: disgusting, at all times, the drink rendered him even more so than usual, as with breath heated with liquid poison he uttered prayers and imprecations at the same moment. Ellen raised her eyes to Heaven, and then fixed them on the beacon-light and the irregularities of the cliffs: she fancied that her wearied body and over-wrought mind conjured a vapour into a vision, but as the boat heaved, she saw gliding from the pier—gliding smoothly and without effort over the pointed crags—the same figure with hooded head and outstretched arms, the very figure which years long past she had seen crossing the river on the memorable night when her aunt and Madame Macarthy breathed their last. She watched the apparition gliding through mid-air, its cloak floating behind it, the arms raised; up—up—and then—that was no freak of her imagination, for it roused the attention of her companions on the water—a shrill piercing scream; another, that made Lawrence start; his eyes glared and his cheek flushed; and Murtogh shuddered, uttered a suppressed groan, and hid his face; while Abel Richards instinctively crossed himself upon breast and brow—the habit of his early days reviving with all its ancient force during the brief moment of terror.

Again the shriek was heard; but fainter, and from a distance.

"Lawrence!—my brother—Lawrence!" exclaimed Ellen, in a tone of anguish. And she cast herself on her knees by his side.

"It will be soon over with me after *that*, Ellen," he murmured in reply: "but it makes me sure of one thing; the Banshee never cried for a base-born Macarthy."

Murtogh roused himself—sat up—and said, "Thank God for it."

"There's the first gray of morning," observed the sergeant, after a pause; "and the lull came over the waters with the scream of them sea-birds. Row, boys, row—three minutes will do it now—steady."

"The sae-birds!" stammered Abel Richards, with a thickened utterance and a triumphant chuckle, determined to do away with the impression his involuntary action might have created. "It's not s—s—sae-birds." He lifted his hat with half-drunken gravity, swinging from one side to the other. "Gentlemen—as I was going to observe—it's a case of de—ci—ded blasphemy to call it the voice of sae-birds!—Cock sae-birds up, with such (as the poor benighted sinners call it) an *ullagawn* as that!—Not it, indeed! Brethren!—I am of a meek and merciful disposition; and though it may be a sin, it's the wakeness of my nature to be merciful—*that* sae-birds!" He clasped his hands together. "No—it's the screeches of Papists, howling in h—!"

But before he completed a sentence so fearfully in accordance with the brutalizing theory of his latter days, the boat reeled violently: it could hardly be said there was a struggle, but two men rolled rapidly and heavily into the dark deep waters, that swelled and fretted and splashed; and the waves closed above them as the boat shivered and then regained its position. A low cry of mingled horror and astonishment burst from some of the men, while others seemed as though struck by lightning. Lawrence, with natural bravery, made an attempt to spring in after them; but he was unable to accomplish his purpose, his guards at either side preventing it.

Undine; a new Translation, with Illustrations, London: Burns.

THIS popular and delightful romance will be ever welcome in any form or dress. But more especially acceptable will it be translated with a quaintness that identifies it with the original German, and evidently by one who has caught the spirit of its father-land, and writes as if he were author instead of trans-

lator. It is beyond comparison the most faithful and literal rendering of the original into English which has yet appeared; it is exquisitely printed, neatly bound, and illustrated with many spirited engravings. It is just the book for a present.

The Jew; a Romance of the early part of the Fifteenth Century. By C. SPINDLER. London, 1845. Bruce and Wyld.

THIS is one of that excellent, widely-circulated, and very cheap series of fictions published under the name of *The Novel Newspaper*. The reputation of *The Jew* has already gone over Europe, and the translation of it, admirably executed, will be a welcome introduction of the author to English readers. As its price places it within the reach of the poorest, it will be unnecessary to do more than commend it to notice as one of the most powerful fictions of modern times.

POETRY.

Pride, or the Heir of Craven; a Poem. By HENRY COOK, Author of "Adrian," the "Star of Destiny," &c. London. Parker.

This work, we presume, is intended to represent the folly and wickedness of pride in general, by the influence it has over an individual. We confess that any time we would rather see humility taught by examples of humility, than pride subdued by instances of pride rebuked. We hold it the better plan to induce men to love the light by tempting them by its splendour, rather than by shewing the horrors of darkness. The plan of Mr. COOK's poem is, for this reason, not such as we approve, and that we regret the more, for its author seems to be gifted with many of the qualifications of a poet.

The Earl Craven is the *proud* man of the story, and it is nothing in his praise to say that he bears a family likeness to BYRON's eastern tyrants. We refer to the character, and not to any resemblance in Mr. COOK's writing to that of BYRON. Mr. COOK has power enough to rely on himself. Doubtless the Earl Craven will be looked upon as a very naughty man by some young ladies, because, forsooth, he is one of those stern fathers, who knit their brows, and control their daughters' affections.

In the poem of *Pride* we trace considerable artistic effect. The grouping and situations of the characters are often striking, which is as we should have expected from Mr. COOK, who is an artist. We read the character of the painter in the performance of the poet. The colouring of the poem is soft and full. It has more of quiet grace than of bold and dashing thought. It is difficult to select an extract, from a book containing but one lengthy poem, which would do justice to the author. Still we give one which shows that Mr. COOK can write well, and even elegantly.

> It was a sweet, a heavenly thing to see
> That gentle girl in deep humility,
> Bending her suppliant knee before the throne
> Of mighty heaven, sorrowful, and lone,
> Praying in mercy that her sire might feel
> A softer influence o'er his spirit steal.—
> That sweet religion 'ere too late might shed
> Its healing balm on his devoted head.
> She was a being blessed indeed with all
> The heaven-born gifts, which yet survive our fall;
> Bright—pure—devoted in that gentle breast
> Each sunny thought of virtue loved to rest;
> Soft as the wind which fans the summer rose,
> Then dies away in beautiful repose;
> Pure as a tear which from the rolls of Heaven
> Blots out the errors of a soul forgiven.
> Above her father's bed, she softly leant,
> Like some fair thing in pitying mercy sent
> From the high regions of ethereal air,
> To win his sinking spirit from despair,

Mr. COOK is not the first artist who has dropped the pencil, and seized the pen to paint his conceptions in measured words. The poet and the painter have been nurtured in one cradle, and, like Castor and Pollux, they walk hand in hand through life. They share an immortality gathered from the least to the most lovely forms of nature, and from the minutest to the most important human action. The similitude of poetry and painting is in their general design, and not in their detailed characteristics. The object of each is to ennoble, and to lead the imagination to a further and a higher range. So far the objects are similar, but the ability of poetry to do this oftentimes surpasses the capabilities of painting. The painter must localize to the eye the spot on which an action transpires. When the painter embodies an Orpheus surrounded by majestic mountains, in his necessity for creating images for the eye, he sacrifices the ideal power which the poet uses. Looking on their still and mimic resemblance in the canvas, it is hard to imagine that the steadfast mountains could dance, and therefore the *fable*—which is a relative *truth* as it regards the power of music—is incomplete.

Again the painter requires a series of paintings to express a progressive action. The poet takes a shorter route and does by a hint what the painter does by labour. This hint is enough for the imagination, which takes up the subject and the intended result is produced. It is not enough that the painter represents Narcissus leaning over a clear stream, his face reflected in the mirror beneath him. There is a *physical action* to follow, a gradual wasting and pining away of the body, which the imagination can the better supply when the eye has not seen the classic representation of that body. We say nothing derogatory of painting. In many cases it is more pointed, and conveys a more vivid, and rapid impression to the mind than poetry. We have been tempted to say so much because Mr. COOK can seize on the double advantage of poetry and painting. He must be aware of the truth of our remarks, and therefore will be strongly convinced of his superior position. What poetry cannot so well accomplish painting can, and *vice versâ*.

Sin; a Poem. Edinburgh, Tait. London, Simpkin, Marshall, and Co.

THIS poem is an exposure of many of the hypocritical frauds of the world. The writer has exhibited them less in the caustic spirit of POPE than in the milder criticism of COWPER. He holds a rod in his hand to chastise the follies of men, but smiles while he uses it. The object of poetry is to unveil the beautiful, but not less is its object to expose deformity. These seemingly separate designs are in reality but one design, for by flinging aside the cloak of deformity a beauty becomes revealed. In this manner do miners throw by the rubbish of a shaft to arrive at the rich ore beneath. Poetry, in the strength of its purity, can afford to come in contact with evils. From such contacts, and from witnessing the Joseph Surfaces of the world, our author nobly exclaims,—

> How dare the hypocrite disgrace his pew,
> Say prayers, sing psalms, as dogs bark, or cats mew?
> Upon his drowsy ear the preacher's art
> Is spent in vain, it reaches not the heart.
> Cast off thy lying cloak, thou man of words,
> Behold the worship of the artless birds;
> They praise their Maker from each waving bough,
> Thou 'neath the aspiring temple deign'st to bow;
> They worship God beneath his own blue skies,
> Thou where the lofty swelling domes arise.
> Nature's bless'd children from each breezy spray,
> From dewy sun-dawn to declining day,
> Long as the breezes blow, the waters fall,
> May your sweet worship earnest prayers recall!
> Far in the swarthy night shall notes be heard
> Divinely warbled, angel is't, or bird?
> Lo! of great Nature, 'tis the priestess voice,
> Offering to Heaven her evening sacrifice.

This is a fair sample of the style of the poet, and it will be seen that the poem before us is not the *first* he has written. Throughout the whole work there is a tone of liberality which adds another evidence to the fact that poetry is an illimitable good, and like light, is all a universality. The mechanical construction of "Sin" is very correct. It is always smooth, and oftentimes highly meritorous, and we dismiss it with the hope that this very little book may produce a large amount of public benefit.

EDUCATION.

The Pharmaceutical Latin Grammar. By ARNOLD J. COOLEY, &c. London, 1845. Groombridge.

THE object of this Grammar is two-fold: 1st, to teach Latin; and 2nd, at the same time and by the same process, to fami-

liarize the ear and mind to the words and phrases particularly employed in pharmacy. This idea is an excellent one, and is ably embodied by Mr. COOLEY. Every illustration of a rule is in words found in medical works or in physicians' prescriptions. We should not hesitate to place it in the hands of a youth intended for the sciences of chemistry or medicine, in preference to the ordinary grammars. It will not only teach him all they teach, but a considerable portion of the alphabet of his profession.

A new French Grammar, with Exercises. By T. A. WOLSKY. Edinburgh: Oliver and Boyd.

MR. WOLSKY modestly observes in his preface, that "he does not pretend to offer a *new* or *easier* method of acquiring a knowledge of French." We like this candid admission; it augurs well for any work coming from a man who can appreciate the difficulties of his task. All that he pretends to do is to collect more apt and copious illustrations of established rules. In this he has been entirely successful. It is the most useful French Grammar we have seen, and we commend it to all schools and private families.

PERIODICALS AND SERIALS.

LAST week we lightened considerably the pile that had accumulated upon our table; we now proceed to make a clearance.

For the first time have we to introduce a youthful quarterly periodical, now only in its third number, entitled the *Prospective Review*. It combines theology with the higher branches of philosophy; its leanings are decidedly towards the rationalism of Germany. Profound thinkers and eloquent writers are evidently engaged upon it, and all its articles are remarkable for a largeness of grasp seldom found in modern British literature. The number before us opens with an interesting article on "Müller's Introduction to a Scientific System of Mythology," which should be read by all who desire to understand the spirit as well as the language of the ancient world. This is followed by an "Essay on the Life and Writings of BENJAMIN CONSTANT," of whose opinions a useful outline is given. "Christian Fellowship" is the next theme; then there is a "Notice of the Miscellaneous Works of Dr. ARNOLD;" a powerfully written review of Miss BARRETT'S poems; and a "Memoir of BLANCO WHITE." This periodical is full of promise.

Mr. WELLS has presented the first number of a magazine to be devoted to the science of ærostation. It is appropriately called *The Balloon*, and contains every kind of information on the topic it has chosen.

In a new and handsome cover we did not at first recognize again our old acquaintance, *Wade's London Review*. The August number exhibits steady improvement. The contents are various in style and subject, but all well selected. Although miscalled a review, it is in fact a magazine, and a very clever one, most of the articles being original essays, tales, poetry, &c. The first number of a series of fictions, to be called "Leaves Torn from the Records of Life," is a composition of great power. The books are also very ably reviewed, and we think impartially.

The *Travellers' Magazine*, No. III., for August, is an adoption by a monthly magazine of the plan of the department of THE CRITIC entitled "The Tourist." It contains accounts of travels interspersed with tales and notices of new books. "My First Pilgrimage and Last Tour," by the editor, is a pleasant, lively, graphic sketch; and Mr. JOHNSTON'S narrative of his voyage along the eastern coast of Arabia is very interesting. Whether a magazine wholly dedicated to one theme will prove to be popular we have some doubt, but certainly it ought to succeed.

The seventh part of the *Lectures chiefly Addressed to the Working Classes*, by W. J. FOX, contains discourses on cant—political, social and religious—a boundless theme for laughter or tears, according to the mood of the philosopher; on the "Living Poets," Mrs. JOANNA BAILLIE being the subject of this lecture; on the "Punishment of Death for Murder," which is denounced with unanswerable argument and forcible eloquence; and a fine reflective and truthful treatise on the last report of the registrar-general of births, marriages, and deaths. Mr. FOX wisely avoids the introduction of sectarian differences into the treatment of these topics, but views them upon principles in which all creeds and parties may concur with him. Hence their wide popularity and their utility.

Dr. Young's Lectures on Natural Philosophy and the Mechanical Arts are now fast being completed. This seventh part treats of the "History of Astronomy," the "Essential Properties of Matter," "Cohesion," the "Sources and Effects of Heat," "The Measures and the Nature of Heat," on "Electricity," on "Equilibrium," and on "Motion," and these are illustrated by many beautiful steel engravings. It is a work that ought to be widely circulated, and to form a part of all popular libraries.

Knight's Political Dictionary. Part VII. completes the first volume of a publication unique in its design, and invaluable to all who take an interest in politics. The articles are written with great ability. This number goes to the close of the letter E, and includes the subjects of "Equity," "Established Church," "Bill of Exchange," "Excise," &c. &c.

The August number of *Simmonds's Colonial Magazine* contains a vast mass of information relating to our colonies, and must be very acceptable both to colonists abroad and their friends at home.

Some weeks have elapsed since last we noticed the progress of that most daring, but, we believe, most successful enterprise of our time, *Knight's Weekly Volumes*. The later volumes have been remarkable for the very high class of literature thus spread before the people, and the great names who have contributed to the work by permitting the use of their valuable copyrights in this cheap form. The fiftieth volume completes Mr. CRAIK'S *Sketches of the History of Literature and Learning in England*. The fifty-first is the second of Mr. KITTO'S curious series, entitled *The Lost Senses*—blindness being the theme of the present volume. We have next two volumes of a reprint of Lord BROUGHAM'S famous *Historical Sketches of the Statesmen who flourished in the time of George the Third*. Such a book for two shillings! Next to this comes two volumes of a *Cabinet Portrait Gallery of British Worthies*. The writer's name is not given, but they are delightful biographies. It is, we believe, intended to be a work of considerable extent, and to embrace a complete series of the great minds this country has produced. As such it will be an acceptable addition to our national literature. Each volume contains six biographies, and six beautiful steel engravings—and all for one shilling. That delightful writer upon art, Mrs. JAMESON, next introduces us to two charming volumes of *Memoirs of the Early Italian Poets*, a work which she is undoubtedly more competent to undertake than any other author living. Another lady, Madame BLAIZE BURY, contributes a volume on *Racine and the French Classical Drama*, which contains an interesting biography of the poet and a criticism of his writings. The fifty-eighth volume is a new translation, by Mr. G. LONG, of the *Select Lives of Plutarch*. We briefly notice in this place the various subjects of the series. The original works will probably be formally reviewed in their proper departments in THE CRITIC.

Besides these, we have volumes III. to VIII. of *Knight's Cabinet History of England*, a reprint of the text of the *Pictorial History of England*, offered at the same trifling price as the weekly volumes, and which, when completed, will supply every book-shelf with a history of England the most readable and instructive that has ever been written, at the cost of a few shillings only.

Before we close, we must notice one more periodical just received. *The Phrenological Journal and Magazine of Moral Science* is a quarterly publication, devoted to the collection and diffusion of information on the subject of the *Science of Mind*. Its contents are of great and general interest. The number before us has articles on Language, on the Moral Treatment of Criminals, on Intellectual Freedom, on the Variations of Weight in the Human Brain, &c. &c. The contributors are thoughtful and observant men, and the work is one which must greatly advance knowledge upon the subject on which the world generally, but the English in particular, are most ignorant.

RELIGION.

Scriptural Communion with God; or, the Holy Bible arranged in Historical and Chronological order, &c. &c. By the Rev. GEO. TOWNSEND, M.A. Canon of Durham. Vol. I. London, 1845. Rivingtons.

INGENUITY would seem to have been exhausted long ago in devising new forms wherein to present the Holy Scriptures to the regards of the Christian public. The text has been arranged in a boundless variety of combinations; notes of every conceivable kind have been introduced for its illustration, and commentaries without number have been appended by learning, or piety, or eloquence. *Primâ facie* it would have been pronounced impossible to produce the Bible in a new shape.

But to Mr. TOWNSEND belongs the merit of having accomplished this apparent impossibility. He has succeeded in devising a plan by which the Holy Scriptures are presented to the Christian reader in a form more instructive, more useful, more practical, than any edition we have ever seen.

His plan is after this manner. Hitherto the custom with commentators has been to blend in the same notes their devotional, explanatory, or critical remarks; or, omitting some of

the classes of exposition, to confine their attention exclusively to others. But Mr. TOWNSEND proposes to combine, and yet to separate, all these modes of illustrating the Holy Scriptures. The text itself is re-arranged (not altered in words) into a chronological and historical order. This is the basis of his design, and in working out the scheme he divides it into sections, each section consisting of five parts, to wit,—a title, an introduction, the portion of Scripture selected, a prayer founded on that Scripture, and notes for the student or inquirer, to be read at leisure, and not in the family.

The *Introduction* is a plain abstract of the information contained in the notes; an interpretation or paraphrase of the passage of Scripture which follows, and contains also the result of the various criticisms or discussions which have arisen upon that portion of the Scripture.

The *third* part of the section consists of the portions of the Scripture to be read in the family. These average about twenty verses; so that the whole Bible will thus be completed in three years. Passages unfitted for family reading are printed in a smaller type.

The fifth part is the *notes*, and these are addressed chiefly to the student and inquiring. They relate chiefly to the differences between the ancient theology, which is founded on a literal interpretation of the text, and the system of sceptical objections which have taken the name of philosophy.

Such is the admirable plan of this laborious and ingenious work. The excellent author has executed it with a diligence, ability, and learning, that make it one of the most valuable contributions of our time to the cause of Christianity. It is admirably fitted for its professed purpose—family reading and devotion; it will be a prize in any household; and heartily do we commend it as beyond measure the best family Bible we have ever seen.

MISCELLANEOUS.

Hints to a Soldier on Service. By W. H. MAXWELL, Esq. Author of "Stories of Waterloo," &c. In 2 vols. London, 1845. Newby.

MR. MAXWELL is one of your dashing, spiritedly careless writers, who throw off whatever comes uppermost in the mind, with little regard for the conventionalities of authorship, and in utter defiance of the canons of criticism. His *Wild Sports in the West* was one of the most agreeable books we ever read; his *Stories of Waterloo* were better than nine-tenths of our fictions. The only work not worthy of him was his *Highland Tour*, of which we spoke somewhat slightingly at the time of its appearance; but justly, as he will himself admit.

His *Hints to a Soldier on Service* are in the form of letters from a retired officer to his son just commissioned. They are narrative as well as didactic recollections of army life many years since, and anecdotes of the Peninsular war are mingled with excellent advice as to qualifications which a good officer should endeavour to obtain, and the conduct he should adopt in the various positions of difficulty into which he may be thrown. The facts and anecdotes illustrate the teachings. But the science of strategy is a prominent feature of the *Hints*, and for the exhibition of the principles laid down, resort is had to most of the memorable engagements and military events of modern times.

This is an extensive, an interesting, and a novel field, which Mr. MAXWELL has not made the most of. Here are the foundations, and many of the materials, for a work that become very popular, and take a permanent place in the library as a portion of our standard literature. Mr. MAXWELL would do well to think of this, and seize the first opportunity that offers to recast and enlarge it, arranging its subjects with deliberation, extending his researches, and, in fact, producing that which does not now exist, a popular treatise on the art of war. So far as it goes, these hints may be commended to all interested in their theme. A few specimens will shew the author's manner.

THE FORTUNES OF WAR.

"My attention," says Colonel Jones, who led the column to assault the breach at St. Sebastian, and was left there wounded on its repulse, "was a short time afterwards aroused by an exclamation from the soldier lying next to me—'Oh, they are murdering us all!' Upon looking up, I perceived a number of French grenadiers, under a heavy fire of grape, sword in hand, stepping over the dead and stabbing the wounded. My companion was treated in the same manner; the sword withdrawn from his body, and, reeking with his blood, was raised to give me the *coup de grace*, when, fortunately, the uplifted arm was arrested by a smart little man, a Sergeant, who cried out, '*Oh, mon Colonel, êtes-vous blessé?*' and immediately ordered some of his men to remove me into the town. They raised me in their arms, and carried me without the slightest difficulty up the breach, on to the ramparts of the right flanking tower: here we were stopped by a captain of the Grenadiers; who asked some questions, then kissed me, and desired the party to proceed to the hospital. On passing the embrasures of the high curtain, we were exposed to a very sharp musketry fire from the trenches; and here it was that we met the Governor and his Staff, in full-dress uniforms, hurrying to the breach. He asked me if I was badly wounded, and directed that proper care should be taken of me."

A fortunate mistake thus saved the subaltern; and a blue uniform and gold bullion epaulette indirectly became the means of his preservation.

Incidentally is noticed a singular

EFFECT OF SHOT WOUNDS.

Showers of grape-shot fell without intermission round the spot, causing an incessant whizzing and rattling among the stones, and appeared at the moment to be carrying destruction through the ranks; but, except the necessity of instantly carrying off the wounded, on account of their sufferings, it caused little interruption to the workmen. It was remarked here, as it had been on former occasions, that a wound from a grape-shot is less quietly borne than a wound from a round-shot or musketry. The latter is seldom known in the night, except from the falling of the individual, whereas the former not unfrequently draws forth loud lamentations.

A SIEGE.

In war, circumstances go far in effecting success and in producing disaster. Burgos proved invulnerable: two years before, Almeida, with every preparation for determined resistance, fell on the second day after Massena's fire was opened upon it. By a fortunate shell, the grand magazine was exploded; and a place abundantly stored, well-garrisoned, and capable of holding out two months, in twenty-four hours was in the hands of the besiegers.

A still stranger occurrence in the history of this fortress succeeded. When, in turn, Massena's tide of fortune ebbed, and he retired from Portugal, Almeida was known to be unprovisioned, and of course its fall was considered to be a certainty.

In no one instance throughout the Peninsular campaign was a French governor of a place of arms tried and found wanting; and with means, and sometimes without means, the spirit and the resources of these able soldiers appears inexhaustible. Brennier, who commanded at Almeida, had been blockaded; but still Massena, "the spoiled child of victory," was in the field, and he expected to be relieved. Strong as that confidence was, he left nothing to uncertainty. He carefully mined the works, and made every preparation by which he might, if necessary, ruin the defences of the place. The heavy firing at Fuentes told him that a severe action had been fought. A day passed—no succour came; and during the night a French private reached the fortress, having with wonderful sagacity eluded the sentries and piquets who were on duty. Tillet confirmed Brennier's suspicions that Massena had been repulsed, and that Almeida must consequently be abandoned.

A stupid general, who requested and unfortunately obtained the direction of the investment of Almeida, permitted Brennier to escape. * * * * * * For two days Brennier continued his work of destruction; and it was effected with so much cleverness, that frequent explosions attracted no particular notice from the blockaders.

He ruined all the principal bastions, and kept up a constant fire of the artillery in a singular manner: for always he fired several guns at one moment, with very heavy charges, placing one across the muzzle of another; so that while some shots flew towards the besiegers, and a loud explosion was heard, others destroyed pieces without attracting notice.

At one o'clock on the morning of the 11th of May, the French governor blew up his mines, and boldly issued from Almeida. The way was opened with the bayonet. The garrison fired but little, and they appear to have marched between the bodies of troops posted to support the picquets; and, in particular, could not have passed far from the right of the Queen's Regiment.

Upon the first alarm, Brigadier-General Pack, who was at Malpartida, joined the picquets, and continued to follow and to fire upon the enemy, as a guide for the march of the other troops employed in the blockade; and Major-General Campbell marched from Malpartida with a part of the first battalion of the 36th regiment. But the enemy continued their march in a solid, com-

pact body, without firing; and were well guided between the positions occupied by our troops.

Here is an

ANECDOTE OF GENERAL FOY.

Among the generals whose oppressive conduct and tyrannical exactions had rendered them detestable to the Portuguese during Junot's occupation of Lisbon, Loison was the most feared and hated. From the loss of an arm, he had acquired the sobriquet of "the maneta;" and by that name the very children were taught to dread and curse him. During a popular outbreak at Oporto, Foy fell into the hands of the infuriated populace; and the mob, mistaking him for Loison, called out "to murder *the maneta!*" With amazing promptness, Foy threw both arms above his head; and the rabble, who a moment before had devoted the hated one to destruction, permitted the general to escapeunharmed, when a moment's want of promptness would have consigned him to instant destruction.

Peter Parley's Annual and Christmas and New Year's Present. London: Darton and Clark.

THE very name of Peter Parley carries with it a recommendation to the entire generation of children who have been lucky enough to be young when he was labouring for their enjoyment. An annual by this venerated personage, stuffed with matter that will attract the dullest, gathering the cream of all his works, mingling travels, and tales, and natural history, and poetry, and all of them profusely illustrated with excellent engravings, will be a prize indeed—a more grateful present from papas and friends than the most costly toy that can be procured. In truth, this is such a book as in our young days would have rivetted our eyes to its pages until all had been read and re-read a dozen times at least. We ask those who purpose a present for children just to look at this volume before they buy, and sure we are that then their choice will not be doubtful.

JOURNAL OF FRENCH LITERATURE.

The Links of a Chain. By the Viscount D'ARLINCOURT. 2 vols.

UNLIKE our own, the French public gives a hearty welcome to works of fiction condensed into tales, when they are the offspring of a clever mind and the produce of a skilful hand. Among English booksellers there is a rooted prejudice against the *nouvelletes*, which form so pleasing a feature in the literature of other European countries. No clever tale-writer would have a chance of appreciation among us, were it not for the Magazines; and we need scarcely point the attention of our readers to many of those which have from time to time appeared, and are still at no infrequent intervals appearing (among others), in *Blackwood* and *Fraser*. Had DE LA MOTTE FOUQUE been an Englishman, and had he offered his delicious *Undine* to Mr. A—— or Mr. F——, he would have been politely counselled either to burn it or to re-model and elaborate it into a 3-vol.'d work. Where would FREDERIKA BREMER, with her unequally-sized fictions, have found grace and welcome in the Row? How would the German writers—those kings and emperors of story-telling—have discovered a patron among our *soi-disant* bibliographers? We answer boldly, Nowhere and in no way! A certain convention, a species of unholy alliance among the magnates of *the trade*, has, unhappily for the literary reputation of the country, decided upon testing the merits of every work according to its size. They mentally apply a foot-rule to every MS. which is offered to them. No matter how fully the tale may have been told in 300 pages, and the *nerve* of the author exhausted upon the particular subject handled in his work, the number of square inches is not attained. Two-thirds of the labour remain to be accomplished. The publisher must have three volumes, neither more nor less; it is a mystic numeral, upon which the fortunes of his warehouse depend. The book in its present state may be a good book—very likely—but in such a shape he declines to "touch it." Should the writer be weak enough or *necessitous* enough to act upon this prompting, he will, in all probability, bring back his sprightly fancy, which was originally as slight, and fresh, and joyous a sylph as ever was born of summer twilight and a dreamer's brain, expanded into a dull, drowsy, obese specimen of brain-torturing and hair-splitting stupidity. Never mind. The honest critic will, of course, when he handles the book, complain of the wire-drawn discursiveness, of the literary dishonesty, and of the false promise, of the more laboured performance; but what cares *M. le Bibliopole?* He has "done business" through his subscription, and the poor author, whose "first intention" has been lost, while *rari nantes in gurgite vasto*, in obedience to his commercial guide, will have to support alike the blame and the loss which *must* ultimately result from so despicable and erroneous a system.

We write strongly upon this point, because we have had *very lately* an example (one among thousands!) under our eyes, in which an unambitious writer, who assumed only to possess materials of a peculiar nature, which would supply a series of attractive magazine articles, to be subsequently collected into a volume, suffered himself to be thus misled by his publisher, brought out his tiny bark in the shape of a fleet of three, and has run the gauntlet through the whole of the independent portion of the press in consequence. What is the meaning—where is the sense of such a system as this? Are writers, like felons, to be timed and distanced upon their tread-wheel, even when conscious that their labour produces no result beyond the wearing away of their own muscles, and of the support on which they lean?

And all this, irrelevant as it may seem, is *apropos* of the volumes of M. D'ARLINCOURT.

The Links of a Chain are a series of very cleverly told stories; either of which, by the adoption of our popular method of bladder-like inflation, might have been readily spun into a very dull novel. M. D'ARLINCOURT and his bookseller, however, knew better than to try the thankless experiment; and the consequence has been, a couple of volumes full of interesting, graphic, and varied matter. Every land has been taxed for its legend, and each is characteristic. There is but one "link" in this pleasant "chain" which we could wish displaced; but that one, although it professes to be the mere record of an old-world event in Normandy, of which a tomb, still in existence, remains to testify the truth, would have been more fitly omitted. Of all the collection, we prefer the opening tale, which is entitled "The Iron Ring." The whole gist of the story may be detected in the opening chapter, which we will give in a condensed form, in order that our readers may be enabled to judge of the noble author's style.

THE TALISMAN.

The celebrated Denon, the Director of Museums under the Empire, the most amiable and the most gracious of the learned of his time, delighted to exhibit to all those who requested the favour of him, the inappreciable curiosities of his cabinet. There might be seen collected, as in a magic palace, the rarest antiquities and the most extraordinary works of art. There, inconceivable wonders, obtained from the four corners of the world, presented one marvellous whole. In short, nothing was wanting to give to the cabinet of the illustrious old man all the appearance of an enchanted dwelling, save diabolical invocations and fairy apparitions.

Madame de Nareuil one day entered the museum of the Egyptian explorer, accompanied by her daughter Stéphanie. She was still a very pretty woman, although her daughter was marriageable, and that she had herself passed through many misfortunes. It is true that she was only thirty-six years old, but the burthen of her sufferings might well have aged her face. She was a widow, and poor.

She passed with considerable indifference before the precious objects which were pointed out to her, until she suddenly paused, and remained fixedly gazing, as if under the influence of some occult attraction, upon a long and open chest, in which lay an embalmed body, enrolled in narrow fillets. The mummy wore upon its brow a species of crown in gilt metal. The case in which it was enclosed was covered with hieroglyphics, and the numerous fillets were of different colours.

Stéphanie, attracted by gayer objects, had left her mother's side. Madame de Nareuil, motionless, remained rivetted before the mummy.

"That was an illustrious princess," said M. Denon, with one of those cunning smiles which gave so much grace and expression to his physiognomy; "she was the daughter of the King of Memphis several centuries ago. Assuredly the high and mighty lady never guessed, upon her death-bed, that her august mummy, withdrawn from the sepulchre of the Pharaohs, would one day leave the shores of the Nile to delight the banks of the Seine. So goes the world; all things change perpetually. Isis could not keep her child: Napoleon dug it up in Africa. Who shall say where Napoleon himself will be buried." * * *

"What does this mummy wear upon her finger?" resumed

Madame de Nareuil, captivated by the Egyptian corse, and unable either to move from it, or to take an interest in any other object.

"It is an *iron ring*, madam; a sort of talisman."

"A talisman!"

"Bestowing happiness. That ring was placed upon the finger of the princess at her death hour, according to the custom of the time, by the magicians of Egypt. It was intended to preserve her remains from all impious profanation. * * * I pray you to remark that the ring has indeed brought happiness to the illustrious African; for three or four thousand years after her death she is admired in Paris; our fair ladies look upon her, and even you feel an interest in her fate. What a signal honour! —what a triumph!"

Madame de Nareuil smiled.

"Would you believe it," continued Denon, "it is asserted that whosoever, down to this day, shall wear that iron ring upon their finger will see the accomplishment of all their wishes, may command every thing, fortune and happiness alike."

"And why then, Sir, do you not wear this ring?"

"In the first place, it is too small to admit my finger; and, secondly, I have it there close to my hand, which is much the same thing as though I wore it. To be its owner suffices."

"Thus, Sir, all prospers with you; your life is one of satisfaction."

"Do you attribute that fact to the ring?"

"I confess that I should like to believe it so."

Madame de Nareuil, as she made this reply, felt almost suffocated. She smothered a rising sigh. How deeply was she, a poor and widowed mother, in want of some good talisman! She had neither property nor protectors. Her daughter, the charming Stéphanie, then seventeen years of age, although eminently favoured by nature, attracted little notice. No proposal of marriage had yet been made for her. Madame de Nareuil, who had once been wealthy, and who had lost at once her husband and her fortune, could not habituate herself to her deprivations; and as her necessities gradually increased, she spent her days in tears.

M. Denon had left her. A thought certainly culpable, a thought perhaps fatal, but inspired by despair, arose suddenly in her soul. At first she shrank from it in horror; alas, ere long it recurred.

"If," said the mother of Stéphanie to herself, "this ring should really be a talisman of happiness—no one is near me—I am alone—If I could secure it—."

And, a few minutes afterwards, full of the idea that in sacrificing her own honour and conscience to the future welfare of her child, she could not be guilty of an unpardonable crime in the eyes of Providence, the poor mother, silently, and in the shade, had stolen the *iron ring*.

"It is nevertheless an evil action which I have committed," murmured Madame de Nareuil, as she entered her own house, accompanied by her daughter; "I have taken the property of another; I have committed—*a theft!* It is true that a link of *iron*, an old rusted ring, is a mere trifle—almost nothing; for, after all, I do not quite believe in the marvellous virtues of this talisman; the days of the fairies are over; nevertheless, I cannot conceal from myself that I have done very wrong, I am highly culpable. My fault, fortunately, will never be known; M. Denon is not likely to discover his loss; he is so surrounded by things of value; and this morsel of old iron, to which he does not seem to attach any importance, and of which he only spoke with a sneer, is intrinsically without any natural value. Besides, he puts no faith, I am convinced, in such superstitious ideas—nor indeed do I;—and yet—I have committed A THEFT."

Madame de Nareuil gives the ring to her daughter, who, on her next appearance in public, captivates the young and wealthy Marquis de Lauvil, who asks, and obtains from the widow, a promise of her hand. The union takes place, urged on by the impatience of the enamoured bridegroom; and immediately after the auspicious event, Madame de Nareuil learns the death of Denon, after a brief indisposition. The honey-moon has not terminated, when the widow receives a letter from an old maiden aunt in Rio Janeiro, requesting her to proceed forthwith to that colony to close her eyes, and to secure an inheritance of 800,000f. to herself and daughter. She of course complies with so pleasant an invitation, and, accompanied by an attached and confidential female attendant, embarks. The young bride, half heart-broken by the separation, insists on transferring the iron ring to the finger of the fair traveller, at least until her safe return. On board the good ship *Argos* Madame de Nareuil is preserved by the talisman from storm and tempest, and even from that scourge of locomotive humanity, sea-nausea. But, alas! in an unguarded moment, Martha, her maid, betrays to the captain of the vessel the important fact that the safety and comfort of her mistress are secured through the medium of the talisman which she wears upon her hand. M. d'Urbinsse, whose moral tactics are not quite so remarkable as his nautical abilities, seizes an opportunity, when his passenger chances to have dropped asleep upon a sofa in the great cabin, to draw the ring from her finger, and to secure it. Thenceforward the commander of the *Argos* appears to control the winds and the waves. The storms sweep by him upon their errands of death, but never linger above his masts; the sea runs rippling past, like some vast lake, lucid as a mirror, and bright as a bride's smile; while poor Madame de Nareuil, half-frantic at her loss, lands in Rio Janeiro only to find her aunt a corse, and to be met by a will, bequeathing her whole fortune to her agent, who has already taken possession of the estate. On her passage out she has, however, attracted the attention, and been much indebted to the courtesies of a certain M. de Malarin, who, strangely enough, although they had never previously met, appears to be fully aware of the real cause of the value which she attaches to her lost ring, and which, we need scarcely remark, she fails to recover. In vain does she question him upon the subject; he is all mystery; and that mystery is to her fearfully deepened, by his frequent mention of the name of Denon, with whom he nevertheless declares himself to have been entirely unacquainted. On landing they part, but not before she has urged him never to forget his promise of using his best efforts to regain her vanished treasure; to which he replies by ambiguously assuring her that he will spare no pains in order to restore it to "its rightful owner."

On discovering the fraud which has been committed by her aunt's agent, and having no further cause to linger at Rio Janeiro, in six or eight months after her arrival she takes her homeward passage on board the Alcyon, when, to her astonishment, the first person whom she encounters on the deck of the vessel is M. de Malarin. To her exclamation of pleased surprise, he frankly admits that the circumstance is by no means accidental; he had heard of her projected return to France, and was anxious to bear her company. M. d'Urbinsse, meanwhile, the thief of the theft, has, by some unaccountable means, become the possessor of millions—millions in six months. He must have been overtaken by a shower of golden rain. Madame de Nareuil compares the period in which his sudden prosperity commenced with that of her own loss; they tally to an hour. The delinquent is in Sweden, and doubtlessly the talisman still bears him company. What is to be done? And upon what, after all, can Madame de Nareuil found her own claim to the treasure-giving ring? Her certainty of the identity of her spoiler is, however, fixed by the confession of the unlucky Martha, who, in a paroxysm of remorse, avows her indiscretion.

Before she leaves the colony, the widow has received one solitary letter from her daughter, in which the fair Marchioness, in a strain of frightful despondency, darkly hints at certain causes of unhappiness, which had evidently been detailed in her previous correspondence, and which had failed to reach the disappointed exile. On her homeward voyage, she communicates this new anxiety to her friend De Malarin, who, as usual, appears to be perfectly cognisant of the whole affair, but who declines entering upon the subject, merely assuring her that although she must prepare herself for a heavy misfortune, it is nevertheless not without its concomitant consolation. M. de Malarin, *en preux chevalier*, escorts the fair traveller to the very door of the Hotel de Lanvil, and she ultimately learns, some five minutes previously to her arrival there, from her almost omniscient companion, that she has no longer a son-in-law.

A MEETING.

Informed of the arrival of her mother, the Marchioness ran to meet her. The two widows fell into each other's arms, their tears were mingled, and they were not all bitter ones. The first emotions over, Madame de Nareuil examined the appearance of her daughter with a scrutiny from which nothing could be hidden. Great was her astonishment. Stéphanie, fairer, more joyous, and more beautiful than ever, bore in her blooming face no trace of suffering. Her elegant and somewhat coquettish half-mourning dress contrasted admirably with the fairness of her skin. Serenity sat upon her brow, a smile played about her lips, and the brightness of her fine eyes had been dimmed by no very profound affliction. In short, the Marchioness was resplendent in health and happiness. * * * Madame de Nareuil, established in the delicious boudoir of her daughter, looked around her with considerable curiosity. There, nothing

was austere, nothing was depressing. The air was embalmed with flowers; the hangings were of a sort of slight mourning grey, tending towards pink. The piano was open; some one had recently been singing a ballad, which was yet upon the music-stand. All was gay and smiling on every side. * *

"You never loved him!" said Madame de Nareuil abruptly; "he did not make you happy!"

Stéphanie replied languidly, and in her elaborate refinement of language endeavoured to conceal her embarrassment: "Where death has spread its pall," she said, "we must approach only with respect. Let no man's ashes be reproached." Then, calling to her maid, "Agatha," pursued the Marchioness, "tell the porter that I cannot receive any visitor to-day. I wish to be alone with my mother."

The words had scarcely left her lips, when a servant threw open the door, and announced very audibly,

"The Count Armand d'Urbinsse."

A fine young man entered. By the grace of his manner, and the elegance of his address, it was easy to recognise in him the hero of gilded saloons, and the favourite of fashion. Nothing could be more eloquent than his language, nothing more exquisite than his costume. His coat was of an irreproachable cut; his gloves had emanated from the warehouse of an *artiste*, whose fee was double payment. These, however, were not his only advantages; nature had also conceded to him, as a sort of supplement, an upright character and a noble heart. * *

The Marchioness de Lanvil was evidently embarrassed by his advent. She stammered out a few unmeaning words, but she could not recover her composure. Madame de Nareuil had guessed all at a glance, nor had the name of her daughter's new suitor escaped her. She entered courteously into conversation with the handsome stranger, and inquired his degree of consanguinity to the commander of the *Argos*. The Count Armand was at once his nephew and his heir.

"I am delighted, Count," said Madame de Nareuil, in an unsteady voice, and with a strange smile, "to have met in my daughter's house the nephew of Captain d'Urbinsse." And, as a token of pleasant memories, she extended her hand to the young man. He took it eagerly, and raised it with gallantry to his lips. But, under the white glove of the fashionable Count, Madame de Nareuil was seeking to realize some wild fancy. All at once she uttered a faint shriek—"Stéphanie! I feel faint—very faint." She fell back upon her chair. The Marchioness hurriedly pulled the bell, and the Count Armand withdrew.

"Mother! what ails you? speak!" exclaimed the frightened Marchioness.

"My dear child, send away the servants." The attendants left the room.

"Stéphanie!" cried her mother, wildly, "tell me the truth—you love him?"

"Love who?"

"That fine young man, M. d'Urbinsse."

"Love him! My mother, what a question!"

"You do not deny it, and that suffices. I now know all, my child. And he, without doubt, adores you in his turn."

"He has never ventured to declare it."

"But you have understood him marvellously well. Moreover, if the Count has a passion for you, you cannot help yourself—you must love him. My child, you are under the spell."

"I cannot understand you——"

"He must succeed in every undertaking."

"He *must* succeed! and wherefore?"

"Stéphanie—he has the *iron ring!*"

We will no further follow out the plot than to state that the talisman ultimately falls, by a somewhat questionable proceeding, into the hands of M. de Malarin, who declares that he has restored it to the "rightful owner." Against this assertion, Madame de Nareuil, her daughter, and the Count d'Urbinsse alike protest; each believing that it must have been restored to the other.

"Has he indeed given it back to you, Madame?" inquired the astonished Count, of the mother of Stéphanie. "Is it possible that your ring——"

"My ring!" murmured Madame de Nareuil. "Alas! Sir, this trying moment is indeed one of general expiation. The whole truth must be told. In this case, I perceive, that each of us in turn has taken that which belonged to another. As for me, I will at once humbly confess my error before you all. The first *theft*——was mine. I stole the *iron ring*. It belonged to M. Denon."

"I beg your pardon," said M. de Malarin, with a mischievous smile. "Neither did it belong to Denon. This so-much-coveted talisman was——*stolen* by Denon in Egypt from the sepulchre of the Pharoahs."

"Then whose property can the ring be really considered?" demanded D'Urbinsse, impatiently.

"Whose? Ladies, see."

M. de Malarin moved slowly towards an antique press, covered with carving of the *moyen age*. He threw back the folding doors, and the Egyptian princess, the mummy of M. Denon, with her gilded crown, her coloured fillets, and her chest with its hieroglyphics, stood revealed—upon her hand she wore the iron ring.

"It is indeed herself!" exclaimed Madame de Nareuil. "I recognise her. M. de Malarin is right. *The ring is in the possession of its true mistress.* He has restored it to *the rightful owner*."

"And that ring! and its true mistress," replied the mysterious traveller as he bent tenderly before Madame de Nareuil, "are both your own. Will you accept them? Forgive me all my stratagems," he pursued vehemently; "a secret voice seemed to warn me that I should never really gain your heart unless I became myself the possessor of the precious talisman. Love is always superstitious. Moreover, I had concealed from you the fact that I was the owner of M. Denon's mummy when I first met you on board the *Argos*; and that a note in the autograph of the celebrated *savant* was attached to the mummy, which contained these words, '*She wore an iron ring; but the ring was stolen from me.*' You lost your's; and Martha betrayed your secret. Thence my mysterious words. I appeared to you as a quasi-necromancer, while I became attached to you for life—and now decide my fate. * * * Madame, henceforth, believe me; cast away every idea of illusion; sooner or later *the true* governs all. Earthly happiness and misery frequently depend upon the imagination. We are apt to attribute to worldly circumstances the dispensations of heaven. We think of every thing save of GOD. I have carefully studied the past in your fortunate and adverse days; it was certainly not the magic of the talisman which produced the events that occurred to you; they were simply accidental circumstances that produced the magic of the talisman. But this matters not: magical or not—the ring and the mummy are your own."

"I accept both with gratitude," replied Madame de Nareuil; "but only upon one condition; which is—that the ring and the mummy shall be the property of all the four, and make us happy together."

"*Of all the four! and make us happy together?*" echoed Malarin delightfully. "Know you, that by this arrangement you accept my heart and my vows, and promise a double marriage?"

"Am I not, like yourself, *under the spell of the talisman?*"

"And you!" cried the Count d'Urbinsse, addressing the Marchioness, and ready to fall at her feet; "do you hear this?"

"Yes, Sir."

"And do you ratify the pledge?"

"Am I not, like my mother, *under the spell of the talisman?*"

"Must we still fight?" asked M. de Malarin, approaching the Count with extended hand. "What say you? I am at your orders."

"Sir," answered d'Urbinsse, "am I not, like all the rest, *under the spell of the talisman?*"

And is not this, and such as this, we ask in our turn, playful, rational, and unlaboured as it is, worth a waggon-load of those ponderous triune-stupidities which cumber so expensively the shelves of half our circulating libraries.

JOURNAL OF AMERICAN LITERATURE.

Journal of an African Cruizer. By an Officer of the U. S. Navy. Edited by NATHANIEL HAWTHORNE. London, 1845. Wiley and Putnam.

THE coast of Africa has not been quite as often described as most of the shores which exercise the descriptive powers of modern tourists. The interest which it possesses has not lost its novelty, and probably an interest would be felt in any thing that was to be told about this singular continent long after its novelty had subsided. The realm to which ancient mystery looked, the home of gigantic marvels, the region around which obscurity and fable in all ages have woven an almost impenetrable veil, it seems to repel, by its noisome pestilence and fever, and by its wild tribes of unreclaimed savages, the inquiry and investigation which its strange position among the nations of the world necessarily invites. We have still, however, the means of learning something of the sea-coast of Africa; of the interior of the greater part of that immense tract of country almost nothing is known. Enthusiastic travellers have explored the countries which Moorish splendour or Egyptian learning and art have rendered conspicuous, and classical students have recalled upon the spot, hallowed by

poetry and history, the scene of DIDO's funeral or MARIUS's solemn and scornful seat. A line of frequent though interrupted settlements are witnesses to the commercial enterprize of more civilized man, and year after year they receive and send back some to tell us a little of themselves, and a little of the territory which immediately surrounds them. But of the heart of Africa we know and we hear nothing. It is fenced off from our observation by lines which may not rashly be invaded, and the land of the negro seems to visit upon the white man who approaches it the long years of oppression and degradation which his race have inflicted upon her children.

The journal now before us extends over a period of more than a year, during which the author cruized off the north-western coast of Africa. One main object of the author's visit, if not the only object, appears to have been to observe the condition and prospects of the black colonies planted upon that coast by the persons who, in America, are termed colonizationists. As might have been anticipated, the author's sympathies and opinions are strongly in favour of the young colony; and throughout the small volume, wherever there is the slightest opening for it, the organ of national self-esteem, for which all Americans are remarkable, displays itself. Apart from this, the journal is amusing; deficient, perhaps, in powers of description, but atoning for that fault by great variety of topic and incident.

Early in the volume we meet with the journal of a fortnight spent on and near the island of St. Antonio. Upon one occasion the party had left the ship in a sloop-rigged boat, which, after tossing about for thirty-six hours, arrived at Genella, a small port in the island, where, under the direction of a mulatto pilot, they landed at nine o'clock in the evening. After eating such a feast as a negro could supply, they sallied out to reconnoitre the village.

Meanwhile, the pilot had not been idle. Though a married man, and the father of six children, he was a gay Lothario, and a great favourite with the sex; he could sing, dance, and touch the guitar with infinite spirit and tolerable skill. Being well known in the village, it is not surprising that the arrival of so accomplished a personage should have disturbed the slumbers of the inhabitants. At ten o'clock, a dance was arranged before the door of one of the huts. The dark-skinned maidens, requiring but little time to put on their ball costume, came dropping in, until, before midnight, there were thirty or forty dancers on foot. The figures were compounded of the contra-dance and reel, with some remarkable touches of the Mandingo balance. The music proceeded from one or two guitars, which, however, were drowned a great part of the time, by the singing of the girls and the clapping of each individual pair of hands in the whole party. A calibash of sour wine, munificently bestowed by a spectator, increased the fun, and it continued to wax higher and more furious, as the night wore away. Our little pilot was, throughout, the leader of the frolic, and acquitted himself admirably. His nether garments having received serious detriment in the voyage, he borrowed a large heavy pea-jacket to conceal the rents, and in this garb danced for hours with the best in a sultry night. Long before the festivity was over, my companions and myself stretched ourselves on a wide bag of straw, and fell asleep, lulled by the screaming of the dancers.

The account of the village, and of the island of St. Antonio itself, differs very slightly from that which is given of several other parts of the continent or neighbouring islands which it fell to the author to explore, and a few extracts may not be unacceptable to our readers.

The people are all negroes and mulattoes. Male and female, they are very expert swimmers, and are often in the habit of swimming out to sea, with a basket or notched stick to hold their fish; and thus they angle for hours, resting motionless on the waves, unless attacked by a shark. In this latter predicament, they turn upon their backs, and kick and splash until the sea-monster is frightened away. They appear to be a genial and pleasant-tempered race. As we walked through the village, they saluted us with "Blessed be the name of the Lord!" Whether this expression (a customary courtesy of the islanders) were mere breath, or proceeded out of the depths of the heart, is not for us to judge; but, at all events, heard in so wild and romantic a place, it made a forcible impression on my mind. When we were ready to depart, all the villagers came to the beach, with whatever commodities they were disposed to offer for sale; a man carrying a squealing pig on his shoulders; women with fruits and fowls; girls with heavy bunches of bananas or bundles of cassada on their heads; and boys, with perhaps a single egg. Each had something, and all lingered on the shore until our boat was fairly off.

Five or six miles further, we landed at Paolo, where reside several families who regard themselves as the aristocracy of St. Antonio, on the score of being connected with Senor Martinez, the great man of these islands. Their houses are neatly built, and the fields and gardens well cultivated. They received us hospitably, principally because one of our party was a connection of the family. I was delighted with an exhibition of feeling on the part of an old negro servant-woman. She came into the parlour, sat down at the feet of our companion, embraced his knees, and looked up in his face with a countenance full of joy, mingled with respect and confidence. We saw but two ladies at this settlement. One was a matron with nine children; the other a dark brunette, very graceful and pleasing, with the blackest eyes and whitest teeth in the world. She wore a shawl over the right shoulder and under the left arm, arranged in a truly fascinating manner. * * * After a good night's rest, another officer and myself left Paolo early for a mountain ride. The little pilot led the way on a donkey; my friend followed on a mule, and I brought up the rear on horseback. We began to ascend, winding along the rocky path, one by one, there being no room to ride two abreast. The road had been cut with much labour, and, in some places, was hollowed out of the side of the cliff, thus forming a gallery of barely such height and width as to admit the passage of a single horseman, and with a low wall of loose stones between the path and the precipice. At other points, causeways of small stones and earth had been built up, perhaps twenty feet high, along the top of which ran the path. On looking at these places from some projecting point, it made us shudder to think that we had just passed where the loosening of a single one of those small stones might have carried us down hundreds of feet to certain destruction. The whole of the way was rude and barren. Here and there a few shrubs grew in the crevices of the rocks, or wild flowers, of an aspect strange to our eyes, wasted their beauty in solitude; and the small orchilla weed spread itself moss-like over the face of the cliff. At one remarkable point the path ran along the side of the precipice, about midway of its height. Above, the rock rose frowningly at least five hundred feet over our heads. Below, it fell perpendicularly down to the beach. The roar of the sea did not reach us at our dizzy height, and the heavy surf-waves, in which no boat could live, seemed to kiss the shore as gently as the ripple of a summer lake. This was the most elevated point of the road, which thence began to descend; but the downward track was as steep, and far more dangerous. At times, the animals actually slid down upon their haunches. In other places they stepped from stone to stone down steep descents, where the riders were obliged to lie backwards flat upon their cruppers.

Into any political questions connected with the colony of Liberia, or its prospects, we of course decline to enter; that it is a bold experiment, no one can deny. To entrust a race only just reclaimed from slavery with the social government of themselves as an established and recognized community, is an instance of faith in the characters and abilities of the leading black colonists beyond any thing that Europe was prepared for. When we hear, as in the course of the *Journal* we do hear, that it is in agitation, both in America and Liberia, to sever the connection between the young colony and the Colonization Society, and that many on both sides are eager for such a separation, we confess we do feel that there is reason to doubt the judgment of the parties concerned, and ground for a suspicion that the benevolent attempt to raise the moral position of the negro must in this instance prove a total failure. The strongest guarantee for the success of the colony seems to be in the very superior capabilities of its governor, Mr. ROBERTS. Those, however, who are inclined to laugh at the progress of the black republic will find ample material in the absurd name of Liberia which it has assumed, and still more in the mock American dignity which the black settlers have either been compelled or have thought fit to assume. Instances appear in what follows:—

Leaving the ship in one of our boats, pulled by Kroomen, we crossed the bar at the mouth of the Mesurado, and in ten minutes afterwards were alongside of the colonial wharf. Half-a-dozen young natives and colonists issued from a small house to watch our landing; but their curiosity was less intrusive and annoying than would have been that of the same number of New York boys at the landing of a foreign man-of-war's boat. On our part, we looked around us with the interest which even common-place objects possess for those, whose daily spectacle is nothing more varied than the sea and sky. Even the most ordinary shore-scenery becomes captivating, after a week or two on shipboard. Two colonists were sawing plank in the shade of

the large stone store house of the colony. Ascending the hill, we passed the printing-office of the *Liberia Herald*, where two workmen were printing the colonial laws. The publication of the newspaper had been suspended for nearly three months, to enable them to accomplish work of a more pressing importance. Proceeding onward, we came to the governor's house, and were received with that gentleman's usual courtesy. The house is well furnished, and arranged for a hot climate; it is situated near the highest point of the principal street, and commands from its piazza a view of most of the edifices in Monrovia town.

The fort is on the highest ground in the village, one hundred feet above the sea; it is of stone, triangular in shape, and has a good deal the appearance of an American pound for cattle, but is substantial, and adequate for its intended purposes. From this point, the street descends in both directions. About fifty houses are in view. First, the government house, opposite to which stand the neat dwellings of Judge Benedict and Doctor Day. Further on, you perceive the largest house in the village, erected by the Rev. Mr. Williams, of the Methodist mission. On the right is a one-story brick house, and two or three wooden ones. A large stone edifice, intended for a court-house and legislative hall, has recently been completed. The street itself is wide enough for a spacious pasture, and affords abundance of luxuriant grass, through which run two or three well-trodden foot-paths. Apart from the village, on the Cape, we discerned the light-house, the base of which is about two hundred feet above the sea.

We dined to-day at the New Hotel. The dinner was ill-cooked (an unpardonable fault at Monrovia, where good cooks, formerly in the service of our southern planters, might be supposed to abound), and not served up in proper style. But there was abundance to eat and drink. Though the keeper of the house is a clergyman and a temperance man, ale, porter, wine, and cherry brandy are to be had at fair prices. Three years ago a tavern was kept here in Monrovia by a Mr. Cooper, whose handbill set forth, that "nothing was more repugnant to his feelings than to sell ardent spirits,"—but added—"if gentlemen *will* have them, the following is the price." Of course, after such a salvo, Mr. Cooper pocketed the profits of his liquor trade with a quiet conscience. He used to tell me that a little brandy was good for the "suggestion;" but I fear that he made, in his own person, too large a demand upon its suggestive properties; for his house is now untenanted and ruinous, and he himself has carried his tender conscience to another settlement.

While in the village, I visited the Court House, to hear the trial of a cause involving an amount of eight hundred dollars. Governor Roberts acted as judge, and displayed a great deal of dignity in presiding, and much wisdom and good sense in his decision. This is the highest court of the colony. There are no regularly educated lawyers in Liberia, devoting themselves exclusively to the profession; but the pleading seems to be done principally by the medical faculty. Two doctors were of counsel in the case alluded to, and talked of Coke, Blackstone, and Kent as learnedly as if it had been the business of their lives to unravel legal mysteries. The pleadings were simple, and the arguments brief, for the judge kept them strictly to the point. An action for slander was afterwards tried, in which the damages were laid at one hundred dollars. One of the medico-jurisconsults opened the cause with an appeal to the feelings, and wrought his own sensibilities to such a pitch as to declare that, though his client asked only for one hundred dollars, he considered the jury bound in conscience to give him two. The doctor afterwards told me that he had walked eighty miles to act as counsel in this court. A tailor argued stoutly for the defendant, but with little success; his client was fined twenty dollars.

(*To be continued.*)

THE TOURIST.

[All the world travels now-a-days. Great, therefore, will be the utility of a periodical to which every Tourist may communicate such of his experiences as to routes, sights, conveyances, inns, expenses, and the other economies of travelling, as may serve his fellow-tourists. To this design we propose to devote a distinct department of THE CRITIC, and we invite communications of the class described relative to travelling both abroad and at home.]

SKETCH OF A TOUR IN THE TYROL.

(*Continued from page* 305.)

SALZBURG is distant nine miles from Hallein, and in order to arrive at it, the tourist must proceed down the beautiful valley of the Salza, with its green meadows and a few corn-fields. Passports will be asked for on entering Salzburg. The castle at this town should be visited; it was formerly the residence of the Archbishop of Salzburg, and in it will be seen the room in which the Archbishop Wolf Dietrich was imprisoned for having married; also the torture-chamber in a tower, which chamber contains the rack. A rope being fastened to each arm of the prisoner, he was drawn up to the ceiling by two windlasses, with a stone of great weight (about 200 lbs.) attached to his feet. He was then allowed to fall headlong to the ground, together with the stone. Near the window is the place where the prisoners were thrown after decapitation. In the same room is the fatal *oubliette* or trap-door, leading into a dark and deep dungeon. Here also was the Eisen Jungfrau (Iron Maiden). In another apartment are preserved lances and shields, formerly used for tilting; the wooden cannon used by the peasants in the rebellion of 1520-5, and the saddle, &c. of the leader, placed on a wooden horse, and the morning star and other instruments of war taken from them; also a curious organ, 300 years old. The castle is now converted into barracks. The views from it and the Mönksberg, a continuation of the hill on which the castle is built, are magnificent. St. Rupert's cell, in the cemetery at the back of St. Peter's church; the cathedral; and the splendid fountain in the square adjoining it; the cavalry stable; the house in the third story of which Mozart was born; the one where Paracelsus lived and died, with his portrait on the wall; his tombstone in the churchyard of St. Sebastian should also be seen. A fine view may be obtained from the convent terrace on the other side of the river. In ascending to it a great many station shrines are passed, where the tourist will observe some of those bloody representations of the sufferings of his Saviour which in many places during his peregrinations he will have presented to his sight, and which appear so unpleasing and even disgusting to his feelings as a Protestant, whose religion consists rather in the purification of his heart and humble reliance for salvation on the merits and sufferings of his Redeemer, than in the constant contemplation of such horrid and brutalizing objects. When he has seen all that he wishes to see in Salzburg, he may forward his luggage to Innsbruck, and then enjoy a pleasant walk of fifteen miles to Berchtesgaden, in Bavaria. He will have to pass through a narrow defile between the Untersberg (6,200 feet high) and the Hohe Göhl (8,000 feet).

The situation and appearance of Berchtesgaden, in approaching it on a fine morning, with its light elegant church spire, and the hills rising one above another, the lower ones well clothed with pines, and the whole backed by the forked snow-capped Watzman (8,250 feet high), are strikingly beautiful and picturesque, accompanied with grandeur. The Leutehaus here we found to be a very dear inn, it had therefore better be avoided. Berchtesgaden is a favourite sporting residence of the king of Bavaria. There had been a great fête here on the day we arrived, in consequence of the presence of him and his queen. It will be necessary to take a guide from this place to Saalfelden, and set out early in the morning, if it be intended to reach the latter place on the same day, which may be done, although it is rather a long, hard walk. We set out at half-past five in the morning, with the design of completing the journey that day, but were prevented, as I shall shortly mention. At a quarter before seven we reached the foot of the Königssee, where we took a boat, and were rowed up to the head of the lake, which occupied an hour and a half. The scenery of this lake is very grand, wild, and solitary; it is hemmed in by high mountains, rising precipitously from the water, which is beautifully green, distinguishing with pretty effect the deep from the shallow parts by the darkness or lightness of the tint. We parted with the boat at the head of the lake, ascended a very steep path, and walked over rough rocks, through very wild and magnificent scenery; we climbed up a steep ridge of the mountain, and reached the chalets at Fundensee at a quarter before one o'clock, where we were regaled with bread, butter, and milk, and also cold fowl, which last we brought with us from Berchtesgaden. All tourists had better do the like. At a quarter past two we pursued our journey, ascending still over ground yet more rocky and pathless. We heard the marmots whistling among the rocks, and saw a ptarmigan, but no chamois. About three o'clock we were overtaken by a thunder-storm, which compelled us to push forward to reach a chalet for shelter, which we soon afterwards succeeded in doing, having walked about seventeen miles. It is situated on the Steinernesmeer, or Stony Ocean, and is inhabited by two men for three months in summer, for sake of the very scanty pasture for their sheep among the rocks. The thunder-storm continuing, with almost incessant flashes of lightning and constant rolling of thunder, we were compelled to spend the night here with not very comfortable accommodations, but with a hearty welcome from the two simple shepherds who inhabited the chalet, and who kissed our hands with a blessing on presenting them with a small sum of money for our lodgings, and entertainment on goat's milk and bread.

We set out again at half-past six in the morning, and, after a very steep and rough ascent over a sea of barren limestone rocks, with scarcely any vegetation upon them, we reached the top of the mountain at a quarter before eight o'clock. It is well named the Stony Ocean, for it is like a sea of rocks tossed by a tempest. It is almost impossible to conceive any place wilder, or more barren or desolate. We then descended on the other side, which for a long way down is nearly perpendicular,

over a very rough and and dangerous path. At a quarter before nine we reached another chalet, and rested there half an hour, and had some bread, butter, and milk offered to us by some wild-looking, yet hospitable, cowherds. We then continued the descent, obtaining some fine views over the rich green vale of Saalfelden. At a quarter before twelve we arrived at the village of Saalfelden, and here we parted with our guide. At three o'clock, having hired an *einspänniger Wagen*, or one-horse vehicle, we rode about nine miles, and then proceeded on foot over a rough road, impassable for a carriage, and at seven o'clock arrived at Dienten, a small village in the Diententhal, having walked this day about twenty miles. The inn is poor, but with beds, each of them sufficient to hold four or five persons. The tourist may here take an *einspännig* for Lendt, an hour and a half's drive, and may either hire another at Lendt, or proceed on foot (as we did) up a steep ascent, and enter the narrow defile of the Ache, a very fine pass, through which an excellent road has lately been made at a great expense: in some parts it is, as it were, supported on a shelf. It is called the Pass of the Klamme, and is a cleft in the mountain. A fine torrent, the Ache, runs through it. The ruins of an ancient gateway across the road are seen at the head of the pass. The valley of Gastein is then entered—a fine open valley, with snow-clad mountains at its head. At the distance of fourteen miles from Lendt he will reach the village of Hof-Gastein, probably in time for the *table-d'hôte*, about twelve o'clock, where a large and respectable company is usually met with, and girls as waiters in very picturesque costumes. After he has been well refreshed here, he may walk quietly to Bad-Gastein, only five miles further. He will enjoy a fine view of the mountains with eternal snow upon their summits.

Bad or Wilbad-Gastein is very romantically situated at the head of the valley, 3,000 feet above the sea. It is a small but much-frequented watering-place, with a splendid waterfall in the middle of the village. There is a fine view down the valley to Hof-Gastein, which appears nearer than it actually is. The tourist, setting out early in the morning on foot, may next proceed (if he be able to inquire his way, and to carry his knapsack without a guide) up the valley of the Ache, by Bockstein, and pass through the defile of Wilde Graben. The Ache here makes two fine cascades. He will also see an extremely beautiful waterfall, called the Schleir Fall, from its resemblance to a veil. It is very like floss silk spread over the rock. It falls from a height of 300 feet into the Ache, and expands about 100 feet broad near the foot of it, where it contracts again. When we saw it, the rainbow upon it was beautiful. One of the falls of the Ache is seen in the same view with this, a little higher up the river. A monument is placed at the junction of these two streams, in commemoration of the marriage of the Archduke John. After passing these falls, the elevated Alpine valley of Nassfeld will soon be entered, where there are several chalets and glaciers on the mountains above them. Having walked to the head of this valley, he must commence the ascent of the pass of Mallnitz. It is a hard climb of two hours to the top. A little below the summit of the pass, he will find the *Tauernhaus*, where he must rest for an hour or so and refresh himself with the eatables that he must have provided at Bad-Gastein, and with a bottle of the light white Styrian wine he will procure at the *Tauernhaus*, and which will warm and cheer him, as he will find it at that elevation (8,000 feet) very cold. He will probably meet with here a cold raw thick mist; but if it should be clear, he will enjoy a fine view. A man lives alone here the greater part of the year. When he has rested sufficiently, he may commence the descent towards Mallnitz. He will descend with great alacrity after his heavy climb and his refreshment, crossing the Manhard Alp, and passing through a fine forest of pines, larch, &c. and a beautiful valley, and the village of Mallnitz; he will arrive early in the evening at the village of Ober Villach, situate in the Möhlthal, one of the finest valleys in Carinthia, and will have walked this day about thirty-two miles, and will feel himself quite fresh after it. An *einspänning* may be taken here in the morning, to ride up the valley of the Möhl, and in two hours it will reach Stall. Much Indian corn, with fringes of yellow pumpkins, and fine crops of millet, with pretty pink blossoms, will be seen in this valley.

(*To be continued.*)

GUIDE TO THE LAKES.

"I climb'd the dark brow of the mighty Helvellyn,
Lakes and mountains beneath me gleamed misty and wide;
All was still, save, by fits, when the eagle was yelling,
And starting around me the echoes replied.
On the right Striden edge round the Red Tarn was bending,
And to Cathedicam its left verge was descending,
One huge nameless rock in the front was ascending,
When I marked the sad spot where the wanderer* had died.

"Dark green was that spot, 'mid the brown mountain heather,
Where the pilgrim of nature lay stretched in decay,
Like the corpse of an outcast, abandoned to weather,
Till the mountain-winds wasted the tenantless clay.
Nor yet quite deserted, though lonely extended,
For, faithful in death, his mute favourite attended,
The much-loved remains of her master defended,
And chased the hill fox and the raven away."

The following brief guide to the Lakes will be found of great service to parties travelling through that interesting district, because so much valuable information, in such a small compass, cannot be obtained in the guide-books.

To parties of pleasure, wishing to spend a few days or a fortnight in the enjoyment of pure air, excellent water, and picturesque and mountain scenery, there is no part of England which presents so great a variety as the lake district. Fisher's and other well-executed Views of the Lakes induce a person to anticipate enchanting scenery; but the district must be visited before he can duly appreciate the delightful scenes which are constantly presenting themselves to the enraptured visitant, if he possess any taste for picturesque scenery. The pen and the pencil cannot do justice to the works of "Nature's God." Parties from Liverpool, Manchester, &c. may go by railway to Fleetwood, from whence a steamer plies at high water to Ulverstone, or go by railway to Lancaster, and thence by coach to Ambleside; if the former, the tourists may remain a day at Ulverstone, and perambulate that interesting neighbourhood, take a view of Morecambe bay from the hill above the church, stroll round the tastefully laid out grounds and hermitage at Conishead Priory, the seat of Col. Braddyl, and visit the ruins of Furness Abbey, before proceeding to Ambleside, either by Coniston Lake or Newby Bridge, and thence up the lake of Windermere by the steam-boat, stopping either at the Ferry Hotel, Bowness, Low Wood Inn, or on to Ambleside. If Ambleside be the head-quarters, visit Stock Gill Force, behind the Salutation Inn,—make excursions to Bowness, the Station at the Ferry, Curwen's Island, Esthwaite, Coniston, Rydal Lake and waterfalls, Grasmere Lake, Keswick, &c. If bent on an extension of the tour, take a conveyance, or walk from Ambleside, cross by the way of Kirkstone. On ascending the hill you obtain a delightful view of Windermere on the right,—pass Broaderwater to Patterdale, here listen to the echo from the report of a small cannon fired from above the inn; then view Ullswater lake and the waterfall of Airey Force, at Gowbarrow Park; from thence either go along the banks of the lake and on to Penrith, and thence to Keswick, or cross from Gowbarrow Park to Keswick, though it is rather a rough cross-road. At Keswick, climb Skiddaw, and visit the waterfall at Lodore. Do not fail taking a walk to Castle-hill, the view from which cannot be excelled in Switzerland. Then go on through Lorton to Chummock and Buttermere lakes; visit Scale Force from Buttermere,—a waterfall of sixty yards, which is well worth seeing, particularly if there has been a recent fall of rain. Return by the road leading to the church, a little distance from which there is a fine view of Buttermere and Crummock lakes; then ascend the hill, and pass through the Vale of Newlands to Keswick—thence to Ambleside through Whyburn, passing the mountain of lofty Helvellyn on the left, and Whyburn water, the lakes of Grasmere and Rydal on the right. The visitor should not fail, on leaving Keswick, to take a few views from the hill, which commands a most extensive and enchanting prospect of Derwentwater, Keswick, Bassenthwaite Lake, and the majestic mountain of Skiddaw on the right, and Withope wood and hills on the left. This view is equalled by few, if excelled by any, and is alone worth a tour to the Lakes.

The tourist may return from Ambleside through Hawkshead, where he will get a view of Esthwaite Lake, and along the Lake of Coniston, or by Windermere Lake, to Ulverstone, or through Kendal and Lancaster. The route pointed out has the advantage of not traversing the same road twice, and may be travelled by ladies in a gig or open vehicle.

The route may be varied according to the time and distance the parties wish to travel. Supposing a party to arrive at Ambleside in preference to Ulverstone, a conveyance may be taken for a view of Blelham Tarn, Hawkshead, Esthwaite and Coniston Lakes, and afterwards proceed by Rydal, Grasmere, and Whyburn Lakes, instead of by Kirkstone to Keswick. From the latter town the other lakes may be visited, and then proceed to the Lake of Ullswater, and on to Penrith, visiting Lowther Castle, and return to Kendal; or from Ullswater to Ambleside, and along the Lake of Coniston to Ulverstone, and here go to

* In the spring of 1805, a young gentleman (Mr. Charles Gough) perished by losing his way on the mountain of Helvellyn. He had inquired at Patterdale for a guide to Wythburn, but no person could be procured to direct him. It snowed, too, on that day. He was, therefore, advised to remain at Patterdale till the day following; but, unhappily, he did not comply with this advice. The remains of this unfortunate gentleman were not discovered till three months afterwards, when they were found guarded by a faithful female terrier, his constant attendant during his rambles through the wilds of Cumberland and Westmoreland. This affecting incident gave rise to the poem by Sir Walter Scott, which comprises five verses, two of which we have given above.

Furness Abbey, and afterwards return by steamer to Fleetwood, and visit Blackpool, which is perhaps the finest bathing-place in the kingdom. The close carriage is not an eligible mode of conveyance through this romantic and interesting country, because the beauties of the surrounding scenery cannot be seen to advantage from it.

Parties wishing to see one of the most romantic districts in the north may go from Keswick through the Vale of Newlands to Buttermere, and return by Honister Crag and Borrowdale (although it is a rugged road, and little known or travelled by tourists), taking care to inquire at this place the road to Keswick, which is on the left, and leads to Bowder Stone, from Borrowdale, to Keswick. *Dix's Map of the Lakes, Otley's Guide, Handbook to the Lakes*, and *Tattersall's Lakes of England*, illustrated with plates, will be very useful companions to tourists. By attending to these brief directions, much time and trouble will be saved.

We have pointed out the most interesting parts of the district from whence the beauties of the northern scenery can be viewed, leaving the tourists to regulate the places they visit by the time they have to spend; but a most delightful district may be seen in a week, or less, by rising early, and taking a fresh horse at Keswick, if two travel in a gig. There are comfortable accommodations and conveyances at the inns in the route. Ladies may ascend Skiddaw, from Keswick, where a guide (and ponies, if needful) may be obtained. Probably they would find the ascent of Helvellyn too fatiguing; a guide, however, may be obtained at the inn, near the chapel, in Whyburn. Perhaps the ascent may be found easier from Patterdale, if the lower route be taken, as it is rather dangerous to go over Striden Edge, which is narrow and slippery in some parts. Red Tarn is at the foot of this ridge. Parties should start early, and provide themselves with something to eat, and a little brandy-and-water, also with an umbrella, which will serve as a protection from the sun or the cold blast. The weather, of course, must be fine; and though the climb to the top of these mountains, or fells, is laborious, yet the adventurer will be sufficiently compensated by the prospects they command. The writer of these hints has perhaps seen more of the lake and mountain scenery, in one day, than any other individual, with the exception of his companion. The distance traversed comprised about forty miles, and was accomplished from Lampleugh Cross to a little past the slate quarries at Buttermere, on horseback, and from thence across Borrowdale mountains to Whyburn and Hawkshead, on foot; and as the feat is an extraordinary one, it may probably be worth while to enumerate the objects seen, namely, Lowes Water, Crummock and Buttermere Lakes, Watendlath Tarn, Derwent and Bassenthwaite Lakes, Whyburn Water (which is called Thirlmere), Grasmere and Rydal Lakes, Elterwater, Blelham Tarn, and Windermere and Esthwaite Lakes (which are all the lakes of importance, except Ullswater and Coniston), the mountains of Buttermere, Borrowdale, Langdale, Skiddaw, Helvellyn, Rydall Head, Coniston, and many mountains of minor height.—*From the Liverpool Mercury.*

ART.

ROMAN REMAINS IN LINCOLN.—During the excavations on the premises of Messrs. Norton, in High-street, several Roman remains have been disinterred; amongst the rest are several bases of pillars, now in the possession of Mr. Nicholson, architect; and two beautiful coins, in the possession of Mr. Krystaller—one of the Emperor Antonius Pius, who died A.D. 161, and the other of Domitian, who was slain A.D. 96. On Wednesday afternoon the workmen discovered some huge worked stones, at about four yards from the present surface; these have evidently been plinths to some pillars supporting a Roman building; on one is an inscription, which, as well as it could be traced, consists of the following letters:—VIC. HRVPO MERCVRES IVM. Most probably this is incomplete, as in all likelihood it was continued along the fellow plinth. All the earth above the level at which the stones were discovered is made ground.—*Stamford Mercury.*

MUSIC.

New Publications.

I never said that I had Loved. A Ballad. Words by G. J. H. JEWELL; music by G. S. CORLEY. Lawson.

THERE is music in this ballad. The air is simple, and breathes the sentiment of the words. Mr. CORLEY has good stuff in him, which, well cultivated, may raise him to eminence in his art.

I have struggled through Life's busy scenes. Written and composed by T. W. SAUNDERS.

A PRETTY little air that must please everybody, and is adapted for any capacity.

The Village Maid. A Ballad. Composed by S. D. SAUNDERS. Duncombe.

THIS song betrays the hand of a scientific musician. It is beautifully harmonized, and will please by its very correctness. But it has higher merits. The air is very much above the average of drawing-room music. It can be safely recommended to the portfolio.

THE DRAMA AND PUBLIC AMUSEMENTS.

ITALIAN OPERA.—*La Gazza Ladra*, repeated on Thursday for the benefit of FORNASARI, went off with undiminished effect, and the attendance was in a very high degree flattering to the accomplished *bénéficiere*, though not more so than his great talents merited. The part he filled in the opera, that of *Fernando Villabella*, was maintained most admirably. GRISI, of course, was the heroine of the piece, supported with unusual animation by MARIO, and with their wonted power by BRAMBELLA and LABLACHE. The opera was followed by a selection from *L'Elisir d'Amore*, mainly supported by the charming CASTELLAN; though we must, in fairness, add that CORELLI'S execution of the beautiful air "Una furtiva lagrime" was not the least attractive feature in the selection. LUCILE GRAHN danced in *La Bacchante*; and CERITO delighted the eyes of the groundlings, more especially in that well-nigh best of ballets, *Alma*. On Saturday *La Somnambula* was repeated. On Tuesday next the season terminates. Under this head we may most appropriately mention that Miss BIRCH, our fair countrywoman, who has been finishing herself under the direction of Signor JUNETTI, and who last year appeared with decided success at the Grand Theatre at Trieste, has been engaged for La Scala, at Milan, a tribute to her talents, in which we rejoice, both on her account and as a testimony in favour of English musical capability. It seems, by the way, a very curious thing that while we are paying foreigners abroad sums to sing in the Haymarket, English vocalists are *fêted* by the most accomplished of all European audiences, those of Italy. It is not at all impossible, that in a year or two hence John and Mrs. Bull will be in a state of breathless impatience to hear "La Signora Birani, *prima donna* at La Scala," who has been induced, by a vast sum, to overcome her reluctance to patronize our foggy island. Should this possibility become fact, however, the certainty will follow, that as soon as the said Signora Birani shall turn out to be English Miss Birch, she will be utterly snubbed by John and Mrs. Bull, and after a season be no more seen. PERSIANI, it seems, is at Florence. Another operatic fact, from the *Recoglitore*, affords us some little consolation, as shewing that England is not the only country where singers and dancers are paid preposterously. "Madame GUISSEPPE RONZI," says the journal in question, "after giving fifteen nights' performance at Bucharest, at 80*l.* a night, has left for Constantinople, on her way to Naples." We may live in hopes, then, of realizing this illustrious personage, in due course, at the small charge of 160*l.* a night, for it would be a material reflection upon us not to give twice as much as the trumpery Bucharestians gave. The sisters MILANOLLO, too, have been making some 30,000 florins in Holland and Belgium, *à ce qu'on dit*.

HAYMARKET.—We recommend our readers by all means to see *She Stoops to Conquer*, whenever it shall next be presented here. They will find GOLDSMITH'S capital play capitally played. Indeed, with FARREN as *Mr. Hardcastle*, Mrs. GLOVER as his doting wife, H. HOLL as *Young Marlow*, JULIA BENNET as *Miss Hardcastle*, and BUCKSTONE as *Tony Lumpkin*, the comedy could hardly be otherwise than agreeably given. Mr. BUCKSTONE greatly exceeded our expectations. Under the admirable discipline which has of late years procured for this theatre so sterling a character, this actor has been shewing more and more, in each part assigned to him in the high class comedies successively produced or revived here, the good stuff that had been previously so long buried in him beneath a heap of careless mannerisms, content with raising a passing laugh. We gladly hail in Mr. BUCKSTONE this new decided progress in the right road. JULIA BENNETT'S performance, as to which, also, we had been somewhat apprehensive, was highly satisfactory. It is well for this young lady that she is impressed with the fact, that in acting, as well as in morals, it sufficeth not to be pretty, but you must be good too. Mr. HOLL dressed, looked, and acted *Young Marlow* excellently. His transitions from bashfulness to brass were managed with true artistic skill. Of Mr. FARREN and Mrs. GLOVER it is superfluous to speak. Several of the minor characters were per-

fectly sustained; it was evident that the lecture which *Mr. Hardcastle* gives his awkward squad in the evening, had been given by Mr. FARREN in the morning before, and with infinitely better success. Mr. H. WIDDICOMB'S *Diggory*, in particular, was capital, and so was Mr. ENNISS'S *Giles;* the look and gestures of the latter, as he imitates his master's action in asking for wine, instead of supplying the demand, was the sublime of self-complacent imbecility. LEOPOLD DE MEYER, on the evening we were present, Tuesday, repeated his most extraordinary performances on the piano, and Mr. JOHN PARRY sang his new song of *Young England*, which was *encored*, knowing that by way of *encore* he would give us something else, which he did in the shape of *Matrimony*. The comedy of *Born to Good Luck* concluded the entertainments, in which Mr. HUDSON appeared for the first time as *Paudeen O'Rafferty*, dancing the "Fox-Hunter's Jig" with Miss P. HORTON, and singing LOVER'S song of *Widow Machree*, as though he were a born Irishman.

PRINCESS'S THEATRE.—The regular season at this theatre terminated on Wednesday; but so attractive have been the performances, and so great it seems the demand which still continued for the *Court Ball in* 1740, and other popular pieces, that a further series of representations was without interruption entered upon, commencing on the Thursday with *The Brigand*, in which WALLACK, of course, sustained the part, so emphatically his own, of *Alessandro Massaroni*. The other entertainments were, *The Swiss Cottage*, *A Court Ball in* 1740, *The Nervous Man*, and *Mrs. Caudle*.

VAUXHALL.—The Fancy Fair and Carnival al Fresco, in aid of the funds of the Licensed Victuallers' School, Kennington, was repeated at these gardens on Tuesday. In addition to the other entertainments, Mr. and Mrs. GREEN ascended in the Albion Balloon, amid the plaudits of some 5,000 or 6,000 spectators. They ascended from the Waterloo Ground, and the sky being clear, the balloon was visible for a considerable period. It descended safe and sound at Eden-park, Beckenham, the seat of Mr. Edward Lawford, by whom the adventurous æronauts were hospitably received. The machine during its progress had, according to Mr. GREEN'S statement, never attained a greater altitude than 2,800 feet. The thermometer, added the veteran skylark, never much below 61 degrees, and from the observations he made, he was of opinion that a favourable change in the weather is likely soon to take place. (This meteorological matter is not altogether in our department, but such good news is welcome from any quarter.) Meantime, the royal property had become fuller and fuller, so much so, that at last it was estimated that not fewer than 10,000 persons were present. The stalls were well attended, and the goods went off very satisfactorily. There were besides a poem written by Mr. SMALLEY, the Secretary to the Institution, and recited by the senior boy; a vocal and instrumental concert, a new ballet, tight rope feats, tumbling, real gipsies, Musard's band, ably conducted by Mr. WILLY, illuminations, fire-works, &c. &c. Mr. GREEN made another night ascent on Wednesday.

SURREY THEATRE.—Mr. and Mrs. C. MATHEWS have entered upon an engagement at this theatre. During the past week they have been playing in *The Swiss Cottage*, *Patter* v. *Clatter*, *Used Up*, *Brother Ben*, and *The Loan of a Lover*. We trust that the spirited enterprise of Mrs. DAVIDGE, in securing the services of these eminent artists, at doubtless a very high remuneration—for Mr. MATHEWS and his wife set no slight value upon their services—may meet with its due reward. As to whether it was necessary to enter upon this large additional expense, is matter of question, which the lessee is best judge of; but it certainly seemed to us, whenever we have visited the theatre, that matters were going on very well as they were. The local public of the better class, however, are decidedly gainers by the arrangement; and perhaps, as a necessary consequence, their suiting their convenience must be beneficial to the establishment, though the prices of admission have not been raised.

SADLER'S WELLS.—*Richelieu*, followed by a couple of amusing farces, has been attracting good houses here. On Monday, *Macbeth* will be produced, and on Thursday, MASSINGER'S *Fatal Dowry*, both of which performances we counsel our readers to see.

ASTLEY'S.—The last new novelty here has for its style and title *The Conquest of Scinde; or, the Heroine of the Indus, and the Siege of Hyderabad*, founded, of course, "on the heroic achievements of the British army in Northern India;" and with tremendous effect, with terrific *vraisemblance*, are those achievements represented at the Royal Amphitheatre. Not with more determined resolution, not with fiercer fury, fought the soldiers of SALE, under the influence of future *batta*, than fights "each bold Ajax" of Astley's, under the influence of present BATTY. We have never seen a real battle, and have not the slighest desire to make personal acquaintance with "the iron face of war;" but its likeness, as here exhibited to public view, is decidedly inspiring. The whole thing, in fact, is decidedly Homeric. The armies are on a scale of fearful expenditure, and their marchings and countermarchings, their stratagems and wiles, the splendid charge of the British horse and foot, were followed forthwith by the panic-struck flight of the Beloochee villians, and were truly military. If Field-Marshal the Duke of WELLINGTON could only be induced to witness them, as sure as a gun he would send Mr. BATTY his compliments the very next morning. The conduct of general commanding-in-chief DANNAVILLE, and of general commanding-in-particular, WIDDICOMB, is throughout beyond our feeble praise. Late Governor-General ELLENBOROUGH alone could find adequate language wherein to thank these gallant men; but we would not desire to lacerate his feelings by thus bringing before him this vivid representation of the scene of his triumphs, whence he was so unthinkingly hurried; and Lord BROUGHAM is unhappily out of town *pour le moment*. By all means, let our readers go and see *The Conquest of Scinde*. As a spectacle such

> As Pallas' self might view with fixed delight;
> Or, would the god of war incline his eyes,
> The god of war would own a just surprise.

THE POLYTECHNIC INSTITUTION.—Scarcely a week passes but we have to record some new invention making its appearance at the Royal Polytechnic Institution. This week we find exhibited an invention for impelling locomotive engines up inclines. It is the invention of a gentleman named COLEMAN, who has just brought it from America. It appears perfectly competent to do all that is required of it, and prevents the necessity for cuttings and tunnelling on railways. The gradient, up which this little engine draws very heavy weights, is on the scale of 800 feet in the mile, or nearly one foot in seven rise. It is provided with an Archimedian screw, between the axles of the carriage, which, on coming in contact with a series of friction rollers placed exactly in the centre of the line between the rails, is made to pull the carriage and train up the incline, without stoppage to attach apparatus of any other kind; a desideratum of the utmost importance, where the country to be traversed is undulating. The inventor believes it to be applicable to the atmospheric railway, to which it would probably make an adjunct of great power and utility.

ORIGINAL CONTRIBUTIONS.

SONNET XL.—PETRARCH.

WHERE birds lament, and where the verdant leaves
Whisper their plaints to the soft summer wind;
Where the white wave in hoarser murmur grieves,
Leaving on some green shore its sigh behind;

There as I sit with thoughts on love intent,
She whom Heaven gave us, and whom earth denies,
Still to my eye, my ear, my mind is sent,
Still, as though living, to my grief replies.

Alas! she asks, why thus consume thy days,
Why pour thy tears in such a tide of woe?
Weep not for me (compassionate she prays),
Weep not for me, whose years once short and slow,
Death made eternal, with eternal rays
Lighting these eyes, which seemed to close below!

C.

CRITIC OF TRADES, INVENTIONS, ETC.

[Every person feels the want of an *honest* informant to direct him where the best commodities of all kinds are to be purchased. New inventions for use or ornament are daily produced, which would be cordially welcomed if their merits were made known. An advertisement alone cannot be trusted. An impartial reporter is wanted in whom the public can confide. This department of THE CRITIC will endeavour to fulfil that duty. To aid the design, correspondents are requested to inform our readers of any new production for use or ornament they may try and prove, of the places where the best commodities of any kind are to be procured, and so forth. Of course no anonymous communication will be attended to.]

THE PRESERVATION OF LIFE FROM FIRES AND SHIPWRECKS.—In *George Cruikshank's Table-Book* for last month there is a valuable article, containing practical suggestions for escape from the horrors of conflagration. The first is that proposed a short time since by the *Examiner*:—

"The simplest and surest escape is a continuous balcony erected in front of the upper windows of every house. This is so obvious, that it is unnecessary to advance one word in favour of the plan. We shall confine ourselves simply to the objections that may be urged against it. 1st, The facility that balconies are said to give to robbery. To us nothing can be more futile than this objection. Stronger fastenings to the windows would as effectually secure the second or third floor windows as locks and bolts do the street-door. Even were this objection tenable,

we consider that less is to be apprehended from the burglar who filches the contents of a jewel-case or a drawer, than from that fierce assailant that devours a man's substance and suffocates him with reekings of the feast."

To remedy the objection, as originally stated, the following plan, illustrated by a sketch, is proposed:—

"The sketch represents a balcony extending in the front of the upper windows of a house, and having two moveable ends, secured by a latch, and attached to a spring which communicates with a bell. In the case of fire, one end being unfastened, falls to the edge of the adjoining balcony, and at the same time rings a bell. The other end being released, falls inwards, and thus opens a communication with the adjoining house. The bell would prevent any improper use being made of the balcony, and, if so constructed, serve as an alarum. 2nd. The formation of a continuous balcony would be impracticable where houses were of different altitudes. In such case we would propose the erection of 'Fire Galleries,' made in the form of a balcony, but having iron shutters between each window, in order that persons seeking refuge might be protected from danger, should any flames issue from the adjoining windows. Ten or twelve persons might remain uninjured for a length of time in one of these fire galleries, or until such time as the fire ladders could be brought to their rescue. A ladder of iron placed in the front of the house, and so constructed that a person might descend between it and the wall, would also afford a safe mode of escape. We repeat that we do not put forward these plans as pre-eminently advisable, but the legislature that compels the formation of party-walls and sewers ought to make the erection of some such simple and effective escape compulsory upon the landlord of every house in the metropolis."

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

CLAIRVOYANCE.

THE incident recorded in our last, although calculated for the moment to disturb our confidence in the results of the experiments that had been previously made, with such apparent success, to ascertain whether the faculty of clairvoyance was or was not a truth in nature—we say, this seeming *contretemps* has already proved to be a most fortunate occurrence, for it has served only the more certainly to establish the fact that has been so long the subject of doubt and controversy. Previously to the discovery of the opening of the card-case, when, after long trial, the faculty did not exhibit itself, it was very probable that all the safeguards necessary to make imposition a physical impossibility were not always used; some reliance was placed upon a confidence that, if he could not see, the patient would say so, and wait a more lucid season. Such, indeed, had been his invariable practice until the occasion in question, when we had unfortunately taken pains to impress upon him the importance of success (as the visitors were gentlemen of eminence, whom to convince would be a vast step gained), and in his anxiety not to appear to fail before them, he was tempted by the ease of an apparently unfastened card-case, and, the faculty failing, was induced to peep rather than send them away unsatisfied. This is the plain fact, and that his assertion is true, subsequent events have sufficiently shewn.

But the discovery has been of essential service in more ways than one. Conscious that he possesses the faculty, heartily regretting that his desire to gratify should have tempted him to a trick, the boy has been ever since most anxious that his conduct should be beyond possibility of question. He has desired that the experiments should be made with articles which *could* not be opened; he has performed the operation in positions where the box or packet was never out of sight of the company—standing at a desk or at a table; as soon as the contents have been seen and read, he has handed the article to the owner, that he might assure himself that no seal had been broken or mark altered. We, on the other hand, and the other gentlemen who have aided us, have conducted the experiments in the knowledge that attempts might be made to peep, if that were practicable, and they have been so contrived as to preclude even the bare possibility of imposture.

The result has been to establish beyond the shadow of a shade of doubt in the minds of those who have made these experiments the existence of the faculty called clairvoyance, as a fact in nature as certain as that the sun shines and the tides flow.

The *fact* established, the great object of inquirers will now be by a long and accurate series of experiments to endeavour to discover its physiology; and already we think we have seen some slight glimmerings of light amid the darkness that surrounds a subject so strange and curious.

Nor can we better contribute to this, the really important object of philosophical investigation, than by continuing to record minutely the experiments conducted with the case which accident has brought so immediately under our inspection.

Friday, August 8.

G. G. mesmerised—slightly convulsed—two persons present. A printed word had been inclosed in five folds of thick brown paper by a gentleman not present, by him sealed firmly to the mantel-piece by three seals, stamped with his seal ring. In about three minutes he said, "Come and press my eyes." His eyes were accordingly closed by one of the gentlemen present, and pressed inwards and upwards with great force. He said, "Press a little harder." More pressure was applied. "Now," he said, "I see the blue light—its coming—I see the letter U. I have it; let go my eyes. I'll write it down, that there shall be no mistake." He rushed to the desk, and wrote the word "FULL." "That's the word," he said, "and its in blue letters." The spectators immediately inspected the packet. It was still sealed to the mantel-piece, and the seals were unbroken. It was then cut off with a knife (neither of the persons present knowing the contents) and unrolled. Within the five folds was found the word "Full," printed in blue ink as he had said. In reply to queries, he said that the objects come and go in his mind like a flash of lightning; he only sees them for an instant. He also stated that it hurts him to read more than one thing at each sitting—it excites him too much. His face and head are always greatly heated and flushed by the effort.

Saturday, August 9.

G. G. mesmerised. A singular phenomenon occurred. About a quarter of an hour previously he had drunk somewhat less than half a pint of ale. He was perfectly collected and sober when he sat down. Immediately on being mesmerised he became perfectly tipsy, staggered, and fell flat upon the ground, and was unable to articulate. He was wakened forthwith, and then the intoxication vanished, and he was perfectly sober. He was mesmerised again about half an hour after, but his head was confused, and no lucidity could be elicited.

N. B.—There was a violent thunder-storm during the experiment.

Monday, August 11.

G. G. mesmerised. Much convulsed. Four gentlemen present. A pocket-book was produced, and he was asked to read any of the contents. In about four minutes he said he saw the words "Cabinet Makers," and "a bill like," with 9s. on it. On opening the pocket-book, which was a very thick one, there was found almost in its centre, in a sealed envelope, a bill sent to the owner from Messrs. ——, "Cabinet Makers," with a charge of 9s. for work done, the words "Cabinet Makers" being printed in black letters. It is to be observed, that the enclosure had not been opened by the owner of the pocket-book, who was not himself aware of the contents of the envelope.

Subsequently he tried to read the contents of a wooden box that had been sent by an eminent professor as a test. He said he saw the letters "IMPEL," but he could not see the rest of them. He tried another box, but complained of pain in the eyes and head, and was wakened. We had used great presssure upon the eye throughout the experiments.

Tuesday, August 12.

G. G. mesmerised again. Had been ill in the morning, and taken a dose of medicine. Was mesmerised at his own request in the afternoon. Said that he could see very clearly. A card-case, tied and sealed, containing a word inclosed in six folds of thick brown paper, sealed at each end and in the middle by a gentleman not present, but left by him as a test, was put into his hands. In less than a minute he said he saw it, and immediately wrote the word "TICKELS," and returned the case, still tied and sealed. The contents were not known to the persons present, and the sealed packet was preserved, to be examined and opened by the gentleman who had sealed it, that absolute assurance may be had that it had not been previously opened. On the following morning the packet was taken by him accord-

ingly, the seals examined and tried with the seal that impressed them; the paper was found so firmly fastened, that it was obliged to be much torn in order to unrol it. In the centre was found the word TICKETS.

Wednesday, August 13.

G. G. mesmerised before dinner. Very much convulsed. (N.B. Observed that he was always more or less clairvoyant according to the convulsion that attends the passing into the coma.) Said he could see any thing to-day, he was so clear. Tried his faculty by reading distinct objects, and moving his fingers backwards and forwards before his eyes. Went to the desk and scribbled something. Asked for sealing-wax. Laid his head on the desk, a high one, with many drawers. Said, "No difference, I see some. There it is in the third drawer, in a little box." Drawer opened; in a small box, under a pile of paper, was some wax, as he had said.

After dinner, the boy was again mesmerised, at his own request, to remove a head-ache. Was asked to read the title-page of a closed book that was presented to him. Three persons present. In about two minutes read one line of the title-page, and said there was a picture of a house on it. And so there was, a small vignette of some public building.

In reply to some correspondents, it should be stated that G. G. has not the slightest recollection, in his waking state, of any thing that occurs in his somnambulist state. In this latter state he is much more lively, intelligent, and active than in his natural state. It was in this that he confessed to having looked into the card-case; when wakened, he had not, nor has, the most distant knowledge of the occurrence. He always comes to ask if he has done any thing, and what, in his sleep. In the two conditions he is as entirely different in character as if he were two distinct beings.

BATH.—SINGULAR EFFECTS OF GOLD.—(*From a Correspondent.*)—A few days since, my brother and myself tried some experiments with gold on Master Thomas Smith, of Union-passage, in this city, whose case I have before mentioned in your columns, and as the results are of a highly interesting nature, I beg to forward them for your perusal. This lad, who is, I believe, about fourteen years of age, goes into the mesmeric trance by a single look of a few seconds' duration only. Having, for the gratification of some friends then present, gone through a series of the mesmeric phenomena, we applied gold (a sovereign) to him, with the following results. We found that, on its being placed in contact with him, it produced a violent pricking sensation in the part, his own exclamation being usually, "Don't do that, you're pricking me," or words to that purport. The effect was entirely local, and affected the part alone to which it was applied, as the right hand or the right foot, and this as readily through his clothing as when applied to his naked person. The same results followed when the gold was placed in contact with another article, the latter being in contact with himself; thus if placed under one of the feet of the chair upon which he was sitting, he instantly jumped up, as though suddenly pricked. To make certain of the genuineness of these experiments, we made him sit in succession upon a great number of chairs, which he did very quietly upon all except the one under which the sovereign was placed; further to test this experiment we substituted a shilling, whereupon no effect whatever followed, and I may here remark that every experiment with the gold was accompanied with one with a shilling, each coin being kept from his sight, and no directions or observation being given or made in his hearing, and the results were uniform, the gold immediately and acutely affecting him, and the silver being inoperative. These experiments being in the parlour, I went into the kitchen beneath, and having made an accurate calculation of the exact spot upon which he was standing, I applied noiselessly the sovereign to the ceiling of the kitchen, when, as I was informed by those above, he immediately ran away from the spot, declaring and appearing as though "his feet were being pricked." After this I took an opportunity, whilst he was leaning against the parlour wall, to go outside of the house, and apply the sovereign to the other side, when he immediately twisted himself about, and ran away in the same manner as before, except that he appeared to feel the pain in the back (the part near to that of the application). Eight of us then took hold of the hands of each other in a line, the one at the end holding Master Smith by the hand; the person at the other end was then touched with a sovereign, and Master Smith almost immediately withdrew his hand as though in pain, declaring that we were pricking him. Each of these experiments was tested by a similar application of a shilling, with no perceptible results. It is worthy of remark, that a gentleman present endeavoured to produce similar effects by the application of his gold spectacles, but they were perfectly powerless; but on a lady's wedding-ring being made use of, the same results followed as when the sovereign was applied, from which it may fairly be assumed that the spectacles in question were any thing but pure; indeed they were not hall-marked. The effect thus produced by pure gold is highly interesting, and opens a wide field for investigation. The boy, on being awakened, declared that he knew nothing of what had been done, of which we were all satisfied; indeed he has never been mesmerised by any one but my brother and myself, and by us he has been sent into the mesmeric sleep at least fifty times, independently of which the precautions taken were such as to render it impossible that he could have been aware of our experiments.

Bath, Aug. 9, 1845. T. W. SAUNDERS.

BOOKSELLERS' CIRCULAR.

THIS is the dullest season of the whole year. All English people are intent on pleasure, and business in every department stands still for five weeks. Even editors take their holiday and brace their nerves for another year of toil and thought. We must snatch a brief respite in common with others, and during the interval pray permission to intermit some of the usual editorial comments. Ample provision has been made for keeping up a supply of reviews and notices, so that neither amusement nor instruction shall flag in the absence of the usual superintendent, and the conduct is committed to good hands.

May we ask our bookseller friends to make a point of introducing to their connections the very popular and useful department lately added to THE CRITIC, under the title of *The Tourist*, and also the great attention paid to *Foreign Literature*. In both of these particulars THE CRITIC is *unique*. No other British Journal contains similar information.

OPINION ON THE CRITIC.

TO THE EDITOR OF THE CRITIC.

SIR,—I feel great pleasure in informing you that your excellent journal gains in this neighbourhood more and more on public favour continually.

Of the necessity there existed for a journal which should give fair and honest criticisms, and separate the good from the bad fearlessly and boldly, I, in common with most booksellers and librarians, had long been convinced; we have now such a journal, and it is our duty, and, indeed, our interest, to support it.

With best wishes, I am, Sir, &c.

Oakenshaw, near Accrington. JNO. BROADLEY.

August 9, 1845,

CAUTION TO ADVERTISERS.—A novel species of fraud has lately been discovered in connection with advertisements, which only requires mention to put the public on their guard against the system of victimization, which, as far as it has at present gone, appears to have produced an ample revenue for the gang of vagabonds concerned in the affair. The most successful part of this plan has been in obtaining payment for advertisements supposed to be inserted in small weekly and monthly periodicals, but which periodicals have really no existence, the names of substantial booksellers being given as the publishers, to prevent suspicion or inquiry. Of course, persons advertising under such circumstances have only themselves to blame for not exercising proper caution in seeing that their advertisements do appear before they pay the money, and a little experience may, perhaps, teach them wisdom. But the system extends further than this. The same parties have expressed their willingness to relieve their friends, who have honoured them with orders, of the trouble and inconvenience of taking their regular advertisements to the daily journals, stating that they are allowed a commission of 2½ per cent. (a statement in reference to the *Times* wholly without foundation), which, if the advertiser were to go himself, he would not get. It does not seem that they have done much in this way at present, though the default has not arisen from their want of inclination, but from want of patronage. In cases where they have obtained such orders, the advertisements have never appeared, though they have charged and received the money for them. The receipts we have seen for sums paid on this system of advertising bear the signatures of two or three individuals evidently in disguised hands, and the bills are generally made out for amounts of between 2*l.* and 3*l.*

FRENCH SCIENTIFIC EXPEDITION.—The gun-brig Boulonnaise has arrived at Brest, after an absence of above three years, during which period she has made a hydrographic survey of immense extent within the tropics, including more than 250 leagues of the river Amazon and its principal tributaries.

THE CRITIC,
And Journal of Literature.

SATURDAY, AUGUST 23, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

JOURNAL OF ENGLISH LITERATURE.

HISTORY.

The History of the Conspiracy of Catiline, and of the Jugurthine War. By CAIUS CRISPUS SALLUSTIUS. Translated by EDWARD PEACOCK, M.A. London, 1845. Longman and Co.

MR. PEACOCK appears to have entertained some reasonable doubts whether a new translation of SALLUST was demanded by any lack of faithfulness or force in those we already possess. In such doubts we fully sympathise with him. We fear that his writing was a superfluous labour, and that his printing will prove a bad speculation; not that Mr. PEACOCK has in any manner failed in the performance of the task he had undertaken, but simply because he has been anticipated, and the market is already supplied. Of his translation it may be observed, that it adheres strictly to the original, and that he has succeeded in preserving a great deal of the style as well as the thoughts of SALLUST. To those who may not already possess a translation of the great historian of Rome, we would commend this one as equal, at least, if not superior, to either of its predecessors.

BIOGRAPHY.

Memoirs and Correspondence of George, Lord Lyttelton.
[CONCLUDING NOTICE.]

After THOMSON'S premature death, which was deeply felt by his friend and patron, LYTTELTON undertook the editing of his works, and he ventured upon a multitude of alterations, which he considered emendations, a few of which, as noted by Mr. PHILLIMORE, we will extract.

Some time after his death, Lyttelton prepared for the press a new edition of his *Seasons*, the alterations, additions, and omissions, which this edition would have contained, have never been printed; they are written in Lyttelton's handwriting on the blank leaves of an interleaved copy of the *Seasons*, now in the library at Hagley, to which it was presented by the late Lord Spencer, to whom it was a gift from "Mathew Montague, who found it among the books of Mrs. Montague;" the date which it originally bears, MDCC.LII., is altered, by a few strokes, into MDCC.LVIII. I have not been able to find any satisfactory reason why it was never published. In one of the blank sheets before the poem, Lyttelton has written as follows:—

"*Preface to the Seasons.*—In this edition, *conformably to the* justly *intention and will of the author*, which have A been thought ~~by good judges~~ too harsh or obscure, or not strictly grammatical, have been corrected, some lines transposed, and a few others left out. The hymn which was printed at the end of the 'Seasons,' in some of the last editions, is likewise omitted, because it appears to good judges that all the matter and thoughts in that hymn much are A better expressed in the 'Seasons' themselves."

The alterations of single words are numerous, and generally are manifest improvements: *e. g.* lines 621, 2, 3, in "Winter," Thomson writes,—

> While well attested and as well believed,
> *Heard solemn, goes the goblin story round,*
> *Till* superstitious horror creeps o'er all.

Lyttelton corrects—

> While well attested and as well believed,
> *The goblin tale goes round: till solemn fear*
> *And* superstitious horror, &c. &c.

887, 8, the lines are—

> . . . . . with these at eve,
> They *cheerful loaded* to their tents repair.

"I wish this line altered," Lyttelton writes; "'cheerful loaded' is not English:

> They cheerful to their shady tents repair.

would be better." In a few instances whole passages are altered.

Whether others interfered, or idleness deterred, happily for his friend's fame the editorial duties were never completed, and the works of the poet of the *Seasons* are transmitted to us undeformed by the projected *improvements!*

More congratulations on marriage, but the name of the writer gives special interest to the letter. It is that of FIELDING, and the occasion was LYTTELTON'S taking to himself a second wife about two years after the composition of the monody on the death of his first wife, which Dr. JOHNSON so satirically alludes to.

Bow-street, Aug. 29th, 1749.

Sir,—Permit me to bring up the rear of your friends in paying my compliments of congratulation on your late happy nuptials. There may, perhaps, be seasons when the rear may be as honourable a post in friendship as in war; and if so, such certainly must be every time of joy and felicity. Your present situation must be full of bliss; and so will be, I am confident, your future life, from the same fountain. Nothing can equal the excellent character your lady bears among those of her own sex, and I never yet knew them speak well of a woman who did not deserve their good words. How admirable is your fortune in the matrimonial lottery! I will venture to say, there is no man alive who exults more in this, or in any other happiness that can attend you, than myself; and you ought to believe me from the same reason that fully persuades me of the satisfaction you receive from any happiness of mine; this reason is that you must be sensible how much of it I owe to your goodness; and there is a great pleasure in gratitude, tho' it is second, I believe, to that of benevolence, for of all the delights upon earth, none can equal the raptures which a good mind feels in conferring happiness on those whom we think worthy of it. This is the sweetest ingredient in power, and I solemnly protest I never wished for power more, than a few days ago, for the sake of a man whom I love, and that more perhaps from the esteem I know he bears you, than from any other reason. This man is in love with a young creature of the most apparent worth, who returns his affections. Nothing is wanting to make two very miserable people extremely blessed, but a moderate portion of the greatest of human evils, so philosophers call it, and so it is called by divines, whose word is the rather to be taken, as they are, many of them, more conversant with this evil than ever the philosophers were. The name of this man is Moore, to whom you kindly destined that laurel, which, tho' it hath long been withered, may not probably soon drop from the brow of its present possessor; but there is another place of much the same value now vacant—it is that of Deputy Licensor to the stage. Be not offended at this hint; for tho' I will own it impudent enough in one who hath so many obligations of his own to you, to recommend another man to your favour, yet impudence itself may possibly be a virtue when exerted on the behalf of a friend; at least, I am the less ashamed of it, as I have known men remarkable for the opposite modesty, possess it without the mixture of any other good quality. In this fault then you must indulge me—for should I ever see you as high in power as I wish, and as it is perhaps more my interest than your own that you should be, I shall be guilty of the like as often as I find a man in whom I can, after much intimacy, discover no want but that of the evil above mentioned. I beg you will do me the honour of making my compliments to your unknown Lady, and believe me to be with the highest esteem, respect, and gratitude, Sir, your most obedient humble Servant,

HENRY FIELDING.

Perhaps the greatest curiosity in the work is the letter addressed to LYTTELTON by VOLTAIRE, which is printed *verbatim et literatim.*

à Paris, 17 May, 1750, n. st.

You was beneficent to Mr. thomson when he liv'd, and you is so to me, in favouring me with his works. j was acquainted with the Author when j stayed in England. j discovered in him a great genius and a great simplicity. j lik'd in him the poet and the true philosopher, j mean the lover of mankind. I think that without a good stock of such a philosofy, a poet is just above a fidler, who amuses our ears and cannot go to our soul. I am not surpriz'd y^r nation has done more justice to Mr. thomson's Seasons than to his dramatic performances, there is one kind of poetry of which the judicious readers and the men of taste are the proper judges, there is an other that depends upon the vulgar; great or small, tragedy and comedy are of these last species, they must be suited to the turn of mind and to the ability of the multitude and proportion'd to their taste, yr nation two hundred years since is us'd to a wild scene, to a croud of tumultuous

events, to an emphatical poetry mix'd with lose and comical expressions, to murtherss, to a lively representation of bloody deeds, to a kind of horrour which seems often barbarous and childish, all faults which never sully'd the greak, the roman, or the french Stage; and give me leave to say that the taste of yr politest countrymen in point of tragedy differs not much in point of tragedy from the taste of a mob at Bear-garden, 'tis true we have too much of words, if you have too much of action, and perhaps the perfection of the Art should consist in a due mixture of the french taste and english energy. Mr. Adisson who would have reach'd to that pitch of perfection had he succeeded in the amourous part of his tragedy as well as in the part of cato, warn'd often yr nation against the corrupted state of the stage —and since he could not reform the genius of the country, j am affraid the contagious distemper is past curing. Mr. thompson's tragedies seems to me wisely intricated, and elegantly writ, they want perhaps some fire, and it may be that his heroes are neither moving nor busy enough, but taking him all in all, methinks he has the highest claim to the gteatest esteem. Yr friendship, Sir, is a good vouchsafer for his merit. I know what reputation you have acquired, if I am not mistaken, you have writ for yr own sport many a thing that would rouse a great fame to one who had in view that vain reward call'd Glory. I have by me some verses that pass under yr name, and which you are suppos'd to have writ in a journey to paris, they reflect very justly on our nation, and they run thus—

a nation here j pity and admire,
whom noblest sentiments of Glory fire,
yet taught by custom's force and bigot fear
to serve with pride, and boast the yoke they wear;
in courts a mean, in camps a generous band,
from priests and tax-jobbers content receive,
those laws their dreaded arms to Europe give,
whose people vain in war, in bondage blaze,
tho' plundered guai, industrious tho' oppressed, &c.

These verses deserve a good translator, and they should be learn'd by every frenchman. Give me leave to send you a little performance of mine, 'tis but a pebble I do offer you for yr pretious stones, I am, with the highest respect, Sir, yr most humble, obed. servant,

VOLTAIRE.

Another specimen of the correspondence with POPE, and we have done. The poet dates from Bath on the 3rd of November, 1741.

Dear Sir,—I have lately received a letter in which are these words—"Suffer not Mr. Lyttelton to forget me." It made me reflect I am as unwilling to be forgotten by you, though I do not deserve so well to be remembered on any account but that of an early, a well-grounded, and (let me add) a well-judged, esteem of you. I do not ask what you are doing; I am sure it is all the good you can do. I do not ask any thing but to know that you are well. I see no use to be drawn from the knowledge of any public events: I see most honest men melancholy, and that's enough to make me inquire no more: when I can do any thing either to assist, or, not assisting, to comfort them, I will. But I fear I live in vain, that is, must live only to myself. Yet I feel every day what the Puritans called outgoings of my soul, in the concern I take for some of you, which, upon my word, is a warmer sensation than any I feel in my own and for my own being. Why are you a courtier? Why is Murray a lawyer? It may be well for other people, but what is that to your own enjoyment, to mine? I would have you both pass as happy and as satisfied a life as I have done. You will both laugh at this, but I would have you know had I been tempted by nature and providence, with the same talents that he and you have, I would have done as you do. But if either of you ever become tired or stupid, God send you my quiet and my resignation. I think I've nothing more to say, but to add with how full a heart I am, dear Sir, ever yours,

A. POPE.

Pray let Mr. West know I am alive, and while I am alive, warmly his.

To the Hon. George Lyttelton, esq. Pall-mall, London.

Lyttelton answered—

November 7, 1741.

Dear Sir,—I received your obliging letter with that pleasure and pride I always feel in every mark of your friendship. As much a courtier as I am, I have no higher ambition than to deserve your esteem, and that of a few honest men more, among whom I desire you to tell Mr. Allen I reckon him, though he is so little in my way that I cannot cultivate his friendship as I wish to do. I envy you the quiet and happiness you enjoy at his house, where you are escaped from the vice, the folly, and the noise of the world, almost as much as if you were dead, and in the region of pure and happy spirits. What a different scene am I forced to sit in! But I won't recal even your thoughts to it, I will only tell you that I am well, and that I have lately heard from Mr. Warburton, who desires me to acquaint you that he has dropt his dispute with Doctor Middleton as you advised him to do; though he has convinced me he could well have maintained it, if he had not loved peace and friendship better than victory, which is a temper of mind so becoming in a divine, and so rare in an author, that I think you should express your approbation of it the first time you write to him. If the person who bid you not suffer me to forget him was Lord Bolingbroke, I beg you would say in your answer that I gave a letter two months ago to Mr. Brinsden to be conveyed to him, which by those words to you I should apprehend he has not reeceived: if you add, that I always remember his lordship with the highest veneration and kindest regards, you will do me but justice. I wish he was in England upon many accounts, but for nothing more than to exhort and animate you not to bury your excellent talents in a philosophical indolence, but to employ them, as you have often done, in the service of virtue. The corruption and hardness of the present age is no excuse; for your writings will last to ages to come, and do good a thousand years hence, if they can't now; but I believe they would be of great present benefit: some sparks of public virtue are yet alive, which such a spirit as yours might blow into a flame, among the young men especially; and even granting an impossibility of reforming the public, your writings may be of use to private society. The moral song may steal into our hearts, and teach us to be as good sons, as good friends, as beneficent, as charitable, as Mr. Pope, and sure that would be serving your country, though you can't raise her up such ministers or such senators as you desire. In short, my dear friend, though I am far from supposing that if you don't write you live in vain, though the influence of your virtues is felt among all your friends and acquaintance, and the whole circle of society within which you live, yet as your writings will have a still more extensive and permanent influence, as they will be an honour to your country, at a time when it has hardly any thing else to be proud of, and may do good to mankind in better ages and countries, if not in this, I would have you write till a decay of your parts, or at least weakness of health, shall oblige and authorize you to lay down your pen. But though in my zeal for your glory I tell you this, I shall love and esteem you just as well, whether you mind it or not: I have long since forgot the author in the companion and friend, and though I shall read whatever you write with a great deal of pleasure, and feel a sort of pride for you in hearing it praised, I had rather you should tell me, as you do in your last letter, that you are happy and satisfied, than be told you had written the finest thing in the world. I was last night at West's, he and his wife are much yours. I wish I could write to you longer: I feel those same outgoings of the soul, which you speak of, very strong in me now, and should like to prate to you through a page or two more, but here are people breaking in upon me, so I can only assure you I am most sincerely, dear sir, your very affectionate, humble servant,

G. LYTTELTON.

POPE's answer was:—

Bath, Dec. 12th, 1739.

Dear Sir,—I write to you so soon, because I know it will please you so hear I am not ill, nor ill at ease; either my lord Cornbury mistook my letter, or you him. I think that ever since I was a poet, nay, ever since I have ceased to be one, I have not experienced so much quiet as at this place. Though I left the world alone, from my very entrance into it I found as much envy and opposition as if my ambition had designed me to overturn it; and since I chanced to succeed in my own low walk, as much solicitation and vile flattery, as if I had places and preferments to bestow; I never deserved or desired either. If I deserve any thing, it is from a constancy to my first philosophical principles, a general benevolence, and fixed friendships, wherever I have had the luck to know any honest or meritorious men. I am yours by every tie; few have, or ought to have, so great a share of me, if I say two or three more, I should correct myself, and say rather one or two. Were it not for a hankering ('tis a good, expressive English word) after these, I could live with honest Mr. Allen all my life. Though I enjoy deep quiet, I can't say I have much pleasure, or even any object that obliges me to smile, except Dr. Cheyney, who is yet so very a child in true simplicity of heart, that I love him as he loves Don Quixote, for the most moral and reasoning madman in the world. For I maintain, and I know it, that one may smile at those one loves, nay, esteems, and with no more malice or contempt than one bears to an amiable schoolboy. He is, in Scripture language, an "Israelite in whom there is no guile," or in Shakspeare's, "as foolish a good kind of Christian creature as one shall meet with."

Mr. PHILLIMORE's brief summary of the character of LYTTELTON must not be omitted. On the whole, it is sufficiently just.

His natural abilities were good; and though not of the highest order, were continually strengthened by careful and unremitting cultivation. His ambition of improvement, springing from a

deep sense of the obligations which wealth and station impose upon their possessor, was constant to the hour of his death—to press forward in the pursuit of knowledge, not diverted from the chase by early success and extravagant admiration of moderate efforts; "to scorn delights, and live laborious days," had been the occupation of his life. Its fruits were visible in the variety of his accomplishments, and the fullness of his information upon the subjects to which he had devoted himself. During the course of his life he had maintained an oral or epistolatory intercourse with the most celebrated persons of his day, both in England and Europe. Making ample allowance for the language of cotemporaneous flattery, it is impossible to ascribe to that alone the very general estimation in which his opinions were held by all who had any pretensions to almost any kind of literature. Nor indeed is the verdict of posterity greatly at variance with the judgment of his own time. Of how few can it be said, that they have left behind them works in History, Poetry, and Divinity, which, after the lapse of nearly a century, maintain an honourable place in the literature of their country? And of how very few, that they combined with success in these pursuits, a laborious and distinguished share in the duties of public life?

Nothing more now remains for us than to remark that the Editor has performed his task with industry and judgment. If somewhat too partial to his hero, too blind to faults, too anxious to make excuses for those he is obliged to notice, the error is one that leans to virtue's side, and will be excused by the tolerant reader. It is a work well adapted for the book clubs and for the largest of the libraries.

SCIENCE.

A Peep into Architecture, with Illustrations. By ELIZA CHALK. London: George Bell, Fleet-street.

ALTHOUGH no branch of the Arts has come under such frequent notice as Architecture, it being daily before the public in a ruder or more refined form, less, perhaps, is popularly known of it than of either of the sister Arts. Why this is we may not here stop to explain. The labours of the Cambridge Camden Society, in the restoration and embellishment of our churches, have, however, of late years, more than any other circumstance, directed attention, and stimulated the public curiosity, towards this the most immediately useful of the Fine Arts. It is, nevertheless, surprising how much ignorance yet prevails on this subject, even among the educated classes.

The publication of a few books adapted by cheapness and an untechnical style for circulation among general readers, like the one before us, will effect more than any other means to dispel this ignorance; will give the eye a new interest in what it beholds, laying open to it, in the ruins and ancient structures spared by time, a curious book, written century after century, as it were, in a different language, and must eventually elevate the art to an excellence perhaps superior to any that has yet existed. This book does credit to its author. Were we disposed to fault-finding, we should object to her over-modesty in calling it "a peep into architecture," when it gives as clear and comprehensive a view of it as is necessary for any one who does not sit down, square, compass, and scale in hand, to the deliberate study of the art for practical purposes. This name, then, really conveys an erroneous idea of the book—one too, that certainly will not add to its circulation, if it does not the reverse. In a condensed, but perspicuous and agreeable manner, we are presented with the history of architecture, its various characteristic forms at different periods, from the Egyptian down to the Perpendicular Gothic and Tudor styles; with the names and forms of the component ornaments of each; and to render the whole the more intelligible, very superior and highly-finished illustrations in wood are scattered throughout the book. The letter-press and general getting up of the work are also superior.

VOYAGES AND TRAVELS.

Journal of a Voyage round the World. By CHARLES DARWIN, M.A. F.R.S. Part II. Demy 8vo. London. John Murray.

THE second part of this instructive and entertaining book has just been published; and surpasses the first in the interest it contains for the reader. It carries forward the narrative of the movements of the expedition from its entrance on Patagonia, thence to the Falkland Islands, Tierra del Fuego, and Chile, embracing excursions to the foot of the Andes, and across the Cordilleras to Valparaiso.

It may well be supposed that these countries would yield a rich harvest to an observer so close and painstaking as Mr. DARWIN, and so they have. As if to favour his purpose of investigation, there occurred, whilst he was in Valdivia, one of the most terrible earthquakes that had been known in South America (which is so greatly plagued with them), for many years. He has thus described the effects of this severe visitation.

While the ship was beating up to the anchorage, I landed on the island of Quiriquina. The mayor-domo of the estate quickly rode down to tell me the terrible news of the great earthquake of the 20th:—"That not a house in Concepcion or Talcahuano (the port) was standing; that seventy villages were destroyed; and that a great wave had almost washed away the ruins of Talcahuano." Of this latter statement I soon saw abundant proofs—the whole coast being strewed over with timber and furniture as if a thousand ships had been wrecked. Besides chairs, tables, bookshelves, &c. in great numbers, there were several roofs of cottages, which had been transported almost whole. The storehouses at Talcahuano had been burst open, and great bags of cotton, yerba, and other valuable merchandise were scattered on the shore. During my walk round the island, I observed that numerous fragments of rock, which, from the marine productions adhering to them, must recently have been lying in deep water, had been cast up on the high beach; one of these was six feet long, three broad, and two thick.

The island itself as plainly showed the overwhelming power of the earthquake, as the beach did that of the consequent great wave. The ground in many parts was fissured in north and south lines, perhaps caused by the yielding of the parallel and steep sides of this narrow island. Some of the fissures near the cliffs were a yard wide. Many enormous masses had already fallen on the beach; and the inhabitants thought that when the rains commenced far greater slips would happen. The effect of the vibration on the hard primary slate, which composes the foundation of the island, was still more curious: the superficial parts of some narrow ridges were as completely shivered as if they had been blasted by gunpowder. This effect, which was rendered conspicuous by the fresh fractures and displaced soil, must be confined to near the surface, for otherwise there would not exist a block of solid rock throughout Chile; nor is this improbable, as it is known that the surface of a vibrating body is affected differently from the central part. It is, perhaps, owing to this same reason, that earthquakes do not cause quite such terrific havoc within deep mines as would be expected. I believe this convulsion has been more effectual in lessening the size of the island of Quiriquina, than the ordinary wear-and-tear of the sea and weather during the course of a whole century.

The next day I landed at Talcahuano, and afterwards rode to Concepcion. Both towns presented the most awful yet interesting spectacle I ever beheld. To a person who had formerly known them, it possibly might have been still more impressive; for the ruins were so mingled together, and the whole scene possessed so little the air of a habitable place, that it was scarcely possible to imagine its former condition. The earthquake commenced at half-past eleven o'clock in the forenoon. If it had happened in the middle of the night, the greater number of the inhabitants (which in this one province amount to many thousands) must have perished, instead of less than a hundred: as it was, the invariable practice of running out of doors at the first trembling of the ground, alone saved them. In Concepcion each house, or row of houses, stood by itself, a heap or line of ruins; but in Talcahuano, owing to the great wave, little more than one layer of bricks, tiles, and timber, with here and there part of a wall, left standing, could be distinguished. From this circumstance Concepcion, although not so completely desolated, was a more terrible, and, if I may so call it, picturesque sight. The first shock was very sudden. The mayor-domo at Quiriquina told me, that the first notice he received of it, was finding both the horse he rode and himself rolling together on the ground. Rising up, he was again thrown down. He also told me that some cows which were standing on the steep side of the island were rolled into the sea. The great wave caused the destruction of many cattle; on one low island, near the head of the bay, seventy animals were washed off and drowned. It is generally thought that this has been the worst earthquake ever recorded in Chile; but as the very severe ones occur only after long intervals, this cannot easily be known; nor indeed would a much worse shock have made any great difference, for the ruin was now complete. Innumerable small tremblings followed the great earthquake, and within the first twelve days no less than three hundred were counted.

The most remarkable effect of this great earthquake was the permanent upraising of the land no less than three feet. The island of Juan Fernandez—memorable as the solitary residence for years of Alexander Selkirk, a shipwrecked sailor—was so violently affected, though distant from Concepcion 360 miles to the north-east, that the trees smote against each other, and there burst forth a volcano under water close to the shore. In the Cordilleras, also, two volcanoes opened at the same moment into violent action, which probably relieved the earth of the upheaving forces that disturbed her. According to our author, the space from beneath which volcanic matter was erupted is in one line 720 miles, and in another, at right angles to the first, 400 miles in extent; from this, Mr. DARWIN infers that there is here stretched out a subterraneous lake of lava of nearly double the area of the Black Sea.

The author's picture of that inhospitable and imperfectly known region, Tierra del Fuego, its products and wild inhabitants, is interesting in a high degree. It is a mountainous land, partly submerged in the sea, so that deep inlets and bays occupy the place where valleys should exist. Trees reach up the mountain-sides, to an elevation of 1,200 feet, and the line of perpetual snow descends as low as 3,000 feet. There is no level ground, and the surface is everywhere covered with a thick bed of swampy peat.

There is (says the author) a degree of mysterious grandeur in mountain behind mountain, with the deep intervening valleys, all covered by one thick, dusky mass of forest. The atmosphere, likewise, in this climate, where gale succeeds gale, with rain, hail and sleet, seems blacker than anywhere else. In the Strait of Magellan, looking due southward from Port Famine, the distant channels between the mountains appeared from their gloominess to lead beyond the confines of this world.

The Fuegians, according to our author, are very little superior in the scale of intelligence to the higher class of brutes. Inhabiting an inclement climate, their ingenuity, unlike that of the stunted natives of the arctic circle, does not even extend to the simple arts of preserving warmth, by sheltering themselves effectually from the weather. They are cannibals, appear to have no idea of a future life, though they shew traces of superstition in a dread of superior invisible powers, each tribe having a conjuring doctor, though his duties, Mr. DARWIN could never clearly ascertain. The remarks, however, which he made on these barbarians will come with greater authority from his own pen, therefore we extract the subjoined description of

THE FUEGIANS.

While going one day on shore near Wollaston Island, we pulled alongside a canoe with six Fuegians. These were the most abject and miserable creatures I anywhere beheld. On the east coast the natives, as we have seen, have guanaco cloaks, and on the west they possess seal-skins. Amongst these central tribes the men generally have an otter-skin, or some small scrap about as large as a pocket-handkerchief, which is barely sufficient to cover their backs as low down as their loins. It is laced across the breast by strings, and according as the wind blows, it is shifted from side to side. But these Fuegians in the canoe were quite naked, and even one full-grown woman was absolutely so. It was raining heavily, and the fresh water, together with the spray, trickled down her body. In another harbour not far distant, a woman, who was suckling a recently-born child, came one day alongside the vessel, and remained there out of mere curiosity, whilst the sleet fell and thawed on her naked bosom, and on the skin of her naked baby! These poor wretches were stunted in their growth, their hideous faces bedaubed with white paint, their skins filthy and greasy, their hair entangled, their voices discordant, and their gestures violent. Viewing such men, one can hardly make oneself believe that they are fellow-creatures, and inhabitants of the same world. It is a common subject of conjecture what pleasure in life some of the lower animals can enjoy: how much more reasonably the same question may be asked with respect to these barbarians! At night, five or six human beings, naked, and scarcely protected from the wind and rain of this tempestuous climate, sleep on the wet ground coiled up like animals. Whenever it is low water, winter or summer, night or day, they must rise to pick shell-fish from the rocks; and the women either dive to collect sea-eggs, or sit patiently in their canoes, and with a baited hair-line without any hook, jerk out little fish. If a seal is killed, or the floating carcass of a putrid whale discovered, it is a feast; and such miserable food is assisted by a few tasteless berries and fungi.

They often suffer from famine; I heard Mr. Low, a sealing-master, intimately acquainted with the natives of this country, give a curious account of the state of a party of one hundred and fifty natives on the west coast, who were very thin and in great distress. A succession of gales prevented the women from getting shell-fish on the rocks, and they could not go out in their canoes to catch seal. A small party of these men one morning set out, and the other Indians explained to him, that they were going a four days' journey for food: on their return, Low went to meet them, and he found them excessively tired, each man carrying a great square piece of putrid whales-blubber with a hole in the middle, through which they put their heads, as the Gauchos do through their ponchos or cloaks. As soon as the blubber was brought into a wigwam, an old man cut off thin slices, and muttering over them, broiled them for a minute, and distributed them to the famished party, who during this time preserved a profound silence. Mr. Low believes that whenever a whale is cast on shore, the natives bury large pieces of it in the sand as a resource in time of famine; and a native boy, whom he had on board, once found a stock thus buried. The different tribes when at war are cannibals. From the concurrent, but quite independent evidence of the boy taken by Mr. Low, and of Jemmy Button, it is certainly true that when pressed in winter by hunger, they kill and devour their old women before they kill their dogs: the boy, being asked by Mr. Low why they did this, answered, "Doggies catch otters, old women no." This boy described the manner in which they are killed by being held over smoke and thus choked; he imitated their screams as a joke, and described the parts of their bodies which are considered best to eat. Horrid as such a death by the hands of their friends and relatives must be, the fears of the old women, when hunger begins to press, are more painful to think of; we were told that they often run away into the mountains, but that they are pursued by the men and brought back to the slaughter-house at their own firesides.

The different tribes have no government or chief; yet each is surrounded by other hostile tribes, speaking different dialects, and separated from each other only by a deserted border or neutral territory; the cause of their warfare appears to be the means of subsistence. Their country is a broken mass of wild rocks, lofty hills, and useless forests; and these are viewed through mists and endless storms. The habitable land is reduced to the stones on the beach. In search of food they are compelled unceasingly to wander from spot to spot, and so steep is the coast, that they can only move about in their wretched canoes. They cannot know the feeling of having a home, and still less that of domestic affection; for the husband is to the wife a brutal master to a laborious slave. Was a more horrid deed ever perpetrated than that witnessed on the west coast by Byron, who saw a wretched mother pick up her bleeding, dying infant-boy, whom her husband had mercilessly dashed on the stones for dropping a basket of sea-eggs. How little can the higher powers of the mind be brought into play; what is there for imagination to picture, for reason to compare, for judgment to decide upon? to knock a limpet from the rock does not require even cunning, that lowest power of the mind. Their skill in some respects may be compared to the instinct of animals; for it is not improved by experience; the canoe, their most ingenious work, poor as it is, has remained the same, as we know from Drake, for the last two hundred and fifty years.

Notwithstanding the low estimate Mr. DARWIN formed of these savages, and which the foregoing account of them, by shewing the stunted, abject condition both of their bodies and minds, fully justifies, he is inclined to place them in the scale of intelligence above the Australians. Taking his description of the Fuegians as it stands, we see sufficient reason for dissent from this opinion. The Australians, when discovered, it should be remembered, had a number of domestic implements, built comfortable huts, though inhabiting a superior climate to that of the Fuegians; had their weapons of offence and defence, their spears, their clubs, their throwing-sticks, and one at least quite new and peculiar to themselves, the boomerang; and, lastly, they had a kind of rude government, and some curious ceremonies at the period of manhood and on the occasions of marriage and sepulture. Nor can we agree with him in opinion that *if* the *Australian* be superior to the Fuegian in acquirements, it does not follow that he is his superior in mental capacity; for surely the one implies the other as clearly as the greater contains the less. In proportion as the powers of the mind are cultivated and extended must the arts of civilized life progress; therefore, if the acquirements of the Australian be superior to those of the Fuegian, his mental capacity must be superior also.

Quitting, not unwillingly, the shores of Tierra del Fuego, the *Beagle* reached Valparaiso late at night on the 13th July. We extract Mr. DARWIN's description of the chief sea-port of Chile:—

VALPARAISO.

When morning came, every thing appeared delightful. After Tierra del Fuego, the climate felt quite delicious—the atmosphere so dry, and the heavens so clear and blue, with the sun shining brightly, that all nature seemed sparkling with life. The view from the anchorage is very pretty. The town is built at the very foot of a range of hills about 1,600 feet high, and rather steep. From its position, it consists of one long, straggling street, which runs parallel to the beach, and wherever a ravine comes down, the houses are piled up on each side of it. The rounded hills, being only partially protected by a very scanty vegetation, are worn into numberless little gullies, which expose a singularly bright red soil. From this cause, and from the low whitewashed houses with tile roofs, the view reminded me of St. Cruz in Teneriffe. In a north-easterly direction there are some fine glimpses of the Andes; but these mountains appear much grander when viewed from the neighbouring hills; the great distance at which they are situated can then more readily be perceived. The volcano of Aconcagua is particularly magnificent. This huge and irregularly conical mass has an elevation greater than that of Chimborazo; for, from measurements made by the officers in the *Beagle*, its height is no less than 23,000 feet. The Cordilleras, however, viewed from this point, owe the greater part of their beauty to the atmosphere through which they are seen. When the sun was setting in the Pacific, it was admirable to watch how clearly their rugged outlines could be distinguished, yet how varied and how delicate were the shades of their colour.

The immediate neighbourhood of Valparaiso is not very productive to the naturalist. During the long summer the wind blows steadily from the southward, and a little off shore, so that rain never falls; during the three winter months, however, it is sufficiently abundant. The vegetation in consequence is very scanty; except in some deep valleys, there are no trees, and only a little grass and a few low bushes are scattered over the less steep part of the hills. When we reflect, that at the distance of 350 miles to the south, this side of the Andes is completely hidden by one impenetrable forest, the contrast is very remarkable. I took several long walks while collecting objects of natural history. The country is pleasant for exercise. There are many very beautiful flowers, and, as in most other dry climates, the plants and shrubs possess strong and peculiar odours—even one's clothes by brushing through them became scented. I did not cease from wonder at finding each succeeding day as fine as the foregoing. What a difference does climate make in the enjoyment of life! How opposite are the sensations when viewing black mountains half-enveloped in clouds, and seeing another range through the light blue haze of a fine day! The one for a time may be very sublime; the other is all gaiety and happy life.

There is the colouring of nature in the following picturesque description of a troop of mules, and the prospect from the ridge of Peuquenes, one of the Cordilleras:—

When about halfway up we met a large party with seventy loaded mules. It was interesting to hear the wild cries of the muleteers, and to watch the long descending string of the animals; they appeared so diminutive, there being nothing but the bleak mountains with which they could be compared. When near the summit, the wind, as generally happens, was impetuous and extremely cold. On each side of the ridge we had to pass over broad bands of perpetual snow, which were now soon to be covered by a fresh layer. When we reached the crest and looked backwards, a glorious view was presented. The atmosphere resplendently clear; the sky an intense blue; the profound valleys; the wild broken forms; the heap of ruins, piled up during the lapse of ages; the bright-coloured rocks, contrasted with the quiet mountains of snow; all these together produced a scene no one could have imagined. Neither plant nor bird, excepting a few condors wheeling around the higher pinnacles, distracted my attention from the inanimate mass. I felt glad that I was alone: it was like watching a thunderstorm, or hearing in full orchestra a chorus of the Messiah.

At the island of Lemuy the ship's crew found the natives hospitable, and willing to sell provisions at prices that will amuse Europeans.

The people here live chiefly on shell-fish and potatoes. At certain seasons they catch also, in "corrales," or hedges under water, many fish which are left on the mud-banks as the tide falls. They occasionally possess fowls, sheep, goats, pigs, horses, and cattle; the order in which they are here mentioned, expressing their respective numbers. I never saw any thing more obliging and humble than the manners of these people. They generally began with stating, that they were poor natives of the place, and not Spaniards, and that they were in sad want of tobacco and other comforts. At Caylen, the most southern island, the sailors bought with a stick of tobacco, of the value of three-halfpence, two fowls, one of which, the Indian stated, had skin between its toes, and turned out to be a fine duck; and with some cotton handkerchiefs, worth three shillings, three sheep and a large bunch of onions were procured. The yawl at this place was anchored some way from the shore, and we had fears for her safety from robbers during the night. Our pilot, Mr. Douglas, accordingly told the constable of the district that we always placed sentinels with loaded arms, and not understanding Spanish, if we saw any person in the dark, we should assuredly shoot him. The constable, with much humility, agreed to the perfect propriety of this arrangement, and promised us that no one should stir out of his house during that night.

A curious sight to an European must have been one which Mr. DARWIN witnessed in the Pampas in the shape of

A FLIGHT OF LOCUSTS.

After our two days' tedious journey, it was refreshing to see in the distance the rows of poplar and willows growing round the village and river of Luxan. Shortly before we arrived at this place, we observed to the south a ragged cloud of a dark reddish-brown colour. At first we thought that it was smoke from some great fire on the plains; but we soon found that it was a swarm of locusts. They were flying northward; and with the aid of a light breeze, they overtook us at the rate of ten or fifteen miles an hour. The main body filled the air from a height of twenty feet, to that, as it appeared, of two or three thousand above the ground; "and the sound of their wings was as the sound of chariots of many horses running to battle:" or rather, I should say, like a strong breeze passing through the rigging of a ship. The sky, seen through the advanced guard, appeared like a mezzotinto engraving, but the main body was impervious to sight; they were not, however, so thick together but that they could escape a stick waved backwards and forwards. When they alighted, they were more numerous than the leaves in the field, and the surface became reddish instead of being green: the swarm having once alighted, the individuals flew from side to side in all directions. Locusts are not an uncommon pest in this country: already during this season, several smaller swarms had come up from the south, where, as apparently in all other parts of the world, they are bred in the deserts. The poor cottagers in vain attempted by lighting fires, by shouts, and by waving branches to avert the attack. This species of locust closely resembles, and perhaps is identical with the famous *gryllus migratorious* of the East.

We have already transgressed the limits we can conveniently spare to this book; its interesting nature, and the information with which every page is rife, have led us on despite ourselves. We conclude by recommending Mr. DARWIN's journal to the perusal of all the readers of THE CRITIC.

FICTION.

Whitehall; or, the Days of Charles the First; an Historical Romance. By the author of "Whitefriars."

THE name of this novel indicates the time and place of the action; it will also suggest the leading incidents. The latter days of CHARLES offer a fine field for the genius of the novelist, but it needs a master-hand to do justice to the theme—powers such as the father of historical romance could alone have brought to the task. To say of the author of *Whitehall* that he has not entirely succeeded in his ambitious aim, is to say of him only that he is not the greatest writer of his age; and we frankly admit that it would be unfair to try him by an extraordinary standard. Compared with his contemporaries, he is not inferior to any of them in some of the qualities requisite for this class of literature; he is equal to most of them in the accomplishments necessary for the production of fiction of any kind. His descriptive powers are great; he has read up well for the occasion; he has keen perceptions of the nicer shades of character, and his soul is in his work, so that he writes with the flow of a full mind, and carries the reader onward by force of a certain energy which is felt, although incapable of definition. But these excellences are mingled with manifest faults. His composition is often careless and ungraceful; his plot is wanting in artistic skill; he resorts too much to the tricks of the novelist; relies for his effects upon the unnatural or supernatural, mistakes the wonderful for the grand, and the melodramatic for the dramatic. He is copious of contrivances for any difficulty; but they are so far-fetched, so thoroughly beyond the bounds of probability, that they offend the reader's sense of propriety, and often produce a smile where a striking surprise was intended. This tendency of the

writer to exaggeration—this convulsive straining after effect, was apparent in his previous novel; but it has grown with his growth, and is still more obvious and more repulsive here. Another fault he has fallen into in common with many of his predecessors. He has been over-anxious to press into his pages all the great personages of the time, and to bring this about he has resorted to contrivances so *outré*, so wild, so out of the natural order of things, that the design is made palpable to the reader, whose interest in the affair departs the moment he is compelled to feel that all these good people have been brought together to shew off the writer, and not to advance the story.

It is in the strictly historical portions of the romance that the author excels. He is skilful in dramatizing actual events, bringing them before us, not as mere dry details of facts, but with their accessories of men and manners, and dialogues that paint them upon the fancy, invested with a human interest, and more like things we have seen than such as we have only read of.

The story begins with the battle of Newbury, and ends with the death of CHARLES. The hero is one Ingulph, an illegitimate son of the Marquis of MONTACUTE, a youth of brilliant talent, favoured of the queen. His brother, born in wedlock, is betrothed to Marie, one of the daughters of the Earl of STRAFFORD, but she is loved by and loves our hero, Ingulph. The jealousies and rivalries of these brothers are the staple of the plot. De la Pole (the legitimate's name) is the villain of the story. He practises all sorts of rascalities against his brother, and, by false charges, has him sent to prison. He escapes thence, is taken prisoner by Prince RUPERT, goes to London, and meets MILTON, WALLER, and other famous personages, and is invited to join the plot of the latter. Failing in this, De la Pole accuses him of crimes of which *he* was the real author, and almost succeeds, when CROMWELL comes in time to save him, takes him into his service, patronizes, and promotes him; this takes him into the battle of Naseby; he is intrusted with the custody of the King; is appointed on the commission; discovers that he is the King's natural son, plots his escape; is detected; and witnesses his execution.

Nevertheless, with all its improbabilities and faults, *Whitehall* is a better novel than the generality of those that are issued to amuse the dull leisure of sea-side loungers. It may be safely added to the library, and safely placed upon the list of books to be borrowed by the romance-loving reader. As a specimen of the style, we take one passage descriptive of

THE EXECUTION OF CHARLES I.

As he spoke, the door flew open, and Axtel rushed abruptly in.

"All is well!" he exclaimed: "he is on the scaffold, and not a breath is heard against it!"

"Our prayer is answered!" exclaimed Cromwell, leaping up.

"They cannot, they dare not, they shall not!" shouted Ingulph desperately: but as he rushed forward, Axtel, Harrison, and the sentinels at the door darted against him, and seized him in an overpowering grasp. After a vain but furious struggle of some moments, he suddenly yielded.

"I submit—all is lost: but let me see him ere he dies—let me but obtain his forgiveness, or my soul is lost for ever!" he exclaimed distractedly, turning to Cromwell, who gazed at him for a moment in silence.

"Swear to me that you will attempt no disturbance!—for I tell you, the guard around the scaffold have orders to sweep it with their musketry on the least symptom of resistance,—and Ireton commands!" said he.

"I swear—I swear!" repeated the agonized victim.

"Give me your pistols." He surrendered them.

"Cock yours, Axtel; your sword!" He unsheathed and threw it away.

"Now, Axtel, walk beside him. On the least return of this madness, use your pistol," said the lieutenant, sternly. "And now go! For me, I will seek the Lord's will only in prayer." And covering his face with his hands, he resumed his kneeling posture, while Ingulph, closely guarded by Axtel, left the chamber, or rather burst out of it.

Aware that all further resistance was sheer madness, in the serenity of utter despair Ingulph hastened to the Banqueting Hall. All the windows were stemmed with gazers, many of them women in vizards; it was crowded with soldiers, whose partisans kept a clear way to the fatal window. Ingulph even afterwards remembered that he looked vacantly up and noticed the ceiling glowing with all the splendours of the pencil of Rubens, and representing the apotheosis of James I.

But the tragedy was not yet consummated—the coffin was still there untenanted. Ingulph hurried on: he reached the scaffold, and stood for a moment in a state of dreamy stupefaction.

The king was on the point of concluding the long and calm harangue with which he vindicated his conduct on the scaffold, appealing thence to posterity.

"I have delivered my conscience," he said. "I pray God that you do take those courses that are best for the good of the kingdom and your own salvation."

Juxon then spoke. "Though it be very well known what your Majesty's affections are to the Protestant religion," he said, "yet it may be expected that you should say something for the world's satisfaction in that particular?"

"I thank you very heartily, my Lord, for that; I had almost forgotten it," replied Charles, with a slight smile; and, turning to the people, he said, in a raised voice—"In troth, Sirs, my conscience in religion I think is very well known to all the world; and therefore I declare before you all, that I die a Christian according to the profession of the Church of England, as I found it left me by my father; and this honest man I think will witness it."

He turned again to the officers in attendance, and his eye fell on Ingulph with an expression of extreme pity and surprise.

"Sirs, excuse me for this same; I have a good cause, and I have a gracious God: I will say no more," he continued to Hacker. "Take care they do not put me to pain. And, Sir," beckoning to Ingulph, "this, an it please you."

He advanced like a statue in motion, until he was close beside the block.

"Take heed of the axe—it may hurt you!" he said kindly. "I owe this gentleman many kindnesses; I must bid him farewell." He then added, in a whisper inaudible to all but Ingulph—"Farewell, *my son!* I know all your efforts in my behalf—I acquit you of all share in my destruction. Keep this ring for my sake and your own; I have sufficiently recommended the bearer to all who love me." And he restored Stonehenge's ring to Ingulph, who knelt bare-headed, and could only ejaculate—

"Mercy!—forgive your murderer, father!"

"Not so, not so; but promise me, never again to serve him that truly is—Cromwell," returned the unfortunate monarch, in a low tone. But, observing that Ingulph was speechless, he stooped, embraced him warmly, and with a gesture recommended him to the care of Axtel, while he himself returned calmly to the executioner.

"I shall say but very short prayers, and when I thrust out my hands"—

The masked executioner nodded, with a deep sigh.

The Bishop now handed the King a white satin nightcap; but feeling his long grey hair, he inquired of the executioner if it would be in his way. The man made no reply, but laid down his axe, and assisted the Bishop in adjusting it under the cap.

"I have a good cause, and a gracious God on my side!" he said to Juxon, smilingly, when this fearful preparation was completed.

"There is but one stage more," replied Juxon; "which, though turbulent and troublesome, yet it is a very short one; you may consider it will soon carry you a very great way—it will carry you from earth to heaven; and there you will find, to your great joy, the prize you hasten to—a crown of glory!"

"I go from a corruptible to an incorruptible crown, where no disturbance can be, no disturbance in the world," said Charles, mournfully, as if retracing in his mind the turbulent events of his career.

"You are exchanged from a temporal to an eternal crown—a good exchange!" replied the Bishop.

"Is my hair well?" said Charles, turning to the executioner. He nodded.

Taking off his collar and insignia of the Garter, the king then handed it to Juxon, saying the remarkable and ominous word which has ever since puzzled posterity—

"Remember!"

Charles glanced at the block, and the loose staples.

"You must set it fast," he observed.

"It is fast, Sir," replied the executioner. Charles looked at him for a moment, but the impenetrable mask baffled his scrutiny.

"Knight of De la Pole!" he then said in a low tone, "it might have been a little higher."

"It can be no higher, Sir," said the assistant executioner, observing that his master made no reply.

By this time Axtel, surprised at Dethewarre's making no effort to rise from his kneeling position, shook him violently, and startled him from a kind of insensibility rather of mind than body. He arose, and, mechanically obeying the gestures of Axtel, followed him off the scaffold. But as they entered the Banqueting Hall, a low deep universal sigh was heard gradually rising among the mob; he glanced back—an axe arose gleaming in a wintry sunbeam, which shone out for an instant, and fell with the same vast and universal sigh accompanying its fall.

The object of so many loves and hates, a moment before instinct with wrongs, and woes, and passions, evil and good, lay there, senseless, thoughtless, silent, bleeding, dead!

Minstrel Love: a Romance. From the German of Fouqué. A New Translation. With Nine Original Designs. London, 1845. J. Burns.

Another of Mr. Burns's delightful series of translations from the German. Any thing from the pen of the author of *Undine* will be read with eagerness, and *Minstrel Love* is, next to that, one of the most charming of his works. It is rendered into English with a most successful endeavour to preserve the quaint simplicity of the original, and were it for nothing more than as a specimen of pure English, ought this volume to be read and enjoyed.

But it has higher merits; it appeals to the highest and noblest of our emotions; it breathes the spirit of religion, the loftiest tone of morals. The tale is in itself of absorbing interest. The book is exquisitely printed, and lavishly adorned with excellent engravings. It will be a right welcome addition to the fireside library.

The Fortunes of Frank Fairfield. By M. H. Barker, Esq. the "Old Sailor." London, 1845. Orr and Co.

A charming tale for young people. It combines, with an interesting narrative, graphic descriptions of places and persons abroad, and a vivid picture of nautical life. It is profusely illustrated with excellent engravings, neatly bound, and will be a right welcome holiday present to deserving youth.

POETRY.

Legends of the Isles and other Poems. By Charles Mackay. Edinburgh and London, 1845. Blackwood and Sons.

We presume that there are none of our readers who are unacquainted with the name and poetry of Mr. Mackay. Mr. Mackay has written so many choice bits of verse which have been copied from paper to paper—for beauty will always multiply itself—that not to know him is inexcusable. We value men whose object is to send such select thoughts into the world as may make it the better and the wiser, and one of this class is Mr. Mackay. He never thinks that, in presenting his readers with a handful of summer flowers, he ought to mix them with any quantity of darnel. He is not among that throng of peevish poets who exclaim, "Behold, here is a whole forest of briers and weeds," and, unprofitable preachers as they are, never hunt for more lovely and consoling prospects. This cheerfulness in Mr. Mackay is shewn in a brief but excellent poem, in which the repeated music of the verse is an echo to its philosophy.

LITTLE FOOLS AND GREAT ONES.

When at the social board you sit,
  And pass around the wine,
Remember, though abuse is vile,
  That use may be divine:
That heaven, in kindness, gave the grape
  To cheer both great and small—
That little fools will drink too much,
  But great ones not at all.

And when in youth's too fleeting hours
  You roam the earth alone,
And have not sought some loving heart
  That you may make your own:—
Remember woman's priceless worth,
  And think, when pleasures pall—
That little fools will love too much,
  But great ones not at all.

And if a friend deceived you once,
  Absolve poor human kind,
Nor rail against your fellow man
  With malice in your mind;
But in your daily intercourse,
  Remember, lest you fall—
That little fools confide too much,
  But great ones not at all.

In weal or woe be trustful still;
  And in the deepest care
Be bold and resolute, and shun
  The coward foe Despair.

Let work and hope go hand in hand;
  And know, whate'er befal—
That little fools may hope too much,
  But great ones not at all.

In work or pleasure, love or drink,
  Your rule be still the same—
Your work not toil, your pleasure pure,
  Your love a steady flame;
Your drink not maddening, but to cheer;
  So shall your bliss not pall—
For little fools enjoy too much,
  But great ones not at all.

The volume before us is made up from a collection of poems which have appeared in the magazines, but they are not the less valuable on this account. There is nothing more deceptive than poetry. Many writers have acquired fame by the popularity of a periodical in which their fugitive pieces have appeared, but who have sunk to a degree of insignificance when such pieces have been collected in a volume. It is easy to account for this. Periodicals are as much the vehicles of amusement as instruction. Readers have a locomotive way of reading them. They outstrip the slowly-creeping editors, and are ready for the next monthly or weekly issues in the space of six hours. The most stupid reader has more critical acumen to detect the want of merit in an author when he stands alone in a volume than he has when the same author is among a crowd of magazine contributors. It may be that, among compound efforts, he has not sufficient strength and singleness of mind to review individual effort; but from whatever cause, it is certain that compositions which charmed in a magazine have afterwards been universally pronounced "flat and unprofitable."

It is from the very contrary result that we hold Mr. Mackay to be a genuine poet. His poems gain by reperusal. What we imagined a fine, vigorous thought does not, as we become more acquainted with it, appear to change, like Banquo's ghost, into a marrowless skeleton. Mr. Mackay is always himself, and when least distinct and marked, we see him still as the talented author of the *Salamandrine*.

The *Legends of the Isles* are bounding and powerful. They are full of bustle and energy; finely described as the "Invasion of the Norsemen," "The Counting of the Isles," "Kelpie of Corryvreckan;" and indeed throughout the entire string of them there is the same vigour.

In the workshop of the artisan Mr. Mackay is not so well known as Ebenezer Elliot, but he has not failed to make himself heard amidst the whirl and the war of labour, as a man of active sensibilities. His "Cry of the People" will bear comparison with the best of those tales of misery with which, alas! we are too conversant. Sorrow needs no pompous words, nor has Mr. Mackay used them. There is no noisy expression in this poem, but, like a deep and sombre river, it flows on, and we feel the whole power of its melancholy.

THE CRY OF THE PEOPLE.

Our backs are bow'd with the exceeding weight
  Of toil and sorrow, and our pallid faces
Shrivel before their time. Early and late
  We labour in our old accustom'd places,
Beside our close and melancholy looms,
  Or wither in the coal-seams dark and dreary,
Or breathe sick vapours in o'ercrowded rooms,
  Or in the healthier fields dig till we weary,
And grow old men ere we have reach'd our prime,
With scarce a wish but death to ask of Time.

For it is hard to labour night and day
  With sleep-defrauded eyes and temples aching,
To earn the scanty crust, which fails to stay
  The hunger of our little ones, that waking
Weep for their daily bread. 'Tis hard to see
  The flow'rets of our household fade in sadness,
In the dank shadow of our misery.
  'Tis hard to have no thought of human gladness,
But one engrossing agony for bread,
To haunt us at our toil, and in our bed.

And many of us worn with age and pain—
  Old wither'd leaves of men, who, fading, cumber,
Long for that pleasant fosse, six feet by twain,
  Impervious to all grief, where we may slumber.
And others of us, more unhappy still,
  Youthful, warm-blooded, with a life to cherish,

Offer in vain our sinews and our skill
For starving recompense, and yet must perish
In our young days, and on a fruitful soil,
Because our food is dearer than our toil.

Oh, it is bitter-hard to roam the earth,
Aliens to joy, with sad thoughts overflowing,
To hear the young birds carol in their mirth,
To feel the sunshine and the warm winds blowing,
To see the beauty in the fields and floods,
The plenty of the meadows, green or golden,
The fair full orchards, redolent of buds,
And know that we, by a hard fate withholden,
Must keep our appetites aloof, nor dare
To taste the stores which happier birds may share.

'Tis hard to know that the increase of wealth
Makes us no richer, gives us no reliance;
And that while ease, and luxury, and health
Follow the footsteps of advancing science,
They shower no benefits on us, cast out
From the fair highways of the world, to wander
In dark paths darkly, groping still about,
And at each turn condemned to rest, and ponder
If living be the only aim of life—
Mere living, purchased by perpetual strife.

We rise in grief, in grief lie down again;
And whither to turn for aid in our deep anguish
We know not—yet we feel that we are men,
Born to live out our days—and not to languish
As if we had no souls; as if, stone-blind,
We knew not spring was fair; and that the summer
Ripen'd the fruits of earth with influence kind;
That harvest ought to be a welcome comer
To us and ours; and that in Nature's face,
Were smiles of joy for all the human race.

We ask not much. We have no dread of toil;—
Too happy we, if labour could provide us,
Even though we doubled all our sweat and moil,
Raiment and food—and shelt'ring roofs to hide us
From the damp air, and from the winter's cold;—
If we could see our wives contented round us,
And to our arms our little children fold,
Nor fear that next day's hunger should confound us.
With joys like these, and one sweet day of rest,
We would complain no more, but labour, bless'd.

But these we sigh for all our days in vain,
And find no remedy where'er we seek it;—
Some of us, reckless, and grown mad with pain
And hungry vengeance, have broke loose to wreak it:—
Have made huge bonfires of the hoarded corn,
And died despairing. Some to foreign regions,
Hopeless of this, have sail'd away forlorn,
To find new homes and swear a new allegiance.
But we that stay'd behind had no relief,
No added corn, and no diminished grief.

And rich men kindly urge us to endure,
And they will send us clergymen to bless us;
And lords who play at cricket with the poor,
Think they have cured all evils that oppress us.
And then we think endurance is a crime;
That those who wait for justice never gain it;
And that the multitudes are most sublime
When, rising arm'd, they combat to obtain it,
And dabbling in thick gore, as if 'twere dew,
Seek not alone their rights, but vengeance too.

But these are evil thoughts; for well we know,
From the sad history of all times and places,
That fire, and blood, and social overthrow,
Lead but to harder grinding of our faces
When all is over: so, from strife withdrawn,
We wait in patience through the night of sorrow,
And watch the far-off glimpses of the dawn
That shall assure us of a brighter morrow.
And meanwhile, from the overburdened sod,
Our cry of anguish rises up to God.

(To be continued.)

EDUCATION.

The First Book of Botany; being a plain and brief Introduction to that Science for Schools and Young Persons. By Mrs. LOUDON. London: George Bell, Fleet-street.

THE purpose of this neat little book is so clearly set forth in its title, that it only remains for us to give the plan on which it has been constructed, and a brief notice of its character. The fair authoress has divided her subject into three chapters. The first treats "Of the Parts into which Plants are separated by Botanists;" as the root, the trunk, the leaves, the flower, and the fruit. The second shews "The Natural Division of Plants," into ligneous, herbaceous, evergreens, deciduous and succulent plants, parasites, hardy and tender plants. The third and last gives "The Botanical Division of Plants," including classification, and the respective systems of LINNÆUS, JUSSIEU, and DECANDOLLE. The work is illustrated with wood-cuts wherever they are necessary, and has appended to it a useful and succinct glossarial index. The letter-press is divested of technicalities, terse, and therefore well fitted for being committed to memory. We can therefore conscientiously commend this book to all, whether young or old, who desire to learn the rudiments of that most delightful and refreshing of studies—Botany.

A Grammar of the Irish Language, published for the Use o the Senior Classes in the College of St. Columba. By JOHN O'DONOVAN, Member of the Archæological Society. Dublin, 1845. Hodges and Smith.

WE cannot pretend to pass a critical judgment upon this portly volume, for we must confess ourselves entirely ignorant upon its subject-matter. But the learned author informs us in his preface, that it has been a work of great research and labour. Begun in the year 1828, he has in the interval visited every county in Ireland, and acquainted himself with the provincial dialects as now spoken. He has introduced copious examples from the remains of the ancient language still preserved in manuscript, and he has received the ready aid of the most eminent antiquarians in his interesting inquiries. An elaborate introduction traces the history of the Irish language from the first Milesian colony; but the subject has not sufficient general attraction to justify our following him in his inquiries. We can only say that to students of Irish literature this volume must be a welcome assistant.

MISCELLANEOUS.

The Emigrant's Guide; or Ten Years' Practical Experience in Australia. By the Rev. DAVID MACKENZIE, M.A. London, 1845. Orr and Co.

AMID the multitude of books that have issued from the press descriptive of our Australian colonies, it is difficult to find one on which the emigrant may confidently rely for truthful information. So many books are written with interested motives, that it is dangerous to trust to any asseverations of the authors. Besides this, there is a propensity to colour objects according to the aspect in which they were viewed by the observer. If he have flourished in his speculations, all is *couleur de rose*; if he have failed, all is gloom and discontent. In the one case, the colony is a paradise; in the other, a hell. A sound-thinking man, who has looked at affairs there without prejudice from personal feelings, is a rare and valuable friend, and will be heartily welcomed by those who seek the very truth as to the prospects of emigration and the preparations to be made for it. Such a guide is the Rev. D. MACKENZIE; and ten years' residence has peculiarly fitted him to give practical advice on all the topics most interesting to emigrants. The volume, though small in size, abounds in useful facts. There is no attempt at fine writing; the author states succinctly the information he desires to convey. He describes the geographical position, climate, soil, agriculture, and appearance of Australia; its population, revenue, government, and that which will sound strange to British ears—

THE LITERATURE OF BOTANY BAY.

There is something funny in the very name. I may perhaps be rewarded for my trouble with a smile of contempt, if I tell you that here, in Sydney, the capital of Botany Bay, there are many who have already enrolled their names among the fraternity of authors—that we have our historians, our poets, our novel-writers; and our writers on theology, on law, astronomy; our reviewers, our naturalists, our public lecturers; also, our museums, public libraries, colleges, schools, mechanics' school of arts, debating societies, commercial reading-rooms, several booksellers' shops, and last, though not least, our editors and daily newspapers.

Some of these papers, such as the *Herald*, *Atlas*, and one or two others, are ably conducted, and occasionally contain leading articles which would not disgrace any of your London prints. It must, however, be admitted that there are a few of our colonial publications which greatly stand in need of pruning. About these there is one very amusing peculiarity. If you happen to advance any opinion, or endeavour to establish any doctrine unpalatable to the editor, instead of attempting to refute or disprove by argument your statements, he immediately falls foul of *yourself*, abuses you personally, and if there is any thing objectionable in all your past history, he rakes it up, and places it against your statements,—to prove, of course, that they are incorrect.

It will be interesting to parents who intend emigrating to New South Wales, to be informed that there is scarcely a town of any note in the colony that cannot boast of its academy or school; and in Sydney there are several highly respectable seminaries, conducted by men of superior talents. There are also several ladies' boarding-schools, where day-scholars are received. With the exception of law, physic, and divinity, there is not a branch of a liberal education but may be studied as successfully in Sydney as in any one of your British institutions. Many important situations are now very creditably filled by native youths, who never left the colony; and I believe that there is not a government office, or bank in Sydney, in which there is not now employed one or more of those young gentlemen who attended my own class when I taught in the Australian College. The Episcopalian Bishop has ordained some young men who received the whole of their education in this colony. Such a step as this has not yet, in any instance, been taken by the Presbyterians, although they have, many years ago, organised and established—chiefly through the exertions of our great lion, Dr. Lang—a system of education in the Australian College, far more comprehensive, and in every respect more calculated to prepare for the duties of the Christian ministry, than any system hitherto introduced under the auspices of our Episcopalians.

There is one great obstacle here to the progress of literature. Money is so easily earned in this colony, that parents, instead of educating their sons for the learned professions, or allowing them to remain at school until they have received a liberal education, send them to the bush with a few flocks of sheep, which is a surer and much shorter way of arriving at colonial eminence and independence. This conduct on the part of parents has always been, and still continues to be, a source of great annoyance to every zealous teacher in New South Wales. It is much to be regretted that colonial youths should not receive the benefits of a classical and philosophical education, and thus have the chance of eventually distinguishing themselves as literary characters. From my having, during the space of seven years, taught mathematics and natural philosophy to a public class of them here, I may be allowed to express my opinion that, in point of natural abilities and general aptitude to learn, they are not one whit behind youths of the same age in England.

You will, no doubt, be greatly surprised when I inform you that there is a general thirst for reading throughout Australia. I took some pains to inquire into this fact; and the result of my inquiries has been that there is an immense number of books of a certain class read throughout the colony. Everybody reads. But I am sorry to add that the reading chiefly in vogue is of a light and frivolous character. There is not a bookseller or librarian here but will tell you that, while celebrated works on divinity, history, and science are allowed to mould on their shelves, the demand for works of imagination is greater than the supply. The Sydney Mechanics' School of Arts, however, has already done much, and promises to do a great deal more, in checking this love of fiction, and creating a desire after more rational and intellectual enjoyment. This valuable institution numbered, some time ago, no fewer than 800 among its members. Its library contains by far the largest and most valuable collection of books in the colony. The annual subscription is only 12s. a year, which entitles the subscriber to attend all the lectures, and borrow from the library any book which it may contain. The lectures hitherto delivered in the institution have been gratuitous and voluntary, no *paid* lecturer having been yet engaged by the committee of management, who have repeatedly expressed their gratification at finding their wants in this respect abundantly supplied by free-will offerings. Men of all classes, of all religions, and of every shade of politics, are equally zealous in patronising the Mechanics' School of Arts. In short, it is the only really public institution in Sydney. We number among our lecturers several of the most influential and talented men in the colony; such as their Honours Justice A'Beckett and Justice Therry; Dr. Nicholson, M.C.; Dr. Wallace; R. Windeyer, barrister and M.C.; Professor Rennie; the Rev. Henry Carmichael, A.M. (author of an interesting work on New South Wales); T. W. Cape, esq., for many years head-master of Sydney College; and several other literary gentlemen of eminence and respectability. The course of lectures is very comprehensive, including, with the exception of politics and controversial divinity, every subject on which it could benefit the mechanic to be informed. That much interest is felt in these lectures, not only by the mechanics for whose benefit they are chiefly provided, but by the public in general, may be inferred from the large attendance of the members, and the fact of reporters from the press being regularly sent there, and a large portion of the newspapers' columns being frequently allotted to the publication of such reports; and this happened even when the subject of lectures was not much calculated to amuse or interest a popular audience. I had occasion more than once to make this remark during a course of lectures, delivered there by myself, on experimental philosophy, though they were not remarkable in any way, either for their novelty or their application to the mechanical arts. I would recommend every emigrant who intends remaining in Sydney or its vicinity to become a member of this institution. The expense is a mere trifle, and the benefit is invaluable. The facility with which money may be accumulated in this colony, and the numerous avenues which are here open for the profitable investment of capital, have an obvious tendency to divert the public attention from scientific pursuits to the sordid and debasing ideas of pounds, shillings, and pence; and I feel assured that to any man of cultivated mind, newly arrived from England, the existence of a flourishing Mechanics' School of Arts in Botany Bay, numerously attended by all grades of society, from the governor down to the chimney-sweep, must appear like an oasis in the wilderness—a solitary green spot, with its refreshing streams, on which the eyes of the weary traveller rest with delight.

The churches and clergymen, morals and society, land regulations, live stock, bush amusements, exports and shipping, travelling, the blacks, are subsequently described in like manner; and some excellent advice to emigrants completes a volume which contains more practical information in a small space than any book we have lighted upon for a twelvemonth.

Tourists' Guide to St. Andrews, with Historical and descriptive letter-press. St. Andrews, 1845. Melville Fletcher.

This is a very complete guide-book—one written in a far superior manner to most works of this nature. It is lavishly illustrated with steel engravings, which are very creditably executed, and the typography and getting up of the volume are tasteful in a high degree.

JOURNAL OF FRENCH LITERATURE.

LITERARY GOSSIP IN PARIS.

(*From our Correspondent.*)

The mania of locomotion appears to have spread in Paris among the *artistes*. The tears shed for the departure of Mademoiselle Plessy are scarcely wiped away, when we learn the flight of M. Théophile Gautier and his friend M. Noel Parfait, for Algiers. Nor is this all; they having, it appears, resolved, for a time, at least, to exchange the pen for the sword, and joined the expedition of General Bugeaud as volunteers. The general is about to lead a force against the two principal chiefs of Abd-el-Kader, Ben Salim and Ben Kassim. The two adventurous travellers are to form a part of his personal staff, and embarked on the very night of their arrival at Delly's in the suite of the governor-general. We may consequently soon look for a narrative of the campaign, "by an eye-witness."

M. Bosio, the celebrated sculptor, whose admirable *bassi relievi* and other works have tended so greatly to increase the value of many of the national monuments throughout France (among the rest, the colossal statue of Napoleon on the famous column at Bolougne, commemorating the *intended* invasion of England), died lately, at the age of 74 years. M. Bosio was a native of Monaco, and was born in March 1761. France, however, was his *pays d'élection*, and his loss will be long felt by his adopted countrymen. This clever sculptor was a pupil of Pajou, a member of the Legion of Honour, and a member of the Academy of the Fine Arts.

Another death which has lately occurred here must not pass unnoticed. I have just read in the *Corsaire-Satan* the following paragraph: "Since 1803 there has lived in the Rue des Vieilles-Etuves a princess of the blood of the Incas, and consequently a great-grandaughter of the sun. This illustrious woman, who had discovered the secret of living happily upon an income of 1,000f. (40*l.*) was named Fatima Palmyra Moholia Bézia Kipacki. Struck by a fatal attack of apoplexy, she died at a very advanced age. The *Petites-Affiches* informed us of this almost royal departure, which, without such advertisement, would have taken place as perfectly unremarked as the decease of a simple peer of France."

A sale of rare and curious autographs took place a few days ago, of which the most singular was a poem addressed by Robespierre to a lady of Arras. This MS. created considerable competition, and was ultimately knocked down for 500f. As some of your readers may be glad to form an opinion of the *poetical feeling* of the great headsman of the Revolution, here it is done into English :—

"Let the world talk—thy mirror shew
A lovely face, fair lady mine ;
Still careless of thy beauty's glow,
Let modesty's sweet charm be thine.
Still doubt thy power unprized, unproved,
Conviction's voice in trembling flee ;
Thou wilt but be the better loved
While fearing that it may not be."

One cannot help asking one's-self if this passion were returned ; for, if so, we fear that the ancient member for Arras must have resuscitated, for his especial benefit, the daughter of Herodias. Alas ! poor human nature !—what a congeries of incongruities does it exhibit !

JOURNAL OF GERMAN LITERATURE.

Der Kriege von Morea in den Jahren 1687 *und* 1688—(War in the Morea during the Years 1687 and 1688), by F. PFISTER, is a work deserving of mention. It was written as a contribution to the history of Hesse ; and though but relating to one part of the great struggle between the Christianity of Western Europe and the Osmans, towards the close of the seventeenth century, thus only partially representing the condition and actions of the Venetians at that period, it is well deserving the notice of the student. It is, in particular, interesting to the lover of Greece, for the light it throws on the state of that unfortunate country at that epoch. Altogether, it is a little book of much utility.

It is certainly one of the many happy consequences of the long peace that Europe has enjoyed, that men of military fame and talents have leisure to present the world with works which, from other than experienced hands, would be of far less value. Individuals, such as the Archduke CHARLES, the generals ZOMINI, GROLLMAN, CLAUSEWITZ, LONDONDERRY, NAPIER, MUFFLING, and others, by their military narratives, have not only elucidated the art of war, but have rendered great services to history. It is seldom, indeed, that they produce any thing beyond mere military works, though now and then a brilliant exception will be met with, such as the *Geschicte der Staatsveränderung in Frankreich*, by General V. SCHUTZ ; such a work is sure of a hearty welcome, when, as in the *History of Napoleon Buonaparte*, by F. V. RATH, independent of much military information, it contains interesting and authentic matter on the other objects which that important period of history embraces. The requisite demanded by VARNHAGEN VON ENSE, in the writer of NAPOLEON'S history, that we should have a good knowledge of military tactics, has, in this case, been fully supplied. HER F. V. RATH, at present in the service of Wirtemberg, has written an impartial, circumstantial, and authentic history of NAPOLEON BUONAPARTE. His various campaigns are treated in a clear and nervous style ; the period of the Empire is written with much research and judgment, though perhaps this part of the work may not compare with that of WACHSMUTH. VON RATH, too, does not pretend to know *every thing* with perfect accuracy and precision ; he sees clearly that, notwithstanding the many years that have elapsed between the occurrences he relates and the present time, many events are nevertheless involved in comparative darkness. Of this nature are the battle of Eylau, of which the various contending reports make it almost impossible to form a distinct judgment ; the retreat of the French from Russia : in this latter point the author has taken his authority principally from Prince LUGEU, of Wirtemberg, from his notices in the *Ostreichischen Militair-Zeitschrift*, of July 1841 ; the diplomatic details of 1813, NAPOLEON'S five days' residence in the castle of Düben, and some other occurrences. The writer has clearly felt the earnestness and weight of his undertaking ; his style, therefore, is simple and impressive, not aiming at effect, full of dignity and severity ; in short, it is the manifest expression of the author's mind, and, as it should be, not darkened with strategic technicalities. The second part of a work of much interest has lately appeared,—*Characterzüge und historische Fragmente aus dem Leben des Königs von Preussen Friedrich Wilhelm III. Gesammelt nach eigenen Beobachtungen und selbst gemachten Enfahrnugen, und herausgegeben*, von R. EGLERT. The volume formerly published was devoted wholly to the character of FRIEDRICH WILHELM ; this second, so long and anxiously awaited, carries the entire interest of the reader to the character of the Queen LOUISA. Never was there an amiable and beautiful woman so favourably described. Many traits of her gentle disposition and noble heart are recorded in those works which bear relation to her times, and this volume is wholly taken up by Herr V. EGLERT'S examination of her relation as wife and mother, but not much as queen. Doubtless this was the result of the writer's evident anxiety to steer clear of political and diplomatic shoals ;—a matter which should hardly be an object with one professing to treat alike of history and biography.

Another publication of value, is one entitled *Denkwurdigkeiten des Freiherrn Achatz Ferdinand von der Asseburg* — (Memoirs of General Asseburg), collected from his papers and documents, by a statesman, and preceded by a Preface from the pen of VARNHAGEN VON ENSE. The name of the statesman is Count SCHULENBURG, Saxon ambassador at the Austrian court. This excellent work contains valuable notices of the years from 1740 to 1797, and offers not only to the learned inquirer or the lover of history, but to young diplomatists in particular, an admirable school. The editor tells us not to expect brilliant anecdotes or piquant sayings, for, in his opinion, such things are beneath the dignity of the statesman ; consequently, those who would seize the book in the idea of being amused, will find themselves severely disappointed. Of personal notices there are too few. People feel naturally interested in the inner life of a man so distinguished as General ASSEBURG : we are not content to learn simply that he was a student at Jena in 1740, smoking strong tobacco and riding hard ; that 1745-46 saw him already commencing his diplomatic career at Munich, and much admired by the fair sex ; nor that in 1747 he travelled to Rome and Paris, when this turns out to be the sum total of *biography* to be found in the whole work, one is neither prepared for, nor pleased at this ; nevertheless, it must be classed among the most momentous works which the Berlin press has of late produced. It contains, in the first place, an account of the Asseburg race, with long genealogical tables ; then follows ASSEBURG'S correspondence with the Danish minister, BERNSTOFF, and the Russian minister, PANIN, with the history of his diplomatic career in the Danish service, embracing a period from the year 1753 to 1773, including the treaty concerning Holstein, Oldenburg, and Delmenhorst, and so forth ; the whole terminating with an account of his domestic relations, &c. and his death. He was born at Meisdorf, on the 20th July, 1721 ; his father was JOHANN LUDWIG V. D. ASSEBURG, Chamberlain to the King of Prussia ; his mother, ANNA MARIA V. D. SCHULENBERG-APENBERG. He died at Brunswick, 13th of March, 1797.

Another publication worthy of notice is entitled *Der Neue Pitaval*, a collection of the most interesting criminal trials which have taken place in Europe. The first part opens with that of R. L. SAND, the murderer of KOTZEBUE, as interesting a trial as could have been selected. "His diary shews that this thought first occurred to him in May 1818, and from that hour never left him until it rose to a perfect mania. It seems that he daily expected to hear that some other had forestalled him in what he held to be the paramount duty of every German ; at last, urged by vanity, perhaps irritated by the comments of his friends, he left Jena, without communicating his resolve to any one, armed with two daggers, though at the same time under circumstances which plainly shewed he calculated the deed would not be done by *him*. He left behind him in his open room letters and papers which announced his determination to the world at large ; but, by some almost unaccountable accident, they were not discovered until after its execution. He spent a fortnight in going from Jena to Mannheim, though riding nearly all the way ; he remained five days in Frankfort, without any object but that of delay ; at last he entered Mannheim. He announced himself to KOTZEBUE under the name of a dear friend, and the deed was easily and quickly done. He had evidently reckoned upon such a state of excitement among the people as would enable him to escape. The event shewed his miscalculation ; he stabbed himself, and was seized. He bore the prospect of death with perfect calmness ; but during the period of the trial his obstinate concealment of the truth seriously compromised the friends who were exerting themselves in his behalf. His imprisonment terminated by his execution on the 20th March, 1820." The next trial is that of FUALDES ; then follows, among others, that of FRAU FIGNET, one of the most interesting in the collection. That of MARTIN GUERRE, 1560, is too antique for a series almost entirely modern. That of the Marquis BRINVILLIERS is one well known, for it is highly interesting. Among the trials selected from England we may mention those of EUGENE ARAM, Admiral BYNG, and last, but not least, that of WARREN HASTINGS, which occupies one entire volume. Comparisons between the systems of justice in the several countries of Europe, and general remarks, connect these one with the other, and render the work well worthy of attention. We believe it is not yet completed.

With these notices of the historical department, as it at present exists in Germany, we must close our remarks for this week.

JOURNAL OF AMERICAN LITERATURE.

Sketches of Residence and Travels in Brazil. By the Rev. DANIEL P. KIDDER, A.M. In 2 vols. Vol. II. London, 1845. Wiley and Putnam.

A VERY inconvenient mode of publishing has of late been growing into favour. The plan is, where a work consists of more than a single volume, not to bring it out entire, but to publish the several volumes at intervals, varying from a month to a year, according to the circumstances. The evident purpose of the arrangement is to obtain as many different reviews and other advertising notorieties for each work as it numbers in volumes. The inconveniences to reviewers and to readers are, however, so great, that an effort should be made to discountenance a scheme which, if permitted to grow unchecked by rebuke, will become an intolerable nuisance. Every book will be to be judged piecemeal and read by detachments. For the mischief there is but one cure, and that is, for the journals to make a rule not to notice a book until it is offered to them in a complete form.

We are sorry to see this device adopted in America. Only a few weeks since we reviewed at some length the first volume of Mr. KIDDER'S *Sketches in Brazil*, and now there is a second and concluding volume, to many parts of which we should have liked to call attention in preference to some of the passages presented in the preceding notice. But as our space is limited, so must be our extracts, and the comments we made upon the first volume being equally applicable to the second, we will at once proceed as if this notice had been a continuation of the former one.

Mr. KIDDER opens with the narrative of a trip upon the river Amazon. He spent some time at Bahia, which he represents as one of the most interesting of the cities of the Brazils. Here, as elsewhere, he notices the different shapes of the water-jars borne on the heads of the negroes, each place having a style peculiar to itself.

The backward state of civilization in the remoter provinces of the Brazils may be judged by the accounts given of the administration of justice there, translated from the official reports. Here is a passage.

"The period for organizing juries is the time of jubilee for criminals. The jurors being in a high degree ill-qualified, having but little general information, and still less acquaintance with the important duties of their office; and, moreover, having no personal security, can by no means be relied upon for the administration of justice and the punishment of offenders. Rare is the criminal, even among the most abandoned, who cannot find some protector; and those who have some powerful man on their side are sure to be fully absolved. This scandal has reached its climax.

"In the villa of Anadia, where a jury had not been organized for more than three years, out of thirty criminal cases, only one was found guilty; all the other defendants were pronounced innocent and falsely accused! In another case, where in ordinary circumstances it is with great difficulty that a competent number of jurors can be assembled, about sixty met for a special purpose, and on their first organization cleared all the persons complained of and then separated."

A very unattractive description is given of Ceará.

The first thing to be said of Ceará is, that it is literally a city built upon the sand. From the beach to the remotest suburb all is sand, sand. If a person walks, the deep sand wearies his limbs; if the sun shines, the heated sand parches his feet; and, if the wind blows, the flying sand fills his eyes. Sand fills the streets and composes the side-walks, except that, here and there, it may be covered with a broken flagging of stone or brick. Walking, riding, and driving, seem to be equally impeded by the sand; and, for the locomotion of a single cart, it is not rare that ten oxen are employed. Nevertheless, the plan of the city is good; the streets are wide and its squares ample.

Like all countries whose inhabitants are scattered about so thinly that they are necessarily thrown back upon their own thoughts, the Brazils have been the scene of many strange superstitions. One of the most extraordinary resulted from a popular belief in Portugal, transferred to Pernambuco, that Don SEBASTIAN, the King of Portugal, who perished in an expedition against the Moors in Africa, will make his reappearance on earth, as each of the faithful believes, during his own lifetime. Among those who at various times have sought to impose themselves upon the credulity of the people as the expected Don SEBASTIAN, was a fanatic named JOAO ANTONIO, who had fixed upon a remote part of the province of Pernambuco for the appearance of the expected warrior.

The place designated was a dense forest, near which were known to be two acroceraunian caverns. This spot the impostor said was an enchanted kingdom, which was about to be disenchanted, whereupon Don Sebastian would immediately appear at the head of a great army, with glory, and with power to confer wealth and happiness upon all who should anticipate his coming by associating themselves with said João Antonio.

As might be expected, he found followers, who, after awhile, learned that the imaginary kingdom was to be disenchanted by having its soil sprinkled with the blood of one hundred innocent children! In default of a sufficient number of children, men and women were to be immolated, but in a few days they would all rise again, and become possessed of the riches of the world. The prophet appears to have lacked the courage necessary to carry out his bloody scheme, but he delegated power to an accomplice, named João Ferreira, who assumed the title of "his Holiness," put a wreath of rushes upon his head, and required the proselytes to kiss his toe, on pain of instant death. After other deeds too horrible to describe, he commenced the slaughter of human beings. Each parent was required to bring forward one or two of his children to be offered. In vain did the prattling babes shriek and beg that they might not be murdered. The unnatural parents would reply, "No, my child, there is no remedy," and forcibly offer them. In the course of two days he had thus, in cold blood, slain twenty-one adults and twenty children, when a brother of the prophet, becoming jealous of "his Holiness," thrust him through and assumed his power. At this juncture some one ran away, and apprised the civil authorities of the dreadful tragedy.

Troops were called out, who hastened to the spot, but the infatuated Sebastianists had been taught not to fear any thing, but that, should an attack be made upon them, it would be the signal for the restoration of the kingdom, the resurrection of their dead, and the destruction of their enemies. Wherefore, on seeing the troops approach, they rushed upon them, uttering cries of defiance, attacking those who had come to their rescue, and actually killing five, and wounding others, before they could be restrained. Nor did they submit until twenty-nine of their number, including three women, had actually been killed. Women, seeing their husbands dying at their feet, would not attempt to escape, but shouted "The time is come; *viva viva*, the time is come!" Of those that survived, a few escaped into the woods, the rest were taken prisoners. It was found that the victims of this horrid delusion had not even buried the bodies of their murdered offspring and kinsmen, so confident were they of their immediate restoration.

A curious trait is recorded of the Brazilian carriers. When, on account of a high load, they are unable to spring upon their horses' backs at one leap, they deliberately take hold of the horse's tail, place their foot upon the gambrel joint, and walk up over the hips of the animal.

Mr. KIDDER attributes the low state of improvement in Brazil to the great natural advantages of the country. The food necessary to maintain life can be procured in such abundance that there is no necessity for hard work, and men will not labour without the stimulus of necessity. The water-melon is, during the season, the principal food of the population, and it is so abundant, that the finest are to be purchased at twenty cents for a hundred. Thus, for a single penny, could a man be fed for a week.

In the river Amazon he noticed a phenomenon very similar to the *bores* that characterize some of our tidal rivers.

This phenomenon is called, from its aboriginal name, *pororoca*, and gives character to the navigation of the Amazon for hundreds of miles. No sailing craft can descend the river while the tide is running up. Hence, both in ascending and descending, distances are measured by tides. For instance, Pará is three tides from the ocean, and a vessel entering with the flood must lie at anchor during two ebb tides before she can reach the city. Canoes and small vessels are sometimes endangered in the commotion caused by the pororoca, and hence they generally, in anticipation, lay-to in certain places called *esperas* or resting-places, where the water is known to be but little agitated. Most of the vessels used in the commerce of the upper Amazon are constructed with reference to this peculiarity of the navigation, being designed for floating on the current rather than for sailing before the wind, although their sails may often be made serviceable.

The ebb and flow of the tides in the Amazon are observed with regularity six hundred miles above the mouth, at the confluence of the river Madeira. The pororoca is much more violent on the northern side of the island of Marajó, where the mouth is wider

and the current more shallow. It was well described by Condamine a hundred years ago, in these terms:

"During three days before the new and full moons, the period of the highest tides, the sea, instead of occupying six hours to reach its flood, swells to its highest limit in one or two minutes. It might be inferred that such a phenomenon could not take place in a very tranquil manner. The noise of this terrible flood is heard five or six miles, and increases as it approaches. Presently you see a liquid promontory twelve or fifteen feet high, followed by another, and another, and sometimes by a fourth. These watery mountains spread across the whole channel, and advance with a prodigious rapidity, rending and crushing every thing in their way. Immense trees are instantly uprooted by it, and sometimes whole tracts of land are swept away."

A short account of the Brazil-nut will be new to many.

It is not generally known that the triangular fruit, called in England and the United States the Brazil-nut, is only produced in the northern parts of the empire. It grows spontaneously in great abundance in the forests of the Amazon. The Portuguese call it "*Castanha do Maranham*,"—the Maranham chestnut, it having first been exported from that province. It grows upon the lofty branches of a giant tree, the bertholletia excelsa. When the fruit is new, and not hardened by age, it is much more delicious than afterward.

During the revolution of 1823, an event occurred, which rivals in horror the Black Hole of Calcutta.

A large number of prisoners were taken, and five ringleaders in the revolt were shot in the public square. Thence returning on board, he received, the same evening, an order from the president of the junta, to prepare a vessel large enough to hold two hundred prisoners. A ship of six hundred tons burden was accordingly selected. It afterwards appeared, that the number of prisoners actually sent on board by the president was two hundred and fifty-three. These men, in the absence of Captain Grenfell, were forced into the hold of the prison-ship and placed under the guard of fifteen Brazilian soldiers.

"Crowded until almost unable to breathe, and suffering alike from heat and thirst, the poor wretches attempted to force their way on deck, but were repulsed by the guard, who, after firing upon them, and fastening down the hatchway, threw a piece of ordnance across it, and effectually debarred all egress. The stifling sensation caused by this exclusion of air drove the suffering crowd to utter madness, and many are said to have lacerated and mangled each other in the most horrible manner. Suffocation, with all its agonies, succeeded. The aged and the young, the strong and feeble, the assailant and his antagonist, all sank down exhausted and in the agonies of death. In the hope of alleviating their sufferings, a stream of water was at length directed into the hold, and towards morning the tumult abated; but from a cause which had not been anticipated. Of all the two hundred and fifty-three, four only were found alive, who had escaped destruction by concealing themselves behind a water-butt."

But we must bring to a conclusion this notice of a work which we should not have treated at so great a length, but that the country to which it is devoted is little known to English readers.

THE TOURIST.

[All the world travels now-a-days. Great, therefore, will be the utility of a periodical to which every Tourist may communicate such of his experiences as to routes, sights, conveyances, inns, expenses, and the other economies of travelling, as may serve his fellow-tourists. To this design we propose to devote a distinct department of THE CRITIC, and we invite communications of the class described relative to travelling both abroad and at home.]

SKETCH OF A TOUR IN THE TYROL.

(*Continued from page* 324.)

NEAR Fragent a mad torrent will be crossed, which has laid waste at its junction with the Möhl a large tract of land. If he can, the tourist may procure another *Einspännig* at Stall (we were unable to do so), or proceed on foot, and advance up the same fertile, well-cultivated valley. It is about three hours' walk to the village of Winklern, where the valley makes an abrupt turn to the right, and becomes narrower. Winklern is beautifully situate high on the side of the valley. He had better refresh here, and then continue his advance up the valley, and pass through the village of Dollach. The mountains increase in grandeur, and the valley narrows considerably. Where the Möhl is crossed, the river forms a remarkably fine rapid, and on the left is the fall called the Jungfernsprung, a tributary stream. He will pass the graceful spire of Bockhagen; and, after climbing a steep ridge that crosses the valley, will come to the cascade of the Möhl, where it bursts through the barrier of rock. It is a fine fall, and the scenery around it grand. When clear, a fine view of the Gross Glockner may be had from the top of this hill; but his head being enveloped in mist, we could only see the lower part, with the glaciers hanging on his side, all white. Heiligenblat will now be soon reached, a very remote village, about 5,000 feet above the sea, and distant about forty miles from Ober Villach. If the weather should be favourable on the following morning, and should not have been so on the preceding evening (as was the case with us), the tourist will be surprised by a glorious sight. We were exceedingly favoured, which is not the case with all tourists, as would appear from the following extract from the strangers' book:—

"We did not see the Glockner, because he would not shew;
We tried him with a telescope, but found it no go."

The view, as we had it from the hill on which the chapel stands, was indeed a glorious one; the light mist floating over the head and sides of the Glockner added greatly to the splendour of his appearance, his aspect ever varying; five or six times his head (which is a very sharp cone, the apex of which is only four feet square) was perfectly clear, and as often hidden again, and was brilliantly white when the sun shone upon it, and contrasted well with the dark clouds which occasionally approached it. It was not entirely covered with snow, as some parts are too precipitous for it to lie on; his side, for the same reason, had broad patches of dark colour, and the hollows were filled with glaciers. The mist was continually changing the view, but always harmonizing with the mountain, and the whole was softened by the hues of the atmosphere. The summit of the Gross Glockner rises 12,760 feet above the sea. The view also over the village and church of Heiligenblat, with the mountains across the valley, their lower parts covered with wood, and having rye growing nearly 6,000 feet above the sea, was magnificent. The church in the village should be visited, where will be seen the Gothic shrine of stone, thirty feet high, covered over with *ex voto* offerings, and the so-called holy blood of our Saviour, in a small phial, and from which the village derives its name; bones of saints, artificial flowers, &c. and an old carved high altar-piece. An excursion is frequently made to the Pasterze Glacier, but this we omitted.

It is a long afternoon's walk from Heiligenblat to the village of Kals, ascending the flank of the Gross Glockner, and seeing part of the Pasterze Glacier, and the pretty waterfall of Gösnitz, the water of which falls upon a ledge of rock, rebounds, and shoots down like rockets, passing through the dell of Leiter, and walking along the Cat's Path on a steep slope of loose slates. After two hours' walk, milk may be had at a chalet, and then crossing over the top of the pass, from which we had another grand view of the summit of the Glockner, and of some splendid precipices before it. Here it appears forked. We had also a view of a magnificent range of mountains on the other side of the pass, and passed near some fine precipices. The descent is then made into the Bergenthal, and the village of Kals is entered, very high above the sea, and about seventeen miles from Heiligenblat, to walk which occupied us about seven hours. We could here get nothing to eat in the way of meat but old goats' flesh, rather strong in flavour, and of which they made us three dishes, viz. soup, a roast, and a pudding. Coffee is always to be had at the poorest inns. Kals is a very remote place; and there is no road to it except an indifferent footpath, by which the tourist must descend the Kalserthal, a very narrow valley, with not much space for cultivation, and the sides steep and wooded. He will cross the river Isl, and continue his progress up the vale of Tefereggen to Hopfgarten, fourteen miles from Kals. This valley also is narrow, and offers pretty romantic woodland views, and has not much cultivated ground. At Hopfgarten he will probably be able to procure no other meat but goats' flesh, but plenty of small fresh-water trouts (*forellen*). After resting here, he must still advance up the valley, narrow and romantic, and for some distance a mere defile: it opens at the head, and becomes very beautiful, where St. Jacob's is situated. He will pass St. Veit's, and arrive at the village of St. Jacob's early in the evening, about twenty-six miles from Kals—fine snowy mountains at the head of the valley and also below. This village stands very high; I should think, not much below six thousand feet above the sea; yet red wheat was ripe a little lower down the valley on the 1st September. In this valley the peasants wear a coarse dark brown dress, made of undyed wool of black and brown sheep; from which their appearance has been compared to bears rampant. It is a very remote valley, and the inhabitants are very primitive in their manners; we saw them busy taking in the crops in immense loads upon their backs. There are some very neat houses, chiefly of wood, at St. Jacob's, and on the sides of the valley near it. A guide should be taken here for the next day's journey, who will conduct the tourist on foot, in an hour and a half, to a bridge; and then for

four hours more, through a mountainous defile along the river, the lower part of it well wooded, the upper part bare of wood, but affording good pasture for cattle.

On the way through this defile the guide will take him into a chalet to get milk, which he will have set before him in an immense wooden bowl, and no doubt he will enjoy it much. He will pass Jackhause, a collection of chalets, where there is, during part of the summer, a good pasture for cattle. He will soon after see the fine glacier of the Fleichback. At the head of the defile he will commence the ascent of the steep part of the pass of Ochsen Lente, and will have a very steep and hard climb, and a difficult and rather dangerous passage across some loose, crumbled clay-slate. The ascent will occupy an hour and a quarter, and he will then have attained the height of 9,500 feet above the sea, and will not regret the labour the ascent has cost him when he has reached the top of the pass, for he will then behold a most sublime mountain view; in front, a splendid range of snowy mountains, some shewing their peaks above the clouds, and below them a small green lake or tarn like an emerald; and in the valley, corn and green pastures; and turning round, he will see mountains with their heads covered with snow and glacier, including a fine mountain near him, on which is the Fleichback glacier, a great mass of ice and snow, and a high mountain called the Patsch, with a glacier on his side extending for several miles; and on his right the mighty Drei Hern Spitz, his head appearing somewhat round, and very purely white and dazzling in the sunshine, heightened by the contrast of the dark bare granite before him, which appears to have been thrown up by some great convulsion. He will scarcely find a view in Switzerland to surpass this. After feasting his eyes on this view till they are satiated, or as long as the cold will permit him, he may commence the descent on the other side, which is rather dangerous, and requires caution, as it is very steep, and the highest part is covered with loose slates, over which it is difficult to preserve a footing; and immediately below this is slippery glacier with a slight covering of snow. We scrambled on all fours, for had we lost our footing we should have slid away over the glacier, at a railway pace, rather further than was agreeable. My fingers became so benumbed that I had great difficulty to hold on. A shepherd's staff would be a great support here. After the first part of the descent is overcome, the tourist will have a rough walk over rocks down the side of the mountain. He will have a beautiful view of the vale of Tauffers as he descends, rich and well cultivated, and inclosed by high, snow-clad mountains, the sides of the hills well clothed with firs as high as they can grow. He will pass near the copper-mines, where he may see the process of washing the ore. When he has completed the descent, he must proceed up the Arnthal to the inn at Heiligengaist, distant from St. Jacob's about twenty-four miles.

(To be continued.)

ART.

CARTOONS, BY CORNELIUS, FOR THE PROPOSED NEW CEMETERY IN PRUSSIA.—The painter Cornelius, on his way from Berlin to Rome, has been exhibiting to his friends a number of the cartoons designed by him for the Cemetery, after the model of the Pisan *Campo Santo*, which the King of Prussia has determined to create. The finished designs comprehend three sides of the walls forming the square of the projected burial-ground, the designs for the fourth remaining to be completed in Rome. Each wall comprises a series of paintings connected in subject, as in the mural painting of Byzantine art. These are composed of a principal fresco, placed between an upper and a lower, or basement, painting. The one great idea, governing the entire conception, is the Fight of Death and Sin, and the Victory of Religion, with its promise of Life Eternal. That is the mystical synthesis of the monument; and each of the several series contributes to that expression by the representation of an independent idea—the respective ideas being all subordinate to the general subject. A writer in the *Moniteur des Arts* remarks that the painter has, on this occasion, "departed from all the beaten tracks of art—subjects the most common, such as that of Jesus at the Tomb, having taken a novel character under his pencil." "Perhaps," he adds, "the composition may be reproached, as representing an abstraction somewhat too subtle and metaphysical; but you know our German passion for expatiating in the regions of the vague and infinite; and the material execution amply redeems the fault—if, indeed, it be one."

GREAT PRUSSIAN EXHIBITION.—From Munich we learn that the magnificent palace for the Exhibitions of the Fine Arts and those of the Trades, is to be inaugurated, on the 25th inst. by the opening of an exposition of the arts of design, for which upwards of 2,600 German and foreign works have been already sent in.

MUSIC.

THE BEETHOVEN FESTIVAL.

AN event so important as this, though occurring at a distance from our shores, it were unpardonable in us to overpass in silence. Though not of our nation, we claim an interest in Beethoven beyond that which we share with the rest of the world in the memory of a great artist, and in doing honour to his shade, since it was from this country that, when underrated and neglected at home, he drew no inconsiderable amount of the funds with which, amid sickness and anxieties, he dragged on a wearisome existence. From England, too, has proceeded a portion of the money subscribed for the erection of the statue now inaugurated with so much pomp; and which his own countrymen, notwithstanding their show of remorse for having in life slighted him, and their vociferous praises of him now he has indignantly shaken off the fleshy bond that made him a German, did not disdain to receive. But though in this instance we may claim merit for having done justice to Beethoven both living and dead, we are ourselves any thing but free from reproach of a similar nature, as the names of Burns and Chatterton, Purcell, Savage, and Keats, bear reproachful testimony.

It would seem, indeed, in all countries, to be the lot of composers more than of any other artists, to be ill-paid and neglected. The mere mechanical musician, who scrapes or blows, thumps or sings, earns hundreds a night, wins uncontrollable applause, and retires from the world glutted with riches, and in the enjoyment of a wide-spread fame; whilst he whose genius has furnished the means for these triumphs and acquisitions; whose inspired works have given intellectual gratification to thousands—have actually improved the morals by elevating the taste of his time—is too generally uncared for, or at best but scantily rewarded. And thus, as it ever has been, will it always be, not only in the case of musicians, but of all other artists, until men see clearer and further than they yet have done—until they recognise the *utility* of genius, and learn to distinguish it when it stands before them.

The festival in honour of Beethoven was celebrated at Bonn, his native place. It commenced on the 11th and closed on the 13th instant, the middle day being that selected for the grand performances and the inauguration of the statue. In addition to her Majesty Queen Victoria and Prince Albert, the King and Queen of Prussia, and other royal personages, there were collected the leading composers, musicians, and singers from all parts of Europe, with a sprinkling of authors, artists, and the *élite* of the German nobility. Among those gathered to do honour to the memory of Beethoven on this occasion, and who have distinguished themselves before the world, we may mention the names of Drs. Spohr, Liszt, and Breidenbach; Ignace Moscheles, some time pupil and since biographer of the great composer; Meyerbeer, Berlioz, Fetis, Lindpainter, Hallé, Crivelli, Elwart, Jules Janin, Schlesinger; Madames Plegel, Dulcken, and Oury; the Chevalier Pignion, the Baron Vesque von Pusslingen, Councillor Von Gretch, Herrn Pischèk and Staudigl; and, among the English, Sir George Smart, Miss Sabilla Novello, Messrs. Chorley, Davidson, and Handel Gear.

The performances took place in the Minster-church, and a newly-erected structure (which at the bidding of Liszt sprung up in some three or four days), called "the Beethoven Hall." It is a spacious room, constructed in the form of a basilica, from the roof of which hang long festoons of oak leaves, and the columns, the capitals of which assume the form of green branching palm leaves, are entwined with ivy leaves. The room is lit by numerous chandeliers of various degrees of size and quality, from the cut-glass lustre to the ring of candles that illuminates a theatrical booth. Round the walls are circular spaces, surrounded by wreaths successively inscribed with the date of Beethoven's birth, the names of his greatest works, and finally the date of his death. At the extremity, immediately fronting the entrance, over the orchestra, is placed a portrait of Beethoven, in the act of composing the *Missa Solennis*, and above him an inscription similar to those on the lateral walls, bearing his name, and supported on either side by two painted figures of Fame.

The performers, amounting to nearly six hundred, were collected from the towns of Bonn, Aix la Chapelle, Cologne, &c.; and the chorus consisted entirely of amateurs. The

chief compositions selected for the first day were the *Missa Solennis*, No. 2 (in D), and the *Symphony* No. 9. The performance of these noble works was not remarkable for its excellence—it embodied but weakly and confusedly the grand conceptions of the immortal composer. The first movements of the ninth symphony must be excepted; these were given with a spirit and precision that seemed like inspiration, were enthusiastically received, and loudly encored, though their length prevented compliance with the demand. After the concert there was a display of fireworks on the Rhine, which but for its being magnified by reflection on the stream, would have proved a trumpery and ridiculous affair.

The proceedings of the second day, including the inauguration of the statue, we subjoin, abridged from the *Times*, which has given a better account of the Festival than any we have seen.

Bonn, August 12.—This being the great day of the festival, the whole town of Bonn was astir by six o'clock in the morning, preparing for the approaching ceremony of inaugurating the statue of Beethoven. The principal streets presented a most striking appearance, every house being literally covered from top to bottom with green foliage, while large streamers of every colour floated in long array from the windows. The market-place was crowded with groups of townsmen, visitors, and students, while drummers were parading in every direction to summon the various members of the procession to the place of rendezvous—namely, the Gasthof zur Schönes Aussicht (Hotel Belle Vue), in the grounds of which the procession was marshalled, and proceeded at about half-past eight to move towards the market-place in order following:—The band of the 28th Royal Infantry; the Schützen Corps, or militia riflemen; the students of the University, divided into different corps, headed by captains wearing their distinguishing scarfs and caps of various colours, and carrying large-hilted swords—the appearance of the latter was highly picturesque, and carried one back to the middle ages. Then followed the committee, the town-council, and the civil and military authorities, and lastly, such of the burghers as chose to devote themselves to give a more imposing air to the procession. After stopping at the Stadt-Haus to take up the guests invited to the ceremony, this very original procession proceeded to the Minster; where Beethoven's mass in C was performed, conducted by Dr. Breidenstein. The solo parts were sung by Demoiselles Tuczek and Kratky, and Herrn Götze and Staudigl. Nothing could be more perfect or more solemnly effective than its execution. The Minster was crowded in every niche and corner, although a very large proportion of the visitors were without, and had already taken their places on the scaffolding erected round the statue on the Münster-platz, where they were joined at the conclusion of the service by the members of the procession and the choruses. Proceedings were then suspended until about twelve o'clock, when the rattle of carriages was heard, accompanied by the shouts of the crowd, and the King and Queen of Prussia, accompanied by the Queen of England and Prince Albert, arrived, and alighted at the mansion of Count Fürstenberg, situate at the extremity of the Münster-platz, where the balcony, hung with crimson velvet, fringed with gold, had been prepared for their reception. After a few minutes their Majesties appeared in their places, and were welcomed with hearty shouts of gratulation. The ceremony of inauguration then commenced, the first stage of which was the performance of a chorus for male voices, composed by Dr. Breidenstein, to words by one Wilhelm Gruets. The production of such a composition as this proved to be would, under any circumstances, be disgraceful; but on an occasion like the present, when the musical genius of Germany is in question, and the object is to do honour to the man in whom it reached its highest point, what otherwise might have been passed over with silent contempt, calls for an open expression of censure, though, perhaps, not so much of Dr. Breidenstein as of his friends, whose ill-judged indulgence has robbed his incapacity of the obscurity which should naturally have sheltered it. This unhappy exhibition having come to a conclusion, an oration was delivered by Dr. Breidenstein, the concluding words of which were the cue to the unveiling of the statue. In an instant the surrounding canvas fell to the ground, and the statue rose as it were into view, amidst the bravoes of the multitude, and the booming of artillery. The effect was thrilling, the immediate impression of the statue being most striking. The features are boldly sculptured, and bear an expression of profound and earnest thought, mingled with the wildness of inspiration, which is seized to its full extent at the first glance. The figure is clothed in a costume which is an effective compromise between the modern dress and the classical robe, and the attitude, which represents him with a pencil and note-book in either hand in an interval of reflection, is easy and natural. The only fault to be found with the statue is, that its vigour approaches too much to coarseness, and that its appearance is somewhat squatty. The pedestal, which, as well as the statue, is of bronze, bears four bas-reliefs, representing four allegorical figures of Fancy, Symphony, Sacred Music, and Dramatic Music, the designs of which are chaste, and full of simple elegance. The sculptor of the statue is M. Haehnel, one of several competitors for the undertaking, and it was cast by M. Burgschmiet, whose work was so effectually done that it is said not to have required re-touching with the chisel. A parchment, recording the facts and date of the inauguration, and attested by the signatures of the King of Prussia and the Queen of England, having been soldered up in a leaden case, was placed under the basement, and the aperture closed and cemented. With this ceremony the inauguration terminated, and the committee and visitors returned to their respective hotels for the purpose of refection previous to the concert, which commenced at four o'clock. The programme of this performance, conducted by Drs. Spohr and Liszt, was as follows:—

1. Overture to *Coriolanus*. 2. Canon from *Fidelio*. 3. Concerto in E s., played by Liszt. 4. Introduction—No. 1 and 2 from the *Mount of Olives*. 5. Symphony, No. 5, in C flat. 6. Quartette, played by Herrn Hartman, Derkum, Weber, and Breuer. 7. Second Finale of *Fidelio*.

The solos by Mesdlles. Tuczek and Sachs, and Herrn Götze, Staudigl, Bottlicher, and Keinthaler.

The concert went off with the utmost brilliancy, the room being still more crowded, if possible, than on the first occasion. Liszt's execution of the concerto was in his best style, full of expression and fire, and the last movement was tumultuously encored. With this concluded the day's proceedings, with the exception of a general illumination in the town, and serenading in the Markt-platz.

The performances on the third and last day were denominated in the programme the *Kunstler*, or Artist's Concert. The first was a very original and masterly *cantata*, composed for the occasion by Dr. Liszt, who conducted it in person. This work, anticipated with so much eagerness by the musical world, is unquestionably the ablest hitherto produced by Liszt. It consists of a *moderato* movement in E major, varied with choral recitatives and vocal solos; then an *andante* in C, founded on a theme by Beethoven, and a *finale* in E major, reintroducing the original movement, and winding up with a brilliant *coda*. Next to this followed the overture to *Egmont*, which was very effectively performed; then was sung very charmingly, by Mdlle. Krasky, the *Adelaida* of Beethoven, accompanied by Dr. Liszt on the piano; and lastly came what proved in reality the grand feature of the day, the *Concert Stuck* of Weber, which was played by Madame Pleyell, the Parisian pianist, with a fire and energy, a brilliancy, certainty, and poetical feeling, that would have enraptured Weber had he been alive to hear it, and which was enthusiastically received, as it deserved to be, by all who heard it. Our countrywoman, Miss Sabilla Novello, then gave an aria from *Fidelio* with much taste and expression; after which M. Moeser, of the *Conservatoire*, Paris, played a solo of his own composition on the violin, which placed him among the foremost of living artists; and the concert concluded with a grand aria by Mendlesohnn, superbly sung by Mdlle. Schloss, and a spiritless violoncello fantasia by M. Franco Mendez, whose execution was as wretched as the subject was poor. After the concert a public dinner took place at two o'clock. It was held at the Goldener-Sterne, was attended by the committee, their guests, and as many of the miscellaneous visitors as could get a place.

In this manner closed the long-anticipated festival in honour of Beethoven. That it fell far short of the expectations which had been raised of it is undeniable. From first to last there was visible a want of unity and government in the arrangements and performances, which marred the intention of Drs. Spohr and Liszt, and those who took a real and lively interest in the proceedings; nor was there wanting to embarrass them, and disunite those who should have worked together with one mind, an abundance of jealousies and bickerings among the *artistes*, to which we lament to say the musical more than any other profession has ever been obnoxious.

NECROLOGY.

MR. MITCHELL,

THE TRANSLATOR OF ARISTOPHANES.

This distinguished scholar died on the 4th of May last, and we are indebted to the *Gentleman's Magazine* for the following memoir of him:—"Mr. Mitchell was born in London, on the

30th of May, 1783. He was the son of Mr. Alexander Mitchell, a riding-master, in Hamilton-place, Piccadilly, and afterwards in Grosvenor-place. At the age of seven years, Thomas Mitchell was admitted into Christ's Hospital, on the presentation of Martin Fonnereau, esq. Here he remained under the tuition of the Rev. James Bowyer, and afterwards under that of the Rev. Dr. Trollope, till October 1802, when he was preferred to Pembroke College, Cambridge, on one of the exhibitions of the Hospital. In the year 1806 he took his degree of B.A. as a senior optime and the first classical medallist. In acknowledgment of this eminence the governors of his school presented him with a silver cup, of the value of thirty guineas. He now naturally looked forward to the obtainment of a fellowship from the college, on which he had conferred so much honour; but in this hope he was disappointed by a novel resolution of the master and fellows, that not more than two students, educated at the same school, should be fellows of the college at the same time; and Mr. Thornton, a member of the *corps diplomatique*, and the Rev. Mr. Wood, afterwards Master, both Christ's Hospital men, were at that time ranked among the fellows of Pembroke. * * As Mr. Mitchell had determined to devote himself to a scholastic life, this disappointment seemed to overset all his future schemes, until in the year 1808 or 1809 he was enabled by his literary acquirements to obtain a fellowship at Sidney Sussex College; an acquisition the more honourable, inasmuch as the fellowship was what is termed *open*, or subject to the rivalry of any competitors. Had he entered in due time into holy orders this fellowship would have provided him with part of those resources which he afterwards lived to need, but Mr. Mitchell never married. But conscientious scruples prevented him from becoming a candidate for holy orders; although we can confidently state that this reluctance of Mr. Mitchell arose from an overwhelming fear of the responsibilities attached to the pastoral office, and not to any objection to the doctrines of the Established Church. After a limited term of years he was obliged, by the statutes of the college, to vacate his fellowship. * * * Under these untoward circumstances, Mr. Mitchell devoted his learning to private tuition and to the public press. * * * In the year 1810 the writer of this brief memoir had the pleasure of introducing him to Mr. William Gifford; and in 1813 he commenced the series of essays in the *Quarterly Review*, on Aristophanes and Athenian manners, which led to his own translations in verse of the *Old Comedian*, which appeared in two volumes, in the years 1820 and 1822. * * * Some of these essays had impressed the patrons of a vacant Greek chair in one of the Scotch universities with so much respect for Mr. Mitchell's classical attainments that they invited him, through a friend, to accept of the situation. It was a lucrative, as well as a most respectable, one, and he was a poor man; but he must have signed the Confession of the Scotch Kirk, and to him this was an insurmountable objection. For the last twenty years of his life, Mr. Mitchell resided with his relations, in the county of Oxford, and therefore found it not inconvenient to undertake the occasional task of superintending the publication of the Greek works which issued from time to time from the Clarendon press." But at length all other literary employment failed him, and he fell into pecuniary difficulties. "His friends now became alarmed for him, and, through the kind intervention of the late Mr. Morritt, of Rokesby, his condition was made known to Sir Robert Peel, who immediately placed at his disposal the sum of 150*l.* from the Royal Bounty Fund, and (what to Mr. Mitchell's feelings was more gratifying than pecuniary aid) conveyed to him, in a private letter, the expressions of his respect and sympathy. In 1843 Mr. Parker resumed his publication of *Sophocles*, and Mitchell edited the remaining four plays of that tragedian, with shorter notes than before; and in 1844 he devoted himself to the preparation of a minor edition of a *Pentalogia Aristophanica*, with brief Latin notes, for the use of schools. He had nearly completed this task when death surprised him. He had been long in a weak state of health, but his end was sudden and unexpected. His health had improved with the present year, and he was indulging himself in well-founded hopes that his governmental grant would be renewed in May, and be followed by a permanent pension. Alas! on the 4th day of that month, he had breakfasted as usual with his niece and housekeeper, and adjourned to his study in tolerable health. About four hours afterwards the niece, on entering the room, found some impediment to opening the door. It was caused by his dead body, which had fallen against it. The medical man who was summoned was of opinion that life had been extinct at least two hours, from a fit of apoplexy."—*Quarterly Review.*

M. ARTOT, THE VIOLINIST.

The French papers are lamenting the decease of M. Artot, the violinist, who died of consumption, in the twenty-ninth year of his age, at Ville l'Avray, near Paris, a few days since. He was, perhaps, the most finished and the most elegant of all the Rubini school of players—one of the handsomest men in our recollection; and much beloved, we are told, among his comrades, for his gentleness and amiability.

ORIGINAL CONTRIBUTIONS.

WRO DARE TO DIE?

There's a light that shineth, a lamp that burneth
Before the brave,
And he is the slave of time who turneth
Back from the grave.
By sword or flood, by fire or wave,
When glares Death's eye,
All under the sun, who have great deeds done,
Will dare to die.

Will the monarch quit his lofty throne,
That costly thing,
And shrink not to wrestle with death alone—
A king with a king?
Ay, he will dare the chance of the ring,
As well he can,
If he hath lived, and himself believed
Less king than *man*.

Will the beggar in his rags dare death?
Yes—if his mind
Be free from fraud when he weeping saith—
"O pray be kind—
I have left many dying ones behind
Dying for bread!"
With a Christian's faith what is there in death,
That *he* should dread?

Will the gaudy-plumed warrior fear to die,
Who, hand in hand,
Hath walked with death, and heard his loud cry,
On sea and land?
Where death is so *red* he may fear not his brand,
But after the fight,
It is well for his errors if death have no terrors,
When death is *white*.

Will the poet or prophet—for both are one—
Like others dare?
Ay, more! for his love, like the light of the sun,
Shines everywhere.
And he who gives love, treads the first white stair
Towards the sky,
And he may write, in his upward flight,
"*I dare to die!*"

E. H. BURRINGTON.

CRITIC OF TRADES, INVENTIONS, ETC.

Every person feels the want of an *honest* informant to direct him where the best commodities of all kinds are to be purchased. New inventions for use or ornament are daily produced, which would be cordially welcomed if their merits were made known. An advertisement alone cannot be trusted. An impartial reporter is wanted in whom the public can confide. This department of THE CRITIC will endeavour to fulfil that duty. To aid the design, correspondents are requested to inform our readers of any new production for use or ornament they may try and prove, of the places where the best commodities of any kind are to be procured, and so forth. Of course no anonymous communication will be attended to.]

THE HARMONIC COMPASS.—Messrs. Cocks and Co. have just published a little moveable machine under this name, which shews at a glance the elemental facts in the theory of music. A number of apertures are pierced upon a circular surface, and by means of a button in the centre (which also turns a pointer to a registered series of the sharps and flats according to their succession) a revolving card underneath shews the various major and minor relations to any proposed key. The board thus becomes a special map. Appearing simultaneously through the openings, you see the dominant and subdominant, the relative minor, the minor seventh of the major key, the leading seventh of the minor key, the dominant seventh, the minor third, the major and minor chord, and the enharmonic change—which last, by the way, for the sake of completeness, might as well have been the *chord* instead of the *note*. This is the best contrivance of the kind which has yet been produced, being ingeniously simple as well as neat and compact. For early students in the principles of thorough bass it will be a useful and ready refresher of the memory, and to them we recommend it.

A very important improvement has been made in the lithographic printing machine by a young French engineer named Nicolle, by which the same precision and regularity of pressure

is obtained as by the common hand-press. By the common lithographic process, not more than from 200 to 250 good impressions of designs, or about 1,000 copies of lithographic writing, can be obtained in twelve hours; by this new machine, which is also worked by hand, as many as 2,000 of the former, and 20,000 of the latter, can be obtained within the same period of time.

Growth of Silk at Norwich.—A person named Leeds, a working cooper, living in St. Edmund's, Norwich, has this year about 10,000 silk-worms, which have just commenced spinning in a room at the top of his house, without any artificial heat; they have been this year in the most healthy state, he having lost scarcely twenty from the time of hatching. Mr. Leeds has now materials for several splendid silk dresses, one of which it is contemplated to send to her Majesty.—*Chelmsford Chronicle.*

Paris Academy of Sciences, July 21.—M. Arago announced to the Academy the receipt of a communication from M. Philippe Breton, an engineer, on the effect exercised by the sun and moon on weight at the earth's surface. This communication is partly theoretical and partly experimental. The sun and the moon attracting in an unequal manner the entire mass of the earth and of the bodies on its surface, change periodically the direction and intensity of the weight of those bodies. Hence results the phenomenon of the tides—a phenomenon the more difficult to be understood on account of the various causes which interfere with the established law of nature on this subject. M. Breton says, that if we could sufficiently isolate and amplify the perturbatory force of the sun and moon over a body under our own control, that body would constitute a true lunar-solar time-piece, having no other motive power than the sun and moon. M. Breton proposes to illustrate his theory by means of an apparatus of which he gave a description.—M. Gaymard communicated to the Academy a letter which he has received from Reykiavik, in Iceland, informing him that for an entire year there had been beautiful weather in that island, and scarcely any winter. The summer of 1844, and as much of the present summer as had passed, have been delightful. The meadows are in the finest possible state, and the fisheries highly productive.—M. Sellier, who is one of the small number of persons who attach no value to the use of lightning-conductors, but, on the contrary, attribute very dangerous results to them, by pretending that they attract the electric fluid to the localities in which they are placed, without carrying it off, writes to the Academy that the only effectual prevention is elevated chimneys, such as those of iron-works, which, he says, drive the electric fluid from the neighbourhood in which they are situated.—M. Despret gave an account of some experiments in the compression of liquids.

A M. Martenez, of Paris, states that he has discovered the means of carrying on the daguerreotype process on a gigantic scale. He can, he says, daguerreotype an entire panorama, embracing 150 degrees! His process consists in curving the metallic plate, and causing the lens which reflects the landscape to turn by clock-work. The lens, in turning, passes over on one side the whole space to be daguerreotyped, and on the other side moves the refracted luminous cone to the plate, to which the objects are successively conveyed.—*Mechanics' Magazine.*

Porteous's Patent Whistle.—This instrument is another invention for giving railway signals. It consists of any number of metallic tubular whistles, combined under one mouth-piece, and having their tones so arranged, that by the introduction of one discordant note an extremely shrill vibrating sound is produced, which strikes forcibly upon the ear, and is conveyed to a great distance. Its peculiar discordance enables it to be readily distinguished from any ordinary whistle, however powerful, and from any common sound. It is thus peculiarly adapted for the use of park and game-keepers, rural and railway police, and for any other purposes where an instantaneous sound is required either by day or night. Smaller sized instruments, on the same principle, are constructed for dog-whistles, and are much approved by sportsmen. These whistles, of all sizes, are very easily blown, and, of course, the sound produced will be in proportion to the volume and strength of the breath, but they cannot be overblown like other whistles. We have no doubt it may be rendered exceedingly useful, but we cannot help thinking that these horrid discords might be avoided.

Air Engines.—Great saving and increased safety and comfort must result from the practical application of compressed air to locomotion. Mr. Parsay's working model is a great stride in advance, and stimulates high hopes of success. In it the condensed air acts directly on the pistons, and of course with a continually decreasing force. This would be a decided objection to substituting the elasticity of condensed air for that of steam; but Mr. Parsay's invention includes a regulating chamber, by means of which the working pressure may be at will raised to a maximum for driving up, reduced to a minimum for running down an incline, or kept at a mean for level working. The mean, moreover, is insured by a self-acting regulator between the working receiver and the high-pressure reservoir, which admits the air uniformly with the discharges from the driving cylinders. The patentee invites the attention of all persons concerned in railroads, navigation, and mill-work to the merits, efficiency, economy, and advantages of his air-engine. We trust that economy will not prevent the early testing of the efficiency of the invention: the model merits it.

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of The Critic is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

DR. FORBES.

Dr. Forbes has published in the *Medical Gazette* an elaborate statement of his experiments with the lad whose case we have been narrating. As our readers are already aware, from the details we have given, the boy *was*, as Dr. Forbes asserts, detected in opening the card-case. In candour, we are bound to say, that Dr. Forbes has given, upon the whole, a correct statement of the experiments; but he errs in his conclusions. He concludes that the sealed paper in which the first word was read, had been opened previous to the reading. But Dr. Forbes did not think so at the time. He admitted then, that in any ordinary case he should have received it as satisfactory evidence of the fact, and he expressed his opinion to the last, that the paper had not been opened. We are sure that it had not been opened, for we took it from the boy who was trying to open it, and with our own hands broke the seals.

The experiment with the folded paper in the card-case, untied and unsealed, we admit to have been unsatisfactory, although we are confident that it had not been opened, and that the paper was rolled in consequence of its stiffness; the creases of the folds were not visible, proving how slightly they had been made. Besides, the eyes of three were on him, and it was actually impossible that so long a roll could have been opened, read, unfolded, and restored to the box without being seen by Dr. Forbes or some of the company.

As to experiments with the box brought by Professor Graham, we are satisfied—so were the other gentlemen present, so was, at the time, Dr. Forbes himself—that it had not been opened. The seal was split, it is true, but with the pressure of Dr. Forbes's foot, and such was the form, and so slight the crack in the seals, that it was impossible to open and restore the cover of the box without more entirely severing them.

Although, after he has found the boy peeping, under circumstances sufficiently intelligible and easily explained, Dr. Forbes chooses to set down the previous successful experiments as tricks also, we think he should not stop there, but continue his investigations of the case. We, who see him almost daily, who have tried every test that ingenuity can devise, and many other gentlemen as sceptical as Dr. Forbes, and as anxious to expose what they deemed to be an imposition, *have* seen him read the contents of packets under circumstances in which deception was a physical impossibility. These experiments have been submitted to the readers of The Critic. We ask any who doubts, to shew in what manner a trick could have been played in those trials with the packet sealed to the mantel-piece, and again, with the sealed packet inclosed in the card-case, and the packet, with the word written down, returned to the person who sealed it, on the following day, and who testifies that his seals were unbroken.

These two instances alone, had we seen none other, cannot but convince us, even though we had witnessed fifty failures or as many tricks. Dr. Forbes admits that a trick or a failure does not of itself negative the asserted fact, it only calls for greater vigilance. This increased vigilance has been used; the results have been equally satisfactory; the thing has been done where deceit was *impossible*. We ask Dr. Forbes to enter fairly and thoroughly upon the case, not on one day only, but many times and in many circumstances; and if then he does

not witness satisfactory, because unquestionable, proofs of the possession of the faculty, he may be justified in denial. But after what he has seen, both of success and of failure, it is not quite fair to stop where he is. He cannot but have some lingering doubt in his own mind whether, after all, there is not more in it than he imagined. He should set that doubt at rest one way or the other. Persons as intelligent, as sceptical, as desirous of probing it to the bottom, as suspicious of fraud, as resolute to detect it as himself, have seen and satisfied themselves that the reading has been performed without a trick or a deception. Surely other witnesses are to be received, if not to carry conviction, at least to demand investigation, patient and continuous, and this is all we ask.

The lad shall be placed at Dr. FORBES's disposal, alone or with others, at his own residence or elsewhere, to be tried and proved in any manner, or at any time he may please, upon condition only that he will make that trial over a period sufficiently long to give fair scope to the varying conditions of the faculty. If, after that, he should pronounce the boy an impostor, we will be content to treat him as such; but it is impossible to form an accurate judgment without frequent observations under different conditions.

It seems never to be considered by those who are so ready to charge all mesmeric patients with being impostors, that the imposture would be more wonderful than the Mesmerism. Such great actors as they would be the world has never seen. Instead of shamming the passions and emotions in a private room, they might rival a KEAN or a KEMBLE upon the stage.

They only could pronounce them impostors who had seen but few patients. He who has seen many cannot fail to be satisfied that, whatever it be, it is not *acting*. They have not such genius as their opponents would attribute to them.

CLAIRVOYANCE.—CASE OF SUSAN W——.—I send, for insertion in THE CRITIC, if you think it worth recording, a case of Mesmerism I met with during a short stay in Bristol.

Susan W—, aged 15, sister to the young lady whose case appeared in your March number, was under medical treatment for some months for a painful and obstinate disease; but she having derived little benefit from medicine, her mother requested me to mesmerize her. I did so for about three weeks daily, and the result was, that her health was completely restored. The pathological details, though very interesting and important, are perhaps not adapted for publication in a popular periodical such as THE CRITIC, but the striking manifestations of Clairvoyance which she evinced may be interesting to your readers.

She was so susceptible, that, after two or three sittings, she could be *willed* to sleep at pleasure, and awakened in the same manner. I have thrown her into the coma while she was standing shaking hands with a friend who had just entered the room.

Every one who saw her was convinced that her eyes were firmly and tightly closed, yet she could read, sew, play at dominoes, and perform any household avocation, as quickly and as easily as when awake, and she continually made observations on the actions, looks, and gestures of persons in the room, with a *naïveté* exceedingly amusing.

Her magnetic sympathy was strongly marked; I could *will* her from one part of the room to another, without speaking a word, or making a pass; and if I left the room, she immediately followed me. Two gentlemen once attempted to detain her by main force, but she broke from them, displaying a muscular force almost incredible in one of her age and sex.

She once presided at the tea-table, while in the sleep, and performed all the functions of her office with perfect ease and correctness, herself making a hearty meal. Her susceptibility to the influence of metals was great; immediately her eyes closed she hastily removed any articles of jewellery she might be wearing at the time, and threw them from her with aversion, entreating those with whom she was *en rapport* to lay aside their rings, watch chains, &c. Gold, she said, burnt her; silver caused a shudder to pass through her whole frame,—"did not hurt her, but made her very uncomfortable"; zinc, and particularly zinc and copper together, caused a violent trembling, like a severe ague, with convulsive twitchings of the muscles, and a rapid motion of the hands and fingers, which lasted some minutes. I observed one thing in this patient, which I have never noticed in any other. When laying my hand on her wrist to feel her pulse, she complained of a violent burning and tingling at the end of her fingers, so intensely painful that she screamed. This result invariably occurred every time I made the experiment. I once took up a black kitten that happened to be in the room, and was about to place it on her lap, when she started from her chair with the expression of extreme terror in her face, and was seized with a violent trembling, which I had considerable difficulty in removing. The same effect took place with her sister. They had neither of them an aversion to cats, when awake.

Since I left, Susan, when mesmerised by her sister, while singing a song, suddenly opened her eyes for a moment, then closed them again, and nearly went into convulsions, in consequence of the kitten having walked past her and touched her foot. She *now*, I understand, has taken a dislike to cats when she is awake.

She affirmed that she could see distinctly persons in the street, and in the neighbouring houses and shops, and she certainly proved the correctness of her statement to the satisfaction of all her visitors. The room in which she was mesmerised is at the *back* of the house, at the extremity of a passage leading to the street-door, with a window looking into the garden. The street runs in front of the house, and there is a grocer's shop next door. She in many instances described the passengers passing in the street, and the customers who went into the shop, stating their sex, age, dress, and the articles they were purchasing, with perfect correctness; mentioned in what rooms the neighbours were sitting, and what they were doing; spoke of children sitting on the door-step; at every knock at the street door she mentioned the names of the parties knocking, if she knew them; if not, she described their appearance. In some of these instances guesswork was *impossible;* in others, though in a single instance a lucky guess may have been made, yet the continual recurrence, day after day, of similar cases, precludes the possibility of deception.

This faculty was exercised with considerable effort, and if I urged her to "look" too long at a time, violent headache ensued. Her lucidity was affected by the presence of people she disliked, or strangers who expressed doubts of her truthfulness. She was deaf to all but the Mesmeriser, except those with whom she was put *en rapport;* she could, however, hear any one who whispered at the epigastrium, which is also the case with her sister. Dr. Engledue, in the last number of the *Zoist*, states this often occurs.

She was in the habit of drinking a good deal of mesmerised water during the sleep, and refused to eat or drink any thing that had not been mesmerised by me. Though I had not seen her sister for six months, she went to sleep immediately on drinking a glass of mesmerised water. When they were both asleep, they could hear each other; but the moment one awoke, the *rapport* ceased. They were exceedingly jealous of each other, and quarrelled which should have the most of my attention.

The effects in the two sisters are very different. Annie shews the phenomena of traction more beautifully than any case I have seen or read of; her cerebral organs can be excited either with or without contact; she evinces introvision, medical lucidity, and insensibility to pain. Susan does not obey tractive passes; will not allow me to place a finger on her head, saying it made her feel as though a fork were running into her brain; can see neither her own internal organization, nor that of others, and feels pain as acutely as when awake. They have both community of taste and smell with me, either when I myself am in immediate contact with them, or when I hold the hand of a person with whom they are *en rapport*. Annie always hears me, even when she is being mesmerised by another person, and will allow me to experiment on her, and to *will* her to wake. Susan, when awake, will obey commands I have given her when asleep. Though she has no recollection of what has taken place during the coma, when the appointed time comes, she feels an irresistible impulse to do what I ordered her. When about to leave Bristol, I, for the sake of experiment, prepared some mesmerised water, directing her to take a glass of it daily. She has done so, and immediately after drinking it she falls asleep, and they can only make her hear by whispering at the epigastrium. Her sister Annie has since mesmerised her. She can will her to sleep and to wake, and produces the same results as I did.

I also mesmerised a gentleman who had been deaf for two years. An improvement was manifested after the second or third sitting, and he daily heard better and better. Sleep was not induced till about the 20th sitting. I left him nearly cured, but advised his continuing the treatment a little while longer, under another Mesmeriser. I have not yet heard the result.

Tudor Hall, Hawkhurst, Kent, J. W. RYLAND.
August 9th, 1845.

BATH.—(*From a Correspondent.*)—CASES OF ELIZABETH NEWPORT AND HANNAH TUCKER.—The following cases will no doubt be of interest to many of your readers, as confirmatory of some of the most remarkable phenomena of Mesmerism.

Elizabeth Newport, aged twenty-four, and Hannah Tucker, aged twenty, are two servants in the house of Mr. Wallbridge, chemist, of Wells, Somersetshire, at whose house I lodge when professional duties call me to that city. I have frequently mesmerised each of these persons, who are now so exceedingly susceptible that a single pass of the hand, or even a look at a considerable distance of a quarter of a minute's duration, is sufficient to send them into the deepest mesmeric sleep. The

former of these two was on her first entering into service at this place so delicate in health as to be almost wholly incapable of fulfilling her duties. She had a continual pain at her side, and her whole appearance bespoke great delicacy of constitution. Since I first mesmerised her, now four months since, she has wonderfully improved in health, so much so that she is not like the same person, and she and her mistress attribute this extraordinary restoration of health entirely to the influence of Mesmerism.

During the last week I have tried a great variety of experiments upon them in their waking state. I have been enabled to catalepse their arms by willing it only, and have in this way catalepsed the two back to back, and whilst embracing each other; by merely willing it also, and without giving any previous intimation of my intention, I have deprived them *seriatim* of *sight*, *hearing*, *smell*, and *speech*; these, one after the other, and all together, and I restored each sense as I willed it. When I took away the sight, the eyes remained wide open, and did not in the slightest degree blink by the application close to them of a strong light; when deprived of the sense of smelling, the strongest smelling salts were applied without producing the least effect; when deprived of speech, but not of hearing, they shook their heads or nodded, in answer to questions put to them, and when deprived of all the senses together, they were perfectly insensible to every thing. These experiments I performed at a distance from them by merely making up my mind to what I desired, and concentrating my thoughts and gaze upon the individuals; but I found, by making passes over the organs of these senses, and at the same time willing the condition into which I desired to put the parties, that the effect was produced more rapidly, the result being in the latter case *instantaneous*. I found that, by desiring them to open their mouths, and then making a few passes across the lower jaw, it was perfectly catalepsed, and that the mouth remained wide open, and that the tongue could be catalepsed in the same way, and be made to stand out of the mouth.

The whole of these experiments were performed whilst the females were perfectly awake, and were thoroughly tested by many parties present. I have attempted similar experiments on others, and with various results; but I invariably find that their success depends upon the mesmeric susceptibility of the patient.

Ivy Cottage, Bath, July 13, 1845. T. W. S.

CURE OF CONSUMPTION.—(*From a Correspondent.*)—I beg to forward you the following case for insertion in THE CRITIC. Louisa Parsons, a girl about eighteen years of age, was in the employment of Mr. White, of Edgar-buildings, Bath. She had a severe pain in her left side, across her shoulders, and in her chest, accompanied with a cough. She was very thin and pale; the lower part of her nails was quite black; her appetite had left her, and she could obtain no sleep. She was obliged to leave Mr. White's, and her pains were so severe, that her mother was frequently compelled to hold her in her chair to prevent her throwing herself upon the ground. Her general debility was such, that she could with difficulty walk across her room; and her relations, and also her medical attendant (a gentleman of considerable ability), considered her to be in the last stage of a consumption, and not likely to survive many weeks. As I had cured her sister of a deafness of eighteen years' standing, her mother, after much persuasion, prevailed upon her to allow me to mesmerise her; and the first sitting lasted about twenty minutes, during which, although she did not go into the sleep, she felt the pain across her shoulders entirely leave her, and she slept better that night than she had done for some time past. At the second sitting, which was in two days' time, she felt the pain in her side and chest much relieved; and after I had mesmerised her a third time, she felt entirely free from any pain. Her nails are restored to their original state; she looks much more healthy than for a long period of time—can eat, drink, and sleep well, and is considered by her relations and friends to be perfectly cured. She has returned to Mr. White's, where she works from about eight in the morning till about eight in the evening. S. D. SAUNDERS.

Ivy Cottage, Lyncombe-hill, Bath.

TO THE EDITOR OF THE CRITIC.

SIR,—Taking a deep interest in the inquiries now pursued in many quarters into the truth and reality of the facts and marvels of Mesmerism, to which you devote a portion of your excellent journal, will you permit me to suggest to you, and through you to the members of the Mesmeric Society, the great utility of collecting in a half-yearly or yearly volume the various letters and papers scattered through your own journal and the magazines, medical journals, and reviews which may be considered worthy of preservation as a record of the discoveries, views, and opinions connected with this curious subject? It would be superfluous to dilate on the advantages which would result from thus bringing together all the facts, proofs, and counterproofs of the advocates and opponents of Mesmerism, thereby enabling many zealous inquirers like myself, who cannot afford to subscribe to all the periodicals which encourage the discussion of Mesmerism, to watch the progress of discovery, and to compare the facts and phenomena which have come under their own observation with those reported by others. For several years past the *Dublin University Magazine* has occasionally published some very clever articles on Mesmerism. *Blackwood's* and *Fraser's* magazines also contain some well-written papers, and I have seen notices of other papers in the *Medical Gazette*, *Lancet*, and *Medical Times*, which I have not had the means of referring to. A record or manual such as I have here suggested would undoubtedly meet a sufficient sale to remunerate the publisher, and would thus preserve many curious and valuable facts which, but for some such method, would soon be lost sight of, and perish with the perishable sheets of the ephemeræ in which they appear. It may be said, perhaps, that the *Zoist* is a *substantial* and widely-circulated journal entirely devoted to Mesmerism, in which are preserved the most important cases of mesmeric phenomena; but it cannot embrace the numerous and apparently well-authenticated cases which continue to be scattered through the daily issues of the provincial press, and in the columns of the various literary and scientific journals. Should it ever be in the contemplation of the Mesmeric Society to publish the annals of their proceedings, my idea of *concentration* would be fully answered by their devoting a portion of their volume to a republication of the letters and papers on Mesmerism which (with the leave of the writers or the proprietors of the periodicals in which they have appeared) they may deem deserving of a place in their transactions. Wishing them all success, and expressing the obligation which, in common with all lovers of science, I feel we are under to THE CRITIC,

I remain, Sir,

Your very obedient Servant,

Dundee, August 11. A SUBSCRIBER.

[Our correspondent's suggestion is a valuable one. There can be no doubt that a well-selected digest of the facts and arguments, the opinions and discussions, for and against Mesmerism, and the separate phenomena it offers, would materially further the interests of the study, by removing the difficulties which now obstruct it, and carrying home conviction of the existence and utility of this powerful and mysterious agent to the minds of all rational and dispassionate inquirers. The difficulty lies in the hazard of loss in such a speculation, and the paucity of men, capable of effectually performing the task, who have leisure to undertake it. The society for the investigation of Mesmerism up to this time have had no intention of publishing collected minutes of their proceedings; it will, however, be a question worth entertaining on their meeting after the vacation, whether it would not be advisable to do so. Should they decide in the affirmative, extend their number, and admit of *subscriptions*, we see no reason why our correspondent's suggestion should not be adopted.—ED. CRITIC.]

MESMERISM.—On Wednesday week Dr. Storer gave a private *séance* at his rooms, 29, Park-street, for the purpose of exhibiting some of the phenomena of Mesmerism. About thirty ladies and gentlemen attended. Dr. Storer first introduced a respectable young woman from Bath, who he stated had been restored from a bad state of health, in which she had ruptured a blood-vessel, by the aid of Mesmerism. The young woman confirmed this statement herself, and added that she was first operated upon by Mr. Sanders, barrister, of the Western Circuit, by whom she was introduced to the doctor. In her case the comatose and sleep-waking states were shewn, with the cataleptic condition, and also phreno-mesmerism. The wife of a mechanic was then acted upon, and exhibited the phenomena of attraction and repulsion. A servant girl (who was accompanied by her mistress), whose tooth was recently extracted while in the mesmeric state, was also operated upon, as was a lady who attended as a visitor.—*Bristol Mirror.*

BOOKSELLERS' CIRCULAR.

LITERARY INTELLIGENCE.

CONTINENTAL GOSSIP.—We hear, from Rome, that the Pope has issued an order opening to the public, for the future, the department of printed books in the library of the Vatican, and for the preparation of a catalogue of its contents for their use. This measure has given great satisfaction to the Italian *savans*; for, although the collection in question consists only of some 35,000 printed volumes, there are amongst them many

rare and some unique works, and a great number contain marginal notes by celebrated men.—The Italians have been endeavouring to pay a debt of gratitude to the historian Sismondi, by striking a medal to his memory. It has been engraved by Antonio Fabris, of Udine, a distinguished artist in that style, and bears an inscription by the tragic writer Niccolini. We are assured that both the artist and the poet have done full justice to the subject; and the eagerness with which the subscription has been filled up sufficiently proves the reverence of the people of Italy for a man who seemed proud to derive his descent from their country, and who has worked with so much zeal and industry in the wide field of its history.—Signor Vincenzo Devit, a distinguished professor of the College of Padua, has, it is said, made a discovery of great interest in the field of classical literature. In an ancient manuscript in the library of that establishment he has found a set of unpublished maxims by Varro, the illustrious contemporary of Cæsar and Augustus, and friend and client of Cicero.—We may mention, too, on the faith of a letter from St. Petersburgh, that Dr. Posselt, Professor of History at the University of Dorpat, being in the capital, has discovered, among the archives of the empire, eleven autograph letters from Leibnitz to Peter the First. They are written some in Latin, and some in German—are all relating to matters of science, and seem to indicate the existence of a continuous correspondence between the illustrious philosopher and the great Czar. They are about to be published.—*Athenæum.*

The papers announce a discovery, interesting to antiquarians, which has taken place in the neighbourhood of Meudon. In repairing the highway that leads from the château, in the direction of Bellevue, three huge Druidic stones have been exposed, surrounded by a quantity of human bones, two hatchets of *silex*, very sharp, and some tusks of the wild boar. According to Dr. Eugène Robert, this has been an ancient dolmen, similar to many that he has visited in Scandinavia; which, judging by the fragments of pottery found among and around its wreck, has been buried; after haring been visited (and probably thrown down) by the Romans. The site of this monument, on the slope of a hill, overlooking an immense plain covered with woods and marshes, and commanding the windings of a great river, is such as the Druids loved. The central stone, which has formerly rested horizontally on the other two, placed upright, has, on what would then be its outer or upper surface, an excavation, in the form of a horse-shoe; which seems to have served for human sacrifices, as in other cases of similar stones found in Brittany and elsewhere. The bones indicate a number of from forty to fifty victims—for the most part adult. The mayor of Meudon has written to M. de Montalivet, Intendant of the Civil List, to suggest that the avenue, which is a dependency of the château, should be subjected to a more extensive excavation. We may add, that excavations making in the department of the Nièvre, in France, have led to the discovery of many Gallo-Roman antiquities, of archæological interest—amongst the most considerable of which are an antique temple and a theatre of vast dimensions. Other objects of art, such as statuettes, medals, vases, tombs, &c. have been found in the same neighbourhood, in such abundance as to lead to the supposition that this locality has been the centre of a considerable population and an advanced civilization, under the Romans.

The Archæographic Commission, attached to the Ministry of Public Instruction, in Russia, is engaged in preparing for publication two important works: *A Collection of Authentic Unpublished Documents relating to the History of Western Russia*, and *A collection of Memoirs on the Ancient History of Russia, drawn from Foreign Sources.*

INDIAN LAW.—We understand that Mr. William Morley, of the Middle Temple, has nearly completed an Analytical Digest of all the reported cases decided in the Queen's and Company's courts in India, and on appeal to the Privy Council here. A work of this kind has long been a desideratum; and the decisions of Sir E. West, Sir J. Macintosh, Sir A. Anstruther, and Sir Erskine Perry, never before published, must add much to its value and authority. An Appendix, containing a collection of the *dicta* of the Hindu and Muhammedan law officers attached to the different courts, is also announced.

In the Vice-Chancellor's Court, on Tuesday, application was made on behalf of Mr. Charles Mathews to restrain Mr. Webster, the lessee of the Haymarket Theatre, from performing the piece called *Used Up*. According to Mr. Mathews's statement, the piece was translated from the French *L'Homme Blasé*, by Mr. Dion Bourcicault, whose version was called *Bored to Death*. It was altered by Mr. Mathews; who stipulated, that if successful, it should be announced in the bills for about sixty nights and until the 22nd June, as being "by Mr. Mathews." On the 22nd, it was announced for the seventy-eighth time as the work of "D. Bourcicault, Esq." The affidavits on behalf of Mr. Webster gave a different turn to the transaction. They stated that the suggestion of adapting *L'Homme Blasé* was first made to Mr. Webster by a lady at Liverpool, who pointed out the character of Nantouillet as especially suited to him. He procured a copy of the French play, and gave it to Mr. Bourcicault for translation. But he had a conversation on the subject with Mr. Mathews, who said he had set his heart upon taking himself the character of Nantouillet; and, at the particular wish of Mr. Mathews, Mr. Webster consented that the character of Coldstream, the English representative of Nantouillet, should be performed by Mr. Mathews, to whom the piece was given for alteration. The alterations and additions made by him, however, were very trifling and inconsiderable, and in fact only those which it is common to allow a performer to make in the dialogue so far as relates to the character he is himself to play. Mr. Mathews's name was introduced as the author of the piece, at his request, by the permission of Mr. Bourcicault, who was not anxious to appear, and, ineed, considered it derogatory to the character of a dramatic author to appear as a mere adapter or translator of foreign productions for the English stage. The piece was registered as the property of the defendant; and it has been played in the provincial towns without any demand having been made by the plaintiff for payment in respect of the copyright. The announcement of his authorship was first made during Mr. Webster's absence from town, and he had not thought it worth while to correct it. Vice-Chancellor Wigram observed that the case was left in great doubt as to the extent to which the alterations made by Mr. Mathews had gone. If the defendant, having procured a translation of a French play, of which he could make no use, took it to the plaintiff, and gave it to him as materials out of which to write a new play, the production of the plaintiff might, to a greater or less degree, entitle him to the rights of an author over his own composition. If the original translation was a work which the defendant thought *could* be used in his theatre, and he desired the plaintiff merely to look it over with a view to any slight emendations, it would be difficult to say that such a circumstance could entitle him to claim the work, or an integral part of the work, as his own. The injunction must be refused; but he would direct the motion to stand over, with liberty to the plaintiff to bring an action, and both parties might apply to this Court after the trial at law.

SUBSCRIPTION FOR THE FAMILY OF T. HOOD.—We expected that this subscription would have mounted higher than the thousand pounds now advertised; but the classes on whose behalf his pen and genius were devoted are too poor to shew their gratitude to their benefactor; or perhaps the difficulty of finding means to enable them to evince it is too great to be surmounted. The pounds of the few admirers of worth and talent may readily be obtained; but the pence of the thousands of fellow-creatures, who would rejoice in contributing their mite in thankfulness to the great popular leader of their cause, cannot be collected. It is a pity; for such would be the noblest memorial.—*Literary Gazette.*

REGISTER OF NEW PUBLICATIONS,

From August 16 to August 23.

NOTICE TO BOOKSELLERS.

A Register lies at THE CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* THE CRITIC, *and no charge will be made either for registration or for publication in* THE CRITIC. *Particulars forwarded* by letter *will be duly inserted.*

LIST OF NEW BOOKS.

Architecture and Embellishment of the Temple Church, 30 coloured engravings, 4to. 2*l.* 2*s.*, large paper, 3*l.* 3*s.* hf.-morocco.—Arnold's (Rev. C.) Boy's Arithmetic, Part II. 12mo. 3*s.* 6*d.* cl.

Balfour's (J. O. esq.) Sketch of New South Wales, post 8vo. 6*s.* cl.—Banfield's (H.) Four Lectures on Organization of Industry, 8vo. 4*s.* cl.—Barnes's Notes on Isaiah, 8vo. 15*s.* cl.—Bickersteth's Promised Glory of the Church of Christ, 2nd edit. Vol. XL. of Christian Family Library, fc. 8vo. 5*s.* cl.—Black's Tourist's Memorial of Scotland, a Series of 20 Views, royal 8vo. 5*s.* swd.—Bunyan's Pilgrim's Progress, a Poetical Version, illustrated, 12mo. 4*s.* 6*d.* cl., 8vo. 7*s.* 6*d.* cl.

Christian Man a Contented Man, by Rev. Robert Sanderson, D.D. 18mo. 1*s.* 6*d.* swd.—Chart of Anglican Church Ornaments, col. 4*s.* 6*d.* in case.—Christ, our Rest, by the Rev. D. Pitcairn, 2nd edit. post 8vo. 7*s.* 6*d.* cl.—Carter's (R.) Psalter. 1 vol. royal 8vo. 1*l.* 1*s.* cl., 1*l.* 2*s.* cl. gilt edges.

Dark River, an allegory, by the Rev. Edward Munro, 12mo. 2*s.* 6*d.* cl.

Epodes, Satires, and Epistles of Horace, translated by the late Rev. F. Howes, fc. 8vo. 6*s.* cl.

Foreign Library, Vol. XVI. "History of the Eighteenth Century," by F. C. Schlosser, Vol. VI. 8vo. 14*s* cl.

Gardener's (John) Modern Abacus, or Pounds, Shillings, and Pence Calculator, 12mo. 2s. 6d. cl.—Gift of Love and Friendship, 32mo. 1s. 6d. cl. gilt.

Harrison's (Rev. W.) Grammar of the Greek Language, 2nd edit. 12mo. 4s. cl.—Hints on the Nature and Management of Duns, 1 vol. post 8vo. 5s. cl.—History of Ireland, by John D'Alton, esq. 2 vols. 8vo. 1*l.* cl. lettered.—Howes's (T. H.) Lessons on the Globes, on a Plan entirely New, new edit. 12mo. 6s. cl.

Jackson's View of the Formation and Discipline of Armies, demy 8vo. 3rd edit. 12s. cl.—Jousse's Pianoforte Preceptor, revised and modernized, by H. West, R.A. of Music, oblong 4to. 2s. 6d. swd.

Letters of the Marchioness Broglio Solari, fc. 8vo. 5s. cl.—Laing's (S. esq.) Notes on the Rise, Progress, &c. of the Schism from the Church of Rome, called the German Catholic Church, fc. 5s. cl.—Levite (The); or, Scenes Two Hundred Years Ago, by Elizabeth Murphy, 3 vols. royal 12mo. 1*l.* 11s. 6d. bds.—Little Bo-peep, and other Stories in Rhymes, with Pictures, by F. L. M. small 4to. plain 2s. 6d., coloured 4s. 6d.

Mill's (James) Sportsman's Library, 8vo. 16s. cl.—Miscellanies, Biographical and Critical, by W. C. Prescott, esq. 8vo. 14s. cl.—M'Crie's (Thomas, D.D.) Vindication of the Covenanters, 4th edit. fc. 8vo. 3s. cl.—Moylan's (D. C. esq.) Law of Registration of Voters at Parliamentary Elections, &c. 12mo. 4s. 6d. bds.

New Zealand and its Aborigines, by W. Brown, post 8vo. 8s. cl.

Only a Fidler and O. T. translated from Danish, by Mary Howitt, 3 vols. post 8vo. 1*l.* 11s. 6d. bds.

Past and Present, by Thomas Carlyle, 2nd edit. post 8vo. 10s. 6d. cl.—Political Dictionary, Vol. I. (Knight's Library of Reference), 12mo. 15s. cl.—Practical Cook, English and French, by J. Bregion and Anne Miller, fc. 7s. 6d. cl.

Reminiscences of the Coronation, &c. by the author of "The Fortress," 1 vol. post 8vo. 12s. cl.—Rome, its Ecclesiastical and Social Life, 1 vol. post 8vo. 10s. 6d. cl.

Scott's (W. M. A.) Plane Trigonometry and Mensuration; for the Use of the Royal Military College, Sandhurst, 8vo. 9s. 6d. bd.—Story of a Royal Favourite, by Mrs. Gore, 3 vols. post 8vo. 31s. 6d. bds.

Text Book to Heresy; or, the Evils of Tractarianism and Puritanism compared, 12mo. 1s 6d. cl. gilt.

Watts's Illustrated Knitting, &c. new edit. 1s. cl.—Wright's Improved Game Book, oblong 4to. for One Year, 5s.; Two Years, 10s.; Three Years, 15s. cl.

GLEANINGS.

ORIGINAL AND SELECT.

ROYAL POLYTECHNIC INSTITUTION.—Among the numerous pictures and engravings which are exhibited in the gallery of the Royal Polytechnic Institution, we observed a portrait of his Grace the Duke of Wellington, engraved from the celebrated daguerreotype portrait. The engraving is a speaking likeness, and proves the facility and correctness with which artists can copy portraits done by the daguerreotype, a fact at one time rather doubtful. The engraver is Mr. Ryall, who has added new lustre to his name by this work.

THE LIBRARY OF THE LATE DUKE OF SUSSEX.—The sale of the sixth portion of the library of the late Duke of Sussex has been concluded at Messrs. Evans's rooms in New Bond-street, it being the residue of his rare and extensive collection of books. Among those sold on the last day, the following were worthy of especial notice:—Woburn Salictum Woburnese, or a Catalogue of Willows, indigenous and foreign, in the collection of the Duke of Bedford, at Woburn Abbey, only fifty copies printed for presentation, sold for 10*l.* Pinetum Wobernense, catalogue of coniferous plants at Woburn Abbey, 100 copies printed for presentation, with an autograph letter from the Duke of Bedford to the Duke of Sussex, sold for 13*l.* The Philosophical Transactions of the Royal Society of London, &c., from 1665 to 1842, in 115 volumes, sold for 20*l.* 10s. A Collection of remarkable Trials for Adultery sold for 2*l.* 7s. Reginald Scot's Discovery of Witchcraft, 1665, &c. sold for 1*l.* 10s. Schedel (H.) Chronicon Nuremburgense, with above 1,000 woodcuts by Wolgemuth, the master of Albert Durer, printed at Nuremburg in 1493, sold for three guineas. The Ordnance Survey of English Counties, on a scale of one inch to a mile, sold for 14*l.* 5s. Chester Mysteries, De Dilusio Noe, De Occisione Innocentum, presented to the Roxburghe Club by J. H. Markland, Esq., sold for 2*l.* 6s. Free Thoughts on Religion, the Church, and National Happiness, by the author of the Fable of the Bees, with MS. notes by the Duke of Sussex, sold for 1*l.* 18s. The number of days consumed in the disposal of this extensive collection of books was 62, and the total amount produced by the sale 19,149*l.* 1s. From this it will be seen that the executors have gained upwards of 3,000*l.* by the government not accepting their offer. The collection cost the late illustrious Prince between 15,000*l.* and 16,000*l.*; but then it must be taken into consideration that a great addition was made to the library by the number of books presented to him being added to those he purchased.

A letter from Algiers contains the following:—"I have just witnessed a ceremony very curious to European eyes—the return to their families of the caravan of pilgrims to Mecca. Their approach had been announced on the previous day, and the whole Arab population went out to meet them, some on horseback, others on foot, with their wives and children. Some of them carried flags of various colours, and many of them kept firing off their guns, without which there can be no fête with this singular people. I joined the *cortége*, and, after proceeding for some time in the midst of this picturesque group, I perceived the looked-for travellers approaching. The whole party, with whom I was, commenced singing, or rather shouting in chorus—"O, pilgrims, in the House of God have you seen the Prophet of the Most High?" "We have seen him, and we left him at Mecca; he there prays, fasts, performs his ablutions, and reads the holy books," was the reply. After which the party hastened to salute them, to kiss their garments, and to offer them hospitality. Happy was he who could entertain them, in order to draw down on his tent the blessings of the All Powerful. Each of the pilgrims had brought from Mecca small chaplets, which they distributed to their relations and friends, and also phials filled with the water of Birzemzen, a fountain in the holy house. This water is kept to sprinkle over the bodies of the dead. The Arabs consider the journey to be attended with much danger, as the road is infested with robbers, and the expedition occupies from twelve to fifteen months, during which time they have innumerable hardships to undergo, the endurance of which they, however, hope will be the means of obtaining pardon for their sins."

ST. PETER'S AT ROME.—We learn from *Galignani* that the dome of this celebrated edifice has excited serious alarm. For a long time past, the cupola has been cracked in many places, and ten arches of iron, weighing 60,000 kilogrammes, have been placed so as to prevent its fall. It has just been discovered that the lanternino, above which rises the cross that crowns the edifice, is cracked through and through. The numerous lightning conductors, which had been erected by Pope Pius VII. for the protection of the edifice, remove all idea of this mischief having been the effect of a thunder-storm. The lanternino is being surrounded by heavy iron chains, to prevent the cracks from extending.

ADVERTISEMENTS.

The following is the moderate scale of charges for Advertisement adopted by THE CRITIC.

For 6 lines and under..... 5s.
For every three lines above ..... 1s.

The volumes of THE CRITIC *neatly half-bound, as completed, for 4s. 6d. each, if the numbers be forwarded to the office. The stamped edition may be sent by post with the ends open, and a letter of advice should contain directions how it is to be returned.*

A portfolio, on a novel and convenient plan, for preserving the numbers of the current volume of THE CRITIC *may be had at the office, or by order, of any bookseller in the country, price 4s. 6d.*

THE CRITIC *may also be had in monthly parts, sewed in a wrapper price 1s. 6d. each.*

To Readers and Correspondents.

C. C. Margate-street, Dover.—*Thanks for the contribution, for which we hope to find room in our next number.*

E. M. R.—*The verses forwarded, though not without merit, do not reach the standard by which we test contributions for this journal.*

R. A. (Maryport).—*The remarks are just and appropriate; but as they throw no new light on the subject, and our columns are already overset, we cannot, without inconvenience, insert the communication.*

J. W. (Monmouth).—*We really are not aware of any book we can recommend on the subject. Mrs. Ellis's perhaps is among the best.*

A. B. G. (Glasgow).—*Our correspondent had better apply to some respectable librarian for an answer to his queries. If he had taken the trouble to look into any respectable edition of Milton, which includes a notice of the poet's life, he would have found what he wanted in less time than it took him to pen to us a needless letter.*

J. B. (York).—*The circumstance alluded to was an accidental oversight of the printer, one that will probably never occur again.*

H. B. (St. Lucia).—*The lines forwarded shall be used; they arrived too late to be available for this number.*

ERRATA.—"Literary Gossip in Paris," Aug. 9, for *pièce de chère* read *pièce déchue.*——In "Journal of French Literature," p. 319, col. 1, for *nerve* read *verve.*

THE CRITIC,
And Journal of Literature.

SATURDAY, AUGUST 30, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

JOURNAL OF ENGLISH LITERATURE.

SCIENCE.

Manual of Astronomy: a Popular Treatise on Theoretical and Practical Astronomy. By JOHN DREW. 8vo. pp. 343. London, 1845. Darton and Co.

THE science of Astronomy, though the most sublime in its disclosures, and the most infallible in its results; though tempting the mind to inquiry by the most beautiful, curious, and interesting of problems; has excited less general attention, not merely in this country, but throughout the world, than so grand a subject for contemplation has deserved. So great is the popular ignorance of this science, that, even among the educated classes, it is a fact—gainsay it who will—that a majority of the persons whom you shall ask to describe the difference in the appearance and motion of a planet from those of a fixed star, will be found unable to give a satisfactory answer. With the wonderful revelations of the telescope—among the sublimest, and, certainly, the vastest hitherto vouchsafed to man—they are mostly unacquainted; nor is their intellect enlarged by a familiarity with the ingenious theories which philosophers have propounded in explanation of the phenomena of the universe, or the curious and intricate processes by which a knowledge of the harmonious laws which govern it have been obtained.

That much of this ignorance is attributable to the utilitarian spirit which has so long circumscribed and starved the intellect, is, we fear, too plain. Excepting, so far as it subserves the purposes of navigation, the science of astronomy ministers not at all to the absorbing and debasing lust for gain; therefore has it been neglected, while other arts and sciences, because they bear more directly on this the chief aim of life, have been sedulously cultivated, though, in an intellectual point of view, of far inferior worth.

We hope, and indeed believe, that the worst of this has passed. The young mind of the present day is more liberal and clear-sighted—it sees something better than money; it looks to the soul rather than to the body; and, sooner or later, will give to every branch of human knowledge attention in proportion to its value. A familiarity with astronomy will then be esteemed indispensable to every one;—a consummation greatly to be wished, since there is no science open to human attainment which so tends to enlarge the soul, or that lays before us such irrefragable testimonies of the power, wisdom, and goodness of the Almighty.

The work which has given occasion for these remarks is well adapted to accelerate this desirable end. The intention of its author has been to lay before the student a clear exposition of the science of astronomy, as it now stands. In order to affect this, he has classified his subject into four parts. The first treats of our Position in the Universe with relation to other Bodies; the second of Physical Astronomy, the Attraction of Gravity, Six laws of Matter and Motion, Perturbation, and Variations, &c.; the third is devoted to Descriptive Astronomy, embracing the appearances of the Sun, Moon, and Planetary Bodies, which make up the Solar System, with Expositions of the Phenomena of the Seasons, Tides, &c.; and the fourth is devoted to Practical Astronomy, comprehending Instruments used for the purposes of Observation and Discovery, with Rules for their Application and Use. The author has again subdivided these parts methodically; he has set forth all the facts hitherto known, and has given, in the absence of positive information on certain points, the hypotheses that have been framed by the soundest and most learned astronomers to explain them. The text is illustrated by diagrams, as simple as the problems to be elucidated permits, and is written in a style as little technical as possible. As the season is now approaching when may be observed that interesting phenomenon which at Spring-tide and Autumn is visible—namely *the Zodiacal light*, we extract our author's description of it.

A singular phenomenon connected with the sun may sometimes be remarked, when the sun is in the equinoxes, a short time before sunrise or after sunset: a streak of light, somewhat resembling the tail of a comet, extends for some distance along the zodiac (whence it is termed the ZODIACAL LIGHT), or rather, parallel to the region of the solar equator, which does not quite coincide with the ecliptic. The faintest stars may be seen through it, as they may be through the matter composing a comet. The form of this nebulous appearance is that of a cone, having the diameter of the sun for its base. It does not appear equally bright at all times when it is seen; indeed, many years it is altogether invisible, especially in our latitude. It would appear to have some connection with the solar atmosphere; but that this atmosphere should extend beyond the boundary of the orbit of Venus, seems unaccountable. Sir John Herschel's opinion is, "that this phenomenon may be no other than the denser part of that medium which, as we have reason to believe, resists the motions of comets, loaded, perhaps, with the actual materials of the tails of millions of these bodies, of which they have been stripped in their perihelion passages, and which may be slowly subsiding into the sun."

The following account of the appearance of the zodiacal light within the tropics, from the pen of a gentleman, whose authority as an observer stands very high, will be gratifying to those who have had an opportunity of witnessing it under equally favourable circumstances:—"At first, it seems a faint, whitish, zone of light, less intense than the milky way, with ill-defined borders, scarcely to be distinguished from the twilight; being then but little elevated, and its figure nearly agreeing with that of a spheroid seen in profile. As it rises above the horizon, it becomes brighter and larger, till it resembles a lenticular beam of light, somewhat analagous to the tail of a comet, rounded at the vertex, with its base towards the sun, and its axis in the direction of the zodiac."

The zodiacal light has been seen to advantage while this work has been passing through the press, in the second week of March 1845, and again on March 28th, and following evenings. It extended, on these occasions, about as far as the Pleiades from the sun's place. By turning the head a little aside when viewing it, so that its rays fell upon a part of the retina of the more sensitive to light than that exactly opposite the pupil, the author could distinctly make out the form described in the above quotation.

On a clear night, when the reader, looking heavenwards, has turned his eyes

> "From star to star,
> From world to luminous world as far
> As the universe spreads its flaming wall,"

the thought must surely have arisen,—"Are not these countless myriads of stars, with their planets inhabited; and if so, by what kind of beings?" Listen to the reply—partly speculative partly inferential—of our author.

Setting aside all imaginative views, and confining ourselves simply to acknowledged facts, let us see whether sound philosophy does not enable us to supply an answer to this inquiry. To suppose that God has placed those mighty orbs in the heavens merely to be viewed by us, the inhabitants of one small world, would derogate from the perfections of Him who maketh nothing in vain. As far as investigations into nature have extended, we find the whole material world teeming with life; a drop of water may contain its hundreds—the air, the verdant fields their thousands of living creatures, delighting in existence; can we, then, suppose that the planetary globes are "cities of the dead;" that there the voice of joy—the piercing vision—the brightness of intelligence—are things unknown?

The discoveries of science are opposed to this conclusion. The nature of light—whether derived from our sun, the planets, or the fixed stars—is found to be precisely the same—resolvable, by the prism, into the primary colours. The organs of vision, then, of the inhabitants of the planets must, to a certain extent, we should imagine, be like ours, adapted to the reception of this light. They feel, too, the sun's absence; and hence the all-bountiful Creator has provided those more remote from his influence with attendant satellites, to cheer the darkness of their night. Picture to yourself the beautiful night of the planet Saturn; the dark sky illumined by several moons; some rising, others setting; some full, some crescent-like, appear amidst the starry firmament; his rings, arching the heavens as girdles of light, reflecting the suns rays, and indicating, by the varied appearance of their surface, their own revolution. Imagine this scene, and say whether that planet is the habitation of beings

who, like ourselves, are formed to admire the Creator's works, and to adore Him through them, or whether it is the gloomy retreat of silence and desolation.

Regard, again, the atmospheres of the planets. Reasoning from analogy, we should conclude that the inhabitants of those distant worlds possess powers which, like our own, require renovation by breathing a vital air; that they have the faculty of admiring their landscapes, varied by mountains and valleys in some cases—by the flow of the ocean in others—by the succession of day and night in all. With these discovered points of resemblance to the circumstances in which we are placed, there are, no doubt, others still, and perhaps for ever, hidden from mortal view, which, if known, would confirm the similarity, and exhibit a beautiful congruity in every portion of the created universe.

Much absurd speculation has been employed on the character and physical peculiarities of the inhabitants of the planets, which has tended to render the public mind generally less open to the legitimate deductions of science with regard to them. The severest reasoner must, however, we should think, join in the conclusion, that all the planetary bodies are the abodes of intelligent beings—alive to physical sensations—capable of locomotion—and doubtless gifted with faculties which enable them to contemplate the great Architect of nature through the medium of his works.

With the above extract we must close our notice of a book that gives as succinct and clear a view of astronomy as can be desired; a book we can conscientiously recommend to the student of astronomy, the heads of schools, and to all who desire a knowledge of the grandest and most soul-enlarging of the physical sciences.

The Human Body in Health and Disease. 1845. Edinburgh: Maclachlan, Stewart, and Co. London: Simpkin, Marshall, and Co.

"A SOUND mind in a sound body" is a blessing which all desire to possess. A nervous mind may be enjoyeed by one whose outward man is rapidly wasting; the kernel may be strong and sound when the shell by which it is incrusted is mouldering and decaying, and preparing to return to the dust whence it came. How vigorous was the diction, how glowing were the sentiments, how poetical the thoughts, of NICOLL and WHITE, when they had almost reached the tomb. The lambent fire of poetry still burned, the quickening spark of genius still informed the mind and enlivened the soul. Whether we look to the poet or to the lawyer, to a THOMSON or a FOLLETT, still mind is found to grasp at power and enjoyment when the body has exhausted its strength, and the soul is ready to shake off its mortal coil.

Such being the strength of the mind, it seems reasonable to suppose that nature would have given to man an equally sound tenement wherein it should be lodged. Undoubtedly she has done so; but the rules of society and the habits of individuals have opposed the ordinations of nature and set at naught the laws instinctively implanted in us for the governance of health. The tenor of our conduct is purely artificial; in this we are stubborn, though mistaken materialists. When, perchance, we do meet with an individual who has been trained in the Creator's school, who has taken the wide universe for his instructor, and the still small voice within as a mentor, then we behold the MAN. How different to the wealth-created mammon-worshipping valetudinarian of every-day life!

The ideals of bodily perfection, pictured by novelists and poets, *have* an existence. The very fact of their connection with poesy stamps them as genuine, as truthful. None can mistake their truthfulness when attention is directed to them; yet, alas! few properly comprehend the fact, until it is too late to follow the example.

To create, or rather preserve, strength of body and soundness of mind is the professed object of medicine. Simple in its origin, the science has been abused and reduced from its original and natural state. Plans as diversified, and doctrines as conflicting, as any that troubled the brain of the knight of La Mancha, are put forth for the purpose of attracting attention by quacks and charlatans, regular and irregular. The honest practitioner is deterred from recourse to simple cures, though the most effective, because dogma and fashion step in, and protest that whatever is natural and easy of accomplishment needs not the physician, therefore it cannot be good. Thus is the upright and well-intentioned practitioner obliged to succumb to prejudices, or lose the chance of obtaining a livelihood. It is our author's object to attack this mischief, and he sets about his work in the right way. The first knowledge necessary is of the structure and functions of the different parts of the human frame, and the general economy of the system, without which all directions would be unintelligible. If every person were taught these simple principles of physiology, how much pain and how many doctor's bills they might save themselves. The regulation of diet, bathing, and exercise are sensibly treated, and an intelligible description is given of the most common diseases. Methods of cure are left for physicians to prescribe, the work confining itself to its avowed object of inculcating a knowledge of the human body, and teaching men to use their frames as becomes their delicate structure. Every period of life, from infancy to old age, receives due consideration, and directions are appended for counteracting the peculiar liabilities to disease of each period of life.

As a specimen, we extract a passage treating of an ailment to which all are liable:—

THE COLD.

Hundreds of remedies are daily prescribed for a cold, many of very opposite tendencies; and as it is the nature of the complaint to disappear of its own accord in a few days, every remedy in succession has come in for a share of praise. They may be all summed up, however, in water-gruel or spare living, moderate warmth and perspiration, and one or two gentle purgatives. Some, not satisfied with this method of starving a cold, have maintained that quite an opposite plan of diet and treatment is the proper one. A fit of intoxication has, no doubt, sometimes cured a disagreeable cold, as well as plunging into a cold bath, or a stew and sweat in a warm, crowded room; but these are uncertain and doubtful expedients, and their consequences may, in nine cases out of ten, be hurtful; and, unquestionably, the most rational plan is the starving system. For allaying the tickling cough, an infusion of linseed may be freely taken, or an infusion of quince seeds, or a solution of gum arabic in water: these are preferable to the sweet syrups in general use, as the former may be taken in large quantities, and repeatedly, without loading the stomach.

The author, though anonymous, has performed his task as befits a gentleman, avoiding alike the hollow chicanery and specious trickery of the quack, and the mystic and stilted language of the regular doctor; for these reasons we recommend his volume to the notice of our readers.

VOYAGES AND TRAVELS.

Servia; or, a Residence in Belgrade, and Travels in the Interior, during the years 1843 *and* 1844. By ANDREW A. PATON, Esq. London, 1845. Longmans.

MR. PATON is already, by his work upon the modern Syrians, favourably known to the literary world. He is a man of humour, observation, and address; has apparently the happy faculty of adopting speedily the tone and manners of the people among whom he finds himself, and, as an almost necessary accompaniment to such a faculty, the power of vividly describing the scenes and characters which come under his notice. Hitherto, moreover, he has wisely chosen to open fresh ground, to introduce the English public to localities not generally explored by the traveller, and to direct attention to nations which may hereafter furnish the historical philosopher with abundant materials for inquiry and illustration. Servia has very fitly been called the youngest daughter of the European family. Her people, indeed, trace their origin to sources as remote as those from which any other European race has been derived. Essentially a European race, the feudal system comprised them within the circle of its institutions, and has left upon them an impress more durable than is to be found in countries whose civilization has advanced farther. Centuries of Turkish dominion have failed to efface the distinctive character thus affixed to them, and they are now found animated by the influences which have made the German race the leader of human kind. Even now, the supremacy of the Sultan, established by its antiquity, recognised by the payment of national tribute, and sustained by the presence of Moslem chieftains in their ancient strongholds, seems to be nodding to its fall, and the figure of Servia stands upon the page of history, which is now open and unwritten, in an attitude betokening a spirit which will be content with nothing short of independence.

Servia is emerging from the state of mediæval Europe, unfettered by the necessity of groping her own way to intelligence and civilization, but within the reach of all the stores of enlightenment and knowledge that the nations of Europe have as yet accumulated. Never surely was there a more striking picture presented than this; a people connected in its origin with the most exalted of European nations, rejecting the long bondage of Asiatic government, and grasping at the enlightenment which kindred and more favoured races have gradually achieved.

But this, after all, is the political and philosophical aspect of Servia. The traveller and the tourist jot down in their notebooks other matters of a more lively cast, and to these we must now hasten. Mr. PATON entered Servia from Bulgaria, having sailed from Beyrout through the Ægean. One or two chapters are accordingly devoted to Bulgaria, and the intervening objects of interest between Constantinople and Belgrade. At Roustchouk, the capital of the pashalic of Silistria, he was entertained at dinner by a Bulgarian Christian. After describing the turnings and windings which he had to traverse in search of his entertainer's abode, the first greetings over, our author thus proceeds:—

The elders sat, the youngers stood at a distance; so respectful is youth to age in all this eastern world. The first figure in the former group was the father of our host; the acrid humours of extreme age had crimsoned his eyelids, and his head shook from side to side, as he attempted to rise to salute me, but I held him to his seat. The wife of our host was a model of fragile, delicate beauty. Her nose, mouth, and chin were exquisitely chiselled, and her skin was smooth and white as alabaster; but the eyelid drooped, the eye hung fire, and under each orb the skin was slightly blue, but so blending with the paleness of the rest of the face, as rather to give distinctness to the character of beauty than to detract from the general effect. Her second child hung on her left arm, and a certain graceful negligence in the plaits of her hair and the arrangement of her bosom shewed that the cares of the young mother had superseded the nicety of the coquette.

The only other person in the company worthy of remark was a Frank. His surtout was of cloth of second or third quality, but profusely braided. His stock appeared to strangle him, and a diamond breast-pin was stuck in a shirt of texture one degree removed from sail-cloth. His blood, as I afterwards learned, was so crossed by Greek, Isinsar, and Wallachian varieties, that it would have puzzled the united genealogists of Europe to tell his breed; and his language was a mangled subdivision of that dialect which passes for French in the fashionable centres of the Grecaille.

Exquisite.—"Quangt êtes vous venie, Monsieur?"

Author.—"Il y a huit jours."

Exquisite (looking at a large ring on his *fore*-finger).—"Ce sont de bons diables dans ce paysci, mais out est un po barbare."

"Assez barbare," said I, as I saw that the exquisite's nails were in the deepest possible mourning.

Exquisite.—"Avez vouz éte à Boukarest?"

Author.—"Non—pas encore."

Exquisite.—"Ah je wous assire que Boukarest est maintenant comme Paris et Londres."

Author.—"Avez-vous vu Paris et Londres?"

Exquisite.—"Non; mais Boukarest vaut cent fois Galatz et Braila."

During this colloquy, the gipsy music was playing; the first fiddle was really not bad; and the nonchalant rogue humour of his countenance did not belie his alliance to that large family which has produced "so many blackguards, but never a single blockhead."

Dinner was now announced. F——'s wife, relieved of her child, acted as first waitress. The fare consisted mostly of varieties of fowl, with a pilaff of rice, in the Turkish manner, all decidedly good; but the wine rather sweet and muddy. When I asked for a glass of water, it was handed me in a little bowl of silver, which mine hostess had just dashed into a jar of filtered lymph. Dinner concluded, the party rose, each crossing himself, and reciting a short formula of prayer; meanwhile, a youthful relation of the house stood with the washing-basin and soap-turret poised on his left hand, while with the right he poured on my hands water from a slender-spouted tin ewer. Behind him stood the hostess holding a clean towel with a tiny web of silver thread running across its extremities, and on my right stood the ex-diners with sleeves tucked up, all in a row, waiting their turn at the wash-hand basin.

It will be observed, that Mr. PATON seems to have fallen very naturally into the dinner customs of his entertainers, and indeed throughout his travels he appears un-English-like, never to have found any difficulty in conforming to national habits. Thus he throws off his slippers, squats on the divan, and smokes a *chibouque*, with an air that would apparently impose upon the veriest Turk in the dominions of the Sublime Porte. Nay, he talks of his dress, his food, his employments, and his mode of life, with an air that makes one half suspect that he has foregotten his own nation and become absolute Turk. Not but that he is called upon from time to time to explain matters connected with his country and countrymen, which he always undertakes to do, and sometimes in a most amusing manner. Veracious as his accounts of us are, they appear not at all times to have obtained absolute credit. Witness the following rebuke which he received from a loquacious inhabitant of Semlin:—

But I must return from this digression to the guest of the Adler. On hearing that I was an Englishman, he expressed a wish to hear as much of England as possible, and appeared thunderstruck when I told him that London had nearly two millions of inhabitants, being four hundred thousand more than the whole of the Barrat. This individual had, of course, learned five languages with his mother's milk, and therefore thought that the inhabitants of such a country as England must know ten at least. When I told him that the majority of the people in England knew nothing but English, he said, somewhat contemptuously, "O! you told me the fair side of the English character; but you did not tell me that the people were so ignorant." He then good-humouredly warned me against practising on his credulity. I pointed out how unnecessary other languages were for England itself; but that all languages could be learned in London.

"Can Wallachian be learned in London?"

"I have my doubts about Wallachian; but"—

"Can Magyar be learned in London?"

"I suspect not."

"Can Servian be learnt in London?"

"I confess, I don't think that anybody in London teaches Servian; but"—

"There again, you travellers are always making statements unfounded on fact. I have mentioned three leading languages, and nobody in your city knows any thing about them."

KARA GEORGE is the great hero of Servia. He it was who, in the year 1806, repeatedly defeated the armies of the Sultan, and procured for Servia a temporary independence. After the re-subjugation of Servia in 1814, and the establishment of MILOSH as governor under the Turks a few years later, he was treacherously murdered while contriving a fresh revolt. MILOSH was himself forcibly expelled for his cruelty in 1838, and his son MICHAEL, with the whole Obrenovitch family to which he belonged, displaced four years later. They made way for the reigning prince, KARA GEORGEVITCH, the son of KARA GEORGE, with whom returned the two pillars of his party, WUCICS and PETRONIEVITCH, in honour of whose reception a solemn festival was kept at Belgrade.

The tolling of the cathedral bell announced the approach of the procession, which was preceded by a long train of rustic cavaliers, noble, vigorous-looking men. Standing at the balcony, we missed the sight of the heroes of the day, who had gone round by other streets. We therefore went to the cathedral, where all the principal persons in Servia were assembled. One old man, with grey, filmy, lack-lustre eyes, pendant jaws, and white beard, was pointed out to me as a centenarian witness of this national manifestation. The grand screen, which in the Greek churches veils the sanctuary from the vulgar gaze, was hung with rich silks; and on a raised platform, covered with carpets, stood the archbishop, a dignified, high-priest-looking figure, with crozier in hand, surrounded by his deacons in superbly embroidered robes. The huzzas of the populace grew louder as the procession approached the cathedral, a loud and prolonged buzz of excited attention accompanied the opening of the grand central portal, and Wucics and Petronievitch, grey with the dust with which the immense cavalcade had besprinkled them, came forward, kissed the cross and gospels, which the archbishop presented to them, and, kneeling down, returned thanks for their safe restoration. On regaining their legs, the archbishop advanced to the edge of the platform, and began a discourse describing the grief the nation had experienced at their departure, the universal joy for their return, and the hope that they would ever keep peace and union in view in all matters of state, and that in their duties to the state they must never forget their responsibility to the Most High.

Wucics, dressed in the coarse frieze jacket and boots of a Servian peasant, heard with a reverential inclination of the head the elegantly-polished discourse of the gold-bedizened prelate, but

nought relaxed one single muscle of that adamantine visage; the finer but more luminous features of Petronievitch were evidently under the control of a less powerful will. At certain passages of the discourse his intelligent eye was moistened with tears. Two deacons then prayed successively for the Sultan, the Emperor of Russia, and the prince.

And now uprose from every tongue and every heart a hymn for the longevity of Wucics and Petronievitch. "The solemn song for many days" is the expressive title of this sublime chant. This hymn is so old that its origin is lost in the obscure dawn of Christianity in the East, and so massive, so nobly simple, as to be beyond the ravages of time and the caprices of convention. The procession then returned, the band playing the Wucics march, to the houses of the two heroes of the day.

It seems impossible to pass through any considerable portion of Servia without having forcibly recalled to the mind all that is picturesque and romantic in our traditions concerning the middle ages. The feudal strength and importance not only of the remaining Turkish nobles, but of the natchalniks or governors in the petty towns, appointed by the native Servian administration; the simple unaffected character and manners of the peasantry; the rude yet gigantic scale of hospitality, and the tone of religious feeling and religious worship, have upon them all the marks which render the earlier period of our history such a favourite scene for poem and story. Nothing can shew this better than an account of a Greek mass in Servia. The thing would be hardly perfect without the last touch descriptive of the bishop's martial mien. It is in the style of the Archbishop THOMAS A BECKET, with his hundred mounted and armed knights at his back.

The cathedral church was a most ancient edifice of Byzantine architecture, which had been first a church, and then a mosque, and then a church again. The honeycombs and stalactite ornaments in the corners, as well as a marble stone in the floor, adorned with geometrical arabesques, shewed its services to Islamism. But the pictures of the crucifixion, and the figures of the priests, reminded me that I was in a Christian temple.

The bishop *in pontificalibus* was dressed in a crimson velvet and white satin dress, embroidered in gold, which had cost 300*l.* at Vienna; and as he sat in his chair, with mitre on head, and crosier in hand, looked with his white bushy beard, an imposing representative of spiritual authority. Sometimes he softened, and looked bland, as if it would not have been beneath him to grant absolution to an emperor. A priest was consecrated on the occasion; but the service was so long (full two hours and a half), that I was fatigued with the endless bowings and motions, and thought more than once of the benevolent wish of the doctor, to see me preserved from a Greek mass and a Hungarian lawsuit; but the singing was good, simple, massive, and antique in colouring. At the close of the service, thin wax tapers were presented to the congregation, which each of them lighted; after which they advanced, and kissed the cross and gospels, which were covered with the most minute silver and gold filegree work.

The prolonged service had given me a good appetite; and when I returned to the doctor, he smiled, and said, "I am sure you are ready for your café *au lait*." "I confess it was rather *langueilig*." "Take my advice for the future, and steer clear of a Greek mass, or a Hungarian lawsuit."

We now went to take a farewell of the bishop, whom we found, as yesterday, in the kiosk, with a fresh set of fur robes, and looking as superb as ever, with a large and splendid ring on his forefinger.

"If you had not come during a fast," growled he, with as good-humoured a smile as could be expected from so formidable a personage, "I would have given you a dinner. The English, I know, fight well at sea, but I do not know if they like salt fish."

A story is related of this bishop, that on the occasion of some former traveller rising to depart, he asked, "Are your pistols in good order?" On the traveller answering in the affirmative, the bishop rejoined, "Well, now you may depart with my blessing."

Csatsak, although the seat of a bishop and a natchalnik, is only a village, and is insignificant when one thinks of the magnificent plain in which it stands. At every step I made in this country, I thought of the noble field which it offers for a system of colonization congenial to the feelings, and subservient to the interests of the present occupants.

But we come next to one of the less favourable resemblances to what are called the dark ages. The animosities between Moslem and Christian, always vehement, are most intolerable upon the confines of Bosnia. This latter territory has the signal disgrace in history of being the only country in which the nobility, upon the irruption of the Turks into Europe, accepted Islamism *en masse*. It should seem that as an individual renegade is always the most bitter in his hostility against the party which he has deserted, so a race of apostates embody a similar tendency in national feeling, and become more intolerant than those who by birth and country are unbelievers. Certain it is that no hatred is more intense than that of the Bosnians to all Christians in general, and Servians in particular. A jealousy of the successful struggles of Servia for emancipation, and a remembrance of the vassalage from which she has emerged, is doubtless an additional stimulant to their fury. Mr. PATON and his party ventured to enter the pashalic of Bosnia and the city of Novibazar on horseback. As Christians had formerly been forbidden this privilege, this was the first incentive to a quarrel. YOUSSOUF BEY, the timorous governor of Novibazar, refused, upon various pretexts, to receive the travellers and peruse the letters of introduction which they brought to him. After various insults, our author and his guide were obliged to take a precipitate departure from Bosnia, in order to avoid the fury of the rabble.

The castle was on the elevated centre of the town; and the town sloping on all sides down to the garden, was as nearly as possible in the centre of the plain. When we had sufficiently examined the carved stone kaouks and turbans on the tombstones, we redescended towards the town. A savage-looking Bosniac now started up from behind a low outhouse, and, trembling with rage and fanaticism, began to abuse us: "Giaours, kafirs, spies! I know what you have come for. Do you expect to see your cross planted some day on the castle?"

The old story, thought I to myself; the fellow takes me for a military engineer, exhausting the resources of my heart in a plan for the reduction of the redoubtable fortress and city of Novibazar.

"Take care how you insult an honourable gentleman," said the over-rider; "we will complain to the Bey."

"What do we care for the Bey?" said the fellow, laughing in the exuberance of his impudence. I now stopped, looked him full in the face, and asked him coolly what he wanted.

"I will shew you that when you get into the bazaar," and then he suddenly bolted down a lane out of sight.

A Christian, who had been hanging on at a short distance, came up, and said:—

"I advise you to take yourself out of the dust as quickly as possible. The whole town is in a state of alarm; and unless you are prepared for resistance, something serious may happen, for the fellows are all wild Arnaouts, and do not understand travelling Franks."

"Your advice is a good one; I am obliged to you for the hint, and I will attend to it."

Had there been a pasha or consul in the place, I would have had the fellow punished for his insolence; but knowing that our small party was no match for armed fanatics, and that there was nothing more to be seen in the place, we avoided the bazaar, and went round by a side-street, paid our khan bill, and, mounting our horses, trotted rapidly out of the town, for fear of a stray shot; but the over-rider, on getting clear of the suburbs, instead of relaxing, got into a gallop.

"Halt," cried I, "we are clear of the rascals, and fairly out of town;" and coming up to the eminence, crowned with the giurgive stupovi, on which was a church, said to have been built by Stephen Dushan, the Powerful, I resolved to ascend, and got the over-rider to go so far; but some Bosniacs in a field warned us off with menacing gestures. The over-rider said, "For God's sake, let us go straight home. If I go back to Novibazar, my life may be taken."

Not wishing to bring the poor fellow into trouble, I gave up the project, and returned to the quarantnie.

Mr. PATON's travels extended over almost the whole of the interior of Servia. Time being apparently of no account to our good-humoured traveller, he turned out of his course to visit every object of curiosity and interest. The hospitality of the natives was unbounded, and no limits seem to have been set to the pride and gratification which they experienced at finding themselves the object of the observation and inquiry of an intelligent tourist. Some villages he entered almost in triumph; everywhere he was gladly welcomed, and furnished with letters of introduction to the authorities of the next district which he was to visit. The only awkward suspicion here and there excited was that he was an engineer, and was meditating an engineering scheme for asserting the sovereignty of Great Britain in Servia. It will be an act of gratification to our readers, and fairness to Mr. PATON, to conclude our ex-

tracts from his book with a description of a visit to the top of Kopannik, and the magnificent view of Servia from that spot. The labour of his ascent to the summit was enhanced by the indolence and repugnance of a certain unwieldy and plethoric captain who was employed as guide on the occasion.

A gentle wind skimmed the white straggling clouds from the blue sky. Warmer and warmer grew the sun-lit valleys; wider and wider grew the prospect as we ascended. Balkan after Balkan rose on the distant horizon. Ever and anon I paused and looked round with delight, but before reaching the summit, I tantalized myself with a few hundred yards of ascent, to treasure the glories in store for the pause, the turn, and the view. When, at length, I stood on the highest peak, the prospect was literally gorgeous. Servia lay rolled out at my feet. There was the field of Kossovo, where Amurath defeated Lasar and entombed the ancient empire of Servia. I mused an instant on this great landmark of European history, and, following the finger of an old peasant who accompanied us, I looked eastward and saw Deligrad, the scene of one of the bloodiest fights that preceded the resurrection of Servia as a principality. The Morava glistened in its wide valley like a silver thread in a carpet of green, beyond which the dark mountains of Rudnik rose to the north, while the frontiers of Bosnia, Albania, Macedonia, and Bulgaria walled in the prospect. "*Nogo Svet*—This is the whole world," said the peasant, who stood by me. I myself thought, that if an artist wished for a landscape as the scene of Satan taking up our Saviour into a high mountain, he could find none more appropriate than this. The Kopannik is not lofty, not much above six thousand English feet above the level of the sea. But it is so placed in the Servian basin, that the eye embraces the whole breadth from Bosnia to Bulgaria, and very nearly the whole length from Macedonia to Hungary.

We have only one word to say to our author in conclusion. He has thought fit to give Servia some praise for her exclusion of Greek and Latin classics from the education of her youth. We think he had better let this ground alone for the future. Had he been a classical scholar himself, he would not have talked of the dead languages as contemptuously as he does. But no Latin scholar ever coined the expression an "*insignium*," far less employed it half-a-dozen times in a dozen pages.

FICTION.

Fitz of Fitzford; a Legend of Devon. By Mrs. Bray. 8vo. London, 1845. Longman and Co.

The fair authoress of this clever novel, having some time resided in Devonshire, where she found in the traditions and legends yet surviving among the country people, and in the county histories, an abundance of subject-matter for weaving into fiction, has made her first essay at a local novel in *Fitz of Fitzford*. Many of the characters, and all the descriptions in the novel, Mrs. Bray tells us in her preface, were drawn from nature; and, in truth, they bear on them the colouring which only by such means may be obtained. The groundwork of the plot is furnished by a romantic story related in Prince's *Worthies of Devon*, as having occurred in the family of Fitz during the reign of Elizabeth. With this she has interwoven—and an interesting episode it makes, the striking tradition of *Judge Glanville of Tavistock*, who in open court was compelled to pass sentence of death upon his daughter. As well it might be, this is the most highly-wrought, pathetic, and impressive scene in the book. As we expect our readers will peruse this novel, we forbear giving an outline of the plot, contenting ourselves with remarking, that the characters are powerfully drawn, well marked with individuality, and skilfully contrasted against each other. The interest of the plot rarely flags, the descriptions are highly wrought and truthful, and the reflections appropriate and natural. This certainly is the best of Mrs. Bray's works, will amply repay perusal, and therefore, we recommend it to the attention of our readers.

The College Chums. By Charles Lister, Esq. 2 vols. 8vo. London, 1845.

This is an unequal and ineffective novel. The story is badly constructed, ill-connected, weak, and pointless. There is a sprinkling of affected sentiment, and an authoritative enunciation of wise remarks (which we are to suppose the result of close and profound observation of human life), scattered through these volumes, that defeat most effectually the writer's purpose, and fall far short of what he evidently thinks he has accomplished. Taken altogether, it is not a novel we cannot recommend to the Circulating Library, since newness is almost the only charm it possesses.

NATURAL HISTORY.

Illustrations of the Genera of Birds, embracing their Generic Character; with Sketches of their habits. By Captain Thomas Brown, M.W.S. &c. &c. Parts I. to V. London, 1845. Smith and Elder.

The want of a work of this nature has long been sensibly felt by most ornithologists. It is now twenty years since M. Vieillot's *Galerie des Oiseaux*—the only European work on the genera of birds—was published. Since then the discoveries of scientific expeditions, and the new classifications and divisions which advanced knowledge has compelled Naturalists to adopt, have added many new genera to those figured in M. Vieillot's book. These circumstances have increased the demand for a comprehensive and accurate work; and we rejoice to find it undertaken by Captain Brown—a gentleman whose valuable books on the *Fossil and Recent Conchology of the British Isles*, &c. &c. have stamped him as a painstaking and able Naturalist—since his very name is a guarantee that the task will be satisfactorily performed.

The work before us is published in monthly parts, each of which presents at least four plates and eight pages of letter-press. The illustrations are on steel, and faithfully coloured from nature. The proportions, characteristic attitude, and peculiar plumage of the birds are most happily conveyed in these illustrations. The letter-press gives, in a clear but compressed form, descriptions of the generic characters and respective habits of the various birds, and the *getting up* of the work is complete in all its parts. As this is really an undertaking that, both for the sake of its object and for the manner in which up to this period the task has been performed, is deserving of support, we unhesitatingly commend to our readers this useful and comprehensive work on the Genera of Birds.

POETRY.

Mackay's Legends of the Isles and other Poems.
[concluding notice.]

Mr. Mackay has a strong faith in the value of a poetic life. He gives us two beautiful poems on the subject, "The two Nigtingales," and "The Wanderers by the Sea." These have a peculiar sweetness of language, and are a faithful picture of the want, or *seeming* want, of sympathy between the world and the poet. One nightingale is weary of singing alone, with none to listen to his strain, and thus he addresses the other:—

In the deep quiet of an ancient wood,
Two nightingales, that since the sun had set
Had fill'd the enraptured solitude with song,
Sat silent for awhile, and thus began,
One with the other, interchange of thoughts:

"I'm weary," said the one with weakest voice,
"Of singing all night long to these dull boughs,
With none to listen to my heavenly notes.
What are to me these green insensate wood,
Yon moon and stars, and the unheeding sky?
I would have lovers wander in the shade
At twilight hour, to listen to my voice
And call it beautiful. I would have youths,
Teeming with gentle fancies, quit their books,
And bend a willing ear to my sweet strains:
I would have sages hearken to my lay,
And own me poet of the pensive night.
Why should I waste my music on the winds,
Or how sing on, abandoned to neglect?
I will away, and force the callous crowd
To be delighted. Through some city vast
My voice shall sound, till busy men shall stop,
And to my floods of swelling melody
Give ear enraptured. Brother, come away!"

Forth fled the complaining child of song, and at last reached a populous city—"a vast smoke-mantled dim metropolis." There he poured his sweet words, but no one listened, and he returned lonely at heart, and sang no more.

But there is another nightingale, a philosopher as well as a poet, a singer for the love of singing, and thus he exclaims :—

" No," said the other—" I am happy here;
To me all needless is the world's applause.
Amid these oaks, surrounded by these hills,
Lull'd by the dash of waters down the rocks,
Look'd on by moon and stars, leave me to sing.
My breast is full—my song an utterance
Of joy, that gives me joy to breathe it forth;
My song its own reward.—Why should I court
The ear of men, or pine in useless grief
That hither comes no audience for my lays?
Mine is a hymn of Gratitude and Love,
An overflowing from my inmost heart;
And if men listen and are pleased, not less
My pleasure in administering to theirs.
But if none care to hear my melodies,
Not the less happy would I be to sing."

" The Wanderers by the Sea" is a continuation of the same idea, so elegantly descriptive of the plodding of some men to the spiritual advancement of others, that we can do no less than copy it entire.

THE WANDERERS BY THE SEA.

I saw a crowd of people on the shore
Of a deep, dark, illimitable sea;
Pale-faced they were, and turned their eyes to earth,
And stoop'd low down, and gazed upon the sands;
And ever and anon they roam'd about,
Backwards or forwards; and whene'er they stopp'd
It was to gather on the weedy beach
The dulse and tangles, or the fruitful shells,
Whose living tenants fasten'd to the rocks
They pluck'd away, and listlessly devoured.
And when they'd eaten all their fill, they sat
One by the other on the placid shore,
And with much labour and incessant care
Polish'd the shells, until to brightest hues,
Various and intermingling, they were wrought;
And these they hung around their necks and limbs,
And look'd each other in the face, and smiled.
This done, they wandered on the shore again,
And ate and ate, and drank and drank, and slept,
Day after day—night after night—the same.
Meanwhile the firmament was bright with stars,
And from the clouds aërial voices came
In tones of melody, now low, now loud;
Angelic forms were hovering around
In robes of white and azure;—heaven itself
Appear'd to open, and invite the gaze
Of these poor stooping earth-enamour'd crowds.
But they ne'er look'd nor heard. Though the deep sea
Flash'd phosphorescent; though, dim seen afar,
The white sails and the looming hulls of ships
Gleam'd through the darkness, and the pregnant air
Gave birth to visions swathed in golden fire—
They look'd not. Though the heavenly voices call'd,
And told them of the world of life and light,
Of Beauty, Power, Love, Mystery, and Joy,
That lay beyond, and might be seen of those,
However lowly, that would lift their eyes—
They heeded not, nor heard, but wander'd on,
Plucking their weeds and gathering their shells.
And if they heard the murmur of the sea
That bore them tidings of the Infinite—
They knew it not; but lay them idly down,
Thought of the morrow's food, and sank to sleep.
And when they woke, with their care-deaden'd eyes,
And pallid faces, and toil-burden'd backs,
Began once more their customary search
Upon the bare and melancholy sands;
As if that search were all the end of life,
And all things else but nothingness and void.
But 'mid that low-brow'd multitude were some
Of larger faculties, and foreheads fair,
Laden with knowledge: and of eyes that beam'd
Intelligence, and quick desire to know;—
Who saw the visions teeming in the air;
Who heard the voices breathing in the sky;
Who o'er the illimitable waters stretch'd
Their eager gaze, and through the gloom descried
Shadows of beauty, which, but half reveal'd,
Added a wonder to their loveliness;—
Who heard celestial music night and morn
Play'd in the lap of ocean, or attuned
To every motion of the ceaseless wind;—
Who heard th' harmonious cadence of the stars;
Who saw the angels with their azure wings;
And lifted up their voices in a song
Of praise and joy, that not from them was hidden,
By blinding avarice and wordly care
Of shells and sea-weed, all th' immensity
Of nature—all th' infinitude of heaven—
And all the hope, bright as a certainty
That here, upon this low and gloomy shore,
Our life is but a germ, that shall expand
To fruit and foliage in a brighter clime.
And all of these spake to the crowd in song,
And bade them lift their dull earth-bending eyes,
And see how beautiful were Life and Time;
And bade them listen to the eternal chant
Of nature, overflowing with its joy,
And the mysterious hymn for ever sung
By earth to heaven, of which their words inspired
Were the interpreters to human kind.
And some of these were angry with the crowd,
Who would not listen, and whose ears were vexed
With all that would distract them from their shells,
And wallowing dulse and tangles on the shore.
But one of them with venerable hair,
And a large brow, and face serene as heaven,
Rebuked them for their wrath with mild sad words,
And said—" Oh brothers, weary not your souls!
If they are happy with their weeds and shells,
Let them alone:—And if their hearts prefer
Pebbles to stars, and sound of their own feet
Plashing amid the waters, to the song
Of angels, and the music of the spheres—
Let them alone. Why should ye vex yourselves?
Are ye not happy that to your keen sight
Those things are shewn which they refuse to see?
Are ye not happy that your ears can hear
The oracles of Nature, mute to them?
That ye are priests and prophets, though contemned?
Brothers, be wise, make music to your minds!
For he who singeth from his own full heart
Has his reward even in the utterance.
Brothers! be wise—and sing your songs in peace!"

We are pleased at the conclusion of Mr. MACKAY, that the reward of song is in its utterance. This should be a lesson to the timid and broken-spirited poet, who hangs his harp upon a willow, and sits weeping beneath it. We dislike a moral coward, especially if he be a poet. God has put a talent in his hand, and he should employ it for the benefit of man, and in so doing he is employing it for the glory of the Giver. CHATTERTON, with a giant intellect, was a mere baby in resolution, and KEATS, though a strong poet, was a weak man. They were no martyrs to a great principle, but died because they were ignorant of Mr. MACKAY's philosophy, that " the reward of song is in its utterance."

MISCELLANEOUS.

Fruits and Farinacea the Proper Food of Man; being an attempt to prove from History, Anatomy, Physiology, and Chemistry, that the original, natural, and best Diet of Man is derived from the Vegetable Kingdom. By JOHN SMITH. London, 1845. Churchill.

No one, on taking up this book, would be inclined to throw it aside as unamusing. Mr. SMITH writes *con amore*, and therefore graphically; but we fear that his arguments in favour of vegetable diet will make but few converts among English beefeaters. Alas! for our countrymen, they have been so long persuaded that beef and mutton serve to the realization of the school-boy fallacy that one Englishman can beat three Frenchmen, that it will be long ere they resign their ancient habits. Many would think the glorious English constitution at an end, if beef and mutton were declared pernicious.

Our author commences his work with an endeavour to prove, from tradition and the Books of Moses, that vegetables were the original food of mankind. From the writings of the inspired leader of Israel, he proceeds to the best Latin and Greek authors, who describe the golden age as a period when man fed upon the fruits of the earth, and when existed that perpetual spring, so beautifully pictured by OVID in the first book of his *Metamorphoses*. LUCRETIUS and the Phœnician historian SANCHONIATHON afford similar testimony; the fathers of medicine, HIPPOCRATES and CELSUS, attribute

the longevity of the antediluvians to the absence of animal food; and the Christian fathers, JEROME and CHRYSOSTOM, affirm that such food was forbidden. After the flood, the patriarchs restricted themselves to fruits, honey, and herbs, and, according to Mr. SMITH, cruelty and immorality arose when this natural diet ceased to satisfy. He likewise seems a convert to Mr. NEWTON's interpretation of the story of Prometheus, who having first taught the use of animal food, and of fire, with which to render it digestible, draws down upon himself the vengeance of the gods, who make his crime his punishment. Thus thirst and disease follow the enjoyment of a vitiated taste, and instead of the perpetual youth with which he was originally endowed, he becomes the subject of a suffering life and lingering death.

As to the assumption that the organization of man is unfitted for the digestion of animal food, those who are desirous of pursuing the subject philosophically may do well to read with attention Mr. SMITH's book, and they will also be led to reflect on the demoralizing effects of habituating man to the slaughter of animals for his food.

It was not difficult to select splendid instances, both among ancients and moderns, of distinguished characters who adhered to vegetable diet, or at least recommended it. PYTHAGORAS and his disciples, PLUTARCH, ZENO, and EPICURUS grace the list of the ancients. The philosopher NEWTON, though not an habitual practiser of such abstinence, is said to have relinquished animal food whilst engaged in his work on Optics; the naturalist LINNÆUS preached, though he did not practise, living on fruits, &c. and it is well known that the philanthropist HOWARD steadily and constantly refused both meat and wine, for the period of sixteen years, though his prison visitations and exposure to different climates, might, it would appear, have rendered such abstinence injurious rather than beneficial. Baron CUVIER's authority is also cited:—

Fruits, roots, and the succulent parts of vegetables, appear to be the natural food of man: his hands afford him a facility in gathering them; and his short, and comparatively weak jaws, his short canine teeth, not passing beyond the common line of the others, and the tuberculous teeth, would not permit him either to feed on herbage or devour flesh, unless those aliments were previously prepared by the culinary processes.

The experiences of SHELLEY and BYRON are of course not forgotten; the former is, as may be imagined, a great favourite with Mr. SMITH, his poetry as well as prose being frequently quoted, whilst his noble friend, though certainly not commendable in his dietary system altogether, may be added to the list of abstainers from flesh. Nor in dwelling on the effects of animal food, does he forget BYRON's speech to his friend and biographer, who was regaling himself with beef-steaks, "MOORE, don't you find eating beef-steaks makes you ferocious?" Mrs. RADCLIFFE, too, appears to have entertained similar notions, since it is related of her that, when writing the *Mysteries of Udolpho*, she fed upon uncooked meat. FUSELI, the painter, resorted to the same expedient, in order to assist his horrible imaginings.

In treating of the effects produced upon the senses by the respective use of animal or farinaceous diet, the case of CASPAR HAUSER is dwelt upon at some length:—

While (says his biographer) he continued to subsist on his simple diet of bread and water, as he had done in his dungeon, the activity of his mind, his fervent zeal to lay hold of every thing that was new to him, his vivid, his youthfully powerful and faithfully retentive memory, were such as to astonish all who witnessed them. The curiosity, the thirst for knowledge, and the inflexible perseverance with which he fixed his attention on any thing which he was determined to learn or comprehend, surpassed every thing that can be conceived of them. After he had learned regularly to eat flesh, his mental activity was diminished; his eyes lost their brilliancy and expression; his vivid propensity to constant activity was diminished; the intense application of his mind gave way to absence and indifference, and the quickness of his apprehension was also considerably diminished.

From the practice of particular individuals, Mr. SMITH proceeds to that of whole nations. The ancient Britons lived only on the productions of the earth, and when Queen BOADICEA harangued her troops previous to their engagement with their invaders, the Romans, she thus alluded to the different habits of the two nations:—"The great advantage we have over them is, that they cannot (like us) bear hunger, thirst, heat, or cold. They must have fine bread, wine, and warm houses. To us, every herb and root are food, every juice is our oil, and every stream of water our wine." "In those times," observes Lord KAIMES, "our fathers were robust, both in mind and body, and could bear, without much pain, what would totally overwhelm us."

To come down to our own times, the Irish and Russian peasants eat little or no flesh, and the peasantry of Lancashire and Cheshire, who are considered the handsomest race in England, live entirely on buttermilk and potatoes. In the East, the Persians, acknowledged to possess great strength and beauty of form, exist principally on boiled rice and fruits. While, on the other hand, the Laplanders, Esquimeaux, and Kamstchatdales "are the smallest, weakest, and least brave people of the globe, although they live almost entirely on flesh, and that often raw." The Patagonians are an exception to the rule; but Mr. SMITH and his friend SYLVESTER GRAHAM comfort themselves by believing that this race of giants "originally sprang from a race of islanders of very great bodily size and harmony of proportions, and who were strictly vegetable eaters." "If this be true," continues Mr. GRAHAM, "it would naturally require a succession of several generations, under the most unfavourable circumstances and diet of savage life, to degenerate the race to the diminished size of other flesh-eating tribes."

The following address of an ancient and distinguished priest of India pleases us as much as it can Mr. SMITH:—

Children of the Sun, listen to the dying advice of your faithful and affectionate instructor, who hastens to the bosom of the great Allah, to give an account, and to enjoy the expected rewards of his services! Your regimen ought to be simple and inartificial. Drink only the pure, simple water. It is the beverage of nature; and not by any means, nor in any way, to be improved by art! Eat only fruits and vegetables! Let the predacious animals prey on carnage and blood! Stain not the divine gentleness of your natures by one act of cruelty to the creatures beneath you! Heaven, to protect them, hath placed you at their head! Be not treacherous to the important trust you hold, by murdering those you ought to preserve; nor defile your bodies by filling them with putrefaction. There is enough of vegetables and fruits to supply your appetites without oppressing them by carrion, or drenching them in blood.

A Treatise on the Use of the Globes Celestial and Terrestrial. By AUGUSTUS DE MORGAN. 8vo. London, 1845. Maltby and Co.

Malby's Celestial Globe Atlas. Folio. 1845.

THESE works are especially designed to accompany each other, and are published under the superintendence of the Society for the Diffusion of Useful Knowledge. The treatise, to use the language of its author, "describes only the appearances of the heavens, without any reference to their producing causes, it is, therefore, independent of all systems, and might be approved by believers in the stability of the earth, if there be any left."

A description at any length of the divisions of the subject, and its treatment in this book, which is purely scientific, would be out of place here. An examination of it, however, enables us confidently to state that a more complete elementary work has never been produced in this country. The Atlas, too, is the best we have ever inspected. The boundaries of the constellations differ slightly from those usually laid down, which, owing to a confusion arising from including in one constellation the stars which are upon the border of another, have been more or less incorrect down to this time. The reader will be surprised to learn that many stars have been figured on globes and in former maps which have had no existence in reality; that the same star has been figured in two different constellations, owing to the original observer having taken it on different nights; but he will be more astonished to learn that many as have been the astronomers who have watched the heavens from the days of PTOLEMY down to FRANCIS BAILY, so imperfect have been the catalogues they have constructed, that Mr. ARGELANDER has marked no less than twenty-seven visible *with the naked eye* from Bonn, which have never been included in any constellation or list.

The utmost care seems to have been expended in perfecting the Atlas; it is printed on a thick and tough paper, and the engraving is clear and singularly exact. Of the treatise, also, we must speak in unqualified praise. The high character of

Professor De Morgan sufficiently recommends it. Distinguished men sometimes rely too much on the prestige of their name, and perform their work in a slovenly manner; this, however, cannot be said of our author; he has evidently worked under the conviction that his was no common-place undertaking, but one requiring care, judgment, and accuracy. His mode of putting the most abstruse problems is felicitously clear; and it is seldom you misconceive or have need a second time to read any passage in order to understand it; and this is no slight praise for a technical work. To the heads of schools and tutors in particular, and to every one who pursues the sublime study of astronomy, we strongly recommend the purchase of this Atlas and the treatise which accompanies it.

The Book of Nursery Tales: a Keepsake for the Young. First Series. Second Series. Third Series. London: James Burns.

If there be any use in elegant embellishments and superior typography in books, and of their value every one who has considered the question for a moment must be thoroughly convinced, certainly the rising generation have advantages over all who have gone before in the beautiful and fanciful illustrations which distinguish children's books at this day from the coarse, ill-drawn cuts that used to perplex them till within these few years past. Never yet did our old favourites, *Cinderella, Jack the Giant Killer, The White Hind, Blue Beard, The Sleeping Beauty*, and the pathetic tale of *The Children in the Wood*, appear in so attractive a shape as in the present. They are printed on superior paper, in a clear, bold type, surrounded by a tasteful border; the leaves are gold-edged, and the binding is a close imitation of Turkey morocco. The illustrations, however, offer to our eyes the greatest charm. They are worthy of Maclise or Selous, who, for aught we know, may have designed them. That superior engravings, such as these, are not beyond the comprehension of children, as some argue, we are fully persuaded; so far, indeed, from thinking thus, it is our firm belief that they enlarge the notions of the youthful mind, by shewing at a single view, in picturesque combinations, entire scenes, to which the unaided imagination of the child could never have attained. Besides those we have named, there are many other tales equally popular and meritorious; and it is a recommendation to this collection, that such only have been selected as subserve a good end. A handsomer present to a child than this series of Nursery Tales, it would be difficult to conceive; and certainly the whole range of children's literature affords no example at once so entertaining and beautiful.

A Guide through the Town of Shrewsbury. Shrewsbury, 1845. John Davies.

It really is one proof, and that not the least remarkable, of the rapid improvement of provincial literature within the past fifteen years, that the standard of guide-books is of a far higher degree of excellence than formerly was the case. This *Guide to Shrewsbury* is neatly written, abounds with every species of information, historical, descriptive, and other, which relates to the subjects noticed, is profusely illustrated with creditable wood-cuts, and, lastly, has appended to it what is of much value to works of this kind, a *Flora* and *Fauna* of the neighbourhood. As a specimen of country printing, the book is remarkable; it might have passed for the work of a Vizetelly or Bradbury.

JOURNAL OF FRENCH LITERATURE.

The Nizam War. By Mery. 2 vols.

This is a most attractive work, rich in local painting and graphic power. We do not purpose to trouble ourselves with the fable, which merely serves as a frame or setting for the more valuable contents of the book. Suffice it that the volumes commence with three entangled love affairs, which are smoothly spun off at their close; the one which is the most prominent involves an English traveller (Sir Edward Kherbbs) in a heart-struggle with a coquettish French Countess; the next in order delivers up Colonel Douglas Stafford, a distinguished British officer, to the golden glories of a Nabob's daughter; while the third and last crowns the affections of a beautiful Greek god-daughter of Lord Byron and a proscribed Polish Count. The characters are cleverly sustained throughout, and the fiction itself is by no means devoid of interest. Nevertheless we shall do the author better service, as well as our readers, by confining our extracts of the work to its more salient feature of local illustration. The word Nizam at once conjures up the association of the Thugs, those fearful fanatics who were first fully appreciated in all their savage horror in Europe through the medium of Captain Taylor's admirable work. The volumes before us are also full of their generally bloodless but always murderous feats. Here is

A THUGGEE ENGAGEMENT.

The costume of Sir Edward and the colonel belonged, with little exception, to the primitive ages. For this singular warfare garments were merely a source of luxurious embarrassment; every shade of colour was an advertisement to the enemy. They carried in their girdles a pair of pistols and a poignard, painted black upon the stocks and barrels.

The old pagoda of Miessour stretches its horrors along the border of the lake. It forms a little hill of ruins, where the stones are covered with moss, euphorbium, broom, and aloes; here and there emerges the enormous head of an Indian deity, whose metallic granite has repelled vegetation, and which still offers to the stars the same aspect of hideous immobility it received from the chisel of the Mahrattan architect of Aureng-Zeb. When the light of the firmament, scattered by the foliage of the mastic trees, descends gloomily on the rude faces of these spectral images, it is as though the giants of the Indian Iliad of Ravana were rising from their tombs to renew the war of Ceylon. The dusky landscape is often animated by the presence of the black tigers, which seek a pedestal of their own colour, stretch themselves out like sphynxes, and folding back, with effeminate grace, their right claws under their humid tongues, renew the varnish of their ebony coats, disturbed by an orgie of blood and carnage.

"In this war," whispered the Colonel to Sir Edward, "every thing serves us as a signal. Even the wild beasts are our auxiliaries. Your eyes are excellent; you have a feline perception of the mysteries of night. Look towards the ruins yonder, on this side, about five hundred paces off. What do you see?"

"Wait," said Sir Edward, leaning carelessly against the trunk of a tree, his hands placed vertically upon his girdle; "Wait, Douglas. Here is what I see—some fine ruins—very fine ruins. They are in the style of the demolished temple of Brambanan at Java, which formerly stood at the base of a volcano called *Maxa Api*, or fire-coloured. These poetical Indians excel in local names! They would never have thought of naming a volcano *Vesuvius* or *Etna*, which means just nothing at all. When the breeze heaves aside those huge plumes of flexible foliage, and for an instant holds them back, I can distinctly trace, thanks to the stars, this superb relic of architecture. Nevertheless, I must confess to you, my dear Douglas, that I prefer the Javanese temple of *Soukou*, near Java. That temple proclaims a civilization superior to those of Greece and Rome; for, in my opinion, a great people is revealed by its architecture. Augustus has left the testimony of his genius on the round page of the Pantheon. While the Indians——"

"My dear Sir Edward," interposed the colonel, "you are really haranguing me with most superb tranquillity!" Do you imagine that I brought you here to deliver a lecture on Indian architecture? Move a step forward; conceal yourself behind these bushes; put away the boughs gently with your fingers, as though the wind were stirring them, and watch what is going forward between the statue of Indra and that stump of Stravalti—answer me cautiously."

"Ah!—yes—there he is—he is magnificent in that position—how well he groups with the objects about him—what a splendid black tiger!—what a majestic growth! Travers has named this species the tiger Nero; it is wanting to our collection in London. He is making his nightly toilette, with a paw as caressing as the hand of the countess Olivia. They fetch 500*l.* in the market at Java. If he is disposed to sell himself, I'll purchase him at that price. Douglas, will you allow me to advance about a hundred and fifty paces, and to possess him gratis, with a hole in his forehead!"

"Beware of such an attempt! That tiger is my spy."

"Pshaw—what a fable!"

"Wait one instant, and you will see."

The tiger continued his toilette with a careful detail and an amiable calmness, which announced a quiet conscience. He deposed, with easy undulations of the head, the foam of his tongue upon his claw, and distributed this savage essence from the tip of his ears to the extremity of his nostrils. Suddenly the animal shuddered all along the spine, and sparks shot from his skin. The caressing claw abruptly became motionless at the height of

its right eye; its ears folded down over its temples, its nostrils expanded to the wind, and a dull, savage, lengthened roar was heard. If the ruins had trembled beneath the sudden eruption of a volcano, they could not have given to the leap of the tiger a more marvellous spring. He bounded up amidst the thickest of the ruins, and disappeared in the woods.

"We will advance now," said the colonel; "Captain Moss is coming up in the other direction."

A strange sight soon fixed the attention of Sir Edward. Throughout the whole length of a breach in the ruins, the tall weeds were trembling to their summits, as though they had suddenly harboured an army of enormous reptiles, a train of boas. Several detachments of sepoys had entered the demolished pagoda. At their head crawled Captain Moss, a young man of two and twenty, already a veteran in this species of warfare, and who had twice escaped the noose of the Thugs, by sliding through their hands like an adder. From this moment, speech, gesture, and almost breathing, were forbidden. Nevertheless, the whole body acted in concert in a manner perfectly marvellous. Each soldier appeared to divine the order of his leader, or to follow the prompting of some sudden and infallible inspiration, fallen from heaven into the head of all.

It had been necessary to renounce the use of every subterfuge employed on previous occasions against the fanatics. At each new engagement the tactics were modified, or totally altered. The Thugs could never be twice deceived by the same *ruse;* they were themselves masters in cunning, as their Indian name implies.

Each sepoy, officer, or soldier, had brought with him a stump of maple-wood, hastily and carelessly cut, but which, half hidden by the ruins, the darkness, and the massive vegetation, when surmounted by his military cap, looked at a distance like a soldier endeavouring to secure an ambush. Nevertheless, it was not enough to deceive the eye of the Thug, it was also necessary to delude his scent, which is as subtle as that of a wild beast. To do this, the sepoys heaped up on the uncovered spaces of earth which were the most exposed to the wind, their heavy uniforms reeking with the acrid moistures of the march. This done, they swam across the lake, and then perfumed themselves on the other shore with the aromatic plants which an Indian sun fosters beside its poisons. Then they followed in the direction of the wind; and a thousand paces beyond the ruins halted in the middle of the wood, on a winding path, bristling with coarse weeds, but the only practicable passage for beings who were semi-human. Officers and soldiers finally lay down among these weeds, and in ambush, forming two invisible lines, and awaiting the signal of Colonel Stafford.

The Thugs never quitted their haunts until their protecting star had risen—the star Lêby; but it was not solely from a religious motive that they would only attempt a death-struggle under the light of this star, at the first hour of the morning; they also calculated that at that precise period they should fall upon their enemy when he was overwhelmed by the double fever of vigilance and slumber, having already wasted half his strength in an useless and hopeless watch. The band of Thugs who, by the order of old Sing, their chief, were on this occasion to attack the advanced posts of Roudjah, had directed their course towards the ruined pagoda of Miessour. The faquir, Souniacy, led the savage brigands. He was a monster, hideous as the ravisher of Sita. His black locks fell in showers upon his bony shoulders, rendered fleshless by abstinence; his body had lost its natural tint under a plaster of vegetable juices; the upper part of his face was of a dead white, and four white stripes encircled his naked arms, like wide bracelets, traced in chalk; a gray and flowing beard fell from his brazen chin; but the fire of his eyes, the angular vigour of his temples, the convulsive agitation of his nostrils and the muscles of his neck, gave the lie to the colour of his beard, and betrayed the man in all the vigour of his prime and strength. Souniacy alone advanced upright, and his carriage and his look had something mystical and solemn, which formed the most extraordinary contrast with the absurd tatouing of his body. The faquir was arrayed in every shade and colour. He looked like a gigantic harlequin turned hermit, famished and macerated, leaving his cell to meditate in the depth of the eternal woods by the night-lights of the firmament.

The formidable band, stealing along the earth like knots of reptiles, followed the phantom Souniacy.

When the faquir snuffed upon the air the human emanations, and could see the summit of the hill of ruins, he became reptile in his turn. From this moment the human sight, fastened upon this pathway of high dark weeds, could not have guessed that a horde of religious bandits were traversing the wood, for the light motion of the leaves would have been attributed to the night-breeze. The wild beasts, alarmed by the living stream which had overflowed their domain, sprang with furious leaps through the masses of rent and crackling underwood to escape from this mysterious enemy, which seemed to have embraced in its claws all the trees of the immense solitude. Colonel Stafford, Sir Edward, and the troops thus understood that the foe was approaching. The tigers, springing with prodigious bounds, in a fit of terrified madness, leaped over the ambushed soldiers, and these, preserving their horizontal immobility, presented a spectacle of devoted heroism, placed as they were between the claws of the tigers and those of the savages, amid the darkness of the night and of the woods. The moment came when the torrent of Thugs entered, so to speak, into a new channel, of which the two banks were formed by the soldiers of Stafford. A shrill whistle swept through the solitude, and was repeated a score of times by the echoes of the ruins and the lake. Three hundred men, their pistols and their poignards in their hands, rose at the colonel's signal.

The Thugs rose also, uttering superhuman cries, which seemed to issue from the bowels of a volcano. Then commenced a formidable struggle, which had not even the stars as witnesses, for the dense foliage floated above the heads of all; and this field of battle, bristling with spectres, resembled the shadowy subterranean which is the vestibule of hell. The Thugs, who had escaped the first shock of the attack, cast themselves in desperation among their enemies, seeking to smother them in their deadly grasp, to split their skulls between their shark-like teeth, and to drink their bubbling blood before they died. The Thugs have not degenerated from the primitive race of Indians. The old age of Bengal has not had power to soften either their bodies or their souls. They are still the worthy sons of the giants who have heaped up mountains, by sawing them asunder both above and beneath the earth, to form a staircase alike to heaven and to hell. Their arms, clasped round the necks of their enemies, wrung the flesh like a collar of bronze; and their victims, as they struggled in convulsive agony, felt a hot and savage breath cover their faces, and saw a monstrous grin light up the demon-grasp. In the centre of this whirlwind of infernal duels, Sir Edward and Stafford, accustomed from their boyhood to exercises of strength, address, and agility, did not waste one blow of their robust fists, nor one stab of their daggers; the monsters fell before them, or if they sought to rise, met only with second death. This horrible work of destruction went on amid a dead silence, which was not even broken by a groan. One voice only, one solitary cry, rang beneath the leafy vault of the tall trees—a melancholy cry, for which human language has no name. It was the faquir Souniacy, who, at intervals, uttered a word of religious exhortation to his fanatical stranglers. When the Thugs, discouraged for a moment, heard this voice, they gnashed their cannibal teeth, they bent their bodies on their hams of steel, twisted their monstrous arms, shook their black hair, and precipitated themselves with renewed fury on their enemies. Those who, stabbed to the heart by a dagger, rolled upon the earth like maimed serpents, resuscitated at the cry of the faquir, and, bleeding and galvanized corpses as they were, clenched the feet of the soldiers, and rendered their last sob in tearing away fragments of living flesh. All at once the voice of the faquir failed in the midst of the combat; nothing could be heard save a distant, confused, and plaintive cry, which seemed to issue from a tomb in the depths of the wood. The Thugs answered by a long scream of despair; and, as though the incomprehensible desertion of the faquir had suddenly prostrated their courage, they sprang with an agility unrivalled upon the traces of Souniacy.

Our space is so limited that, in order to assure to our readers the opportunity of forming a correct judgment of the work under notice, we shall not, as we well might, expatiate upon the extreme talent with which M. Méry has combined fact with fiction in these thrilling volumes. There are moments during their perusal, when we feel tempted to believe that he must have assisted personally in the frightful campaign which he so graphically describes. Assuredly Captain Taylor himself, about whose participation in Thuggee horrors there was no doubt, presented to us no *tableaux* more life-like, or of more faithful local colouring. Having premised thus much, we must confine ourselves to a couple of extracts of great interest, and which perfectly develope the nature of the work, and the graphic power of the author. The coquettish Parisian has arrived in India accompanied by the affianced bride of Colonel Stafford. Circumstances too intricate to detail determine her to secure an interview with the gallant officer before he meets his *fiançée*. For this purpose she takes a guide, who is to conduct her from the fortified village of Roudjah to Nerbudda, the place of the colonel's residence. The pretended guide proves to be the attached spy of Sir Edward Kherbbs, who, having heard the Countess speak harshly of his master, and fearing that the beautiful European may be anxious to injure him, instead of obeying her directions, takes her to a log-cabin in the woods, one of those vast erections in which the Indians house their store of rice after the harvest. These rude buildings bear a considerable resemblance to the *châlets* of Switzerland; they are built upon stakes, which separate their floors from the soil,

and layers of dried bamboo cover their roofs. The upper story is reached through a door or window, by means of an enormous ladder. This cabin, well known to Nizam (the spy), and his customary dwelling, had been long abandoned, for a young growth of forest was pushing vigorously through the soil, which had formerly been a rice-field. The interior contained only a bed of dried leaves, and the partitions, widened by the hot sun and the violent storm-winds, did not exclude the melancholy glimmer of the midnight stars.

Having performed this notable feat, the faithful but over-zealous Indian hastens to Nerbudda, to inform his master of the circumstance, upon which Sir Edward, *en preux chevalier*, disdaining all peril, hastens to share the captivity of his ladye-love, whose removal through the woods before daylight is of course impossible. The Countess is at first resentful and suspicious, but the delicacy and good sense of her lover gradually obtain ascendancy over her anger. Such is their position when our extract commences.

MIDNIGHT IN THE WOODS.

There was a momentary silence. Every murmur which came from the forest and the valleys was melancholy or terrific. The wind rushed with fury through the crevices of the hut, and the neighbouring trees, covered with clinging parasites, shook them in the breeze, like the manes of wild animals; while all the boas of Bengal appeared to be darting their stings, and hissing round the mouldering walls of the cabin. The old trees groaned about their roots, as though they sought to utter an agonized farewell before they yielded to the power of the storm-blast; and the surrounding caverns roared in their depths like the bellowing throats of apocryphal monsters. The forest, gloomily illuminated at its summit, betrayed the mystery of its horrors by a tempest of cries, yells, roars, and howlings. It was a world of shadows, invaded by its nightly inhabitants, and relating to the stars a new page of its bloody history commenced on the eve of the creation.

Sir Edward, seated on the threshold of the raised door, with his foot upon the last step of the ladder, and his arms folded, looked out tranquilly upon this scene of discord, and seemed to defy nature to be more agitated than himself. * * * Common-place circumstances having placed our two personages in this strange position, it was no rare occurrence in Bengal, as Sir Edward remarked, for them to become spectators of the scene which we are about to describe. In our European countries, such a *tête-à-tête* might possibly have been troubled by the barking of dogs, or by the passing of a party of sportsmen, a band of marauding thieves, or labourers hastening to their toil before daybreak. These accidents would appear simple enough in our narrative. In the heart of Bengal the interruptions which it experienced were different both in form and name; they were at once perilous and frightful. We must take countries as God has made them. Sir Edward, who was familiar with India, and the habits of its wild inhabitants, well knew that the sound of human voices, and the scent of human flesh, would attract, after midnight, sundry four-footed banditti about the cabin; and he felt convinced that this terrible episode would give a charm to his devotedness, and would prove a marvellous auxiliary to his chivalrous passion.

Two tigers of the most noble breed had expressly chosen this night to give to their young the first lesson in marauding; the whelps were charming; they sported with all the innocence of their age, and their parents, happy witnesses of their sports, occasionally forgot their superb gravity to join in the pastime. At each blast of wind the ripe fruits rained from the trees, and the young tigers, curving their backs, leapt after these playthings, the presents of nature, and rolled over them with outstretched claws and undulating tails, in furious fits of graceful elasticity and unsuspicious pleasure. When the careful elders saw their incautious offspring venturing too near the dark boundary of the wood, or some unmated tiger, some jealous Herod, who might perhaps seek to strangle them in the cradle, they precipitated themselves in two long leaps towards their imprudent charges, and coaxed them back with graceful caresses to the open ground. The dam, then probably recalling the period when she had been young and giddy like her nurslings, romped with the little truants, gently beating back their budding nails with her own large claw, while her enormous tongue covered them with kisses at every convulsion of their plastic bodies. The old male watched over the welfare of his family; he thrust forth his muzzle towards every suspicious spot, half closing his eyes, and fluttering his nostrils; he tried, by scent, the mystery of every leafy bush, which seemed too still not to conceal a foe; he pricked his ears to distinguish, amid the murmurs of the night, those which belonged only to the tempest from such as might indicate danger; and when his observations had secured to him a moment of domestic safety, he contemplated askance, with calm joy, and eyes humid with paternal tenderness, the touching spectacle of the happy mother, surrounded by her sportive little ones. Suddenly the huge tiger bent his ears in token of distress, drew his tail beneath his belly, and, from between his clenched teeth, emitted a long sharp yell. His mate caught up one of her young between her jaws, driving away the other which sought to renew its sport while its playfellow occupied this new position, and at the second signal of alarm, the prudent mother sprang towards a mass of moss-covered rocks, and disappeared with her nurslings. A moment afterwards she returned, and took her place beside the male. * * * The bearing of the tiger became more fierce, when he had ascertained that his young were in a place of safety. Nevertheless, he did not forget the holy laws of prudence which nature has engraved on the heart of the tiger, and which cause it frequently to be accused of cowardice by the coward naturalist. The tiger is as brave as the savage, who will always accept an equal combat, and retreats without shame when the peril offers no chance of victory. * * * * He advanced then, the neck outstretched, the legs shortened, the claws drawn in, ready either to attack or fly, according to the nature, number, and strength of the suspected enemy. On sight of the hut, he fell back suddenly on his haunches, giving to his muzzle a nervous contraction that was frightful; the female copied every motion; but, after a rapid reflection, he appeared to say to himself that he had frequently come upon similar buildings in the woods, from which nothing dangerous had issued. The exhalations of human flesh filled the air a hundred paces from the hut; such is at least probable, for at that distance the two tigers snuffed in the wind with fury, and bending back their tongues, appeared to be collecting a store of foam for the festival which the odorous breeze announced to them. Arrived at the foot of the ladder, our savage bandits scented for a considerable time the lower rails, and then the male placed his fore-paws upon them, as if to test the solidity of the wood, before attempting to mount. His companion gave signs of feverish impatience, and turned her ear in the direction of the wind, to listen to the distant wailings of her abandoned young.

Sir Edward, stretched upon his stomach, and his head covered with dry leaves, felt the velvet of two charming lips touch his ear, and at the same time heard in a trembling whisper, the murmur of a faint voice which said, "In God's name, overthrow the ladder!" The hand of Sir Edward still extended horizontally upon the boards, answered by a sign of confidence.

The tiger, who had calculated, from the degree of the exhalations, and the feebleness of the voice, that the enemy was not formidable, scented each bar as he ascended leisurely, steadying himself by one claw against the wall, when he felt the ladder quiver beneath his weight. Already his large face, bristling with coarse hair, and streaked with black, had gained the height of the window, throwing out, through his open jaws, a guttural tempest of aspirations, when Sir Edward seized the top of the ladder with one hand, fired with the other, struck the monster, and hurled from him both the body and the staircase with a strength and swiftness which revealed the long experience of an intrepid sportsman. The other tiger, whose thoughts were occupied by her young, gave forth a stunning roar, and bounded off to her lair to assure herself that they had not been destroyed by the same ball. At the report of the discharge, clouds of birds darkened the stars, and mingled their air-borne symphony with the howlings of the wild beasts, who fled crashing through the woods, seized with a sudden panic. Sir Edward sprang from the floor, exclaiming, "It was cruel to throw so affectionate a family into mourning, but the public benefit must supersede all other considerations."

With another extract we conclude. The Polish count and nine of the sepoys have been made prisoners by the Thugs, and carried off to their sacrificial temple, as victims to the goddess Déera.

A THUGGEE SACRIFICE.

In a deserted gorge of Mount Sérieh, a large and symmetrica excavation serves as a portico to the temple of Doumar-Leyna. There is, in the neighbourhood of this gloomy court, such a prodigious mass of up-heaped rocks, that the native Indians themselves could not discover it, without the guidance of one of those faquir-pilgrims, who consider themselves compelled to visit the ancient crypts, where their ancestors adored the trinity of the Hindoo worship. * * * The temple of Doumar-Leyna is not a master-piece of grace and elegant solidity, like that of Boro-Bodor at Java. Every stone intended to brave the sunshine was chiselled with love and care by the Indian architect; the subterranean stone destined to darkness, preserved the hideous characteristics of a horrid night-dream. The sculptor who rent the entrails of the Doumar-Leyna mountain, wrought there his horrible arabasques, in order to materialize in the depths of the vault the caprices of the bad genius Myhassor. He created a populace of symbolical animals, and made them leaping or tooping, as the living pedestals under the colonnades, and threw

their monstrous faces into prominence along the cornices of the roof. All the evil spirits of the Indian mythology appeared to start, as dwarfs or giants, from every nook of the subterranean, shaking their adder-like locks, and their hands armed with axes and daggers. * * * In the farthest aisle of this gloomy edifice the Thugs hold their meetings and celebrate their rites. The deformed statue of Déera stands upon a pedestal of viscid rock. On the right and left of the altar may be imperfectly distinguished two colossal *bassi relievi*, one represents the combat of Dourga and Myhassor, the other the execution of the ravisher of Sita. Two sepulchral lamps, fed with fetid tallow, burn and smoke in this sanctuary. * * * The continual murmur of invisible waters, and of groups of weeds, agitated by gloomy families of birds and insects, are the only sounds which link to the life without this rejoicing-place of death.

The faquirs, or sacrificial priests, entered first, assuming a religious gravity which announced the respect with which they ventured to place a profane foot in this sanctuary of the most formidable of their gods. The band of Thugs followed, imitating the bearing of their leaders. The prisoners, their bonds removed, in order that they might be sacrificed as free victims, advanced boldly, with that righteous courage which, in the last moments of mortal agony, threw back defiance upon their assassins. The young Count Elona, his arms crossed upon his bare breast, might be distinguished in the midst of his companions by his haughty and contemptuous calm. * * * The savages chanted their hymn to the goddess Déera, in that slow and melancholy cadence adopted in all Oriental worship. At the conclusion of each strain, the faquirs prostrated themselves before the deformed idol, and when they rose again threw themselves into attitudes of ecstasy, as though they had just been initiated into the beatitude of the celestial garden of Mandana.

The hymn terminated, two executioners seized a prisoner, and led him to the altar of the goddess. He was a youth of twenty, with long light locks curling about his face, whose clear and pure complexion formed a strange contrast with the livid, green, and bony countenances of the sacrificators. He offered his head boldly to the silken string, and then each executioner rested his hand upon a shoulder of the victim, and stretching out the other arm, to which was attached the instrument of death, ultimately cast upon the earth this first corpse, strangled with a dexterity that was infernal.

The priests raised their eyes to their terrible divinities, who figured in the *bassi relievi*, as if to discover there a smile of approbation. * * * The murder of the prisoners was proceeded with in slow solemnity; the priests appeared desirous of prolonging the atrocious voluptuousness of the ceremony; and, after one execution, they deferred the next, in order to give time to the whole army of Thugs, dispersed in the mountains, to share in this festival of corpses. Every instant new parties were arriving at Doumar-Leyna, and creeping, like infernal shadows, through the collonnades of the vast subterranean. Those who, having come too late, could see neither the altar nor the sacrifice, escaladed the ruined porticoes to suspend themselves from the cornices, and mingle their mobile muzzles with the motionless heads of sphynxes, tigers, and bulls. The reflection of the lamps beneath the arches shone on the eyes of these savages, contorted among the colossal arabesques of the roofs.

Nine prisoners had been sacrificed, and their bodies, covering the base of the altar, seemed to serve as a pedestal to the goddess. Elona alone remained alive. The priests had at once discovered that he was no common prey, and they had accordingly bestowed upon him a more protracted agony, and a more frightful fate. The heroic young man moved out of the shadows amid which he had been standing, and advanced towards the lamps of the shrine to meet his fate. Three times he went, and gathered up a handful of earth, which he cast over the bodies with a pious prayer. Then he folded his arms once more upon his breast, and awaited the will of his murderers. The light of the lamps betrayed no expression upon his noble brow, save that of pity for the victims at his feet. The hands of the sacrificators touched his shoulders, but not a nerve quivered.

Suddenly a horrible hissing was heard from the *basso relievo* of the ravisher of Sita; the statues of the Indian typhons quivered in the sides of the mountain, and a stone image, with living eyes, stretched forth its arms towards the place of sacrifice; while a deep voice pealed out these words:—"Priests of Siva—children of the Lion of God—servants of Myhassor, suspend the sacrifice! This last victim belongs to the God Soupramany-Samy, the second son of Siva, who has long inhabited this temple under the form of a serpent. Go forth, all of you, and leave here him who is still living. The serpent Anenta craves his blood and his flesh. Children of the Lion of God, to-morrow you may return, meanwhile, go and pass the night in prayer and contemplation."

After the utterance of this oracle, the stony spectre closed its eyes, its arms became rigid, and its body resumed its immobility. The priests, the faquirs, the sacrificators, all the Indians witnesses of this prodigy, often quoted in their history, fell upon their faces on the earth. Elona only remained upright, his eyes fixed upon the figures of the *basso relievo*, with a tranquil and minute inspection which sought the natural solution of an unheard-of miracle. The colossal sculpture kept its secret.

The crowd slowly retired, preceded by the priests and executioners; and all, filled with holy terror, traversed the vaults with bent heads and upraised hands, murmuring the mystic words which appease the anger of Myhassor.

The temple was deserted.

Once more the statue opened its eyes, and with its hand made a sign to the Pole to advance; then a low sound issued from its lips: "Count Elona, extinguish the two lamps."

Brodzinski, seized with nervous terror, hesitated to obey.

"Extinguish the two lamps, Count Elona," repeated the figure.

Elona made a very natural reflection with the rapidity of thought. "Even by the aid of these lamps," said he mentally, "I shall scarcely find my way in this labyrinth; what will become of me if I put them out?"

"Nay, then," said the statue, "since you refuse a chance of life, I must risk myself to save you," and having uttered these words, the ghostly figure sprang over the stone effigies of the *basso relievo*, fell upon the lamps, and extinguished them. At the same instant, a vigorous hand grasped the arm of Brodzinski, and a voice whispered in his ear, "Follow me, and I will be your guide." * * * * * * *

"Ha!" murmured Elona, "you are the faithful spy of Sir Edward Kherbbs!"

LITERARY GOSSIP IN PARIS.

(*From our Correspondent.*)

THE journals are now farming out a large portion of the fiction-talent of the country. The *feuilleton* system, of which M. Dumas is the head, has answered the purpose of the public press so thoroughly that the editors of the several papers have become fearful of losing their regular contributors, or of suffering them to lessen their popularity by over-diffusion. M. Sue has for some time bound himself over "for a consideration," and doubtless a very satisfactory one, to the *Constitutionnel*, which has the exclusive property of all his writings, be they as multitudinous as they may; and this, as we have heard, for some twelve or fifteen years. The *Presse* has in like manner appropriated M. Frederic Soulié, in conjunction with the *Siècle*, for half that space of time; and these two journals are henceforth to share his novels between them. The *Révue des Deux Mondes* and the *Presse* have possessed themselves of M. Jules Sandeau, to the exclusion of all other brain-speculators; but the most startling arrangement yet made is that with M. Dumas himself, by the *Presse* and the *Constitutionnel*, whereby he is not only restricted to these two papers, but also to the production of no more than *eighteen volumes yearly!*

One's first impulse on learning this clause of the treaty is to smile at the introduction of so supererogatory an article; and yet its omission would have been no laughing-matter to *MM. les Redacteurs*, who having made him their sole and exclusive property, would have been unable to appropriate his works; for M. Dumas pours forth his compositions as Niagara pours forth its waters. Hitherto he has annually sent before the public from thirty to forty volumes bearing his name in the title-page, and, strange to say, without any commercial depreciation in value. Those who were at the trouble of numbering them did not hesitate to express their doubts of the legitimacy of their paternity; and they were authorised in so doing by the fact that this species of literary felony is by no means uncommon in Paris. M. Dumas, however, met their supicions by asserting that every MS. which had left his hands was in his own autograph; and there was certainly no probability that he would sit down to copy another man's work. The result of the present arrangement will be to deprive at least two daily journals of the *prestige* of his name, and the public of about one half of his labours. M. de Balsac, Madame Dudevant, and several other popular writers, are still at liberty to immortalize themselves where they see fit; but the number of daily and weekly papers is so great here that they will probably soon be involved in the same vortex.

The system is, in any case, an extraordinary one; but we doubt if it be favourable to the talents of the writer so employed. The necessity which exists of giving to every distinct *feuilleton* its separate point and finish, deprives the work, when read as a whole, of that calmness of style and continuity of subject which allows due repose to the mind; and has done much to produce the spasmodic, violent, and fragmentary manner which is now so conspicuous a feature in French fiction-writing.

The last packet from Algiers brought news of the capture of M. Théophile Gautier by the Arabs. No one, however, places implicit faith in the report. This is the season for *canarets*, and this may well be the hoax of some inventive genius. If it be true, then so much the worse for the purse of M. Gautier, and so much the better for his book. We shall learn by the amount

of his ransom-money at what price the Moors value a man of letters.

JOURNAL OF AMERICAN LITERATURE.

Hawthorne's Journal of an African Cruizer.

[CONCLUDING NOTICE.]

HOWEVER the black settlers may appear to be better suited than Europeans to harmonize and amalgamate with the native tribes, the result of their present intercourse has by no means been the establishment of mutual understanding and good-will. Incessant quarrels prevail between the two classes, settled at times by amicable palavers, but more frequently by violence and bloodshed. Indeed it is scarcely to be expected that so long as the colonies are under the immediate protection of the American cruizers, the natives should cease to regard them as little better than American invaders. Another element of discord upon the African shores visited by the journalist is found in the jealousy between the sable republic and the white missionaries. The latter are probably in a great measure in fault; but the superior respect which the white man commands among the untaught natives as a being almost of a different race, cannot fail to be a fruitful source of jealousy between the missionaries and the members of the just emancipated community. Certainly our author details, with apparent carelessness and levity, an instance of conduct upon the part of his countrymen little calculated to inspire the natives with higher and more civilized feelings than at present belong to them. The natives had, two years previously to the incident which he relates, treacherously murdered the captain of a schooner called the *Mary Carver*, together with the whole of her crew. The circumstances of the captain's death had been attended with the very worst kind of cruelty. The mate and crew had been surprised by an overwhelming force and massacred. The only motive for this deed was the desire of plundering the vessel. There was no evidence of any ill-will having existed at any time between the parties. After several ineffectual palavers, the party to which our author belonged determined to take ample vengeance; accordingly, they set to work to destroy by fire a number of the native villages.

After the storm and conflagration of the second town, we took a brief rest, and then proceeded to capture and burn another, situated about a mile to the northward. This accomplished, we judged it to be dinner-time. Indeed, we had done work enough to ensure an appetite; and history does not make mention, so far as I am aware, of such destruction of cities so expeditiously effected. Having emptied our baskets, we advanced about three miles along the beach—still with the slugs of the enemy whistling in our ears—and gave to the devouring element another town. Man is perhaps never happier than when his native destructiveness can be freely exercised, and with the benevolent complacency of performing a good action, instead of the remorse of perpetrating a bad one. It unites the charms of sin and virtue. Thus, in all probability, few of us had ever spent a day of higher enjoyment than this, when we roamed about, with a musket in one hand and a torch in the other, devastating what had hitherto been the homes of a people.

One of the sweetest spots that I have seen in Africa, was a little hamlet of three houses, standing apart from the four large towns above-mentioned, and surrounded by an impervious hedge of thorn-bushes, with two palisaded entrances. Forcing our way through one of these narrow portals, we beheld a grassy area of about fifty yards across, overshadowed by a tree of very dense foliage, which had its massive roots in the centre, and spread its great protecting branches over the whole enclosure. The three dwellings were of the same sort of basket-work as those already described, but particularly neat, and giving a pleasant impression of the domestic life of their inhabitants. This small, secluded hamlet had probably been the residence of one family, a patriarch, perhaps, with his descendants to the third or fourth generation—who, beneath that shadowy tree, must have enjoyed all the happiness of which uncultivated man is susceptible. Nor would it be too great a stretch of liberality, to suppose that the green hedge of impervious thorns had kept out the vices of their race, and that the little area within was a sphere where all the virtues of the native African had been put in daily practice. These three dwellings, and the verdant wall around them, and the great tree that brooded over the whole, might unquestionably have been spared, with safety to our consciences. But when man taxes upon himself the office of an avenger by the sword, he is not to be perplexed with such little scrupulosities, as whether one individual or family be less guilty than the rest. Providence, it is to be presumed, will find some method of setting such matters right. In fine, when the negro patriarch's strong sable sons supported their decrepit sire homeward, with their wives, "black, but comely," bearing the glistening, satin-skinned babies on their backs, and their other little ebony responsibilities trudging in the rear, there must have been a dismal wail; for there was the ancestral tree, its foliage shrivelled with fire, stretching out its desolate arms over the ashes of the three wicker dwellings.

Thus ended the warfare of Little Berebee. The degree of retribution meted out had by no means exceeded what the original outrage demanded; and the mode of it was sanctioned by the customs of the African people. According to their unwritten laws, if individuals of a tribe commit a crime against another tribe or nation, the criminal must either be delivered up, or punished at home, or the tribe itself becomes responsible for their guilt. An example was of peremptory necessity; and the Americal vessels trading on the coast will long experience a good effect from this day's battle and destruction. The story will be remembered in the black man's traditions, and will have its due weight in many a palaver. Nevertheless, though the burning of villages be a very pretty pastime, yet it leaves us in a moralizing mood, as most pleasures are apt to do; and one would fain hope that civilized man, in his controversies with the barbarian, will at length cease to descend to the barbarian level, and may adopt some other method of proving his superiority, than by his greater power to inflict suffering. For myself personally, the "good old way" suits me tolerably enough; but I am disinterestedly anxious that posterity should find a better.

As, however, the classical Liberia and its gigantic wars may not be quite as interesting to the English readers as to those for whose especial behoof the *Journal* was published, we turn to other matters. Leaving the tract called Liberia (which extends for about 300 miles from Cape Mesurado to Cape Palmas), the first point almost at which the author stopped is at Axim, whence commences a chain of forts which extend to and which have been held by different European nations for centuries. The fortress at Axim itself was built by the Portuguese in the year 1600, and was wrested from them by the Dutch less than forty years after its foundation. Axim itself is dependent upon the stronger garrison of El Mina, and is constantly exposed to the attacks of its powerful neighbour, the king of Apallonia, one of the Ashantee race of princes. We are afraid some of Mrs. TROLLOPE'S victims would be rather scandalized by the following description of the place, and the garb of its female inhabitants:—

The native houses are constructed in the usual manner, of small poles and bamboo, plastered over with clay, and thatched. They might be kept comfortable if kept in repair, but are mostly in a wretched state, although thronged with occupants. The proportion of women, as well as children, appears larger than in other places; and they wear a greater amplitude of apparel than those of their sex on the windward coast, covering their persons from the waist to the knee, and even lower. The most remarkable article of dress is one which I have vaguely understood to constitute a part of the equipment of my own fair countrywomen—in a word, the veritable bustle. Among the belles of Axim, there is a reason for the excrescence which does not exist elsewhere; for the little children ride astride of the maternal bustle, which thus becomes as useful, as it is unquestionably ornamental. Fashion, however, has evidently more to do with the matter than convenience; for old wrinkled grandams wear these beautiful anomalies, and little girls of eight years old display protuberances that might excite the envy of a Broadway belle. Indeed, fashion may be said to have its perfect triumph and utmost refinement in this article; it being a positive fact, that some of the Axim girls wear merely the bustle, without so much as the shadow of a garment. Its native name is "tarb koshe."

Axim is said to be perfectly healthy, there being no marshes in the vicinity. The soil is fertile and the growth luxuriant. There is a fine well of water, from which ships may be supplied abundantly and easily, though not cheaply. The landing place is protected by small islands and reefs, which break the force of the swell; so that boats may land with as much safety and as little difficulty as in a river. One of our boats, nevertheless, with fifteen or sixteen persons on board, ran on a rock and bilged, in attempting to go ashore. All were happily saved by canoes from the beach. There is a great abundance of pearl-shells to be found along the shore, not valuable, but pretty.

The currency here is gold dust, which passes from hand to hands as freely as coin bearing the impress of a monarch or a republic. The governor's weights for gold are small beans; a

brown one being equivalent to a dollar, and a red one to fifty cents.

We have made sufficient extracts to shew what is for the most part the style of the book under review. Perhaps, in justice, we ought to insert one passage, written in a different tone, and affecting a higher flight. It occurs in that part of the *Journal* which records the impressions produced upon the journalist's mind by a visit to the tomb of the ill-fated L. E. L. who died at Cape Coast Castle from the effects of prussic acid, within a year after becoming the wife of Governor MACLEAN. We omit the inscription upon the marble tablet erected to her by which these reflections are prefaced, because the journalist is not responsible for that, and the taste of it is to our mind much worse than questionable. An awkward Latin epitaph is bad enough over the tomb of some John Smith, in one of our London churches, but it is intolerable when composed upon the remains of such a creature as Mrs. MACLEAN.

The first thought that struck me was the inappropriateness of the spot for a grave, and especially for the grave of a woman, and, most of all, a woman of poetic temperament. In the open area of the fort, at some distance from the castle-wall, the stone pavement had been removed in several spots, and replaced with plain tiles. Here lie buried some of the many British officers who have fallen victims to the deadly atmosphere of this region; and among them rest L. E. L. Her grave is distinguishable by the ten red tiles which cover it. Daily, the tropic sunshine blazes down upon the spot. Daily, at the hour of parade, the peal of military music resounds above her head, and the garrison marches and counter-marches through the area of the fortress, nor shuns to tread upon the ten red tiles, any more than upon the insensible stones of the pavement. It may be well for the fallen commander to be buried at his post, and sleep where the reveillé and roll-call may be heard, and the tramp of his fellow-soldiers echo and re-echo over him. All this is in unison with his profession; the drum and trumpet are his perpetual requiem; the soldier's honourable tread leaves no indignity upon the dead warrior's dust. But who has a right to trample on a woman's breast? And what had L. E. L. to do with warlike parade? And wherefore was she buried beneath this scorching pavement, and not in the retired shadow of a garden, where seldom any footstep would come stealing through the grass, and pause before her tablet? There, her heart, while in one sense it decayed, would burst forth afresh from the sod in a profusion of spontaneous flowers, such as her living fancy lavished throughout the world. But now, no verdure nor blossom will ever grow upon her grave.

If a man may ever indulge in sentiment, it is over the ashes of a woman whose poetry touched him in his early youth, while he yet cared anything about either sentiment or poetry. Thus much, the reader will pardon. In reference to Mrs. McLean, it may be added, that, subsequently to her unhappy death, different rumours were afloat as to its cause, some of them cruel to her own memory, others to the conduct of her husband. All these reports appear to have been equally and entirely unfounded. It is well established here, that her death was accidental.

THE TOURIST.

[All the world travels now-a-days. Great, therefore, will be the utility of a periodical to which every Tourist may communicate such of his experiences as to routes, sights, conveyances, inns, expenses, and the other economies of travelling, as may serve his fellow-tourists. To this design we propose to devote a distinct department of THE CRITIC, and we invite communications of the class described relative to travelling both abroad and at home.]

SKETCH OF A TOUR IN THE TYROL.

(*Continued from page* 341.)

THE next day's walk may be over the Krimmler Tauern, and during which he would be better with a guide. We happened to meet with a peasant who was going over the pass for cheese, and we accompanied him. The tourist must walk up to the highest extremity of the valley, and will pass, on his right, the old chapel of Heiligenguist. He will then commence the steep ascent of the mountain, over a road by which horses sometimes cross, although it appears impassable for them. In an hour and a-half, if he climb hard and perseveringly, he will reach the top of the pass (9,000 feet high), called the Krimmler Tauern, from which he will have another magnificent mountain view. At the head of the valley he will see the Drei Hern Spitz, covered with snow—a remarkably fine object. The descent on the other side is over rough rocks. In three-quarters of an hour the Brunneu, at the bottom of the steep part of the mountain, will be reached; and, pursuing the route down the stream, in another hour and a-quarter the tourist will arrive at the chalet in the Achental. At the foot of the defile, just before entering the Achenthal, a most magnificent Alpine scene will burst upon him. At the head of the valley, and near him, he will behold in all his majesty the Drei Hern Spitz, covered thick with snow and glacier, with a very wild-looking and picturesque foreground of rocks and pines. At the chalet he will have a splendid bowl of milk set before him; the one presented to us measured in circumference eight full spans of my companion's long fingers and thumb, and was full of milk to the brim. We reduced the height of the milk considerably. The tourist will then continue his journey down the valley, inclosed on both sides by high mountains, and rocks covered with firs on the lower parts of them, with good and level pasture ground between them—the soil sparkling with mica. One or two very pretty openings in the side of the valley will be seen, particularly where the Ramsbach forms a fall, and two fine, high sharp mountain peaks are seen covered with snow. He will afterwards enter a narrow defile, which becomes very wild, with immense blocks of granite scattered about in wild disorder, and which is well wooded with firs. At the foot of the defile are the three Kriml waterfalls: the first falls about 250 feet, and is very beautiful; it is forced through a narrow passage at the top, and throws out rocket-like gushes of water, which fall upon a ridge of rock, from which the water again rebounds, sending off heavy showers of spray; then runs down on each side of the rock, leaving the middle of it bare, and then falls with great force into the basin below, boiling and rising up again in the middle of the middle of the basin like a spouting fountain. The second one is small. The third fall is higher than the first; the upper part of it is sloping, and the water spouts out in various forms, dashing on the rocks; the lower part is contracted, which causes a fine gushing foaming fall, which tumbles with great force into the boiling cauldron below, sending off clouds of foam to a great distance, from which the enterprising tourist will probably enjoy a heavy shower-bath. These falls are remarkably fine; the first possesses the most beauty, but the third excels in grandeur. The accompanying scenery is also very fine. The view, as we saw it on a fine evening from above the falls, of the valley of Kriml, rich and well cultivated, the village of Kriml, and its pretty church with its red tapering spire, was very beautiful.

The tourist will this day have had a pleasant walk of about twenty-five miles, and will arrive at a very good inn at Kriml early in the evening. He may resume his journey on the following morning by ascending the Plattenburg from which is obtained a distant view of the falls; the top of the Plattenburg is something like a Scotch moor. He will then proceed down the river on the other side to Gerlos, fourteen-miles from Kriml, passing down a narrow valley with green meadow-land flanked with firs. The valley opens at Gerlos, which is a scattered village, with now a good inn, where he should rest. We saw here, drinking their beer, some fine specimens of the Tyrolese peasantry, tall handsome fellows. After leaving Gerlos, and walking a little distance, the valley again contracts, with steep sides covered with firs, forming a fine forest. Before coming into the Zillerthal, the side of the valley opposite to the road forms a beautiful slope, with fine green cultivated land, dotted over with picturesque chalets and groves of firs. In decending, a most lovely view will be had of the Zillerthal and the village of Zell, with its pretty green tapering spire, backed by a hill side with groves of firs finely arranged by the hand of nature in the English natural style of gardening. The bottom of the valley, as seen from here, is almost like a garden, quite level, and of a beautiful green, with picturesque neat houses scattered over it. At Zell, a very neat clean village, and about thirteen miles from Gerlos, an *einspännig* may be taken to ride for six miles down the beautiful Zillerthal, rich and well cultivated. He will then, probably, be able to walk the remaining five miles to Fügen, and must there inquire for the house of Joseph Rainer, one of the Tyrolese minstrels who visited London in 1828; he is now married and settled here, and keeps a very comfortable inn. We saw the inhabitants of this valley in their sunday costumes; that of the men consisted of a conical black hat with artificial flowers or a gilt tassel, and generally gray jacket, short black breeches, a broad belt of black leather figured with white, some of these a foot broad, and red braces. The women wore hats like those of the men, and dresses with very short waists, nearly close under the arms, and very unbecoming to the figure. When the tourist leaves this inn in the morning he will probably be presented with a nosegay by the *kelnerinn*. He may then walk quietly down the Zillerthal which continues beautiful and fertile, with a little corn and much meadow, the bottom being level and the sides sloping and ornamented with groves of firs, beautifully varied with green pastures. At the foot of the valley there is a picturesque old castle. He will then turn up the valley of the Inn, the sides of which, for some distance after entering it here, slope down to the river; it afterwards becomes flat at the bottom and continues so to Innsbruck; it is fertile, and produces much Indian corn, and varies from half a mile to between two and three miles in breadth, and contains many neat villages with clean

whitewashed houses, each having its church and neat spire—spires are very numerous. The river Inn is in some parts near a hundred yards broad. At the end of twelve miles from Fügen he will reach Schwartz. He may take a peep at the church here and the monuments it contains. He may rest at the inn kept by Anthony Rainer, another of the Tyrolese minstrels, and may then join the *stellwagen* (a kind of omnibus), and in three hours he will reach the town of Hall. He must here visit the grave and monument of the patriot Speckbacher, and he will see in the church about thirty skulls, each placed on a cushion of silk or velvet, ornamented with gold lace, the skull covered with muslin with gold lace in front, and with gilded rays of glory and a wreath with jewels over the top of it, and the name on the cushion; he will also see a great many pieces of bones richly ornamented in glass cases, and the skeleton of a saint lying in a case, and handsomely dressed. He may then go forward in the *stellwagen*, and in one hour and a-half he will arrive at Innsbruck, the capital city of the Tyrol.

The first object in this place which claims the attention of the tourist, is the celebrated monument to the Emperor Maximilian in the Hof Kirche, and with which he cannot fail to be much struck; it is most imposing, and of wonderful workmanship. The same church contains the grave of the patriot Hofer, over which is a fine marble statue of him in the costume of a Tyrolese peasant; and the silver chapel containing the two monuments, one to the Archduke Ferdinand of Austria, and the other to his wife, Philippina Welser. Jacob's Kirche contains the grave of the Emperor Maximilian the Second, with a monument over it; and also the celebrated Madonna of Lucas Cranach, to which miraculous powers are attributed. In the churches in Innsbruck we saw several skeletons of saints gorgeously dressed in glass cases, with the names of the saints marked on them. In one church we observed a splendid pulpit, with gilded and silvered angels, cherubs, &c. The two churches at the outside of the town, after passing through the Arch of Maria Theresa, are both richly ornamented in the interior. The palace garden is a pleasant promenade, as also along the principal street, called Neuer Strasse, which is long and handsome. In the cemetry is the monument to the sculptor, Collin of Mecklin; it contains, also, several other handsome monuments; one in marble representing an angel receiving a child about eight years old, and his mother sorrowfully parting with him, is very beautiful: we observed here brushes tied to basins or pans containing holy water for sprinkling it over the graves. The museum should also be visited; it contains many of the mineral productions of the Tyrol, birds, &c.; also figures cut in wood by the inhabitants of the Grödnerthal, and some beautiful bas-reliefs in wood by Joseph Hill; a portrait of Hofer, said to be very like him; his sword, hat, and green braces, and other relics of him; the belts of Speckbacher, and his sword. We also saw a painting in the Museum of the battle at the foot of the Berg Isal, near the two churches at the outside of the town, and also of another battle at the bridge of Innsbruck; in both battles the French were defeate by Hofer; also two paintings on spiders' webs, with glass on both sides. A visit may be made to Maximilian schloss, standing on the hill just above the town. Near the schloss is the tomb of Richard Henry Tooth, Esq., of Coleshill, who died at Weirburg (which is passed in ascending the hill) aged 23; it is a very chase and simple monument, with flowers growing around the grave, and is situated at the top of the hill, which commands a fine view of Innsbruck; it has a cross, with the inscription "Unica Spes." A pleasant day's excursion may be made by walking first to the Schloss Ambras, an ancient castle built in the 13th century, once the residence of the Archduke of Austria, and afterwards converted into barracks, and which commands a very beautiful view of the Valley of the Inn; then continuing the walk up the hill to Heiliges Wasser, where there is a pilgrimage chapel and a small inn, and from which there is a most splendid view. It receives its name from the so called holy water, which runs out of two old gun barrels, over which is a calvary. The interior of the chapel is nearly covered with *ex voto* offerings, chiefly consisting of paintings of the virgin and child; above, the representation of some accident happening to some person, or of some one sick or praying, some dated in 1688; also of men, animals, legs, and other parts of the body in wax. We observed during our walk from this place some of those long whips, that the peasants are so expert in cracking over their heads with a report louder than a pistol. Near the Schloss Ambras may be seen the Tummel Platz, where tournaments were formerly held; it is now a burial ground, with a great many votive offerings fixed on the trees. Rifle shooting, and the Bauern Comödier, or small dramatic pieces performed by the peasants, may be witnessed near Innsbruck. As this town is very centrically situate, many excursions may be conveniently made from here.

(To be continued.)

RHINE TOURISTS.—(*From a Correspondent.*)—Aug. 21, 1845.—At Mayence last night there was a great rush for beds. I went to four hotels before I could obtain one. At last I entered a house not named in Murray, the *Heissicher Hof*, or Hessian Hotel, situate on the river, and nearer the quay than the others. The landlord conducts it in person; the beds were excellent, the supper good, and the charges extremely moderate. Nothing could surpass the civility and attention of mine host. I recommend your readers, when they stop at Mayence, to take this hotel. They will gain much in comfort, and save much in pocket.

E. W. C.

ART.

STATUE OF THE LATE DUKE OF SUSSEX.—The statue which about twelve months since was ordered from E. H. Bailey, esq. the eminent sculptor, by the Grand Lodge of Freemasons, as a tribute of respect to the late M. W. Grand Master (his Royal Highness the Duke of Sussex), is rapidly progressing, and the fidelity with which the features and figure of the late prince are delineated, and the admirable manner in which the decorations of the orders of the Thistle and Garter, with the robes of the latter, are executed, reflect great credit on the artist, and have received the highest encomiums from her Grace the Duchess of Inverness, his Royal Highness the Duke of Cambridge, and others who have visited the sculptor's studio. The whole figure is eight feet high, including a six-inch plinth; its weight about six tons, and is formed of one solid block of beautiful white Italian marble, from the quarries of Carrara, the original cost of which was 280 guineas, and the price to be paid to Mr. Bailey is 1,800*l*. When completed, it will be placed on a five-feet pedestal, to be formed (it is understood) of ordinary stone, and the whole is to be erected on the dais in Freemasons' Hall, which is at present being embellished and decorated. The statue, from its great size and weight, can only be conveyed into the hall through an aperture to be cut in the outer wall. The execution of the public subscription statue of his Royal Highness is intrusted to the same sculptor, and will, it is understood, be from the above model, price 1,000 guineas. A drawing has been made, which will shortly be engraved for publication.

MUSIC.

MUSICAL NEWS.—M. Adolphe Adam's new ballet of *Le Diable à Quatre* has met with entire success at the Grand Opera in Paris. Among its greatest attractions is the mazurka danced by Carlotta Grisi, but Sophie Dumilatre, Hoguet Vestris, Petipa, and others have distinguished themselves. Great praise is bestowed on the music, which is written with as much care as for an opera, and in M. Adam's best style, who is to be ranked, however, rather as an agreeable, than as a very profound or original composer. This ballet, and another called *La Fille de Marbre*, to be also composed by M. Adam, are to he brought out at Drury-lane Theatre early in the next season, for which Mademoiselle Adele Dumilatre and M. Petipa have been engaged. Donizetti is said to be indisposed, and no new works from his pen are looked for at present; this may, however, be an adroit specimen of the puff indirect. M. Baroilhet has arrived in Paris, and it was believed that an engagement at the Grand Opera would be offered to him. Madame Rossi Caccia had passed through Paris to Italy, and would afterwards visit Berlin, where she has been engaged. M. Inchindi, the celebrated baritone, is going to Madrid, but will previously perform at Pampeluna, before the Queens of Spain. Madame Grisi's appeal to the Cour-Royale, from the decision of the Tribunal de Commerce de la Seine, which had condemned her in 11,000f. costs for refusing to perform the part of Elizetta in *Il Matrimonio Segreto*, has ended in a reduction of the damages to 6,000f. Madame Henelle, whe made so favourable a *début* at the concerts of the Philharmonic Society, has arrived in Paris, having given, on her way to the capital, some concerts at Boulogne, jointly with the sisters Milanollo and M. Ehrman. *Le Nabucodonosor*, a new opera, by Verdi, has been performed in Paris and Marseilles, with but moderate success, which is ascribed, however, to the subject of the opera rather than to its want of merit as a musical composition. Another opera, by Verdi, called *Alzira*, has been given at the theatre of San Carlo, at Naples, with greater success. The repairs of the Grand Theatre at Brussels have been completed, and the operatic company which succeeded so well in London have re-appeared in consequence of that success with increased reputation. Mr. Mitchell has gone to Paris, and, according to the musical journals of that capital, is making engagements preparatory to the performance of French operas in London during the next season. Messrs. Anderson, W. S. Bennett, J. Calkin, J. H. Griesbach, Howell, Lucas, and M'Mudie, have been chosen directors of the Phil-

harmonic Society for the next season, the last in the place of Mr. C. Potter, who was elected, but declined serving. Mr. W. S. Bennett, has been appointed to conduct the whole series of concerts. The festival at Norwich is appointed to take place on the 16th of September and three following days. A monument to Weber is about to be erected in front of the Theatre Royal, Dresden. A performance in aid of the subscription was to take place at Berlin. Mendelssohn had just finished a new oratorio, which is to be performed at Frankfort; also a second trio for the pianoforte, violin, and violoncello.

MR. W. FARREN, JUN.—This gentleman, the son of the eminent comedian, has proceeded to Florence for the purpose of completing his musical education, preliminary to a *début* on the English stage. The judgment pronounced as to his vocal powers by some high authorities on the subject is, it appears, unequivocally favourable. As for ourselves, we shall hail with great pleasure any worthy accession to the operatic department of our drama, at present so lamentably deficient, more especially as to vocalists of the male sex; and we shall hail the accession with all the greater pleasure in the person of a son of Mr. W. Farren.

THE DRAMA AND PUBLIC AMUSEMENTS.

ITALIAN OPERA.—The season at this establishment has closed, after an unprecedently successful campaign. The theatre on the last night was wonderfully full, considering that every body is said to be out of town. Let us throw a glance over the doings of the season thus terminated. We have observed that the campaign has been a most successful one. We have frequently expressed the opinion that the success Mr. LUMLEY has achieved is amply merited; and, as a proof that this opinion is a general one, the most influential of the subscribers have joined in the purchase of a handsome piece of plate, to be presented to Mr. LUMLEY in token of their cordial approbation of his management. The performers, we believe, both great and small, have already testified, by a similar tribute, to the impartial kindliness, the high honour which characterizes his conduct behind the curtain—a manifestation peculiarly creditable to its object. During the season we have had only one new opera, *Ernani*, but there have been several revivals, more or less successful. *Il Giuramento*, *Il Pirata*, *Roberto Deveux*. The works most frequently presented, yet ever fresh, ever received with *furore*, have been the *Sonnambula*, *Norma*, *Don Pasquale*, *Lucrezia Borgia*, *Semiramide*; *Don Giovanni* has been played several times, *Cosi fan tutte* twice. We have had the *Barbiere* given perhaps better than ever. Madame CASTELLAN has proved a most valuable accession, though we still sigh for PERSIANI; while ROSSI CACCIA and MORIANI afford clear proofs of the *impresario's* sound judgment. It is needless to speak of GRISI and the other long-since established favourites. As to *ballet*, the past season must have indeed been a glorious one for PERROT, his productions have been a succession of triumphs. The *Pas de Quatre* alone will, in future annals of the opera, suffice to give peculiar celebrity to *anno domini* 1845.

FRENCH PLAYS.—We have heard with very great pleasure that these charming entertainments are to be renewed at the St. James's theatre in October, under the able direction of Mr. MITCHELL, the favourable result of whose judicious and spirited management has, in the past season, doubtless, encouraged him to this further enterprize. We heartily wish him all success in it. We had begun to fear, indeed, that he would labour under the inability to obtain the co-operation of Mademoiselle PLESSY, in consequence of her self-banishment to icy Muscovy, but we see that in her engagement with the director of the St. Petersbourg theatre, she has stipulated for ten weeks' leave of absence in each year, which, if she be so disposed, and she can hardly be otherwise after the reception she has ever found among us, will give her time to pay England a visit. Her engagement, by-the-way, with the Russ, extends to six years, the salary, including one benefit in each year, being 3,400*l.* per annum. One of the stipulations reads curiously enough; viz. that she is to receive fifty roubles a night, *fire-money*, for each piece of one act, 100 roubles for each piece of two acts, and 150 for each piece of three acts and upwards. Health and happiness to her, wherever she be.

PRINCESS' THEATRE.—The only circumstance calling for notice under this head is the important one that MACREADY has concluded an arrangement with Mr. MADOX for, we believe, three months, six weeks of which will be entered upon shortly, and the term completed on the great actor's return from his provincial engagements. This is an adventurous enterprise on the part of Mr. MADOX, for Mr. MACREADY'S terms are none of the easiest; but we feel confident that if full houses every night will repay the spirited lessee for the great additional outlay of various kinds, to Mr. MACREADY and other performers whom it will be necessary to engage to give adequate effect to the works produced, full houses Mr. MADOX will have, night after night, for the whole series. The opportunity to Mr. MACREADY'S admirers of seeing his play to effect will be a more advantageous one than has ever yet presented itself, for the reasonable size of the house will enable the spectators to see each gesture, hear each word, without any necessity being imposed upon the actor to raise his voice beyond the proper pitch, or to make use of over energetic action. The supplemental season here of two weeks, which has been well carried on by the aid of WALLACK, in his old character of *Alessandro Massaroni*, among others, COLLINS, and other favourite performers, has terminated.

SADLER'S WELLS.—We put down the name of this theatre, principally for the purpose of keeping it in our readers' memory, as a place to which they ought most assuredly to go. The pieces are well selected, and most satisfactorily performed; the light farces which relieve the sterner interest of high tragedy being well nigh as efficiently rendered as the tragedies themselves are by the able lessees and their excellently disciplined corps. To the judicious revivals which have done honour to this little theatre under its present management, we have now to add that of MASSINGER'S *Fatal Dowry*, produced on Wednesday, in a manner which will insure it a permanent position in the acting *repertoire*. It was repeated on Thursday, and will doubtless be given once or twice a week.

SURREY.—Under this head, too, we have nothing more to do than to recal to our readers' attention that Mr. and Mrs. MATHEWS are performing here, for a limited period, in a variety of their most popular parts. *Beauty and the Beast* was produced on Thursday very effectively.

VAUXHALL.—Another grand masquerade, the fourth of the series, was given at these gardens on Tuesday night, in honour of Prince Albert's birth-day. There was a considerable attendance of visitors, too many of whom wore no costume whatever. It is very true that, even when people do assume characters on these occasions, they, with very few exceptions, make no sort of effort to act up to them; but still the variety of dresses produces a good effect, and is, at all events, so necessary to realize the idea of a masquerade, that those who have the superintendence of such festivals should make it a *sine quâ non* that each visitor should wear, at any rate, a domino and mask. As to the conduct of the throng, up to the hour of our departure, it seemed decent enough. There is, indeed, we think, a marked improvement in the character of these *bals costumés*. Far too many objectionable people are to be seen, indeed, as is always the case at all public balls and similar entertainments, where a system of authentication is not in force, as at ALMACK'S; but the conduct of the objectionable is far from being so objectionable as it used to be. Among other features of the evening, there was a grand illumination presenting a huge ALBERT in glowing letters. Mr. LEWIS, one of the active managers of the establishment, an exceedingly courteous and well-behaved person, took his benefit on Wednesday, when an infinite variety of entertainments was provided.

On attending at the Adelaide Gallery on Wednesday evening, we were much pleased at seeing so numerous an assembly. The variety of the entertainments, which are at all times highly amusing and instructive, added to a very excellent *mêlée* of music, singing, dancing, &c. cannot fail to be attractive. The programme on this occasion was diversified by a lecture given by a New Zealand chief, on the manners and customs of the natives. The chief, it appears, is an Englishman, left this country in 1827 in a trading vessel, and after going through a number of vicissitudes by sea, was induced to settle amonst and become naturalized by the New Zealanders; he was there made the chief of a tribe. He is very curiously tattooed, according to the custom of the country, and gave a very minute description of this singular process. He appears fully equipped as a chief, with all the different instruments of war used by this peculiar people. He exhibits the war dance, and gives specimens of their singing, &c. with a variety of other entertaining details, which will well repay a visit. The chief has an assistant lecturer, who fully describes every part of his dress and the separate interest attaching to each; as, in consequence of so long an absence from his own country, he has in a great degree forgotten his native language. At the termination of the lecture the visitors have every opportunity of satisfying their curiosity by a closer inspection. The model of PILBROW'S Atmospheric Railway Carriage is still in operation, and cannot fail being an object of great interest.

ORIGINAL CONTRIBUTIONS.

THERE is so much of humour and of playful satire in the following verses, that, although they differ both in subject and style from the poetry we have prescribed ourselves for this journal, we cannot forbear giving them a place in our columns.

HARRY SINGULAR.

My name is Harry Singular,
Protesting is my trade;
Though right or wrong,
In prose or song,
In sunshine or in shade,
I'm ready with my protest,
No matter who says "aye:"
I dread *nem. cons.*
E'en more than duns,
And duns are my dismay.

My models should you like to know?
I take my facts from Brougham;
From Sir Andrew
My Christian cue,
My figures from Joe Hume;
My tactics from D'Israeli,
My loyalty from Dan;
My debts I pay
Whene'er I may
Like honest Jonathan.

In love I never venture—
To me a woman's eyes
Are but the stars
That guide us tars
'Neath Cupid's low'ring skies;
Her tears are but the vapours
That shroud our milky way,
Her sighs and smiles
At best but wiles
To lead our hearts astray.

With abstinence, tee-totallers,
And Mathewites I vie;
In meat and drink
I'm proud to think
No "gastronome" am I:
'Mong aldermen I'm never found,
Their dinners I disdain;
I loathe their hock,
Their turtle mock,
Their Margaux and champagne.

Though dancing now is all the "go,"
Of course I never dance,
Or Irish jig,
Or Polish rig,
Or galopade of France:
The polka, shadow'd forth by Polk,
I vote a double bore;
So coming things,
The poet sings,
Their shadows cast before.

In politics and party strife
I seldom see my way,
Tories and Whigs
But change their gigs
For "Broughams" of the day.
Some sympathy I felt, I own,
When Dan was sent to jail,
Though I've a knack
To turn my back
Whene'er he turns his tail.

In religion I take my stand
A Presbyterian true;
No common fold
I ever hold
With heathen, Turk, or Jew:
Away with "surpliced ruffians,"
Whatever be their vest,
I hate all cant,
E'en Protestant,
I solemnly protest.

My loyalty to king or queen
No mortal dares to doubt;
By England's throne
I'd stand alone,
Whatever foes might shout;
And yet I must confess a fault
(Don't take me for an elf)—
When others sing
"God save the king,"
I sing—God save myself.—H. B.

CRITIC OF TRADES, INVENTIONS, ETC.

Every person feels the want of an *honest* informant to direct him where the best commodities of all kinds are to be purchased. New inventions for use or ornament are daily produced, which would be cordially welcomed if their merits were made known. An advertisement alone cannot be trusted. An impartial reporter is wanted in whom the public can confide. This department of THE CRITIC will endeavour to fulfil that duty. To aid the design, correspondents are requested to inform our readers of any new production for use or ornament they may try and prove, of the places where the best commodities of any kind are to be procured, and so forth. Of course no anonymous communication will be attended to.]

ELECTRIC TRAIN INDICATOR.—The Paris journals state that, at a recent meeting of the Academy of Sciences, M. Dujardin, the inventor of an electrical telegraph, submitted a plan for rendering this invention valuable as a means for indicating the precise position of a railway train upon different parts of the line. He proposes that as a locomotive passes by certain places it shall touch a spring in connection with the wire, and thus communicate with the index of the station by certain signs previously agreed on. An invention similar to this, for the purpose of preventing collisions, appears to be attracting public attention on the other side of the Atlantic, and is thus described by a writer in the *Albany Argus* as the invention of an inhabitant of Syracuse, in July last. "The object of the invention is to shew at any point on a railroad the exact position of a train of cars which are passing over it, in order to prevent collisions, and for other purposes, through the aid of electricity, in the following manner. A wire is extended on posts, like Morse's telegraph, and at the end of each mile a mile-post is placed, with the distance on it from the place of beginning. On each mile-post is a dial, like the face of a clock, with one pointer or indicator, and around in circle are all the numbers of the posts on the road. The wire passes through the machinery of the dial (which is very simple), so that every time the electricity passes over it the pointer is forced forward one number, or from 1 to 2, or 2 to 3, and so on. A battery is placed on the locomotive, with a conductor reaching out from it, so that it will come in contact with another one reaching from the mile-post and connected with the wire, so that when the locomotive passes the post, the electricity will pass from the battery and take effect."

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

DR. FORBES ON THE CASE OF CLAIRVOYANCE.

DR. FORBES' article in the *Medical Gazette* calls for some further comment.

Let us avow our conviction that Dr. FORBES is an honest inquirer. The large admissions of Mesmerism, as a fact in nature, which he has made in spite of the prejudices of his profession, prove that he is sincerely seeking the truth, and if satisfied, would boldly proclaim it. In this he differs vastly from the majority of those who call themselves the opponents of Mesmerism, for their object is not to ascertain the very fact, but to make out a case against it,—two different operations, which are pretty sure to lead to different results. Dr. FORBES is, therefore, a man worth an attempt to convince; one to whom argument may be addressed and experiment exhibited with a confidence that they will be received with attention though scrutinized with strictness, as they should be. Hence it was, that we were anxious that he should personally inspect the case of clairvoyance of which so many particulars have been submitted to our readers. The results of that investigation Dr. FORBES has published, and we have no other cause to complain of his statement than that he has substituted, in two important particulars, a positive assertion for a suspicion, and that he has jumped at conclusions which the facts do not justify. These we set forth last week.

We have further to defend ourselves from the charge of credulity, which Dr. FORBES has preferred against us. We do not this by way of complaint, we simply offer a reply to the accusation.

Dr. FORBES admits that the most perfect fairness was exhibited on our part, and that every opportunity was given for the investigation.

We are willing to concede to Dr. FORBES that if we had seen no other experiments, and knew no more of the patient than himself, we should be open to the charge of credulity had we put any faith in them. They would have excited our curiosity, and induced us to institute a formal and extensive investigation, but they would not justify conviction.

It is only because we have seen so many *more* experiments than Dr. FORBES, and from daily inspection of the patient, both in his natural and mesmerised state, that we are satisfied that his case is real, and that he possesses the power asserted.

Dr. FORBES has more than once admitted that if, *in a single instance*, the boy would read the contents of a packet impervious to ordinary vision, and so closed that it should be impossible to open it without detection, he should admit the faculty called clairvoyance. Had not the three experiments in which *it was tried and performed* in the presence of Dr. FORBES, been unfortunately vitiated by neglect of precautions which would have set the matter at rest and forbid doubt, Dr. FORBES must have avowed his conviction, founded upon his own personal observation, and for so doing, would have been called credulous by those who had not seen what he had seen. To that his answer would have been, "I cannot doubt my senses. Here is a packet which was folded and sealed by myself; no eye could penetrate it. The word within was read, and the seals returned unbroken. I *must* believe what my senses shew me."

Such is precisely the answer *we* make to Dr. FORBES when *he* charges *us* with credulity because *we* have believed in facts which *we have* seen, but *he* has *not*. We say, "We have proceeded on your own principle. We would believe on no less evidence than you. But we have had such evidence. We have seen the patient read the contents of packets sealed and inclosed in card-cases and boxes, and returned them to the persons who had sealed them with the seals unbroken, and this not once only, but many times. And to the fact we were never the solitary witness; each instance has been attested by others present throughout, by persons of different callings and various intellects, many of them decided opponents of Mesmerism, who came intending to discover a deception, and who quitted convinced that clairvoyance was a fact whatever may be its explanation.

Dr. FORBES has no right to assert that the facts were not such as all these impartial witnesses aver, simply because he did not see them. Sure we are he does not intend to accuse so many persons of *wilful* falsehood. And to charge them with credulity in believing what they see is equally unfair. The experiments have been minutely described; the papers and inclosures are all preserved for inspection by him or any other curious inquirer. He has no right to charge others with credulity for receiving them, unless, at the same time, he shews in what manner, under the safeguards described, deception was *possible*.

Still, as we have before observed, the case is open to him to test in any manner he pleases; we ask only that a judgment shall not be formed by three or four trials, whatever their result, but only after repeated examination in various forms, and with any safeguards ingenuity can devise. Our entire ignorance of the nature of the faculty renders the conditions under which it acts merely a work of guessing and a trial in the dark, and hence the uncertainty of results in this, being, like all other branches of physiology of which the knowledge to which we pretend is a mountain, while that we really know is but a mole-hill.

Since the above was in type, we have received from Dr. FORBES a letter, which will be found below. We have not at hand the Doctor's report of the experiments on GEORGE GOBLE, consequently cannot compare them a second time, as we could wish, with our own remarks. We may, however, observe, that the testimony of other gentlemen who were present before and after the opening of Professor GRAHAM'S box, goes to corroborate our statement, that the Doctor, though he insisted on the nullity of the experiment, owing to the conditions not having been strictly observed, at the time expressed an opinion that the box had *not* been opened by GOBLE. With regard to the repeated attempts to read the box left with A. B. for experiment with the boy, we should state that, owing to unavoidable circumstances, the boy has not been mesmerised for the past twelve days, consequently, a second attempt to read the contents of the box has not been made. The peremptory and even angry tone of Dr. FORBES'S letter we will not emulate.

TO THE EDITOR OF THE CRITIC.

SIR,—I have to request that you will give the following brief statement a place in your Journal, in reply to your comments on my paper in last week's CRITIC.

It is odd, after stating that "Dr. Forbes has given, upon the whole, a correct statement of the experiments" (in the case of the boy Goble), that you should give statements *exactly the reverse* of those made by me in the published account.

1st. In regard to the first experiment, I did *not* express my "opinion to the last that the paper had not been opened;" what I did express is stated in my paper.

2nd. The statement in my account, in regard to the "folded paper in the card-case" I maintain to be the truth. Your *confidence* "that it had not been opened" must go for nothing when placed by the side of the *facts* related by me.

3rd. I was *not* satisfied that Professor Graham's box had not been opened, but the very reverse; and so far from its being "impossible to open and restore the cover without more entirely severing them" (the seals), it is distinctly stated in my paper that this was *actually done afterwards*, without altering the character of the crack in the seal.

It certainly would have been much fairer, both to your readers and myself, had you printed my report of the experiments; and I think I have a right still to demand this of you. It would also have been candid if you had stated that, in taking my leave of George Goble, I had placed in the hands of Mr. A. B. a sealed box containing a word, with the promise, that when this box was returned to me unopened, with the word it contained written on its outside, I would then investigate Goble's alleged power of clairvoyance yet further. Although the box has been in Mr. A. B.'s possession nearly three weeks, and although I have a striking proof* that Goble has been *trying* to read the word, the box has not yet been returned to me; and therefore I think I have a very reasonable excuse for not, at present, troubling myself any more about one who, by his own confession and Mr. A. B.'s open admission, has been proved to be "a liar and a cheat."

I am, Sir, yours, &c.

JOHN FORBES.

Old Burlington-street, Aug. 25, 1845.

WE have pleasure in laying before our readers a temperate, argumentative, and sensible letter from Mr. NEWNHAM (whose work on Human Magnetism has been noticed in these pages), on the unwillingness of medical men to examine into the truths of Mesmerism, and the readiness they display, in the absence of an acquaintance with the subject, to prejudge and censure it.

TO THE EDITOR OF THE CRITIC.

SIR,—In commencing a series of occasional communications on the subject of Magnetism, it is necessary that I should state the reason why I have selected your pages as the vehicle for giving to the public observations which must sometimes wear a professional tinge; and which, in my opinion, ought to have seen the light through the medium of a strictly professional journal. But since I cannot find that strictly professional journal disposed to give fair play to the advocates as well as to oppugners of Magnetism; and since, as a body, medical men in *ignorance of the* science are disposed to condemn it unheard, since they will not investigate its claims to attention; and since they will summarily decide against its pretensions, absolutely without knowing the foundation of those claims—I am compelled by the love of truth, and the desire for its prevalence, to leave my own accustomed journal and to present my thoughts through a new channel to that public, who will ultimately compel a serious inquiry into the merits of the subject to be set on foot, and carried out, by professional men. I would by no means maintain a bigotted adhesion to all that has been put forth under the name of Magnetism; but I would, with all confidence, ask for an investigation by a well-chosen commission of medical men, and I would state my honest conviction that the refusal to inquire arises from the apprehension of being obliged to forego many darling and long-cherished prejudices,—and to endure the mortification of unsaying what, for years past, they have been

* I had a note from Mr. A. B., informing me that Goble *had read* my word, which he (Mr. A. B.) had written on the box. The word named by Goble and written by A. B. is *entirely different* from that contained in the box!

saying, with a positiveness which is proverbially their especial attribute.

To those who have really seen magnetic phenomena, is is matter of unfeigned astonishment to hear and read the absurd and ignorant denial of those phenomena which is weekly obtruded upon the public; and it is really difficult to estimate in the moral and intellectual scale, the guilt attaching to such wilful ignorance, or the amount of so great intellectual perversion.

It is, Mr. Editor, a remarkable fact in the history of this controversy, that its opponents, for the most part, leave all the more important and well-known phenomena of magnetism as beside the question, or demanding only a passing notice, in order to bring the full strength of their warfare against *clairvoyance*—a phenomenon confessedly rare,—a phenomenon which very many magnetisers have never seen—a phenomenon which might be blotted from magnetic history, and yet never be missed from all the principal objects of Magnetism. Yet the fact of this rarity—and of its having been comparatively seldom seen and established, constitutes it a far easier object of attack—and far more difficult of defence. Hence is this chosen as the great subject for controversy; and if, on this point, there seems to be some partial victory, then is it promulgated through the length and breadth of our land, as another proof that the whole of magnetism is an imposture. Is this the conduct of scientific men—of truth-loving and truth-seeking men—of men who are willing to confess their errors, if they can be shewn to be errors, —and, at all hazards, to prefer the triumphs of truth to the lethargic security of prejudice?

These observations have been induced by events which have happened in the last few weeks. At the last meeting of the Provincial Medical and Surgical Association, lately held at Sheffield, the author of the *Retrospective Address on Medicine*, Dr. Charlton, in the most gentlemanlike manner, gave an opinion unfavourable to Magnetism. I never object to fair difference of opinion, and I feel persuaded, that a mind like Dr. Charlton's is open to conviction, and that he will yet see reasons for altering his opinion.

Not so much can be said for Mr. Estlin's *Remarks on Mesmerism*, just published in the journal of the above-named Association. This paper was evidently written for an audience ignorant of the real merits of the subject, and prejudiced against it.

Mr. Estlin alludes more than once to the *clairvoyante*, whose history I have given in my work on human magnetism, and by whose history I set so little store, as immediately to ask of what avail are facts like these, when these are not the chief objects of magnetism. But, as I have above remarked, it suits Mr. Estlin to pass over these important facts and reasonings, in order to pounce upon a case of *clairvoyance*, which he thinks more easily assailed, and upon which he endeavours to throw the odium of ridicule, by stating that "the labouring mountain produced such a very ridiculous mouse as the supernatural discovery of the picture of a man dressed like a woman." These things are very easy to say; but they are the evidence of a weak cause; for, in plain truth, the fact of an ignorant girl discovering the face to be the face of a man, and yet being puzzled by the official robes, was the strongest possible testimony, that she *did see what she asserted*. Of course, our opponents will say, why then, if she saw so distinctly, did she not read the name of the individual at the bottom of the engraving? For the best reason in the world; because it was a proof impression *before the letters*. But Mr. Estlin finds fault that more evidence was not produced to authenticate this fact. I can only repeat that pains were taken to ascertain that the girl had never been in Farnham; that she had no possible means of knowing any thing about my library, and that she did not even know me. Far more pains were taken on this head than Mr. Estlin gave himself before writing against it; for had he been as well acquainted as he ought to be with the literature of this subject, he would have known that such facts exist in *nature*, are found among the histories of *natural* somnambulists, and no man of science would venture to say, that whatever has been produced by a *natural agency* which he does not comprehend, *cannot* have been produced by a *voluntary agency*, which equally he does not *comprehend*.

Mr. Estlin cannot perceive that medical men are now more called upon to investigate the phenomena of magnetism than *formerly*. Granting this, however, if the subject has never been adequately investigated; if medical men have always refused to inquire, is it any palliation of their present refusal, that they do so now because they have ever done so? And is not their assumed, and in fact their real improvement, in scientific character, a new and an additional reason for them to *inquire* into the relative claims of phenomena of which they admit the partial truth (see *Mesmerism true, Mesmerism false*), but denying the existence of the remaining phenomena? Need any reasonable persons require more powerful motives to investigate and judicially to decide between what is true and what is false? Mr. Estlin and his compeers are not called upon to "scrutinize the mode in which curious tricks are played with cards, or the devices practised by persons pretending to read with closed eyes;" if it so pleases them to waste their time, nobody has any right to call them to account; but what they are asked to do, and what they *refuse to do*, is to inquire how far the phenomena of magnetism admits of being turned to good account, in the relief of the disorders of suffering humanity, over which medical skill has exhausted the usual resources of art, and exhausted them unavailingly. If this be an unworthy object of professional inquiry, I have yet to learn what are the real objects of medical science.

Passing a few days lately at Combe Down, with my cousin, the Rev. George Newnham, the clergyman of that parish, he took me to the cottages of two of his parishioners, where he shewed me Charles Chiffins, aged fifteen, and Mary Ann Parsons, aged twenty-one. Both these individuals had been *very* deaf, the former longer than he can remember, the latter for fifteen years; both had tried the means of cure within their reach, but the deafness remained unimproved. Both now hear distinctly; and this effect appears to have been accomplished through the agency of magnetism, employed by some benevolent gentlemen (brothers) in the neighbourhood. There are the cases—there are the complete cures—and the girl's health has been most remarkably improved. These cases have occurred under the immediate inspection of the above-mentioned clergyman; and of their truthfulness there cannot be a shadow of doubt. If there were no other cases of cure extant, and there are many, would not these alone afford sufficient motive for inquiry into the agency of such a remedy? But, we shall be told, the cure was effected through the agency of imagination; and if so, the motive is only removed one step backward, for it is equally necessary to inquire in what way the imagination can be so excited by magnetism, as to produce these effects entirely through a mental impression. Contemplate the facts in every possible way, the conclusion is the same, it is the duty of medical men to inquire into what is inexplicable if admitted, and which must be *shewn* to be *false if denied*.

Mr. Estlin refers to the case of amputation at Leicester, in August 1844, said to have been performed without pain, as if it were *almost* unique—and as if the fact had not been established by many undeniable cases. With regard to the Leicester fact, I have very carefully read the statements produced on both sides, and it is indeed lamentable to observe, that such very opposite narrations should be given by honourable men. Every one will form his opinion of the evidence before him, and will decide to which side credit is to be given;—and doubtless, each one will decide in his own favour, according to his own preconceived views; and admitting this to be the case, if we have no means of comparing the relative credibility of the witnesses, all we can do, is to reject the testimony on both sides.

Mr. Estlin is mistaken as to the reasons why magnetism is not more frequently tried on patients before subjecting them to a painful operation. An eminent surgeon, a believer in this fact, was asked the question, *why* he did not do so, and was honest enough to confess, that he dared not do so, in the present state of professional prejudice. And on this subject I venture to give to Mr. Estlin's assertions the most unqualified denial—and to assert that professional magnetizers are few; that opportunities are *very seldom* allowed to other magnetizers to test the insensibility of pain; that such facilities are not neglected, for they do not exist; and that to my knowledge, many cases favourable to this great fact, have not been communicated to the public: and for the reason above mentioned—they have not the courage to meet the ridicule heaped upon them by their brethren. I would also tell Mr. Estlin, for his comfort, that many among his brethren have become converts to magnetism, and though they dare not yet avow their convictions, are secretly pursuing the path of inquiry. Mr. Estlin is, however, quite right in asserting that magnetism has made more progress in the drawing-room, than it has done in the profession; and he will, ere long, find, that drawing-room intelligence will force investigation upon professional prejudice. Mr. Estlin is perfectly wrong in supposing that the higher phenomena of magnetism have never been exhibited by any persons of character; the contrary is the fact; but these, too, shrink from the public gaze, and cannot bear to be classed among the "impostors," which are so unsparingly found by those who will not inquire into the evidence, or who are predetermined to produce failure of experiments by any means, lawful or unlawful. There are some exceptions to this rule, and I venture to predict, before long, some remarkable testimony from these quarters.

It is not enough for Mr. Estlin and his friends to say that the cure of diseases alleged to have been accomplished by magnetism were really effected by the imagination; they must *prove* that they were so, or their assertion is worthless; it is not enough for them to say that more or less pain was exhibited under such and such an operation, though performed during the state of magnetic sleep; they must prove that such operation was not carried on during such a state of unconsciousness to suffering as has no parallel in the strongest moral courage and the least sensitive nervous system; for this is what is asserted to be the case, and this is the *truth*.

Mr. Estlin says that Mesmerists complain of the way in which they are treated by their opponents, but that the fact is, very little is written against them. We take the liberty of asserting that they have reason to complain because unlawful weapons are employed against them; and we believe that during the last year as much has been written against as for magnetism. I admit that the character of the respective writings has been very different.

Mr. Estlin goes on to remark, that I have censured Dr. Radclyffe's Hall's History of Mesmerism, as published in the *Lancet*, as giving an unfair representation of the subject. The fact is, that in my letters to the *Provincial Medical Journal* (the last of which, though written several months since, is not yet published), I have followed Dr. R. Hall, step by step, through his inquiry,—that I have shewn him to have misquoted his authorities,—to have quoted them unfairly at second hand,—to have selected any inferior authorities, while he has neglected all the more important ones,—to have misrepresented many of these, and to have misquoted himself; and to have shewn, that the only inference to be drawn is decidedly in favour of magnetism. Such, I will venture to say, must be the inference of any unprejudiced person who shall take the trouble of perusing the two series of papers.

I have already trespassed too long upon your time, and I must pass over the remainder of this paper with a very slight notice. It is, however, remarkable that any philosophical mind should tell us, as one of the conclusions unfavourable to magnetism, "that the condition requisite for the production of the phenomena must be pre-existing in the patient, and not communicable by the mesmerizer;" as if it were not a fixed law, that susceptibility to impression must exist before impression could be made, and, as if this were any proof that such susceptibility was not developed by the magnetizer. I must pass over all the other conclusions, many of which are about equal in philosophical value, and merely state, that Mr. Estlin is mistaken when he says that no person can be mesmerized at a distance, or without a knowledge that something is going on from which effects are expected to follow: and that he is likewise mistaken with regard to his mode of accounting for community of sensation on the principle of the "observed suggestions of the mesmerizer." We can only say, that unquestionable facts are against him; and until he has learned to prove that black is white, and to make men believe it too, he never will be able to *crush* the truths of magnetism.

Yours, &c.

Farnham. J. T. NEWNHAM.

BOOKSELLERS' CIRCULAR.

IN opening our review of *Kidder's Travels in Brazil* in our last number, we took occasion to expose a plan now adopted by the publishers of issuing one volume only at a time, when the work consists of several, by which means the benefit of repeated notices and consequent advertisements in the literary journals is secured for them. This practice of issuing works in a broken manner at intervals is of obvious disadvantage to the public; it lessens the interest of the book for the reader, and leaves a far less distinct and serviceable impression on him than is the case when the work, complete, is at his command at sitting down to it. Another evil is there in the shape of an uncertainty that a work, though it may be commenced with spirit, will ever be completed. He who may have bought the first volume of a work which shall be abandoned at the second or third, loses utterly, as far as value goes, the sum he may have outlaid on it. A correspondent has singled a case, which we subjoin at his request, hoping that, now he has challenged the attention of the author to his sin of omission, the latter will complete what is really a very superior work.

TO THE EDITOR OF THE CRITIC.

SIR,—In your last number you truly remark that "a very inconvenient mode of publishing has of late grown into favour. The plan is, where a work consists of more than a single volume, not to bring it out entire, but to publish the several volumes at intervals," &c.

Will you permit me to mention what I consider a very gross case of this kind. In 1841, Mr. G. P. R. James published three volumes of a life of Richard Cœur de Lion; but the third volume only brings the history up to the period of that monarch's accession to the throne, and though Mr. James has been for the last four years "novel spinning" to a most surprising extent, he cannot, I suppose, find leisure to finish a really useful and valuable work. What security have purchasers the book will ever be completed? If it should not, their two guineas (14*s.* per volume being the selling price) will be entirely thrown away.

Requesting the favour of your inserting this letter in the next number of your excellent paper, which will have the effect of calling the attention of the author in question to the subject.

I am, Sir, yours, &c.

A LONDON BOOKSELLER.

Paternoster-row, August 25, 1845.

LITERARY INTELLIGENCE.

We are given to understand that the King of Prussia has presented to Eton College one of the two copies, on vellum, of the folio edition of the *Niebelungen*, published at the last centenary festival, held in honour of the invention of printing. This magnificent volume, especially printed for himself and his queen, is covered with purple velvet, and closed with clasps of gold; and has the following inscription written, in German, on the fly-leaf, by the hand of the king. The dedicatory spirit, it will be seen, is apt to take something of the tone of flattery, even in the mouth of a monarch:—"To Eton College—the hope of the new generations—the promoter of all that is good and noble—the preserver of the ancient Saxon spirit—this heroic poem of the German people, and memorial of a German invention, is presented, in memory of his journey to England, in 1842, and gratitude for the cordial reception which he there experienced, by Frederic William, King of Prussia."

RE-APPEARANCE OF MR. MACREADY.—Mr. Macready has, it is stated, concluded an engagement with the manager of the Princess's Theatre for a term. He will appear early in November, and play six weeks; after which he quits the metropolis again to complete some provincial arrangements, and returns to complete his number of representations with Mr. Maddox.—*Examiner.*

REGISTER OF NEW PUBLICATIONS,

From August 23 to August 30.

NOTICE TO BOOKSELLERS.

A Register lies at THE CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* THE CRITIC, *and no charge will be made either for registration or for publication in* THE CRITIC. *Particulars forwarded* by letter *will be duly inserted.*

LIST OF NEW BOOKS.

Agrippa; or, the Nominal Christian invited to Consideration and Decision, by the Rev. J. Jefferson, 3rd thousand, 18mo. 1*s.* 6*d.* cl.—Arnold's History of Rome, Vol. II. 3rd edit. 8vo. 18*s.* cl.

Beaumont and Fletcher, edited by the Rev. A. Dyce, Vol. IX. 8vo. 12*s.* cl.—Bunyan's Pilgrim's Progress illustrated, 12mo. 3*s.* 6*d.* cl. (Bagster's Edition.)—Bunyan's Life and Experience; or, Grace Abounding, 12mo. 2*s.* cl. (Bagster's Edition.)—Burns' Fireside Library: "German Ballads and Songs," 2*s.* 6*d.*; "Lays and Ballads from English History," 2*s.* 6*d.*; "Lives of Alfred, More, and Evelyn," 1*s.*; "Leisti, a Swiss Tale," 8*d.*; Musæus' Popular Tales, 1*s.* 9*d.* 12mo. swd.

Coxe's (Rev. R. C.) Poems, Scriptural, Classical, and Miscellaneous, crown 8vo. 7*s.* cl.—Combe's (A., M.D.) Physiology of Digestion, 6th edit. revised and enlarged, post 8vo. 2*s.* 6*d.* swd.

Dimock's (Rev. J. F.) Thirty-nine Articles Explained. Vol. II. 8vo. 7*s.* 6*d.* cl.—Discoveries in Central Australia, by E. J. Eyre, 2 vols. 8vo. 1*l.* 16*s.* cl.—Dobson's (Rev. W.) Subjects and Selections for Greek and Latin Compositions, 12mo. 2*s.* cl.

Family Prayers for a Week, from the Holy Scriptures, 12mo. 2*s.* cl.—Fisher's Elements of Geometry, 18mo. 2*s.* cl.

History of the Conspiracy of Catiline and the Jugurthine War of Sallust, translated by Edward Peacock, M.A. post 8vo. 7*s.* 6*d.* cl.

Jacob's (Rev. G. A.) Bromsgrove Greek Grammar, abridged for Beginners, 12mo. 2*s.* 6*d.* cl.—Jacob's (Rev. G. A.) Bromsgrove Greek Grammar, revised and enlarged, 12mo. 3*s.* cl.

Letters from the Mountains, by Mrs. Grant, of Laggan, Vol. II. (Clarke's Cabinet Series) imp. 32mo. 1*s.* 9*d.* swd.

Montgomery's (Rev. G. W.) Illustrations of the Law of Kindness, 2nd edit. with Additions and Supplementary Chapter on Almsgiving, fc. 8vo. 4*s.* 6*d.* cl., 5*s.* 6*d.* cl. gilt.

O'Donovan's (John) Grammar of the Irish Language, 8vo. 16*s.* cl.

Poems and Lyrics, by Mrs. Hemans, imp. 32mo. 2*s.* swd. (Clarke's Cabinet Series.)—Poole's (Rev. G. A., M.A.) History of England, Vol. II. 12mo. 4*s.* 6*d.* cl.

Scenes on the Shores of the Atlantic, by the author of "A Summer in Germany," 2 vols. post 8vo. 1*l.* 1*s.* cl.—Spanish Word Book, by Mad. de Belem, 18mo. 1*s.* swd.—Spanish Phrase Book, by Mad. de Belem, 18mo. 1*s.* swd.

Unwick's (W., D.D.) Concise View of the Ordnance of Baptism, 12mo. 1*s.* 6*d.* cl.; Remarks on the Connection between Religion and the State, 12mo. 1*s.* 6*d.* cl.—United States Exploring Expedition, condensed and abridged, Part II. 8vo. 3*s.* 6*d.* swd. (Whittaker's Popular Library.)

Wylie's (Rev. J. A.) Journey over the Region of Prophecy, 18mo. 1*s.* 6*d.* cl.

BOOKS WANTED TO PURCHASE.

No charge is made for insertion in this list. Apply to the Publisher of THE CRITIC, stating prices.

Poems, Narrative and Lyrical. By William Motherwell. Glasgow; David Robertson, Irongate; Oliver and Boyd, Edinburgh; Longman and Co. London. 1832. Large paper copy, small 4to. 10s. 6d. or 12s.

The Poetical Works of Hector Macneil, esq. 3rd edit. 2 vols. 1812. 8s. or 10s.

Titton's Sketch of the Geology of Hastings, 12mo.

A second-hand copy of Bowdler's Family Shakespeare, 8 vols. 8vo.

Vol. II. of Allen's History of York.

Eclectic Review for January, 1841, being No. I. of Vol. IX.

GLEANINGS.

ORIGINAL AND SELECT.

The Musical Society of Hamburg has sent to Dresden a crown of solid silver, admirably wrought, destined to adorn the marble bust of Weber, which is placed over his tomb.

EDUCATION IN DENMARK.—The King of Denmark has just ordered the teaching of the French language and singing in all the colleges of the kingdom. All scholars will be obliged to learn these, and there will be an annual examination.

NINEVEH REMAINS.—A considerable portion of the remains rescued from the ruins of Nineveh have been safely transported to Bagdad, on their way to Paris.

A NEW DEGREE OF RELATIONSHIP.—It has been untruly said that there is nothing new under the sun. One asked Misther Patrick Maguire if he knew Mr. Tim Duffy? "Know him!" answered he, "why he is *a very near relation of mine*—he onst proposed to marry my sister Kate!"

To Readers and Correspondents.

W. B. U. Cashel.—*We cannot give the root of the word you name.*

J. S. Bristol.—*The communication, if we can find space for it, shall be used in an early number.*

T. T. W. Blackburn.—*We would willingly adopt the suggestion of our correspondent, but to do so would be entirely to change the character of our journal.*

E. M. R.—*The verses, though not deficient in some of the qualities of true poetry, are too unequal to be available for* THE CRITIC.

S. S. Leeds.—*The manuscript has safely come to hand, and will be used as soon as our columns will admit.*

A Subscriber, Dundee.—*At first we proposed adopting the course suggested by our correspondent; but as the facts had previously been stated in this journal, and we admitted the report of Dr. Forbes to be substantially correct, though wrong in its conclusions, it would be going back over the same ground, and that fruitlessly, to insert the articles from the Medical Gazette.*

ADVERTISEMENTS.

Just published,

A PORTRAIT of the REV. GEORGE TOWNSEND, D.D., Canon of Durham; engraved in Mezzotint by T. C. Hogarth, from a Painting by Robinson Elliott. Prints, 10s. 6d.; proofs on India paper, 15s.

David Bogue, Fleet-street, London; George Andrews, Durham.

ROWLAND'S UNIQUE PREPARATIONS.

(Under the Patronage of the several Sovereigns and Courts of Europe, and universally preferred.)

ROWLAND'S MACASSAR OIL,

For the Growth, Preservation, and for Beautifying the Human Hair.—Price 3s. 6d.—7s. Family Bottles (equal to four small), 10s. 6d. and double that size, 21s. per bottle.

ROWLAND'S KALYDOR,

For improving and Beautifying the Skin and Complexion.—Price 4s. 6d. and 8s. 6d. per bottle, duty included.

ROWLAND'S ODONTO,

OR PEARL DENTIFRICE,

For the Teeth and Gums.—Price 2s. 9d. per box, duty included.

CAUTION.

SPURIOUS COMPOUNDS are frequently offered for sale, under the same names (some under the implied sanction of Royalty), the Labels, Bills, and Advertisements of the original articles are copied, and either a Fictitious Name, or the word "Genuine," is used in the place of "ROWLAND'S."

It is therefore imperative on purchasers to see that the word "ROWLAND'S" is on the wrapper of each article. For the protection of the public from fraud and imposition, the Hon. Commissioners of Stamps have directed the Proprietors' name and address, thus,—

A. ROWLAND & SON, 20, Hatton-garden,

to be engraved on the Government Stamp, which is affixed on the Kalydor and Odonto.

Sold by the Proprietors, and by Chemists and Perfumers.

*** All others are FRAUDULENT COUNTERFEITS!!!

AN INTERESTING AND VALUABLE COLLECTION

OF

ANCIENT AND MODERN BOOKS,

SELLING AT LESS THAN HALF THEIR ORIGINAL COST,

AT

G. WILLIS'S,

GREAT PIAZZA, COVENT GARDEN.

(Continued from the last Number of THE CRITIC.)

BEATTIE'S SWITZERLAND, illustrated in a Series of Views, taken on the Spot, by Bartlett, expressly for this work, and beautifully engraved, 2 vols. 4to. cloth, gilt leaves, the work complete, 36s. (pub. at 3*l.* 3s.).

BAXTER'S (RICHARD) PRACTICAL WORKS, complete, with an Essay on his Genius, Works, and Times. Portrait, 4 thick vols. imp. 8vo. cloth, 2*l.* 2s.

BAYLEY'S (J., Keeper of the Records) HISTORY and ANTIQUITIES of the TOWER of LONDON, with Biographical Anecdotes of Royal and Distinguished Prisoners, State Prisoners, &c. deduced from the Records, State Papers, and MSS. Numerous fine engravings of the exterior and interior of this highly interesting building, from drawings by Nash. 2 vols. royal 4to. boards, 1*l.* 1s. (pub. at 6*l.* 16s. 6d.)—Ditto, half-bound in morocco, marbled leaves, 1*l.* 10s.

BEATTIE'S (W.) The CASTLES and ABBEYS of ENGLAND, from National Records and Early Chronicles. 200 engravings on copper and wood, royal 8vo. cloth, 14s. 6d.

BENNET'S GUIDE THROUGH NORTH WALES, with 20 etchings by Alfred Clint, stout 8vo. cloth lettered, 6s. 6d.

"An excellent guide to the tourist."

BEWICK.—The FABLES of ÆSOP and Others, with spirited wood engravings by Thomas Bewick. Second edition, 8vo. bds. 10s.

BEETHOVEN (The celebrated Composer,) The LIFE of, including his Correspondence with his Friends, numerous characteristic Traits, and Remarks on his Musical Works. Edited, with Notes, by J. Moscheles, esq. Including an Account of his Library, and Catalogue of all his Works. Portrait, and plates of music, 2 vols. 8vo. cloth, new, 6s. 6d. (pub. at 21s.)

BELL'S (H. N.) HUNTINGDON PEERAGE, to which is prefixed a Genealogical and Biographical History of the illustrious House of Hastings, including a Memoir of the present Earl and his Family. 2 fine Portraits of the Earl and Countess of Huntingdon. 4to. bds. 5s. 6d. (pub. at 2*l.* 2s. in bds.)

BIRD'S (Rev. G.) HINTS for the REVIVAL of SCRIPTURAL PRINCIPLES, in the Anglican Church. 8vo. cloth, 4s. 6d.

BLACKWOOD'S MAGAZINE, from the commencement in 1817 to 1842, 52 vols. all new, half-bound calf, very neat, fine set of this highly entertaining Magazine, now very scarce, in sets, only 15*l.* (pub. at about 50*l.*

BLAIR'S GRAVE.—Blake's (W.) Illustration of Blair's Grave, with the Poem, splendidly printed by Bensley, fine portrait of Blake, and 12 beautiful engravings by Schiavonetti, imperial 4to. blue morocco, cloth, lettered, 18s. (pub. at 2*l.* 12s. 6d.)

BLAND'S (Dr.) PHILOSOPHICAL PROBLEMS, 8vo. cloth, "a work of considerable utility." 3s. 6d.

BOBBIN'S (TIM.) LANCASHIRE DIALECT and POEMS, rendered intelligible to general readers, by a Literal Interpretation and Glossary of the Obsolete Words in the Lancashire Dialect, illustrated by Quotations from the earliest English Writers, including the Battle of the Flying Dragon and the Man of Heaton, illustrated with plates by G. Cruikshank, 8vo. cloth gilt, 3s. 6d.

BOOK of BUTTERFLIES, MOTHS, and SPHINGES, by Captain THOMAS BROWN, F.R.S. F.L.S. &c. with numerous coloured plates, 3 vols. 18mo. cloth, 6s. 6d.

"This is a delightful work, with no fewer than 144 engravings, coloured after nature; and, both by the style of its scientific descriptions and its general arrangement, well calculated to convey ideas at once correct and popular of the habits and economy of the beautiful tribes of which it treats."—*Literary Gazette.*

"The engravings alone would be astonishingly cheap at the price of the volumes."—*Sunday Times.*

BOOK of FLOWERS, Le Boquet des Souvenirs; a Wreath of Friendship containing 25 beautifully coloured plates of Flowers, accompanied by original Prose and Poetical Descriptions, the Botanical portion by the Rev. Prof. HENSLOW, 8vo. morocco gilt, gilt leaves, 12s.

BOOK of the COURT, exhibiting the History, Duties, and Privileges, of the several Ranks of the English Nobility and Gentry, the Great Officers of State, and the Royal Household; the Forms of Court Etiquette, Rules observed at Drawing-rooms, Levees, &c. by THOMS, stout 8vo. cloth gilt, 6s. (pub. at 21s.)

BOOK of the POETS; the Beauties of English Poesy chronologically arranged from Chaucer to Beattie, and illustrated by Forty splendid steel engravings by first artists. 8vo. crimson cloth, richly gilt, 10s. 6d.

BRAND'S POPULAR ANTIQUITIES. A new edition, in 3 vols. square 12mo. by Sir HENRY ELLIS, Sec. F.A.S. Principal Librarian of the British Museum, 10s. 6d.

"Any one who will read on each respective day the chapter which belongs to it will, when he has got through the volume, have a better notion of what English History is than he will get from almost any other work professedly named a 'history.'"

(To be continued.)

THE CRITIC,
And Journal of Literature.

SATURDAY, SEPTEMBER 6, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

JOURNAL OF ENGLISH LITERATURE.

PHILOSOPHY.

Four Lectures on Civil Liberty and Expansion of Intellect, as connected with Human Happiness. By J. H. HARVEY. London, 1845. Longmans.

MR. HARVEY'S lectures were delivered to a certain society, called "The Philosophical Institution of Walsall." It is not often that the matter addressed to such audiences is worth publishing; but Mr. HARVEY has some considerable claims to be made an exception to the general rule. Of the four lectures, the two first, on civil liberty, are, in our judgment, the best. Their title, "The *Reason* of the Law of Liberty," is an unfortunate and ambiguous one. Our English word, "reason," has very many and wide senses, and scarcely one of them would express Mr. HARVEY'S meaning. In one place he attempts to explain it as the spirit or soul of the law, intending, we suppose, something like what MONTESQUIEU called "*L'Esprit des Lois*," and were we to suggest a term, we think BENTHAM'S expression, "The Rationale of the Law of Liberty," would, though less English, have been more intelligible. Mr. HARVEY'S great object is to shew that liberty consists, not in the freedom from restraint absolutely, but in a service to our country, prescribed and defined by wise laws restraining us, so far as, and no further, than is conducive to the general good. He maintains, moreover, that the test of the existence or non-existence of this civil liberty is security, the security, that is, of life and property, the end and employment of which ought to be the glorifying of God and the production of human happiness. And he lays it down that the happiness of man, as a member of civil society, consists in three things: first, *contentment*, including all the moral virtues; because where there is no morality there can be no contentment; secondly, the *expansion of the intellect*; thirdly, the *increase of property*. We have, in a few words, let our readers into the subject of these two lectures; of course they branch off very widely into the important considerations that of necessity are mixed up with inquiries of this nature. Thus, a very great part of one lecture is given to an examination of certain positions advanced by PALEY, in his *Moral Philosophy*, and to a discussion of the oft-debated question of the origin of human society. Upon this point Mr. HARVEY'S sentiments are very unsatisfactory. They proceed too much upon an assumption which has been exposed over and over again; that men did at some distant time *enter into* society upon certain terms, forming a part of what is called the social contract. Now, such a view, at variance with all history, revelation, and common sense, is defective in itself and mischievous in the deductions to be derived from it. So far from men entering into society, society was born from the relations in which men already found themselves.

The germ of society lay in the home of our first parents, and it expanded without the intervention of man's will, and altogether independently of his stipulations. He had therefore no power to form any contract at all, and what are called the laws of the social contract are no other than the mutual duties and relations ordained and created by the same Being who made the world. It is in the discussion of this point that Mr. HARVEY displays considerable reading, but, apparently, of an unmethodical and desultory kind. This flows through the whole of the book; so that although there is much information, much happy selection and quotation, there is a great deal to indicate either a self-taught or an ill-taught man. Thus, the second Lecture contains a review of a few prominent portions in the history of some prominent nations, as supplying illustrations of the lecturer's arguments. Greece, Rome, America—the ground is ample. But the authorities referred to are frequently not good ones upon the points at issue, and there are in his sketches of Athenian and Roman history not a few faults which would be detected by any forward public schoolboy. Thus one of the Licinian laws at Rome is said to have prohibited "any Roman citizen from possessing any more than 500 acres of land, 500 small cattle, and 100 large cattle, and to have provided that whatever any man had beyond this, should be taken from him and divided amongst the other citizens;" and this is given as an instance of republican injustice and blindness; whereas any such schoolboy as we have just mentioned would have known that the law was, that no patrician should appropriate to his own use more than 500 acres of the public or common unallotted land, or feed more than the prescribed number of cattle upon the public pasture. We notice this mistake (and it is only a sample) with no hypercritical feelings; Mr. HARVEY is not wanting in good strong sense, or in literary power. If he will take advice in good part, he may fit himself to be an author of more than ordinary pretensions; but he wants care and attention, and above all things steadiness and concentration in his studies.

The Creed of a Man. A Summary of the System of Individualism. By WILLIAM MACCALL, Author of "The Agents of Civilization," "The Individuality of the Individual," &c. London: Chapman.

MR. MACCALL is so well known as the philosophic author of *The Agents of Civilization*, that we expect to find every thing from his pen pregnant with deep and valuable thought. And such is the case with the present tract, which contains many sterling and useful remarks and maxims. The tract under notice is mainly valuable as an incentive to thought. It is the exhibition of a brilliant idea which, by shewing to man the necessity and the value of individuality, inculcates a self-reliance, which dignifies him, and gives to the future the grandest of hopes.

Probably the creed of Mr. MACCALL, which he has appropriately *named the Creed of a Man*, will be considered an innovation on the great cry of the day, "co-operation." Yet such is not the case, as the study of Mr. MACCALL'S works will shew. Individuality and co-operation are not antagonistic.

There is much poetic and metaphysical beauty in the maxims before us; witness the following:—

Those whom the pretendedly many-sided men, such as Goethe and Coleridge, despise as one-sided men, are the only many-sided men.

The universe is greater than an epigram—a fact of which the French are ignorant.

The great obstacle to the study of religion is, that men place Nature between God and themselves; whereas they ought to place themselves between Nature and God.

Ideas perish individually;—affections never perish individually.

The Germans have the gift of vision, without the gift of utterance; the French have the gift of utterance, without the gift of vision; the English have partly the gift of vision, and partly the gift of utterance.

Such are a few of the maxims which we think Mr. MACCALL will not suffer to remain as they are. The author has given them as lights to guide us to the threshold of knowledge. They throw their reflection far into the temple of truth, and by making a new world visible, induce the mind to hope that Mr. MACCALL may carry into detail many things at which he has here simply hinted. Where we recognise genius, as we do here, we are ready to shake hands with it, and therefore we trust we shall meet Mr. MACCALL again.

FICTION.

O. T. and Only a Fiddler; or, Life in Denmark. By the author of "The Improvisatore; or, Life in Italy." Translated by MARY HOWITT. 3 vols. R. Bentley.

THE discovery but a few months ago of unexplored fields of literature in Sweden and Denmark has proved an event of singular interest to the reading public of Great Britain. To MARY HOWITT we owe the merit of this disclosure; she it

was who first found and then displayed the gems of genius those countries enshrined, doing at once, what so much becomes her, a kindness to the writers, previously unknown in England, and a pleasure to readers, who, but for her, had probably never enjoyed that gratification. Such has been the result of pacific relations and facility of intercourse between Germany, France, and England, that their literature, common to each, has become as one. With the history and science, poetry and romance, of the countries forming the middle and the south of Europe, few educated persons among us are unfamiliar. With the forms and phases these present we have been long acquainted, therefore turn with all the eagerness of curiosity to examine into the merits of a literature belonging to countries unobtrusive, and little visited, and which we had scarcely given credit for the possession of such a blessing.

The charming works of FREDERIKA BREMER, more than one of which we have introduced to our readers, unfolded to us new beauties of which we had previously not so much as dreamed. In her descriptions of the rude, honest simplicity of Swedish life, in her pictures of northern scenery, and in the portraiture of character existent in a state of society widely differing from our own, the English reader found a new and fascinating charm. There has arisen, however, in Denmark, "another and greater than she," one who brooks not with her a divided rule, but takes, by the "divine right" of genius, the sovereignty of northern literature into his own grasp. This is HANS CHRISTIAN ANDERSEN, already favourably known to us by *The Improvisatore in Italy*—a work full of passion and colouring as book can be.

In the fictions now under consideration, ANDERSEN has been even more successful than in the work which first brought him before the British public. In both, or at least in *Only a Fiddler*, he describes the cares and sorrows, the struggles, difficulties, and privations, endured by the poor, and which, coming closer to his own experiences than did the adventures of the improvisatore among affluent friends in a foreign country, he has done with greater fidelity to nature, and more of probability in his story.

O. T. or Life in Denmark, is not equal to the other tale. It wants spirit to raise it above the common-place. True, the painting of Danish life and manners in this is as good as in the other, but the story is sadly deficient in interest, and the succession of events is sometimes improbable.

The case, however, differs materially with *Only a Fiddler*. This is obviously founded upon ANDERSEN'S own experiences, which he has interwoven, on the whole, not without skill, though sometimes clumsily, into a narrative of striking beauty. The characters are finely discriminated and as powerfully drawn. Never were the feelings and thoughts of children so faithfully represented by an adult as by ANDERSEN in the heroine and hero, Naomi and Christian. The glow and colouring of passion which he has cast over these characters in mature life, the faithfulness of Naomi, and the sufferings and adventures of poor Christian, are such as only a master hand could produce. The morals of these stories are often questionable, and oddly enough, notwithstanding the laxity in general observable in these pages, the author here and there, especially towards his conclusion, suggests the idea that he had a moral purpose at heart. If so, we can only say he has failed in his intention. To enforce a lesson of this nature, he should have contrasted the anxieties and sufferings entailed by sin, against the peace of mind, even amidst distress and adversity, which attends upon virtue.

It is a peculiarity of these fictions that they may be read with as great a relish, or nearly so, in parts, as if the reader sits down deliberately to go through them to the end. This results from the completeness of each scene in itself, coupled with the fact that the mere plot is of trifling consistency or value. The poor Fiddler, wandering friendless through the world, meets with many adventures, which, apart from subserviency to the story, are perfect in themselves. How exquisitely told is the following, where young Christian, seeking means to acquire the art of the musician, meets with a benefactor.

"Ah, dear Sir," said he, and the tears came into his eyes, "I have nobody in the whole city who can help me. Yet so gladly as I would learn music! Oh, I would think night and day upon that which people would tell me." And he related to the count about his home, and described to him his wholly helpless condition.

The count looked compassionately on him; and Christian pressed the hand of the kind gentleman to his lips, wetted it with his tears, and besought him to let him be his servant. He would clean his boots and shoes, run errands for him, or whatever else it might be, if he would only assist him, so that he might be able to learn what was necessary, that at length he might become such an artist as those of whom he had told him.

"Yet, my good youth," said the count, "that is not so easy as you fancy it to be. Besides this, you must also be possessed of a great deal of genius; and whether that is the case or no, time can only prove. You must never forget that you are a poor child! If you are possessed of real genius, it will make for itself a track, though you may have to buffet about on the sea for yet another long year. *Per aspera ad astra!* Adversity purifies. If it be so that any thing is to come out of you, a higher power will help you; that you may of a surety believe! I, alas! can do nothing for you; I have so many others to care for."

With these words he drew out his purse, and gave the boy a silver dollar; repeating at the same time the consoling assurance that real talent always made for itself a way. He then folded his cloak more closely about him, and leaned his head on the wall in order to sleep.

What a philosophic vein of thought, what truth and melancholy sentiment, is there in the following remarks on the uncertain destiny of the child.

When the sculptor commences modelling the clay, we do not yet understand the work of art which he will create. Time and labour are necessary before the plaster-cast exists, and the chisel after the model animates the marble. How much more difficult is it, then, to discover in the child the worth and fate of the man! We here see the poor boy in Svendborg; the instinct within him, and the influence without, shew, like the magnetic needle, only two opposite directions. He must either become a distinguished artist or a miserable confused being. The pollen of environment already begins to work upon him. The god of music, already in the cradle, gave him the consecrating kiss. But whether the goddesses of the times will one day sing him inspiration or madness, who can say? The division between both is often merely a thin partition. Will he some time, perhaps, excite the admiration of thousands, or in a miserable public-house, the violin under his arm, as an old man, act the fiddler to wild and rude youths, who mock him as a fool—he, whose soul received the unseen consecration of music? We know that the Duke of Reischstadt came lifeless into the world. In vain were all means tried to call him back to life: then thundered the hundred cannon, he opened his eyes, his pulse beat. This was the son of the great emperor, and on this account the whole world learned this circumstance of his birth. But no one knew that the son of poverty entered life under similar circumstances. He also was born a corpse, laid on a bed beneath the broken window-pane, when suddenly flutes and violins resounded from the street, where were playing itinerant musicians. A melancholy girl's voice was heard, and the little one opened his eyes and moved the already cold hand. Was it their tones which recalled his soul to labour here upon earth? or was it chance this, Solomon's sword of reasoning men? A rare artist must he become, or a miserable bungler—a sparrow-hawk with yellow wings, which for this superiority is pecked to death by its companions. And if he should become such a being? What comfort would it afford him, what comfort to mankind, full of proud prejudice? Like the snow-flake which falls into the running stream, is he buried and forgotten, and only the works and names of a few elect pass over to the next century. Enviable fate! But future joys may await him in the new state of existence, whilst the happiness of fame lies far distant, in a world into which he cannot enter, in which he can take no part. What does that matter? Is it not all one how high we may be placed in life, if we are only firmly placed? So sounds the consolation of the world! This is the wavering self-consolation, with which the mighty wave of human life rolls on towards the coast of eternity!

The burial of Naomi's grandfather, who perished in a fire, which also destroyed his property, is graphically and impressively told. The sorrowful sympathy of the old servant, Joel, is extremely touching.

In the almost empty hovel stood old Joel, near to where the hole was in the wall. He supported himself against the wall, whilst his dark moist eye was riveted upon an object which, imperfectly covered, lay on an empty bedstead. His thin pale lips moved convulsively, and in a scarcely audible voice he spoke the following words to himself:—"A box, then, shall be thy coffin, thou rich son of the race of Solomon! the apron of a poor woman thy pall! Ah! no daughters of Israel will wash thy body; the red flames have done that. The fire was more dry

than the herbs, more red than the roses which we cast into the bath of our dead. But thy tombstone shall stand at *Bet achaim*, even should poor Joel be thy only follower. Thou shalt enter thy consecrated grave, where the black underground stream will carry thee to Jerusalem."

He removed the apron, and raised the lid from the box in which lay the consumed remains of his master: his lips quivered convulsively, tears streamed down over his wrinkled cheeks, but his words were hollow and not to be understood.

"Lord Jesus be merciful to him!" exclaimed Marie, as she entered; but a blush overspread her countenance when she had spoken these words: she feared to have wounded the mourner by pronouncing the holy name in which he did not believe. "God may," repeated she, therefore, quickly and with emphasis—"God will be merciful to him."

"His tombstone shall stand near his daughter's," said Joel, and again covered the melancholy remains.

"She lies buried in Frideritz," said Marie; "you must be taken a long distance to find a grave. I remember very well the night she was removed: her coffin was packed in straw, and her father, who now lies there in coal and ashes, and you, Joel, were with it. The rain fell in torrents from heaven. The poor child is the only one remaining. The old grandfather was Naomi's sole support."

"Her mother was of our people," pursued Joel; and then added, in a somewhat proud tone, "our community allows no one of its body to perish. I, old man as I am, shall receive my bread, and I will divide it with her, if she find not a place at a more wealthy table. In the house of the Christian belongs the Christian child," added he, but in so low a tone that Marie could not hear.

"The child is with us," returned Marie: "for God's sake let her remain here until something better offers: where the pot cooks for three, a fourth can eat his meal."

Late on the following evening, when it was become dark and quiet in the streets, there moved along a little band through the town towards the bridge of boats: first went the tailor, with a little lantern in his hand; Joel followed him, his bundle on his shoulder, the box under his arm; Marie, with Christian and Naomi, brought up the rear. The little girl wept bitterly; Joel kissed her hand and brow, and went on board the yacht, which was lying under weigh. But few words were exchanged. Silently stood the rest of the party on the bridge, where the cables were loosened.

And by the light of the rising moon did Christian see how the sails unfolded themselves, and the vessel glided slowly along over the mirror of the sea, for all outlines shewed themselves distinctly in this moon-twilight.

Poets tell us of the gypsies who took down their chief from the gallows, placed a crown upon his head, and clothed him in a purple robe, thus to lay in the stream which should bear him to Egypt, where he would rest in the pyramids. A similar thought filled the boy's soul: it seemed to him as if Joel were travelling with the dead into a distant land of fancy, which perhaps was not far from the Jewish city of Jerusalem.

"How similar to the Rhine scenery near Mayence!" exclaimed the tailor, pointing across the straits to the island of Thorseng.

"Good Heavens!" exclaimed Marie, "how is it possible for thee to think of such things now? We ought to be in a rather graver mood, even though it be a Jew whom we bury. Poor people! even in death they have no rest: they must even travel to be laid beneath the earth!"

She looked sorrowfully after the vessel, which slowly glided along the waves, and every moment removed itself from the eyes of those who remained behind.

A novel and curious legend from that prolific land of superstitions, Norway, is that of the girl whose bosom was steeled against the natural duties of her sex—one, too, that is not without a meaning. Its termination is happier than one might expect:—

What should you think if I were to give you a handful of flower-seeds, and you were to let the seeds lie until they were all dried up and had lost all their virtue, would not that be as much as if you had destroyed a whole plot of flowers? There is in Norway the story of a girl who had a horror of becoming a mother, and therefore, the evening before her marriage, went to the water-mill where the witch dwelt, to ask for some remedy which should prevent this. The witch gave her twelve seeds, which she was to fling into the mill-pool. This she did, without thinking any thing more about it; but at each seed which she flung into the water there was heard a slight sigh: it was a child's heart which broke each time. She became a wife, but remained childless; in old age remorse seized her. Her hand was unstained with blood, and yet she was a murderess, and endured agony of mind as an infanticide. One night, as she went into the church to pray for the removal of her guilt, she saw her twelve unborn sons standing before the altar, and their whole race, all their descendants, the number of which was so immense that they filled all the aisles of the church. And she knelt down and prayed; she, the murderess of a whole race! The clergyman denounced wrathfully the woman's sin. "I will not grant thee absolution, and God the Lord will be equally unforgiving. Sooner shall roses spring up out of the flag-stones than I forgive thee!" The night that she had this vision in the church, the clergyman dreamed the same thing as the old woman, and when he awoke the flag-stones had split, and twelve odorous roses grew out of the apertures; these were the twelve sons of the childless wife. "Now is our mother happy!" said the clergyman, and sought for her in the church, where she lay dead before the altar.

Here we take our leave of these amusing fictions. The extracts we have given will convey to the reader a fair notion of what he may expect from this book. Beyond a doubt, it is the ablest, most powerful, and skilfully-constructed of ANDERSEN'S works, and should he produce nothing hereafter superior to it, he will have a honourable place to retire to in the laurels he has won by these fictions.

POETRY.

The Vision of Las Casas, and other Poems. By EMILY TAYLOR. Second Edition. London: Mudie.

To the conflicting opinions regarding the guilt or innocence of LAS CASAS, as the original proposer of the African slave-trade, we are indebted for the poem before us. A second edition is presumed to be a tacit acknowledgment that a work is successful. It may so be, but we do not take it for granted that the second edition of a book necessarily places the author before those less fortunate writers who, not being born under a "bright particular star," have never troubled the press for a reprint. We are not sharp-sighted enough to discover the particular merit in this poem which has carried it to a second edition. Perchance we are too nice, and because a flower has less beauty than the rose, we cannot look with complacency on it. Let us not, however, be so ungallant as not to welcome back the "familiar face" of Miss TAYLOR. We like some of her shorter poems, and think the few lines to the "Golden Eagle" possess a richer vein of poetry than is to be found in the more elaborate versification of *Las Casas*. It was a fine and true saying of the ancient philosopher, that "although a little thing may be perfection, perfection is not a little thing." The highest attribute of poetry is to express universal good-nature with the least waste of language. In *Las Casas* the good-nature is preserved; but force and concentration are wanting. Why does Miss TAYLOR trammel herself by writing the sonnet? We admit that she writes gracefully, and understands what the sonnet should be better than nine-tenths of the poets who meddle with such a form of verse; but we see no reason why a man or woman should walk in fetters. We little relish the form of the sonnet, how much soever we may admire its contents. It is folly for a weak writer to limp on to the fourteenth line, and equally folly for a strong one, having arrived there, to be compelled to stop. The sonnet is too arbitrary, like the unities of the old drama, and is to the mind what shackles are to the hands or gyves to the feet.

The Hall of Silence; or, the Supreme Lama of Patoli; and other Poems. By CHARLES ADAMS BREW. London and Ennis.

THIS work is modestly put forward as an appeal to "public sympathy on behalf of some bereaved relatives of the author." We are aware that benevolence requires some pretext for distributing its blessings, and therefore this volume will give an opportunity to the humane to extend their relief.

Mr. BREW does not fear the reviewer, for this very sensible reason, that "eagles do not pounce on insects." Mr. BREW should have been too independent to have ventured this opinion. It looks like an attempt to propitiate the reviewer with an oily compliment; but it should be remembered, that if it be not in the nature of eagles to pounce and prey on insects, they sweep down swarms of them which may be in the beat of their wings.

We must be careful not to let our benevolence lead captive

our judgment. It is no justification that an author sends forth a book under the plea that it is for the benefit of the distressed. The reading world is injured by a bad book, although its profits may benefit the afflicted. The philosophy of letters is like the philosophy of politics; it presumes that the many must never be sacrificed to the few. The most prominent feature of the work before us is its inequality. *The Hall of Silence* is vastly superior to the miscellaneous poems. So far as intellect is concerned, there is no affinity between them. Mr. BREW, according to his own account, wrote *The Hall of Silence* "in the vigour of his intellect." When the other poems were penned, we are not informed. Mr. BREW has committed the fault too general among a certain class of writers, of ransacking every corner of his desk for verses of any kind, *in order to make up a book*. We do not, however, say that, because the book is thus made up, it should not, in consequence, be purchased. *The Hall of Silence* is a readable story; it has not that passion and impetuosity which we look for in an Oriental tale; but, if in these qualities the author has fallen behind MOORE, he has surpassed many poets who endeavour to find subject-matter for their muse in the East, which they imagine their own country is too poor to supply.

Sutton Park; a Poem. By H. H. HORTON. Second Edition. Birmingham: Ragg and Co.

THIS poem professes to be a description of the beauties of Sutton Park. It has much local and some general interest. The author writes in the quiet unobtrusive style of KIRKE WHITE. In *Sutton Park*, Mr. HORTON reads us many useful lessons. He has viewed the beautiful and fruitful portions of England in comparison with the condition of the poor; and mingling the practical philanthropist with the fanciful poet, has produced a poem above mediocrity.

PERIODICALS AND SERIALS.

The Pictorial Penny Balladist. Part I. 8vo. London: J. C. Moore, Wellington-street.

THIS is really the best got-up, and not the least useful of the penny publications with which the press now deluges the country. This part gives us, for the small sum of 5½d. the noble ballads of "Chevy Chase," "The Nut-browne Mayde," "The Mermayde," "Robin Hood," and, lastly, "The Blind Beggar's Daughter of Bednal Green." These are neatly printed, on good paper, and illustrated with spirited and well-engraved woodcuts. How so much can be done for the money we are at a loss to say. The projectors must rely upon an enormous circulation, for with nothing less can a remuneration be secured. If the succeeding parts equal this in point of excellence both of *getting-up* and selection, this will make a work which will discredit no library nor even drawing-room table.

The Pictorial Penny Shakespeare. 8vo. London: J. C. Moore.

THE same character as we have given to the former work, both for getting-up and cheapness, applies also to this. The illustrations, upon second examination, we think, inferior to those of *The Penny Balladist*.

The Dublin is national and spirited as heretofore, and is full of that earnestness which we would gladly see a little more common in periodical literature. The new feature in this number is the first of a series of articles upon Irish rivers. The first is on the most romantic of its many beautiful streams —the Blackwater in Munster—justly called "the Irish Rhine." We hope this series of papers will induce our tourists and lovers of the beautiful to resort in greater numbers to our sister isle; for, once give the Irish and the English full opportunities of becoming acquainted with each other, and we shall soon cease to hear the fierce denunciations which now impede the progress of civilization and at times even threaten the stability of the empire. There is the usual intermixture of strong political articles,—"Peel's Policy towards Ireland," and "Ireland and her Church," are both ably and powerfully written.

Douglas Jerrold's Shilling Magazine proceeds with unabated vigour. Here, too, there is earnestness, and if some should think that there is somewhat too one-sided a view of our social relations, it is a fault on the right side. It sounds the note of alarm to the consciences and the prudence of the easy, well-to-do-in-the-world folks, and attempts to rouse them into reflection upon the vast, unmeasurable superiority of *worth* to wealth. Home truths it speaks, indeed, and from one of the articles upon the position of literary men in England we extract the following:—

> But if the treatment of men of letters and learning in England be as remarkable for its absurdity as for its flagrant injustice, they themselves must remember that, *as the creators and guiders of public opinion, they maintain, if they do not actually make, the very wrongs from which they suffer*. Were they as a body just to themselves, no one could be unjust to them. Never did any class possess greater power, or use it to so little purpose for their own mental, moral, or personal elevation.
>
> The chief cause of this is, we think, to be found in their want of union. They have no *esprit de corps*—no standard of opinion among them, calculated to instil something of the lofty aim and earnest love of truth and goodness, that actuate the higher minds, into those of the lower. Literature is in consequence made a trade of. And the very peculiar feature of the case is, that those who most degrade the vocation generally in the eyes of the world, are precisely the men who are the least sensitive to the inevitable consequences. Thus, for instance, party writers, in their zeal to blacken each other, evidently forget that the world will be apt to say, as it looks on, "Well, gentlemen, of course you know best," and accept their portraits of each other without further scruple. So also with that pettiest of party tricks—omission or colouring of unfavourable facts, undue prominence to the favourable; men of sense soon perceive that to obtain any thing like a correct view of these facts, they must look at the accounts of both sides; so, whilst the partisans are fancying they are deceiving the public by their transparent cheats, that public is in fact amusing itself at their expense, and losing every particle of respect for the talents displayed, in contempt of the impudent dishonesty to which they are made subservient. But all this while the real sufferer is the independent and impartial journalist, who refuses to attack a man personally because of his opinions, and who is content to allow facts to appear in their own native guise, satisfied that they must ultimately square with his views, if his views are right, and who is quite prepared to renounce them if they are wrong. Such a man feels keenly the disrespect that his unworthier fellows have caused to be attached to the vocation; he is hampered in a thousand ways by the obstacles they have raised in the path. Men are doubting *him*, when they should be listening with the deepest attention to the wisdom he is able to impart.

"St. Giles and St. James" is continued; as also "The Hedgehog Letters." There is also a brief, but, at this time, most valuable illustration of "Romanism as it is," in the account of the mummery and profanity respecting the Holy Coat of Trèves.

Knight's Political Dictionary (Part VIII.) also deserves a passing notice. It is just what we have often wished for—a portable cyclopædia of numerous matters relating to our constitution, our civil and commercial relations, and subjects of general interest which cannot be found in any other one book, and some of them, indeed, not at all. The nature of it may be best shewn by stating that the present part contains, among others, the following subjects: "Factory," "Federation," "Fellowship," "Feudal System," "Fisheries," "Forest Laws," "Foundling Hospitals," "Friendly Societies," "Game Laws," "Gaming," "General," "Germanic Empire," "Guardian," "Hudson's Bay Company," "Inclosure," "Insolvent," "Insurance," &c. &c.

MISCELLANEOUS.

My Razor and Shaving Tackle. By JOHN TEETGEN.

THIS is the title of an unpretending and useful pamphlet, written by a tradesman, in Bishopsgate-street, on the art of shaving. Although in such productions the matter, rather than the manner, should form the subject of criticism, we must do the author the justice of saying that his *brochure* is not without merit even in a literary point of view, while on the score of utility it is much to be commended. Young and old may derive equal profit from an attention to its rules, which are illustrated by numerous well-executed wood engravings.

JOURNAL OF FRENCH LITERATURE.

Médérine. By Madame Ancelot. 2 vols.

The fair author of the present work is better known as a dramatist than as a novel-writer. Her pretty and *piquante* comedies have been popular in Paris for several years, and are well worthy of the approbation with which they have been almost invariably received. The volumes now before us consist of a series of very clever tales, the first of which gives its name to the work. With that identical *nouvellette* we shall not, however, interfere; we have a horror of the morbid sensibility which seeks to cast a halo around vice, and to present the sinner as a victim. There is a vast difference between the unforgiving prudery which "throws the first stone," and the weakness which shuts its eyes to the fault, in favour of a sudden and fervid reformation, forced forward by circumstances; nor have we much faith in the revived virtue of the erring wife when it awaits the treachery and abandonment of the seducer to display itself. Such being the case, we gladly pass over the history of Médérine, with all its clever details and effective situations, for the admirable sketch which follows.

"An Old Glory in 1843" is one of those thoughtful and rare tales which, once read, are never likely to be forgotten. There is in it so much of human interest, so much of wholesome truth, and so much of that best species of eloquence, which, born of the heart, addresses itself alike to the feelings and to the understanding, that we were thralled from its first page to its last, and reluctant to believe at its close, that we had indeed been absorbed so fully by a mere fiction. Nay, we are still tempted to doubt that such is truly the fact. In her preface Madame Ancelot states that these narratives "have their foundation in truth, and are the records of events which have taken place in our own time;" and melancholy though the conviction be, we cannot but believe that this "Old Glory" did live, and feel, and suffer as she describes.

Adelbert de St. Géniès is a student at Paris. Devoted to books and book-lore, on quitting the college Saint-Louis, he declines the splendid home offered to him by his aunt, the Countess de Salvy, and establishes himself in a squalid lodging in the *Pays Latin*, in order to secure himself against all interruption. Handsome, enthusiastic, and warm-hearted, he finds the friendship of some old college companions and his modest income of 2,400f. sufficient for his happiness; varying his monotonous existence by a weekly visit to the hotel of his aunt, with whom he spends his Sunday. His friends attempt in vain to wean him from this life of learned labour, by providing him with a wife; he is deaf to their advice. The thirst for fame is strong upon him; and he resolves to succeed, let the sacrifice be what it may, in earning a proud name among the learned of his country. This generous and high-hearted ambition is the sole principle of his being—his aim by day, his dream by night—and who shall say how often the visions of his sleep overpay the labour of his hours of toil. At length he fails in his accustomed advent at the *Faubourg St. Germain*, and the countess, alarmed at this unusual defalcation, determines on visiting him in his retreat.

A PARISIAN STUDENT IN HIS LAIR.

Under any other circumstances, the narrow and crooked street, the wretched house, the low door, the gloomy passage, and the dark and dirty staircase, which led to two poor and ill-furnished rooms, where the young invalid lay stretched upon a comfortless bed, would have strangely depressed Madame de Salvy, whose eyes rarely rested upon any objects save those of elegance; and whose repugnance to gloom and disorder was carried even to exaggeration; but now she saw nothing until she stood at the bedside of the young man, gazing upon his face flushed by fever, even amid a deep and tranquil slumber.

The little room, which was very dark, only contained one low window, which looked out upon a court, or rather upon one of those nameless cavities which are called courts in Paris, because they are supposed to act as such, seven or eight feet square, in the midst of houses five or six stories in height; the daylight scarcely penetrated to the pavement, and almost entirely shut out the sun; of whose existence the inhabitants could only be aware from having heard it spoken of by others. Madame de Salvy looked curiously about her, even into the dark corners of the narrow chamber, nor did she find her scrutiny impeded by its furniture. A walnut-wood table, which had seen several generations of ink-stands succeed each other, a few straw-bottomed chairs, a small book-case, and loose volumes everywhere; upon the table, upon the chimney-piece, upon the seats, were evidences of study and study only.

Nothing around her recalled the diversions and pleasures which are generally part and parcel of a student's life; it was not the chamber of a young man, it was the cell of a cenobite, faithful to all his vows.

The slender light which forced its way into the room fell first upon the table at which Adelbert was accustomed to work, and then streamed over the bed upon which still lay his morning's task. No curtain was necessary at either window or bed to soften its glare, for there was scarcely sufficient admitted into the chamber to enable the young scholar to pursue his avocations; and it was only when the eyes of Madame de Salvy became accustomed to the partial obscurity, that she was fully aware of the objects by which she was surrounded. The table and chair beside it were placed under the window; the bed stood near, and beyond was a small recess. As the countess looked in that direction, she involuntarily shuddered, for she perceived that she was not alone with her nephew. Her surprise had almost betrayed her into an exclamation of alarm, but she suppressed the weakness, and remained motionless, with her look riveted upon the singular being who appeared to be as motionless as herself.

It was an old man, whose lank arms and fleshless hands rested upon the bedstead, and supported his bald head, where a few scanty hairs, completely white, might still be seen. His face was bloodless and faded; livid and wrinkled skin betokened sickness as well as age. When once Madame de Salvy had cast her eyes upon this singular face, of which no words can paint the fearful paleness and the extraordinary attenuation, she had no longer the power to remove them. She ran no risk of offending the old man by this fixed attention, for he did not even remark her presence. All that was left of life in the almost inanimate being upon whom she looked appeared concentrated in his contemplation of the young sufferer. Madame de Salvy was therefore enabled to examine at her leisure what had so much struck her at the first glance. To her, accustomed as she was to guess with ease the bygone characters of the worldly, to read under forms levelled by similar habits, to understand, despite wasted and constrained expressions, passions and ideas in all their various and intricate shading and gradations, it was not difficult with her experience to read in the wide and terrible scars of the soul: and it was with a sort of terror that she discovered, by slow degrees, in examining the grey old man before her, that sufferings more than years had ploughed the deep lines in his cheeks, and hollowed out his eyes, whose orbits moved amidst a circle blackened by tears. A broad, high, and prominent forehead overhung those deep-set eyes; its outline, that of the temples, of the summit of the head, and above all of the bones which surmounted the eyes, revealed all the traces of a lofty intellect, developed broadly all the powers of a mighty mind, and indicated an unwearied habit of mental application. Imagination and reflection had there engraved their uneffaceable traces; and all announced to an observing eye that the power of thought must, like the power of suffering, have left its shadow there. But the look was dim, the physiognomy blighted, the life gone. It was still the type of a fine and intelligent head, but its intellect appeared to have departed, and its sunken outline had diminished and withered, doubtlessly from an absence of the element necessary to their existence. Something had evidently been wanting to this soul, and that had failed in turn to the support of the body which it was intended to animate. The suffering of the one had caused the suffering of the other. This was, beyond all doubt, one of those beings of whom the vulgar say that the blade has worn out the scabbard; but here the iron was also used up by some undying grief, and what was left of life only served to drag towards the tomb a body without strength, and a soul without volition.

When her nephew awakes, the countess vainly endeavours to learn the history of the human ruin by which she has been so deeply moved. At the first exclamation of the sick student, the old man discovers the presence of a stranger, and steals quietly from the room. Adelbert can only inform her that he is an inmate of the same house, of whom no one is aware of the antecedents. He is known simply by the name of the old man, and passes all his time in the chambers of the different students, never, however, breaking in upon their occupations by a word. Madame de Salvy suggests that he may be necessitous, and is anxious to come to his aid; but her nephew corrects her mistake, and cites an instance of almost magnificent charity, where the mysterious being, in return for a simple civility shewn to him by a neighbouring carpenter, established one of his sons in trade. Adelbert recovers from his fever, and suffers himself to be prevailed upon to pass his period of convalescence under the roof of his aunt. While her guest, he sees and becomes enamoured of the fair ward of one of her friends, whom he first meets in the gardens of

the Luxembourg, where, by a singular chance, the old man happens to be walking likewise. Pauline recognises him as he passes, from his resemblance to an engraving which she had seen in the hand of her mother on her death-bed. Her exclamation of surprise attracts the mysterious unknown to her side, when it is discovered that she is the daughter of a lady to whom in his youth he was betrothed, but whom he sacrificed to his literary ambition. The shock of this rencontre proves too much for the wasted energies of the poor old man, who is placed in a carriage almost lifeless, and conducted to his home by the student. In a few days he collects around his dying bed all the actors in this little history, and tells to them the story of his life, in order to prevent the marriage of Pauline and Adelbert.

THE REWARD OF FAME.

"Take her away!" he exclaimed energetically, "you to whom her fate is confided; in heaven's name, leave her not a day, an hour, a moment near that young man, that madman, who lives only for a chimera, for a shadow! Let her not know, unhappy child, that her youth, her beauty, her graceful loveliness, and her heart, full of soft and loving sentiments, are as nothing to a maniac like him! What avails her beauty? He will never see it!—Her heart? He will never understand it! He will destroy the one, and break the other without pity,—without remarking her regrets, her tears, her sufferings, and her death! And all this for ——. Just Heaven! can it be possible? All this for something without a name—without a meaning—which cannot be defined—which cannot be explained, so utterly does this inconceivable madness escape—even the memory! Yes," he continued, appearing to search with difficulty into the past, "it is a word uttered by strangers, a breath which is tortured into a reality, when it is only a sound! Praises—honours—no, not even these; but, on the contrary, abuse, and calumny, and lies—the contempt of a few, the injustice of the mass, and eventually the forgetfulness of all! And then one awakes—but alone, cold, iced—in a tomb—with the consciousness of being still alive!"

The mother of Pauline, although forced into marriage with another by her family, had sickened and died with the first love in her heart; and the old man, whom the sight of her only child had thrown back among the memories of the past, remembering that in his thirst of fame he had made a victim of the only woman who had been dear to him, now trembled for the fair girl who had bestowed her young affections upon the equally enthusiastic Adelbert. Betrothed to a woman of birth and fortune far above his own, he had nevertheless suffered his egotistical ambition to delude him into the belief that he could not live without realizing his dream of literary glory; although to attain to it, he must trample beneath his feet all the softer and holier impulses of nature. There is a sad and startling lesson in his tale, of which we will give the struggle and the sequel.

LITERARY AMBITION.

"I have summoned you here," he said, after a pause, to see me die. Do not alarm yourselves—when the dream has been frightful, it is a joy to waken; but, do not dream as I have done; Adelbert," he added, grasping the hand of the young man, and drawing him nearer to himself; "blessed be heaven that my mind has become more lucid before I awake eternally. Yes, I feel this moment a little light penetrating through the darkness of my brain, where for a long time all has been night. All my ideas have latterly been so confused that I could not distinguish any thing. Midnight reigned *there*," he said, pressing his hand upon his brow; "dark, stormy, frightful; I suffered, but I no longer understood whence my sufferings came; I could no longer define or explain them;—but even then I felt—Adelbert—that danger menaced you; that you were rushing towards a precipice which you could not see. I sought to warn you, to stop you, but I had no longer a voice; or rather, I no longer found words to speak to you, to make myself heard,—and this anguish came only in the wake of another. I *had* spoken, warned; but my voice had not been heeded, my words not understood—all had been vain when I believed that all might have been saved. Oh! let them save you at least—let them awaken you; for it is a dream without rest, that of glory and ambition! * * * * I felt the same want as yourself; I coveted the esteem of my fellow-men, their praises, their admiration, and also their friendship; I lived for them—for my countrymen—for my age—for my country—for a glorious name. Well, this name—to punish myself for having sacrificed every thing to the desire of rendering it illustrious, I condemned myself to resign it, to forget it! Yes—it shall never be known, it shall never again be uttered by me! and if there be still some to whom it is familiar, and who associate with it ideas of glory and renown, for those I exist no longer! I have nothing to link me to the name which I once bore; I am no longer myself, and what is left of my life and of my individuality belongs no more to what remains of the reputation which I so ardently desired. Never will you know my name, even you who are now around me. Never shall those who knew it learn where lived and died the man who bore it.

"Sophia had received my confessions and my vows. She had answered amid her tears, 'I will wait.' I was madly attached to her when I stepped into the carriage at the door of her father's château; when I reached Paris I was already speculating upon my future triumphs.

"They were great. The hall rang again and again with the sincere applause accorded to my works. More than one book attracted that lively and curious attention which the productions of a popular author can always command, and you may believe me when I say this, for I acknowledge my faults in too frank a manner to leave you any room for doubting the veracity of my tale. I owed my triumph to the sympathy of the public with the ideas which I developed, in the emotions that I had striven to call forth. To me the real mission of literature and wit seemed to be the elevation of the soul—the ascendency of high and noble sentiments over the grosser instincts; it was to the liberal and the high-hearted that I addressed my writings; and they succeeded.

"A popularity, freely accorded by my countrymen, soon lifted me above both my predecessors and my rivals! I believed, and I had a right to believe, that I had won fame; I received the crown of bays with an emotion of delight which that of a kingdom could not have conferred. I said to myself, 'This is indeed a noble and incontestable royalty! Its principle is based upon divine right, and ratified by the voice of the people.' Doubtlessly my triumph exalted me too near to heaven in my own eyes, for all the interests and pleasures of earth faded from my memory. The moment had not then arrived when all glory in France was to be translated into money; when authors were to canvass for celebrity in the streets, and to exchange it for bank-notes; and when genius was to be estimated precisely at the amount which it would bring. The aristocracy sought my society; I was patronized by the court; and those who loved to collect around them men of mark and talent, flocked about me. Thus, not only did I feel that I was a monarch, but also that my royalty was fully recognised; and I believed that it would prove as stable as it was brilliant!

"New ideas visit progressive minds; they are what Bossuet calls a sudden illumination from heaven. Their talent expresses them; people of intellect comprehend them; and fools adopt them, to seem as though they also could understand them. But communication is too prompt in the present day; so short a period elapses between the moment of invention, or of revelation to the superior intelligence, and the moment in which the imitator possesses himself of the idea conceived by another's genius, that what, only yesterday, was a daring innovation, is to-day a general notion, and falls to-morrow into the category of commonplace, or of the prejudices which all disdain; as they do those new fashions which are shunned at first as extravagant and conspicuous, and which at the end of a few days none will wear, because they have been adopted by all classes.

"I had scattered through my works some ideas that appeared new, perhaps from the elegance with which they were treated, and which was consistent with their elevated and delicate nature. They belonged to the sentiment of order and justice which it was then sought to revive, in order to establish society upon a more solid basis. They were understood, adopted, and extolled by all those who sought to encourage and to develope thought; moreover, a new success is so great a boon to old rivalries; it is seized upon so eagerly to injure those by which it has been preceded! It is sometimes a balloon inflated with air, and then let loose as a formidable projectile hurled at its predecessors, until it becomes of sufficient consistency to dazzle of itself. Then is it at once the solitary object of attack; and it is pursued with the pricking of pins and the stabbing of penknives, until, pierced on every side, it is, like all which have gone before, in its turn lessened and lowered.

"I had reached this precise point at which I could not fail to offend some vanity; and when many are tempted to say, like Diogenes, 'Move out of my sun.'

"In a time of calm, paltry jealousies and individual hatreds can only shew themselves in petty intrigue and roguery, which may be easily counteracted; but for the last fifty years, things have been different. France has adopted a habit of getting up from time to time a revolution, which is marvellously serviceable to the evil passions and ambition of individuals, which they can shroud beneath the pretext of this or that idea. We have seen immense political fortunes built up upon the ruins of blighted greatness. It was time that literature also should have its taking of the Bastile and its barricades; and that new names should replace that old nobility of glory which was still confiscated by Corneille and Racine. * * * * "The

people have so long been told that they are the 'sovereign people,' that they are every moment asking themselves, 'But where have they reigned hitherto?' and they have been anxious to verify at least a portion of their royalty in the domain of literature. They have accordingly compelled it to assume their coarseness of conception; their vigorous outline; their power, built up of violence rather than of reason; their strength, more active than ingenious, more ardent than reflective. Thus, all charm of expression, delicacy of shading, justness of idea, and subtlety of perception have ceased to be understood and felt.

"The youngest, the most exaggerated, the most forcible among our writers, were those who best sympathized with this new public, which has more sensations than ideas; then the journals, with their countless voices, learned to speak with more passion than justice, with more force than reason; and soon, amid these contradictory outcries, which jostled and clashed against each other, instead of forming a mutual support, a few noble and distinguished talents in every department of knowledge perished, as the fairest and most delicate flowers perish amidst a storm.

"Ah! I am not the only one, Adelbert, who has in our age seen the illusion of glory perish which popularity had attached to his name. Most of the men of our days outlive themselves, long before the age when talent becomes weakened, or when intellect is impaired by years; and this happens because others are too anxious to take their place; that youth is without control, and old age without support, at a time when public opinion, like all the intellectual powers, has lost its force before the material interests which govern all. * * * * On returning from a long voyage, I endeavoured to get one of my dramas upon the stage. It had become impossible; the theatre was no longer an arena where noble and generous rivals contended for fame; it was a warehouse where minds more or less gifted contended for money. I went into the world; it was careless about every thing save the material and positive pleasure of the moment. None cared to think of the future, and each forgot all of the past which was not every morning recalled to his memory by the daily papers.

"In a saloon where I was audibly announced, a young poet inquired of a journalist who I was. Even those who were occupying themselves solely with the same subjects which had successfully engrossed myself for ten long years were not acquainted with my name. A few years had sufficed to efface it. * * I became a misanthrope; I hated mankind, and I avoided them; they also shrank from me; I had nothing to offer them but my melancholy and my regrets, so why should they have sought my fellowship? I fell sick, and I was as utterly alone in the town where I was born, where I had lived, and where I had been celebrated, as I could have been in a strange city, of which I had only recently become the inmate. * * * * So soon as I was sufficiently strong to express my will, I put into execution a project which I had formed. I hired this narrow lodging, and I resolved to live alone—unknown to every one, and without revealing my name. I wished, also, to render my experience useful to the students who inhabit this quarter of Paris; but my faculties were enfeebled by my illness, and almost entirely annihilated by a fall, in which I received a deep wound in my head. I had become aged and decayed before my time. I never could decide whether it were the organs themselves, or my over-excited, intellect now become unemployed and passive, which rendered me unable to manifest what was in me; but frequently I had not power to give utterance even to the most familiar thought which was impressed upon my mind. Then a new cause of despair overwhelmed me: I had not only survived my fame—I had also survived myself!"

The old man dies, but not before he has convinced the young student that the low voices which fill a happy home are more to be coveted than the acclamations of an interested and fickle multitude; and that the bright eyes of Pauline were better calculated to illumine his path of life than the aureole of popular glory. The dead man lay before him; he had been one of the gifted spirits of his country; he had striven nobly, and had triumphed; and what now remained of his victory? Not even a name!

A simple funeral and an unlettered stone were the only boon he craved: beneath that mute tablet his secret lies buried with him.

LITERARY GOSSIP IN PARIS.

(*From our Correspondent.*)

You will probably have learnt ere this that, on the 16th of July, the Civil Tribunal was busied with the "delicate investigation" which has excited so much attention in all classes here. I allude to the separation of M. Biard and his wife, the former of whom, from consideration for a woman whom he had loved, and who had become the mother of his children, was anxious to spare her, should it be possible to do so, the degradation of appearing at the bar of the correctional police. This merciful intention was, however, rendered abortive by the disgraceful public rumour which attributed to the eminent but unfortunate artist the dishonourable meanness of bartering his personal respectability for gain, and of pandering to the vices of his fallen partner, in consideration of certain pictures to be painted by him and certain patronage to be accorded. Justly indignant at so foul a slander, and deprived of all other means of refuting so injurious a report, M. Biard found himself compelled to forego the delicacy of his intended self-abnegation, and accordingly he applied for a judicial divorce, through the medium of his solicitor, M. Flayol. The King's Attorney, M. de Gaujal, supported the petition of M. Biard, but he at the same time urged that the adultery should be punished by imprisonment. The Court, after consulting together, pronounced the separation; and moreover condemned the lady to imprisonment for three months in the house of correction, placing the children under the guardianship of the father, with permission to the mother to see them twice a month; M. Biard being also bound to make to his erring wife a yearly allowance of 1,200*f.*

Many of your readers are probably not aware that, by the law here, all women sentenced for similar crimes have their heads shaved on entering the gaol, and are compelled to wear the prison dress, which is composed of yellow serge. Thus, although the *laissez aller* of society is tolerably established, it now and then occurs that the punishment which overtakes frailty is considerably heavier than with you, where the Lothario is merely mulcted in purse, and the woman suffers only in her shame. *Apropos* of the Lothario—Is M. Victor Hugo, the poet-peer and law-making novelist, to escape scot-free? For the sake of his wife and family, we are bound to hope so; but, looking upon the affair as matter of law and justice, we have our doubts, and may be permitted to question if the precedent be a safe one.

JOURNAL OF GERMAN LITERATURE.

BIOGRAPHY.

Schiller's Leben. Verfasst aus Erinnerungen der Familie, seinen eigenen Briefen und den Nachrichten seines Freundes Körner. (*The Life of Schiller, compiled from the Recollections of his Family, his own Letters, and the information derived from his friend Körner.*) 8vo. Stuttgart: Cotta. London: Nutt. 1845.

This biography of Schiller is written by Caroline von Wolzogen, the sister-in-law of the poet. It is an affectionate, kindly tribute of womanly feeling and respect, the fond record of years which glided by as a river whose stream is occasionally overshadowed by the dark gloom of the surrounding heights, but which, when more expansive, reflects the serenity, the noon-day glory, the starry brilliancy of heaven, beneath which it takes its course. Were it allowable to criticize it minutely, we should point out some faults of style; but as these have arisen from feelings inseparable from the subject, and most natural to the authoress, we shall pass them without comment. The life of Schiller is doubtless familiar to our readers by the eloquent narrative of Sir Edward Bulwer Lytton, and the less accurate but more critically valuable work of Mr. Carlyle; one, invested with every charm of art, presents to us the *man*, the other guides us to his estimation as the *author*, but both are requisite to a right conception of the poet's character and progress. That our readers, however, may be better enabled to judge of the merits of this volume, we shall attempt a slight sketch of its subject-matter, and introduce some of its most interesting passages by extracts.

Johann Christoph Friedrich Schiller was born at Marbach, November 11, 1759. His father, who was of humble extraction, had formerly held the rank of surgeon in a Bavarian regiment, was subsequently raised to that of captain in the Wurtemburg army, and finally promoted to the office of inspector and layer-out of the grounds at Solitude, with the grade of major. He was a man adventurous and restless, stern and harsh in manner, warmly attached to his family, possessing good abilities industriously cultivated, and an upright, abiding religious sense. He lived to witness the fame of his son, over whom he, in infancy, had breathed this prayer:—

O thou Being of all beings! to thee did I pray, upon the birth of mine only son, that thou wouldest bless him with those mental gifts, which I, by reason of mine own deficiencies, could not bestow; and thou hast mercifully heard me. I bless thee, O mer-

ciful Father! for that thou hast had regard to the prayer of thy servant.

His mother was ELIZABETH DOROTHEA KODWEISS, a woman of respectable parentage, remarkable for her unpretending manners, devotion to her children, and unaffected piety. She nourished the genius and protected the religious tendency of her favoured son, by many a tale of witch and fairy, and by reciting the verses of KLOPSTOCK, GERHARD, UTZ, and GELLERT. He was at all times susceptible of external impressions, and the man never outlived this distinguishing characteristic of the child.

In his fifth year he was attentive to all which his father related or read in the family circle, and incessant in inquiry until he had mastered the subject. Above all, he loved the perusal of passages from the Bible, and the morning and evening prayer, which his father was wont to repeat aloud, ever drew him with joy from his dearest amusements. It was, says his sister, a sight full of pleasurable emotion, to witness the impression of this hour upon his features. The blue eyes, from which faith beamed, upraised to heaven; the fair hair which clustered around the expansive forehead, and the hands folded in earnest feeling on his breast, gave him the appearance of a little angel.

At six years of age his father was removed to Lorch; here he received the first regular rudiments of education from the clergyman of the parish, PHILIP MOSER, afterwards immortalized in *The Robbers*. At nine he was entered at the public school of Ludwigsburg; it was here he for the first time saw a theatre, and the remembrance of its spectacle gave a colour to his thoughts, which soon clothed themselves in poetry, and assumed a dramatic form. But his religious bias was still the strongest.

He would often mount a stool and begin to preach. His mother or sister was besought to wrap around him a black gown and to give him a small cap. He assumed an earnest look; whoever was at hand must become his auditory, and if any merriment was evinced, he grew impatient, would immediately rush out, and was with difficulty again found. He exhibited in these discourses a well-ordered plan. He learnt a few sentences at school; these he connected together, gave them expressive utterance, and having noticed that the clergyman divided his sermon into different heads, he was careful to follow the prescribed form.

The great crisis of his life, however, was now at hand; he was made a poet by the military discipline of his sovereign. KARL, Grand Duke of Wurtemburg, was one of those men who, desirous of promoting good, nevertheless mar the effect of their designs by their fettered system of action. Designing his school for the sons of the officers and privates in his army, yet not excluding civilians, the whole system was yet exclusively military, and founded upon the mechanical routine of the camp. The youths were defiled in parade to lessons, in parade to meals, in parade to bed. At the word "march," they paced to breakfast; at the word "halt," they arrested their steps, and at the word "front," they dressed their ranks before the table. How irksome such a system must have been—how weariness and disgust must have corroded his feelings, every letter of SCHILLER to his friends at this time proves. He had abandoned, in compliance with the wishes of his father and the desire of the duke, his design of entering the church; he had studied jurisprudence with reluctance, and now pursued the prescribed course of medicine, not so much because it was more congenial, but because it was less irksome. By the restrictions of the school, all works not immediately connected with their pursuits were forbidden. But it is with the affections of the intellect as with those of the feelings, the greater the obstacles, the stronger the desire to surmount them; genius admits no barrier, love no opposing force to interpose between them. It was at this time, too, that German literature was awaking from its long sleep of ages. If the quarrels of GOTTSCHED, of BODMER, and their followers had no other effect than that of shewing their countrymen they possessed a national language, it was much to have thus roused and formed opinion. Indifferent as their poetry might be, it created an audience, which became enlarged and enlightened by KLOPSTOCK, LESSING, WIELAND, HERDER, and VOSS. SCHILLER counterfeited sickness, that he might enjoy the advantage of relaxation and of light beyond the hour permitted by the regulations of the school. He thus studied SHAKSPEARE, PLUTARCH, many historical, and the philosophical works of MENDELSSOHN, SULZER, and the others we have named. GOETHE'S *Gotz von Berlichingen* and *Werther* were in the hands of all; one admirable by its historic truth, the other powerful from its eloquent delineation of human passion.

This romance was devoured by Schiller and his companions, and excited, as was most natural, all the hidden poetic feelings of his soul, as the wind which sweeps over the surface of ocean arouses its depths to a storm. The plan of a second *Werther* was sketched, but remained unfinished. Siegwart also had stolen in. This natural, simple, feeling picture of youthful love excited him deeply. He told us that he had often stood for hours at his lonely iron-barred window, lost in the pleasing emotions which it caused. The sight of Goethe, who visited the school at this time with the duke, greatly added to these impressions. How willingly had he made himself known. One word, one look from that inspired genius, who had thus stricken the chords which vibrated responsively, yet untaught, within him, yielding tones musical but uncertain—what had not these effected! How little, too, did Goethe conceive that then a spirit greeted him—that near him then a heart pulsated, the great Hereafter was to form and fashion worthy of his friendship—for whose loss he was to bow down in grief, over whom he was to utter his undying meed of praise, and near whom, in the fulness of days and honour, he himself was to repose.

The dawn of these events then faintly tinged the horizon. In 1780, he left the school, and was appointed surgeon in a Wurtemburg regiment. Soon after *The Robbers* appeared. The effect was instantaneous—it was as revolutionary as the feelings beneath which it had been nurtured, and became admired at once for the rugged greatness of its style and its uncompromising defiance of all settled institutions. But it drove the author from Stuttgard. The displeasure of the duke, who sought another destiny for SCHILLER, who declined, moreover, his critical assistance, was increased by the representations of the court; and an order was given "that F. SCHILLER was to publish no works but those connected with his profession." But *The Robbers* had now been produced upon the Mannheim stage, and what so natural as to desire to witness the result.

To hope for permission to do this was vain, it must be furtively done. For the first time he discovered the deep and stirring emotions his genius had the power of rousing into action. The representation of this firstling of his heart and mind, amid the applause of hundreds, was as the incense which the muses first threw before the altar of their gifted son. It was with much deep and saddened feeling that, at a date long subsequent to this, a friend pointed out the place where Schiller then stood, amid the crowds of the theatre, unknown; for Dalberg and Klein were alone aware of his presence.

Upon its second representation, in 1782, he again similarly visited Mannheim; but his flight was discovered, and he was placed under arrest. During this, he sketched the plan of *Cabal and Love*, and subsequently of *Fiesco*. Murmurs of further harsh and still severer measures met his ear; he had before him the fate of SCHUBART, confined in Hohenasperg for having reminded his ruler he was mortal. He felt the obligations of his family to the duke, he felt also the danger of his wrath to them; but to offer up all that his intellect taught him to worship and to struggle for, as elevated, pure, and free—to yield up all his heart nurtured and his imagination cherished—was impossible. He resolved to emancipate himself, to fly from Stuttgard, and to cast himself upon the world.

Whilst the city was astir with the preparations for the reception of the Crown Prince Paul and his wife, the court, occupied with its festivities, to which both nature and art were to contribute—whilst the youth of the duchy gathered from far and near to partake of the general enjoyment, or streamed from every portal to witness the arrival of their ruler's guests, Schiller assumed his disguise, and quitted the city by a more deserted way. It was a beautiful summer's night, he had said farewell to all that to him, to any manly heart, is dear—parents, and friends, and fatherland; yet he was free; and with the conviction he could now exercise his talents with freedom, he thought all was gained, and that the future was a fairyland.

Thus unknown, thus depressed, for years to struggle with poverty, for years to feel the bitterness of hope deferred, the unsatisfied desire of fame, SCHILLER left Stuttgard a fugitive. "He who now visits that capital finds little to arrest his interest, except one colossal statue in a broad space near the

Royal Palace, before which his guide will bid him halt, to contemplate FRIEDERICH SCHILLER, the pride of his fatherland." He was accompanied by his faithful friend STREICHER, and relied for subsistence upon the production of *Fiesco*. We cannot enter into the details of his life at this period; travelling from place to place, in debt, yet ever intellectually richer, enlarging his views of life, and strengthening his character by the sharp uses of adversity, he finally obtained a home—humble, yet secure—by the kindness of Madame VON WOLZOGEN. This lady was a widow, the mother of his schoolfellow WILHELM, subsequently the husband of the authoress of this work, who offered him an asylum in a small house she possessed at Bauerbach, about two miles from Meiningen. Thither he repaired; it was towards the end of December, 1782.

A deep snow covered the ground, and night gradually stole in darkness upon the valley, yet the cheering light which gleamed from its scattered houses seemed to offer the wanderer a home. Solitude and Freedom, which in his present circumstances he most sought, welcomed him with the joyous greeting of a friend. The village lay nestled beneath the old castle of Henneberg, surrounded by thick woods, which were again o'ertopped by a lofty range of mountains. Their rugged sides presented a desolate contrast to his fruitful Swabian landscape, and evidently yielded but a scant subsistence to hard toil. But the spirit of freedom dwelt there, and the poet's eye glanced over with innate pleasure, and peopled with a thousand coming fancies and changing feelings the little desert between the rough declivities of the rocks, towards which the dark wood cast its shadows. It was here that he read the History of Don Carlos, by St. Real, sketched the plan and completed some scenes of his tragedy. The subject of Mary Queen of Scots was also considered. The retirement in which he lived, the total absence of all external exciting causes, were doubtless in part the reason that he grasped the conceptions of his ideal world, by an imagination stronger and more refined. Those creations of genius which in the light gaiety of youth, under happier circumstances, had been probably scattered like broken rays of light, became concentred, more earnest and impassioned, by this solitude at once of the affections and the mind. Beneath their influence he lived, these o'ershadowed his soul, and were its rich possession.

As he completed his tasks, his imagination preyed upon itself, the world grew dark around him, men's characters assumed a still unkindlier hue. He passed from love to hate, with feelings glowing with the noblest impulses, suddenly congealed, as their fresh stream welled forth, by the icy coldness of the world;—he became *misanthropic*. His letters at this time betray the grief which depressed him. He was dependent, he was in obscurity, he was even sheltered as an outcast. He meditated flight to England, exile to America. He writes of abandoning poetry; in vain, it was like striving to break the fetters of love,—the Heart was stronger than the Will. By degrees he was emancipated from this depression, brighter prospects dawned; the Duke of WURTEMBURG tacitly ceased to persecute; in the society of his benefactress he found relief; the faithful STREICHER, and the bookseller RHEINWALD never slackened in their zeal; DALBERG, the director of the Mannheim Theatre, felt it was at last safe to secure his aid;—finally *Fiesco* was printed and represented. Thenceforth his course was progress. Honours were soon bestowed, and a tolerable income secured; it was sufficient for his necessities; he possessed a manly simplicity of character, which made him independent; he did not pawn his pen to maintain a position not his own. But we must hurry on events. In 1786 he removed to Leipsic; here he was welcomed by HUBER and KÖRNER, the father of the poet.

In 1787 he went to Weimar, whither he had been long invited. Wieland's proposal that he should become a contributor to a periodical with him gave him much pleasure, and the place where he, Goethe, and Herder lived; where the genius of Germany was hallowed, and where freedom winged its flight, he above all sought to know. Goethe was then in Italy, but by Herder and Wieland he was welcomed as became them and him. The manner of the former was more winning, but the greeting of Wieland was as that of a father,

> 'Twas softened all, and tempered into beauty.

"We shall pass happy hours," wrote SCHILLER to a friend; "WIELAND is young when he loves." He was right; in youth we love with feeling, without fear. But at first he did not enjoy the society to which he was admitted.

The court of Weimar tended to cultivate but not stimulate his mind. The tone of its society was criticizing—rather reserved than forward. It wanted freedom and heartfulness. The Duchess Amelia, at whose house all eminent men were welcomed, was at that time occupied with studies and preparations for the journey to Italy. The duke, often absent, seemed to evince no particular interest in him; the court circle was exclusive. The reigning spirit was literature, and its genius bore full sway; but in truth more was talked than felt or thought, and that intimate social life, which elicits character, and which was requisite to unfold his, was wanting.

In 1787, he returned to Meiningen, where his eldest sister had married his friend RHEINWALD. It was a memorable visit. He became then first acquainted with the authoress of this Life, and her sister CHARLOTTE, his future wife. She was then twenty-one, and destined to a situation at the court of Weimar. Her manner was exquisitely womanly; her disposition affectionate, gentle, faithful, willing, and sincere; her education such as befitted her future career to be passed in a refined court. Here is the first meeting:—

It was a dark November evening, when the sound of two horsemen was heard in the straggling street. They were both shrouded in their mantles; we recognised at once Wilhelm von Wolzogen, who in this manner sportively half concealed his face; but the other was unknown, and raised our curiosity. The riddle was soon solved by Wilhelm's request to be permitted to introduce to us his friend Friedrich Schiller. The future of his life was thenceforth ours.

Years, however, intervened before they were united; he felt as others, not the pain of passion unreturned, but of affection he did not dare avow. He was poor. How much of noble feeling has withered to the tomb beneath that stern necessity of life. His letters to her were friendly, marked esteem, and breathed a noble, mild, discreet inclination, without a trace of passion. Our love is generally the effigy of the one we love. SCHILLER'S was the gold purified from sensual passion. Of these letters we regret we cannot venture to give extracts. In 1788 he resided at Rudolstadt, and thus he lived.

How welcome was it to us, when, after some tedious evening-party, we could start to meet our genial friend, beneath the beautiful trees which cast their broad shadows over the banks of the Saale. A forest brook which flows into the river, and over which a light bridge leads, was the place where we awaited his arrival. When we thus met, beneath the pale glimmering light of evening, a calmer, a purer ideal life seemed to possess us. Lofty earnestness, a gentle intellectual vivacity, were in him ever predominant; in his presence we seemed to walk life's path, between the immutability of the stars of heaven and the fairest flowers of earth.

Love, however, occupied, but did not exclusively master his mind; he wrote, he studied, he disciplined his knowledge, ever aiming at that ideal excellence he worshipped; he strove by unceasing energy to conquer also the real antagonism of fortune. He was at length successful; GOETHE interested himself in SCHILLER, and he was summoned to take the chair of Professor of History at Jena. Four hundred students arose to greet his entrance—his emoluments increased—his fame was European—titles were bestowed—every difficulty subsided, and on the 20th February, 1790, he was married. And Death envied his happiness, and aimed the shaft to strike it down. As his intellect expanded, his physical strength decayed; "from the cradle until now," he wrote, "I have struggled with fate." But he was yet spared, and never more inspired; it seemed as if nature, which could not withstand the fiat which recalled life, had yet concentred all her powers in his mind. In 1799 he produced *Wallenstein*, subsequently the long-meditated *Maria Stuart*, *Maid of Orleans*, and *Wilhelm Tell*: then, as if envious of the immortality of Genius, Death refused to relax his hold. He was stricken with his last illness April 28, 1805. For nine days he lingered, weaker and weaker, and gradually more unconscious. His mind dwelt with his family and his works, mingled with recollections of his friends. The thought of eternity dwelt in calmness over his spirit, and occupied it untroubled amid his dreams. On the evening of the 8th of May, Madame VON WOLZOGEN approached and asked him how he felt.

"Always better—always calmer," was the reply; these were the last words he uttered unto me. He desired the curtains might be drawn, that he might once more see the sun. Calmly he gazed upon the setting light. Nature received his farewell.

Upon the 9th he became unconscious; his words were unconnected, and he spoke chiefly in Latin. Towards three in the morning his weakness increased; his breath fluttered. My sister knelt by his bedside; even then she felt the thrilling nerveless pressure of his hand. I stood with the physician at the foot of his bed, and applied warm cushions to his feet. A shock sudden and electric swept across his features, his head fell back, a deep holy calm succeeded and irradiated his face; it was that of the Spirit in repose.

The grief of men finds not its way in tears, the true man conceals them from the world;—yet GOETHE wept. He had been himself ill, but he divined something of the fact. We take the following passage from the exquisite narrative of Sir EDWARD BULWER LYTTON:—

"I see," he said, "Schiller must be very ill." That night they overheard him, the serene man, who seemed almost above human affection—who disdained to reveal to others whatever grief he felt when his son died—they overheard Goethe weep! In the morning he said to a friend, "Is it not true that Schiller was very ill yesterday?" The friend (it was a woman) sobbed. "He is dead," said Goethe, faintly. "You have said it," was the answer. "He is dead," he repeated, and covered his eyes with his hands. He was buried on the night of the 11th. As the bier was lowered, the wind suddenly scattered the mists; the moon broke forth, and its light streamed upon his coffin. When all was over, the skies were again suddenly obscured.

Nature had lowered him to his grave.

We earnestly recommend this volume, as the requisite companion to his works.

GLANCES OF GERMAN LITERARY INTELLIGENCE.

(From our Correspondent.)

To all who observe the current of German literature, and examine into its causes and effects as manifestations of the mind of a nation, it cannot appear accidental that lyrical poetry has at all times and everywhere in Germany found a cherished home. One may, perhaps, call up a smile at sight of the many volumes of this poetry which every year duly produces, but there lies a deeper meaning in this unceasing lyrical reproduction than may appear at the first glance. In the lyric, the German seizes upon the very spirit of the nation, the inward feeling of the people; losing almost all consciousness of *self*, in no other kind of poetry is he less *individual*. He has recourse to the lyric, because so much else is completely closed to him. Among the Greeks, poetry was in immediate connection with the state; with the Germans this can never be; with them, the lyric is another thing than with the French or English. It is seldom that the lyric forms tempt the muse either of France or England. But where is the German who has not written lyrics? The many, the almost innumerable volumes of lyrical poetry with which the German book-market is always laden bear evidence to the harmony of that form of verse with the spirit of the people. JULIUS MOSEN is among the most well-known and deservedly celebrated of the German lyrical poets. MOSEN, strictly speaking, is of the period of UHLAND and RUCKERT,—the time when they bore the lyric banner over all valleys and hills, and pervaded the nation with a spirit which is now reckoned among the things that were. Who at this day reads the songs of SCHENKENDORF? They are hardly known to the mass of German readers even by name, and the roofs which once echoed to them are now filled by the songs of HERWEGH and HOFFMAN. At that time the words of a KORNER were of deeper import to the heart of a people than was the battle of Leipsig itself. MOSEN can never be classed among the modern "poets of freedom;" there lies a whole era of mind-formation between him and them; he is older than the leaders of Young Germany, and the modern "Gesinnungspoeten," and yet his spirit has remained the younger. He belongs really to the era of KORNER. An untiring love of country, a firm faith in the German spirit, are the chief characteristics of MOSEN. See, for instance, his beautiful poem *Frisch, mein Leid!* His sympathy, too, with the misfortunes of Poland are well known through his "Polen Lieder," which, if not, on the whole, equal to those of Count PLATEN, contain one or two of undying fame. His ballads "Der Wasserkönig," "Haland," "Rabeerlied," "Das Waldweib," &c. are among the most perfect things of the kind in German literature. A new edition of his works has lately been published.

HEINRICH WEISSE is a new name among the continental poets; whether it will rank hereafter among the highest, is perhaps a subject of doubt, yet the small volume he has published has been very favourably received. He is a young and unfortunate author, having been blind for many years. This circumstance is of itself sufficient to secure the sympathies and suffrages of the world of readers; he seems to be regarded as a writer of much talent and promise. It is not surprising, with our very slight knowledge of the general literature of the Continent, that many names of note, names well worthy of propagation beyond their own circle, should be to us as unmeaning as though they had never deserved a word of approbation from their nation; such a one is FRIEDERICH VON SALLET. His death is not recent enough, as it is now more than a year since it took place, to induce a mention of it here, were it not that the publication of new editions of his poems necessarily brings him before us. It may be said that his efforts as a poet, while he yet lived, were not commensurate with the talents he owned in such a high degree. He may not inappropriately be likened to CHAMISSO, perhaps also to GANDY; but that he wants the energetic power of the former, so characteristic of CHAMISSO, and differs from GANDY in the want of that jovial spirit with which he clothed every subject he touched. SALLET is powerful by means of his deep earnestness and truth, his total abstinence of all vanity, and his confidence in the justice of the cause he advocates. Undoubtedly he would have done much more, had his life been spared. As it is, he remains one of the German writers most deserving of study. But a poet under inspiration will wander at times, as inclination, humour, or feeling may lead. This SALLAT never does, which is perhaps the reason that he has been, comparatively speaking, so little appreciated. He was not one who could ever be ranked among the romantic poets—he never toyed with nature; all that he sings is simple truth and beauty. It is clear in all he says and does that he acts from the impulse within, without a single thought for the censure or approval which may follow from the world. But for his creative powers—he died too young to enable us to form a just estimate as to their probable development. His romances, legends, and ballads, almost irresistibly remind one of the great poet of the Germans, SCHILLER; but only in some minor peculiarities. SALLET, too, was wanting in humour, in the true meaning of the term, though his epigrams were remarkable for their truth and point. He is one who was needful to the Germans at this time, one whose early death must be sincerely lamented.

Rapidity of production is one remarkable feature of German literature; books are written for the market, not for fame; and yet does not every one know on the school form that HORACE says "Nonum prematur in annum;" that is to say, if you will publish, keep your book nine years, and then print it, if you then think it worth while; and now the morning sees the publication of a work only written the evening before; there is no care for after-improvement; and what work of art does not need it? This rapidity of production is very closely linked, as in other countries, with over-estimation of his own powers on the part of the author. Was it not PLATO who burnt his poems after reading HOMER? Now-a-days such a thing would be deemed absurd; few strive to give their best to the world, their only endeavour is to give something. In the province of Belles Lettres, since 1830, a remarkable tone of frivolity and superficiality may be observed; it might almost be termed alarming. Every one attempts every thing—novels, tragedies, criticism, poetry, and so forth; yet how rarely do we meet with genuine poetical power! How seldom do we find any thing like a trace of genius! Many of our modern, so-called, poets seem to fancy they can conceal their deficiency of poetic inspiration by an affectation of oddity, which they seem to hope will be mistaken for the eccentricity of genius; but the want of harmony and of taste is alone sufficient to bear witness against them. Where the creative power is not to be found, a work will, sooner or later, fall into neglect, notwithstanding all the trickery which may have been expended on it. An excellent work on this subject is *Poeten der Jetztzeit, in Briefen an eine Frau*, von J. SCHEER. It evidences much critical acumen. The title, "Poets of the present Time," embraces a wide range. SCHEER is clearly an earnest optimist; he sees very much through a beautifying glass. He does not confine himself to the poets of Germany, but brings under the reader's observation the latest poets of Poland, Italy, France, and England. The first part is devoted, evidently *con amore*, to the Polish poet ADAM MICKIEWICZ, whose powerful and enthusiastic strains, ten years ago, placed him at the height of fame. He is now at Paris, no longer employing his energies in the cause which won him so much honour. MICKIEWICZ has often been compared with BYRON. This comparison HERR V. SCHEER holds to be unfounded; BYRON was always individual, MICKIEWICZ always national. His *Russland* is a noble work; his heroic poem, *Konzad Wallenrod*, is also one of his most famous poems, an energetic appeal against oppression and tyranny.

JOURNAL OF AMERICAN LITERATURE.

Tales. By EDGAR A. POE. London, 1845. Wiley and Putnam.

WE have in this volume a number of tales, many of which shew the ingenuity, rather than the capacity, of the author's

mind. Mr. Poe is familiar to us as a poet of considerable power. We remember the fine conception and the musical execution of some of his stanzas, and, with these fresh in our mind, we confess ourselves disappointed by the present volume of Tales. The first story, "The Gold Bug," is only interesting from its strangeness. It tells of the discovery of some hidden treasure, by the solving of certain enigmatical figures. Viewed with the moral, the tale *may* be useful, as shewing what a patient, earnest mind may accomplish. This is barely probable, and the tale will add no more to the stock of choice literature than the thousand and one stories that yearly fill the penny novelists.

Of a piece with "The Gold Bug" are the "Mystery of Marie Roget," and the "Murders of the Rue Morgue." The author seems here to have amused himself by following the plan of those philosophers who trace a series of references between every minute act, and so upward to the making and dethroning of kings. Mr. Poe has been as assiduous in this scheme as an Indian who follows the trail of a foe. He has learnt from the dwellers in the American woods a marked acuteness, which he has dealed out again to his readers in the Tales before us. Another tale of this class is the "Purloined Letter." If we were called upon to recommend this story to any particular party, it would be to some Bow-street officers. Such functionaries would be sure to appreciate it, as it exhibits a quick intellect, which, from a few surmises, arrives at a chain of conclusive evidence.

Perhaps of even less utility is Mr. Poe's tale of the "Black Cat." The Black Cat would have been a proper inmate for the "Castle of Otranto," and a most valuable counterpart to the mysterious plume and helmet. The beauty of Walpole's inexplicable riddle would have been much enhanced by the introduction of such a sooty monster. But it may be argued that the Black Cat is a figurative personification of the dark-brooding thoughts of a murderer, murder being the climax of the story. It *may* be so urged, we repeat, but, at present, our little perception cannot perceive it; and we have not faith to believe that the generality of readers will discover what we cannot.

We object, for the most part, to the tales we have instanced, because they uncurtain horrors and cruelties. It is enough, and perhaps too much, for public benefit, that minute details of murders and other horrors find their way into newspapers. They form no part of the glories of literature. The literature of the past, in a great measure, is not pure enough for the gaze of the future because of its antagonistic character. Mr. Poe's Tales are out of place. They are things of the past, but the past has retired from them. They do not anticipate the wants of the future, and the future will take no cognizance of them. But why has Mr. Poe given us so much of the scraps and the worn-out thoughts of yesterday?

Mr. Poe could not possibly send forth a book without some marks of his genius, and mixed up with the dross we find much sterling ore. He is a deep thinker, and as a proof of it, we give an entire story. The interest of the subject, and its masterly treatment, is an apology for its length.

MESMERIC REVELATION.

Whatever doubt may still envelop the *rationale* of mesmerism, its startling *facts* are now almost universally admitted. Of these latter, those who doubt, are your mere doubters by profession—an unprofitable and disreputable tribe. There can be no more absolute waste of time than the attempt to *prove*, at the present day, that man, by mere exercise of will, can so impress his fellow, as to cast him into an abnormal condition, of which the phenomena resemble very closely those of *death*, or at least resemble them more nearly than they do the phenomena of any other normal condition within our cognizance; that, while in this state, the person so impressed employs only with effort, and then feebly, the external organs of sense, yet perceives, with keenly refined perception, and through channels supposed unknown, matters beyond the scope of the physical organs; that, moreover, his intellectual faculties are wonderfully exalted and invigorated; that his sympathies with the person so impressing him are profound; and, finally, that his susceptibility to the impression increases with its frequency, while, in the same proportion, the peculiar phenomena elicited are more extended and more *pronounced*.

I say that these—which are the laws of mesmerism in its general features—it would be supererogation to demonstrate; nor shall I inflict upon my readers so needless a demonstration to-day. My purpose at present is a very different one indeed. I am impelled, even in the teeth of a world of prejudice, to detail without comment the very remarkable substance of a colloquy, occurring between a sleep-waker and myself.

I had been long in the habit of mesmerizing the person in question (Mr. Vankirk), and the usual acute susceptibility and exaltation of the mesmeric perception had supervened. For many months he had been labouring under confirmed phthisis, the more distressing effects of which had been relieved by my manipulations; and on the night of Wednesday, the fifteenth instant, I was summoned to his bedside.

The invalid was suffering with acute pain in the region of the heart, and breathed with great difficulty, having all the ordinary symptoms of asthma. In spasms such as these he had usually found relief from the application of mustard to the nervous centres, but to-night this had been attempted in vain.

As I entered his room he greeted me with a cheerful smile, and although evidently in much bodily pain, appeared to be, mentally, quite at ease.

"I sent for you to-night," he said, "not so much to administer to my bodily ailment, as to satisfy me concerning certain psychal impressions which, of late, have occasioned me much anxiety and surprise. I need not tell you how sceptical I have hitherto been on the topic of the soul's immortality. I cannot deny that there has always existed, as if in that very soul which I have been denying, a vague half-sentiment of its own existence; but this half-sentiment at no time amounted to conviction. With it my reason had nothing to do. All attempts at logical inquiry resulted, indeed, in leaving me more sceptical than before. I had been advised to study Cousin. I studied him in his own works as well as in those of his European and American echoes. The '*Charles Elwood*,' of Mr. Brownson, for example, was placed in my hands. I read it with profound attention. Throughout I found it logical, but the portions which were not *merely* logical were unhappily the initial arguments of the disbelieving hero of the book. In his summing up it seemed evident to me that the reasoner had not even succeeded in convincing himself. His end had plainly forgotten his beginning, like the government of Trinculo. In short, I was not long in perceiving that if man is to be intellectually convinced of his own immortality, he will never be so convinced by the mere abstractions which have been so long the fashion of the moralists of England, of France, and of Germany. Abstractions may amuse and exercise, but take no hold on the mind. Here upon earth, at least, philosophy, I am persuaded, will always in vain call upon us to look upon qualities as things. The will may assent—the soul—the intellect, never.

"I repeat, then, that I only half felt, and never intellectually believed. But latterly there has been a certain deepening of the feeling, until it has come so nearly to resemble the acquiescence of reason, that I find it difficult to distinguish between the two. I am enabled, too, plainly to trace this effect to the mesmeric influence. I cannot better explain my meaning than by the hypothesis that the mesmeric exaltation enables me to perceive a train of ratiocination which, in my abnormal existence, convinces, but which, in full accordance with the mesmeric phenomena, does not extend, except through its *effect*, into my normal condition. In sleep-waking, the reasoning and its conclusion—the cause and its effect—are present together. In my natural state, the cause vanishing, the effect only, and perhaps only partially, remains.

"These considerations have led me to think that some good results might ensue from a series of well-directed questions propounded to me while mesmerized. You have often observed the profound self-cognizance evinced by the sleep-waker—the extensive knowledge he displays upon all points relating to the mesmeric condition itself; and from this self-cognizance may be deduced hints for the proper conduct of a catechism."

I consented, of course, to make this experiment. A few passes threw Mr. Vankirk into the mesmeric sleep. His breathing became immediately more easy, and he seemed to suffer no physical uneasiness. The following conversation then ensued—V. in the dialogue representing the patient, and P. myself:—

P. Are you asleep?

V. Yes—no; I would rather sleep more soundly.

P. [*After a few more passes.*] Do you sleep now?

V. Yes.

P. How do you think your present illness will result?

V. [*After a long hesitation, and speaking as with effort.*] I must die.

P. Does the idea of death afflict you?

V. [*Very quickly.*] No—no!

P. Are you pleased with the prospect?

V. If I were awake I should like to die, but now it is no matter. The mesmeric condition is so near death as to content me.

P. I wish you would explain yourself, Mr. Vankirk.

V. I am willing to do so, but it requires more effort than I feel able to make. You do not question me properly.

P. What then shall I ask?

V. You must begin at the beginning.

P. The beginning! but where is the beginning?

V. You know that the beginning is God. [*This was said in a low, fluctuating tone, and with every sign of the most profound veneration.*]

P. What then is God?

V. [*Hesitating for many minutes.*] I cannot tell.

P. Is not God spirit?

V. While I was awake I knew what you meant by "spirit," but now it seems only a word—such, for instance, as truth, beauty—a quality, I mean.

P. Is not God immaterial?

V. There is no immateriality—it is a mere word. That which is not matter, is not at all—unless qualities are things.

P. Is God, then, material?

V. No. [*This reply startled me very much.*]

P. What then is he?

V. [*After a long pause, and mutteringly.*] I see—but it is a thing difficult to tell. [*Another long pause.*] He is not spirit, for he exists; nor is he matter, *as you understand it*. But there are *gradations* of matter of which man knows nothing; the grosser impelling the finer, the finer pervading the grosser. The atmosphere, for example, impels the electric principle, while the electric principle permeates the atmosphere. These gradations of matter increase in rarity or fineness, until we arrive at at a matter *unparticled*—without particles—indivisible—*one;* and here the law of impulsion and permeation is modified. The ultimate, or unparticled matter, not only permeates all things, but impels all things; and thus is all things within itself. This matter is God. What men attempt to embody in the word "thought," is this matter in motion.

P. The metaphysicians maintain that all action is reducible to motion and thinking, and that the latter is the origin of the former.

V. Yes; and I now see the confusion of idea. Motion is the action of *mind*—not of *thinking*. The unparticled matter, or God, in quiescence, is, as nearly as we can conceive it, what men call mind. And the power of self-movement (equivalent in effect to human volition) is, in the unparticled matter, the result of its unity and omniprevalence; *how* I know not, and now clearly see that I shall never know. But the unparticled matter, set in motion by a law, or quality, existing within itself, is thinking.

P. Can you give me no more precise idea of what you term the unparticled matter?

V. The matters of which man is cognizant, escape the senses in gradation. We have, for example, a metal, a piece of wood, a drop of water, the atmosphere, a gas, caloric, electricity, the luminiferous ether. Now we call all these things matter, and embrace all matter in one general definition; but, in spite of this, there can be no two ideas more essentially distinct than that which we attach to a metal, and that which we attach to the luminiferous ether. When we reach the latter, we feel an almost irresistible inclination to class it with spirit, or with nihility. The only consideration which restrains us in our conception of its atomic constitution; and here, even, we have to seek aid from our notion of an atom, as something possessing in infinite minuteness, solidity, palpability, weight. Destroy the idea of the atomic constitution and we should no longer be able to regard the ether as an entity, or at least as matter. For want of a better word we might term it spirit. Take, now, a step beyond the luminiferous ether;—conceive a matter as much more rare than the ether, as this ether is more rare than the metal, and we arrive at once, in spite of all the school dogmas, at a unique mass—an unparticled matter. For although we may admit infinite littleness in the atoms themselves, the infinitude of littleness in the spaces between them is an absurdity. There will be a point—there will be a degree of rarity—at which, if the atoms are sufficiently numerous, the interspaces must vanish, and the mass absolutely coalesce. But the consideration of the atomic constitution being now taken away, the nature of the mass inevitably glides in what we conceive of spirit. It is clear, however, that it is as fully matter as before. The truth is, it is impossible to conceive spirit, since it is impossible to imagine what is not. When we flatter ourselves that we have formed its conception, we have merely deceived our understanding by the consideration of infinitely rarified matter.

P. There seems to me an insurmountable objection to the idea of absolute coalescence; and that is the very slight resistance experienced by the heavenly bodies in their revolutions through space—a resistance now ascertained, it is true, to exist in *some* degree, but which is, nevertheless, so slight as to have been quite overlooked by the sagacity, even of Newton. We know that the resistance of bodies is chiefly in proportion to their density. Absolute coalescence is absolute density. Where there are no interspaces, there can be no yielding. An ether, absolutely dense, would put an infinitely more effectual stop to the progress of a star than would an ether of adamant or of iron.

V. Your objection is answered with an ease which is nearly in the ratio of its apparent unanswerability. As regards the progress of the star, it can make no difference whether the star passes through the ether *or the ether through it*. There is no astronomical error more unaccountable than that which reconciles the known retardation of the comets with the idea of their passage through an ether: for, however rare this may be supposed, it would put a stop to all sidereal revolution in a very far briefer period than has been admitted by those astronomers who have endeavoured to slur over a point which they found it impossible to comprehend. The retardation actually experienced is, on the other hand, about that which might be expected from the *friction* of the ether in the instantaneous passage through the orb. In the one case, the retarding force is momentary and complete within itself—in the other it is endlessly accumulative.

P. But in all this—in this identification of mere matter with God—is there nothing of irreverence? [*I was forced to repeat this question before the sleep-waker fully comprehended my meaning.*]

V. Can you say *why* matter should be less reverenced than mind? But you forget that the matter of which I speak is, in all respects, the very "mind" or "spirit" of the schools, so far as regards its high capacities, and is, moreover, the "matter" of these schools at the same time. God, with all the powers attributed to spirit, is but the perfection of matter.

P. You assert, then, that the unparticled matter, in motion, is thought?

V. In general, this motion is the universal thought of the universal mind. This thought creates. All created things are but the thoughts of God.

P. You say, "In general."

V. Yes. The universal mind is God. For new individualities, *matter* is necessary.

P. But you now speak of "mind" and "matter" as do the metaphysicians.

V. Yes—to avoid confusion. When I say "mind," I mean the unparticled or ultimate matter; by "matter," I intend all else.

P. You were saying that "for new individualities matter is necessary."

V. Yes; for mind, existing unincorporate, is merely God. To create individual, thinking beings, it was necessary to incarnate portions of the divine mind. Thus man is individualized. Divested of corporate investiture, he were God. Now, the particular motion of the incarnated portions of the unparticled matter is the thought of man; as the motion of the whole is that of God.

P. You say that divested of the body man will be God?

V. [*After much hesitation.*] I could not have said this; it is an absurdity.

P. [*Referring to my notes.*] You *did* say that "divested of corporate investiture man were God."

V. And this is true. Man thus divested *would be* God—would be unindividualized. But he can never be thus divested—at least never *will be*—else we must imagine an action of God returning upon itself—a purposeless and futile action. Man is a creature. Creatures are thoughts of God. It is the nature of thought to be irrevocable.

P. I do not comprehend. You say that man will never put off the body?

V. I say that he will never be bodiless.

P. Explain.

V. There are two bodies—the rudimental and the complete; corresponding with the two conditions of the worm and the butterfly. What we call "death," is but the painful metamorphosis. Our present incarnation is progressive, preparatory, temporary: our future is perfected, ultimate, immortal. The ultimate life is the full design.

P. But of the worm's metamorphosis we are palpably cognizant.

V. *We*, certainly—but not the worm. The matter of which our rudimental body is composed, is within the ken of the organs of that body; or, more distinctly, our rudimental organs are adapted to the matter of which is formed the rudimental body; but not to that of which the ultimate is composed. The ultimate body thus escapes our rudimental senses, and we perceive only the shell which falls, in decaying, from the inner form; not that inner form itself; but this inner form, as well as the shell, is appreciable by those who have already acquired the ultimate life.

P. You have often said that the mesmeric state very nearly resembles death. How is this?

V. When I say that it resembles death, I mean that it resembles the ultimate life; for when I am entranced the senses of my rudimental life are in abeyance, and I perceive external things directly, without organs, through a medium which I shall employ in the ultimate, unorganized life.

P. Unorganized?

V. Yes; organs are contrivances by which the individual is brought into sensible relation with particular classes and forms of matter, to the exclusion of other classes and forms. The organs

of man are adapted to his rudimental condition, and to that only; his ultimate condition, being unorganized, is of unlimited comprehension in all points but one—the nature of the volition of God—that is to say, the motion of the unparticled matter. You will have a distinct idea of the ultimate body by conceiving it to be entire brain. This it is *not;* but a conception of this nature will bring you near a comprehension of what it *is*. A luminous body imparts vibration to the luminiferous ether. The vibrations generate similar ones within the retina; these again communicate similar ones to the optic nerve; the nerve conveys similar ones to the brain; the brain, also, similar ones to the unparticled matter which permeates it. The motion of this latter is thought, of which perception is the first undulation. This is the mode by which the mind of the rudimental life communicates with the external world; and this external world is, to the rudimental life, limited, through the idiosyncrasy of its organs. But in the ultimate, unorganized life, the external world reaches the whole body (which is of a substance having affinity to brain, as I have said), with no other intervention than that of an infinitely rarer ether than even the luminiferous; and to this ether—in unison with it—the whole body vibrates, setting in motion the unparticled matter which permeates it. It is to the absence of idiosyncratic organs, therefore, that we must attribute the nearly unlimited perception of the ultimate life. To rudimental beings, organs are the cages necessary to confine them until fledged.

P. You speak of rudimental "beings." Are there other rudimental thinking beings than man?

V. The multitudinous conglomeration of rare matter into nebulæ planets, suns, and other bodies which are neither nebulæ, suns, nor planets, is for the sole purpose of supplying *pabulum* for the idiosyncrasy of the organs of an infinity of rudimental beings. But for the necessity of the rudimental, prior to the ultimate life, there would have been no bodies such as these. Each of these is tenanted by a distinct variety of organic, rudimental, thinking creatures. In all, the organs vary with the features of the place tenanted. At death, or metamorphosis, these creatures, enjoying the ultimate life—immortality—and cognizant of all secrets but *the one*, act all things and pass everywhere by mere volition:—indwelling, not the stars, which to us seem the sole palpabilities, and for the accommodation of which we blindly deem space created—but that SPACE itself—that infinity of which the truly substantive vastness swallows up the star-shadows—blotting them out as nonentities from the perception of the angels.

P. You say that "but for the *necessity* of the rudimental life" there would have been no stars. But why this necessity?

V. In the inorganic life, as well as in the inorganic matter generally, there is nothing to impede the action of one simple *unique* law—the Divine Volition. With the view of producing impediment, the organic life and matter (complex, substantial, and law-encumbered), were contrived.

P. But again—why need this impediment have been produced?

V. The result of law inviolate is perfection—right—negative happiness. The result of law violate is imperfection, wrong, positive pain. Through the impediments afforded by the number, complexity, and substantiality of the laws of organic life and matter, the violation of law is rendered, to a certain extent, practicable. Thus pain, which in the inorganic life is impossible, is possible in the organic.

P. But to what good end is pain thus rendered possible?

V. All things are either good or bad by comparison. A sufficient analysis will shew that pleasure, in all cases, is but the contrast of pain. *Positive* pleasure is a mere idea. To be happy at any one point we must have suffered at the same. Never to suffer would have been never to have been blessed. But it has been shewn that, in the inorganic life, pain cannot be; thus the necessity for the organic. The pain of the primitive life of Earth, is the sole basis of the bliss of the ultimate life in Heaven.

P. Still, there is one of your expressions which I find it impossible to comprehend—"the truly *substantive* vastness of infinity."

V. This, probably, is because you have no sufficiently generic conception of the term "*substance*" itself. We must not regard it as a quality, but as a sentiment:—it is the perception, in thinking beings, of the adoption of matter to their organization There are many things on the earth, which would be nihility to the inhabitants of Venus—many things visible and tangible in Venus, which we could not be brought to appreciate as existing at all. But to the inorganic beings—to the angels—the whole of the unparticled matter is substance; that is to say, the whole of what we term "space" is to them the truest substantiality;—the stars, meantime, through what we consider their materiality, escaping the angelic sense just in proportion as the unparticled matter, through what we consider its immateriality, eludes the organic.

As the sleep-waker pronounced these latter words, in a feeble tone, I observed on his countenance a singular expression, which somewhat alarmed me, and induced me to awake him at once. No sooner had I done this, than, with a bright smile irradiating all his features, he fell back upon his pillow and expired. I noticed that, in less than a minute afterwards, his corpse had all the stern rigidity of stone. His brow was of the coldness of ice. Thus, ordinarily, should it have appeared, only after long pressure from Azrael's hand. Had the sleep-waker, indeed, during the latter portion of his discourse, been addressing me from out the region of the shadows?

N. P. WILLIS has commenced a series of letters from England, which are published in the *Evening Mirror* (New York), and copied with eagerness into numberless American papers. A file of that journal, containing several of them, has been obligingly forwarded to us; but as yet they contain wonderfully little to interest an English reader, and, unless they greatly improve, we should not entertain a high opinion of the value of "American popularity." Perhaps, however, a passage in the first letter—which we think a disgrace to the author—may find favour in the eyes of the "native Americans." After a sneer at six clergymen on board the steamer, "their protection against icebergs," he proceeds:—

I wish to ask a personal favour of all the friends of the *Mirror* who are in the offices of American custom-houses, viz. that they would retaliate upon Englishmen, in the most vexatious manner possible, the silly and useless impediments thrown in the way of passengers landing at Liverpool.

After detailing the grievances, he adds:—

I was too ill to laugh, and I therefore passed the matter over to my resentments. I trust my particular share will be remembered in the coming wars of Oregon.

This pandering to the hatred of the Britishers may be expedient, as the letters are doubtless well paid for; but it materially lessens the probability of the letters being truthful as well as agreeable. The third, pompously announced as a "delicious letter," is a long description of a visit to the opera, but remarkable for nothing but the author's confession that he had stared at the Queen's box a long time without discovering that the Queen, Prince ALBERT, and the King of the Belgians were there. We may hereafter, perhaps, glean something worth presenting to our readers. The following is the only passage that we have as yet found:—

During the four or five hours that I was playing the hanger-on to a vulgar and saucy custom-house officer at Liverpool, one or two contrasts crept in at my dull eyes—contrasts between what I had left, and what was before me. The most striking was the utter want of hope in the countenances of the working classes—the look of dogged submission and animal endurance of their condition of life. They act like horses and cows. A showy equipage goes by, and they have not the curiosity to look up. Their gait is that of tired donkeys, saving as much trouble at leg-lifting as possible. Their mouths and eyes are wholly sensual, expressing no capability of a want above food. Their dress is without a thought of more than warmth and covering, drab covered with dirt. Their voices are a half-note above a grunt. Indeed, comparing their condition with the horse, I would prefer being an English horse to being an English working-man. And you will easily see the very strong contrast there is between this picture and that of the ambitious and lively working-men of our country.

Another contrast strikes, probably, all Americans on first landing—that of female dress. The entire absence of the ornamental—of any thing indeed, except decent covering—in all classes below the wealthy, is particularly English and particularly un-American. I do not believe you would find ten female servants in New York without (pardon my naming it) a "bustle." Yet I saw as many as two hundred women in the streets of Liverpool, and not one with a bustle. I saw some ladies get out of carriages who wore them, so that it is not because it is not the fashion, but simply because the pride (of those whose backs form but one line) does not outweigh the price of the bran. They wore thick shoes, such as scarcely a man would wear with us, no gloves, of course, and their whole appearance was that of females in whose minds never entered the thought of ornament on week-days. This trifling exponent of the condition of women in England has a large field of speculation within and around it, and the result of philosophizing on it would be vastly in favour of our side of the water.

THE TOURIST.

[All the world travels now-a-days. Great, therefore, will be the utility of a periodical to which every Tourist may communicate such of his experiences as to routes, sights, conveyances, inns, expenses, and the other economies of travelling, as may serve his fellow-tourists. To this design we propose to devote a distinct department of THE CRITIC, and we invite communications of the class described relative to travelling both abroad and at home.]

SKETCH OF A TOUR IN THE TYROL.

(*Continued from page* 362.)

If the tourist has never been in Munich, he should not now omit to visit it, for I should think there is no other city of its size so rich in specimens of architecture, painting, and sculpture, nor where the arts now meet with so much encouragement as they do here, under the patronage and superintendence of the liberal and elegant-minded Lewis, the present king of Bavaria. He may either take a place in the *Eilwagen*, or join a party in making a bargain with a *Lohnkutcher* for a carriage, which latter is the pleasanter way, and which we adopted. We rode down the Inathal, and at Schwarz we crossed to the left side of the valley, and passed the convent of Viecht, and near Jenbach, the castle of Tratzburg; at which village of Jenbach we arrived in about six hours after leaving Innsbruck, and, being evening when we arrived, we passed the night there. On the following morning, at half-past six o'clock, we resumed our journey, and walked before the carriage the first five miles, up a steep road, through a defile, and along the banks of the Achensee, at the lower end of it, a pretty, peaceful-looking lake, reflecting the hills covered with pines; the scenery of the higher part of it is grander, and the road is cut out of the side of the rock, with scarcely room for a carriage, which, as it passes along the rock, in one or two places closely overhangs. We travelled along the Achenthal, a pretty valley, with a considerable number of houses. Being, as we were told, the birthday of the Virgin, it was here a general holiday, and the church was crowded to overflowing, many bowing down at the outside. We then passed through a well-wooded defile (in which we crossed the Bavarian frontier), until we came, at one o'clock, to the bath-house at Kreuth, where we dined at the *table d'hôte*. It is placed in a very lovely situation, being on a small piece of flat ground in the midst of hills well clothed with fir trees, and is a very large house, and much frequented in summer. We proceeded through the village, and over a pretty country, to the Tegernsee, where is situate the palace of the widow of Maximilian, the late king of Bavaria, and passed near the marble-mines. A thunderstorm having come on with a great deal of beautiful pink-coloured lightning, we were compelled to stay all night at a new inn by the road-side, where we arrived about six o'clock in the evening. The peasants had a merry-making here, playing with cards peculiarly marked, and wearing hats without brims. Next morning we set forward again, and travelled over a level cultivated country with much fir forest. At ten o'clock we stopped and rested the horses for an hour, and arrived at Munich at half-past one, at the splendid hotel called "Der Baierishe Hof," built by the king; it is also very comfortable, and the charges moderate; there is a *table d'hôte* at one o'clock, and another at five. I shall not attempt to enumerate the great variety of interesting objects that may be seen in this city, but refer the tourist to the guide-books for information. A day may be devoted to an excursion from Munich to the ancient town of Augsburg. By setting out in the railway train at seven in the morning, after passing over a level, uninteresting country, the tourist will arrive there in about an hour and a quarter; he will then make his way to the Drei Möhren Hotel, and, after breakfasting there, will sally forth to see the town. Here are some fine old-fashioned houses, particularly in Maximilian Strasse, which, in its best days, has been a splendid street, and it contains three handsome bronze fountains, one of them with some good figures of Naiads, &c. Many of the houses have scroll-work and faded frescoes on the outside. A visit should be made to the cathedral, an old heavy-looking building, with a bronze Byzantine door, and a double choir. Near the cathedral is the palace, where we saw the room in which the Augsburg Confession was read before Charles V. in 1530. It then formed part of a chapel, which has been since divided into rooms. At the foundry we saw twelve very handsome brass cannon, made in Bavaria in the 16th century; two of them above 9,000 lbs. in weight, made in 1524, and two others above 7,000 lbs., each having a lion's head, with gaping mouth, at the muzzle, and all over beautifully figured. After the tourist has seen all the sights in Augsburg, not forgetting the room, with the ceiling of cedar, where Charles V. was entertained, and dined at the *table d'hôte* at the Drei Möhren, and partaken of Falernian wine, he may return to Munich as he came from there; and when he has seen all the lions at Munich, he may agree for another carriage to return to Innsbruck, and may vary his route by travelling along the banks of the Isar. We left Munich by this route and mode of travelling at half-past ten o'clock in the morning, and at half-past two arrived at Wolfrathshausen, where we dined, and at seven in the evening, a little before reaching Benedictheuern, stopped at the Lion Inn (a very good one), where we spent the night, having passed through a well-wooded country. At half-past five the next morning we continued our journey, passing Benedictheuern, and near it the once celebrated Benedictine convent, now a flint and crown glass manufactory; a little further we reached the Kochelsa, a pretty lake, the head of it something like Loch Katrine, but the lower part tamer. We then passed over the steep height of the Kesselberg, picturesque and woody, and soon came to the Wallersee, well covered with wood; the village and church standing out into the lake, form a very picturesque and quiet-looking view. The lake appears as if it were two distinct lakes, one part of which only is visible at once. The view of the second division is very rich and beautiful. Renchen, an excellent fish, something like small herrings, are caught in this lake. We then advanced along a well-wooded pass, and came again to the Isar. At noon we reached the village of Mittenwald, situate in an elevated, open valley, and a celebrated place for making violins. The outsides of many of the houses are curiously painted; on one we observed the Creed written, and a representation of the apostles and Virgin. Here passports are examined, as the frontier of Austria is near this place. They are also examined at Scharnitz, on the Austrian side of the frontier; here are the remains of an old fortress, with a wall right across the pass.

From Scharnitz the road continues to ascend, and presents fine mountain views. A very steep descent conducted us into the valley of the Inn, at the village of Zirl, situate under the ruins of the old castle of Fragenstein, which is a very fine object on the side of the hill. In descending we had a magnificent view of the valley and mountains. Near the castle is seen the fine perpendicular precipice called Martinswand, where the emperor Maximilian is said to have nearly lost his life; the spot is marked by a cross and Calvary with St. John and the Virgin. We then rode eight miles down the Innthal, when we arrived again in Innsbruck about eight o'clock in the evening. It is ninety-eight miles by this route from Munich. An excursion should also, if possible, be made from Innsbruck to the head of the Oetzthal, as it is one of the finest valleys of the Tyrol for grandeur, wildness, romantic beauty, and variety of scenery. This excursion would occupy about five days. The tourist may proceed to Zirl either by the *Stellwagen* or an *Einspännig*, and then take another *Einspännig*, cross over the valley, and ride up to Silz, where he will arrive in about two hours after leaving Zirl, having passed the convent of Stambs. He may continue his journey up the valley on foot, passing the castle of Petersberg; and at Haimengen, turning to the left, leave the high road, and enter the Oetzthal. At the entrance of the valley he will have a fine view of the mountains. He will find the foot of the valley narrow, very picturesque, and rich in maize, flax, &c., with some prettily and romanticly situate villages, and some grand, bold precipices. He may rest the first night at Umhausen, fourteen miles from Silz, as he will find there a very comfortable inn, and a civil and intelligent landlord. The next morning early he must resume his progress up the valley; he had better, however, take some provisions with him from this place, for fear he should not be able to procure sufficient at the inn where he must pass the night. After quitting Umhausen, the valley is open for a short distance, and then closes and becomes a ravine, with some very wild scenery. Then, after passing a ridge like a screen thrown across the valley, it opens again, and discloses beautiful green level meadows. Where it begins to open, stands the village of Dorf; and where the valley turns round a fine projecting precipice, is seen the pretty neat village of Langenfeld, with white houses and green windows, and a church with a beautiful green spire; and on the opposite side of the valley, a pretty church standing alone in the midst of the wood. Flax is much cultivoted here, and there are several water-mills for crushing it. From Langenfeld the valley continues open to Hube, with high, picturesque rocks. At this place the valley contracts again, here and there leaving small patches of cultivated ground, where two or three small villages are situate. It again opens with well-cultivated ground; and near where it again contracts is Solden, which is about five hours' walk from Umhausen. At the inn at Solden we found the landlady busy making candles for her own use. Soon after leaving Solden, a most magnificent defile is entered. The foot-path (for there is no horse-road) passes round the breast of a very steep and dangerous precipice overhanging the river, which runs through a deep gorge, with overhanging wild-looking rocks around, well clothed with trees; for wherever a tree can grow, there is one to be seen. Huge rocks, which have fallen from the mountains, are lying spread about in wild confusion; and in looking back down to the open part of the valley, a striking contrast is seen in the peaceful-looking patch of cultivated ground with picturesque wooden houses. This is one of the finest defiles in the Tyrol, and approaches to sublimity, exciting in the beholder feelings of awe, at the irresistible power

which has manifestly been in operation here, and impressing him with a sense of his own utter weakness and insignificance.

After passing this defile, the pretty village of Zwiselstein will soon appear in sight, with, as usual, its pretty church; for every village, if with no more than half-a-dozen houses, has its church, with its picturesque spire, painted generally some showy colour. It seems as if the dwellers amidst such scenery as this were deeply sensible of the immediate presence of an Almighty Being, and of their great need of his protection; and although their religion may be a superstitious one, yet it appears to be sincere, for they are very frequent in offering their prayers; the murmur of their voices may be heard in their dwellings every evening towards sunset.

Near Zwiselstein the valley divides into two branches; the tourist should take the one to the right, which for a considerable distance is narrow, with steep sloping sides, well cultivated wherever it is possible to be so, and in many parts well irrigated. Land appears to be considered of great value here, for, to gain space for cultivation on the steep sides of the hills, terraces are built, many of them for the sake of only a very few yards of land. Houses are seen standing very high, and apparently very difficult of access, some being perched on the tops of the rocks; and some very picturesque churches. He will arrive in the evening at Fend, for an hour and a half before reaching which place he will have to walk up a very barren high mountain-defile, without cultivation, and with dangerous overhanging rocks. Numerous accidents have occurred to travellers in the Oetzthal from land-slips, falling rocks, avalanches, floods, &c. We counted, between Umhausen and Fend, thirty-eight memorials of such accidents, dating from 1771 to 1841. The memorials consist of small paintings on wood, set up on posts by the way-side, generally representing the occurrence of the accidents; many of them are very neatly executed. We also observed a painting by the road-side which tends to shew the somewhat gloomy cast of mind of the inhabitants of this valley; it was a curious allegorical painting on wood, representing the road to hell strewn with flowers, and that to heaven with thorns; and on the former road figures of men and women dancing, and men playing on the violin and drinking, and on the latter road one man with his beads, and another bearing his cross.

Fend is about thirty-two miles from Umhausen, and is a small, poor village of about half-a-dozen houses, and is very remote, and about 6,000 feet above the sea. When we arrived here, we could obtain nothing to eat, not even bread, at the house to which we were directed as being the inn; they, however, produced some wine, coffee, and milk. We fortunately, however, had brought a little bread with us. They have in this valley a small, active breed of cattle, of a dun colour, and with slender legs, very well adapted to the situation. The mountain called the Spiegel Spitz is a fine object as seen from Fend, with its head very white with snow.

(*To be continued.*)

ART.

Twelve Designs in Outline, illustrative of "The Castle of Indolence," made expressly for the Art-Union of London. By William Rimer.

It was a recommendation we strongly urged on the committee of this really useful society, upwards of twelve months ago, that they should continue to present annually to their subscribers a set of illustrations of some work of an eminent British author, which shall in all cases be the result of competition. Already we have had, in Mr. Selou's designs for *The Pilgrim's Progress* published by the society, one of the most imaginative and beautiful series of illustrations that have been produced in this country since the time of Flaxman; a second, embodying some of the most striking scenes in Thomson's voluptuous poem, *The Castle of Indolence*, is now before us; and a third, consisting of designs illustrative of the *Revelation of St. John*, is in preparation for the subscribers of the current year, and though the last-named series does not come within our limitation to British authors, we readily waive objection to it since the subject is finely adapted for the pencil, and biblical history belongs strictly to no one place or country, but, as it was intended to be, so has it become, the common property of the whole world. From this thrice annual succession of outline illustrations, though we find in the report no pledge to assure its continuance, we are induced to hope that the committee have determined on adopting the suggested arrangement; that such a course will impart a stimulus to the arts of design, improve the drawing, and quicken the imagination of our schools, and at the same time elevate the public taste by giving beautiful embodiments of our authors' works, there can be no doubt, and we are confident that a more judicious line of conduct, one more beneficial to the community at large, they cannot pursue.

There are few descriptive poems in our language bettee adapted for the painter than *The Castle of Indolence*. Thr scenes of luxurious indolence which it contains abound with a profusion, and are overspread with a colouring, which lead captive the imagination, and intoxicate the senses. Mr. Rimer has given proof in these designs that he has feeling to appreciate, and, to a great extent, ability to embody the conceptions of the poet. The characteristics of the twelve designs before us are elegance and neatness of finish, more than fertility of imagination or artistic strength. The grouping is clever, and oftentimes original, though the lines on the whole partake too much of the peculiarities of Academy postures. For expression—that rare quality of art! these designs are remarkable; the artist seems to have paid no common share of attention to this requirement, and we congratulate him on the result. His style is loose, his conception occasionally weak, his drawing defective, and his figures in some instances are wanting in grace. Plate 3, *Victims entering the Castle of Indolence*, will justify all these objections; but notwithstanding these drawbacks, taken altogether, he has produced a superior set of illustrations; and we have pointed out his deficiencies, not in an exceptionable mood, with a readiness to find fault, but because we see in him power to overcome these weaknesses, and to improve his productions for the future. In proof that this confidence in him is not without foundation, we point to plate 7, *The Magic Globe*, and plate 11, *The Knight endeavouring to reclaim the Inhabitants of the Castle*, both of which are remarkable for their beauty, and for the absence of all the deficiencies we have pointed out as existent, more or less, in these illustrations.

Admiral Collingwood's Statue.—The fine colossal statue of the illustrious coadjutor and friend of Nelson, by Lough, was disembarked at Newcastle on Tuesday week. This statue, which does equal honour to the valour and to the fine arts of Northumberland (for both the warrior and the artist are natives of the spot) will forthwith be erected at Tynemouth, on a noble terrace 45 feet feet in height, now nearly completed for its reception. The whole height will be 68 feet; and a spacious piece of ground around has been given by the Duke of Northumberland for a public promenade. As the original was a great example to British sailors, so will this splendid likeness of him be a striking seamark and guide into the safe harbour on this often stormy coast.

MUSIC.

The Burleigh Polkas and Cellarius Valse, for the Pianoforte. By Thomas Adams. London, E. Ransford.

The composer of these Polkas eagerly informs the public that they were performed "in the presence of her Majesty and Prince Albert, the Duchess of Kent, and the Duchess of Gloucester, at Burleigh House." The potency of fashion is great, and Mr. Adams knows it; therefore, he proudly steps forward to announce the fact that sets the seals of authority and precedent on his compositions. In addition to having informed us that his Polkas were done "in the presence" of the Queen and her consort, had he said they received the sanction of their approval, he would have furnished us with a standard by which to measure the taste of Royalty. But no—Mr. Adams is too cunning for that; he knows that the bulk of the world will content themselves with his mere announcement, and look no farther; the very idea of royalty is dazzling; the music which reaches her Majesty's ear must be good; the Queen has danced to it—and so will we, therefore, buy, and be happy, without more ado. This same curse of fashion, which dwarfs and enfeebles the musical talent of the day, is unbearable. Scarcely does a composition now-a-days see the light that relies solely on itself. This singer or that player, these concerts or those balls, eternally are the recommendations urged, as though there were no taste in the public itself—or it dare not venture on an opinion of its own, but must wait patiently in its ignorance—take thankfully on trust the authority urged in this way, and defer to it most humbly when it appears before them. For the sake of the art, its independence and dignity, we wish this false and foolish custom were abolished, and that every work would

rely on that only which should sustain it, namely, its merit, instead of the worthless extrinsic recommendations to which we have here objected.

These Polkas are neither good nor bad; they are deficient in spirit, and not sufficiently rhythmical to provoke the dance; on the other hand, the melodies are graceful, though feeble. It was remarked, and truly remarked, by a lady, after *trying through* this set, that none of the Polkas brought out since the introduction of this most characteristic and inspiriting dance, equalled the original ones. And so it is. The English composers seem quite unfitted for the undertaking; their Polkas want the motion and vivacity, the emphasis and bold intervals of notation which mark those introduced into England with the dance itself. For novelty and agreeable melody, but for nothing more, can we commend these Polkas.

Operatic Basses.—A correspondent of the *Musical World* makes the following amusing remarks upon this ill-used class of vocalists:—I have observed lately, with much regret, that the principal tenor of an opera is almost invariably the successful lover; he it is who basks in the sunny smiles of the *prima donna*, whilst the bass is too often made painfully to feel his situation as the rejected lover, and compelled to groan out his hopeless passion in rocky passes or dreary caverns. During the whole progress of the opera the happy tenor has little to do but to make love and enjoy himself. Sometimes he is rowing in a gondola, and sometimes serenading in a garden; sometimes transported by unknown hands to a fairy palace, and sometimes banquetting in a moonlit grove. In every situation he is the favoured individual; and whilst many of the characters are buffeted about by fortune, he generally contrives, between singing, flirting, and rioting on the good things of this life, to spend a very pleasant time of it. Meanwhile, however, the poor bass leads the life of any dog. If he be a lover, he is generally rejected in the first scene; and, to add injury to insult, the tenor, in the pride of his superiority, is very apt to hasten his departure by some such phrase as "Tyrant, begone!" which being very high, and delivered with the chest voice, is extremely likely to get a round of applause. There is a limit to all human endurance, and if moral men with bass voices do turn out villains after the first scene, I can't wonder at it. Having once vowed vengeance against the tenor, by touching the hilt of his sword, the poor bass must now forfeit all claim to sentiment. He is generally to be seen surrounded by a number of suspicious-looking gentlemen, who are extremely partial to drink, and who, in a grand chorus, declare their determination to stick to him to the last. He now generally appears enveloped in a cloak; and, although he has forfeited all claim to the friendship of respectable people, for the sake of his voice in the concerted music, he is allowed to sneak in at the back, where he often creates much effect by imaginary stabs at the tenor, after the manner of the warriors at the fairs, who never thrust at each other save upon the accented portions of the bar. I have thought much upon this subject, and cannot be made to see that gentlemen with dark whiskers and bass voices should be thus discouraged in their amours. It is true that the stage is but a mimic representation of life, but if such things are allowed to be continually placed before a public audience, who knows but that they may prove extremely prejudicial to the rising generation? The notion may eventually so take possession of the people, that the claims of suitors shall be estimated by the compass of their voices, and a good tenor *ut de poitrine* be equivalent to a round sum at the banker's. Happy tenors may marry and rear up families, whilst despised basses may go to their graves unpitied and forlorn.

ORIGINAL CONTRIBUTIONS.

"WANDERING THOUGHTS:"

In reply to a lady who sent the author some beautiful verses so entitled.

Talk not of *thy* wandering thoughts,
Gentle Minstrel, for they are
Scintillations of a star—
Tremulous motions of a light
Fading not from sight!

Imperfection (Nature's law)
Is the appanage of all;
Human thoughts, like snow, must fall
On the earth,—and on it meet
Track of human feet!

Pray thou, that no deeper shadow
Than is flung from human love,
Intercept heaven's light above,
Falling on earth's darkest road
From the sun of God!

Mine are wandering thoughts that flee
Natural walks of human care
For the insubstantial air,
Where unfriendly spirits fight
In their own red light.

Wild Ambition—Anger—Pride—
Doubt of truth in brother-hearts—
Scorn, not pity, of such arts
As the weak employ—and hate
Of the gauds of state:—

And a bitter sinful strife
'Gainst the false, whose words profess
Sympathy and tenderness
For their human-kind, the while
Niggards of a smile

To the stranger—whom their accents,
Printed in the public book,
Have beguiled to hope, and look
For the courtesy bestrown
On their words alone!

"Lord!" (and now, my friend beloved,
Let me humbly pray like thee)—
"Put such harsh thoughts, Lord, from me,
And, with thy halo o'er me cast,
Give me peace at last!"

Calder Campbell.

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of The Critic is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

Mesmerism: Cases and Disclosures. By James Arnott. Parts I. and II. 8vo. London, 1845. J. C. Moore, Wellington-street.

This is a work which, when completed, according to the modest opinion of the author, "will go far to revolutionize the science of Animal Magnetism." He further adds, that the truths promulgated in this volume were presented to his mind gradually, each laying the foundation for its successor; and that *for this reason* he has adopted the plan of bringing his work before the world in weekly parts; leaving it to be inferred that the public mind is not fitted to receive at once the whole truth, but must have it at intervals, that each modicum may be digested before the next supply. After glancing through the parts before us, we have not, we confess, been able to discover the first even of those principles which we are told will eventually subvert existing notions on Mesmerism, break up false hypotheses, and establish the science on a sound and enduring foundation. Mere assertion and dogmatism will never do this; yet, though certainly not the faintest glimmer of the light which is to dispel all doubt and error has yet dawned on us in these pages, we will not say that future numbers may not afford it; albeit, judging from the character of what lies before us, we have strong reasons for doubting that so desirable a result will by this book be effected.

The work itself is ushered in by an historical notice of Animal Magnetism, which, if it presents no new facts, and gives no evidence of unusual research on the part of its author, has at least the merit of being clearly written, and of presenting a very succinct account of the science down to the present time.

The body of the work oddly opens with "*Cases*," the first of which is that of a "lady born blind." This extends, with the exception of two short, interpolated narratives of cures of deafness, over the entire of the two parts devoted to "Cases;" and of its result (as it runs into the next number) we are left in doubt. The physical sight of the lady, however, seems to have been greatly assisted, while a new, and, we presume, a

mental vision is vouchsafed to her. She sees spiritual existences, like the German lady whose case is related by Dr. JUSTUS KERNER in the *Seeress of Prevorst*. Now, though we will not place a limit to the marvels Animal Magnetism unfolds to us, we doubt extremely the propriety of laying before the public particulars of a supernatural—or, at least, what has up to this time been considered a supernatural—communion. Well knowing the force of imagination, through which many of the most extraordinary of the mesmeric phenomena may be educed, we require some more conclusive evidence than is furnished in the particulars of these cases, even though Mr. ARNOTT has himself seen certain preternatural appearances, to convince us of the existence of this faculty in the parties alleged to possess it. So strong is the popular prejudice against even the simpler phenomena of Mesmerism, that the publication at the present time of such transcendant marvels, even supposing them to be realities, is, to say the least, injudicious, and, beyond a doubt, prejudicial to the interests of the science.

There is always beauty in imagination; and, whether or not this was the agent under which the ladies saw the spiritual existences as related below, their description is so entertaining, that we transfer it to our columns.

At a quarter to one, accompanied by Mary and Ellen, I went into the dining-room, when they both exclaimed, "There are the taller and lesser female figures standing opposite us at the centre window." I went forward, and stood between the table and the window. "The lesser female figure," they said, "has advanced quickly towards you with great animation; her face lighted up with a heavenly sweetness beyond the power of description, every feature beaming with heavenly joy and affection; she has thrown her arms around you, and put her lips to your brow, and pressed them there with apparent fervour. She now looks into your face, and now she stands at your right hand, her face towards you. The taller figure now comes forward, very very happy-looking, and she stands on your left hand; and they both put their hands upon your head alternately, as if blessing you." About ten minutes after coming into the room, Mary and Ellen both said, "There Alicia has come in by the door, and she has bowed and smiled to us as she glided past, her robes touching the ground; she has gone forward to you and embraced you." I thought I felt that she did so. "The taller figure took Alicia by the hand whilst she was embracing you, and then, or a moment after, the canopy of light, with the stars above it, fell over you, and at the same instant there came another over Alicia's head. You now look much brighter." To both, the angel Alicia seemed this evening more than usually glorious. "Her robes were more snow-white; the veil flowing down from the crown thinner and also more snow-white, the gems upon it much brighter and more sparkling; the crown whiter, larger, and more thickly studded with gems like stars, which flashed and sparkled with a deeper light than that of the robes; and her head thrown more back, and her eyes raised in a more upward direction than she had ever appeared before. The taller figure also looked very dignfied, but not so much so as Alicia; the crown was not so large, nor the gems on it so numerous or so large; she had no veil from the crown; nor were her robes of such a pure white as those of Alicia." The lesser figure was apparently dressed, in every particular, like the taller figure, but did not appear so dignified. "Alicia had the palm branch in her hand, and waved it above you. Upon a former evening she also waved it above you, when we saw the buds of light fall from it upon and around you, and new buds spring out on the instant. When you kneeled to-night after Alicia embraced you, she put her hand upon your forehead, standing first before you, and then going to your side." I now left the dining-room, when the angels accompanied me, and in passing Ellen and Mary, bowed to them, Alicia bringing the "palm" over the heads of both. The angels followed me into the parlour, and when I shut the door, both girls said that the light from the angels disappeared.

The following being less transcendant, we can reason on more calmly; and in our opinion furnishes clearer—that is to say, more comprehensive—evidence of imagination than did the extract just given.

This morning Mary and Ellen operated on along with Mr. Walpole. Having made a few passes over them first, I then went towards Mr. W. when I observed them both avert their eyes, with dread and horror strongly depicted on their countenances. "You were very bright," they afterwards told me, "before you went to Mr. Walpole; but on making the first pass over him, the light on your body became blood red; at the next, black and red; at the third, black prevailed, with streaks of red in it; and then quite black. On making the first pass, the crown on your head hovered, and became red, but not so red as the light on your body; it became darker and darker each pass you made, until it disappeared altogether." Ellen having made a few passes over Mr. W. Mary saw the same appearances on her. They saw many black veils fall upon him, but none on me; they saw no light fall from above. When I came from him, they could not for some time look at me without dread; and at one time the light did not reappear on my body until five minutes and more had elapsed. "The light when coming back was first red; the crown reappeared, but impure like, and flickered and wavered unsteadily, until, with the light of the body, it became brighter." They both say the light did not regain its usual brightness until Ellen had made a few passes over me.

Here, again, is a further glimpse of the spiritual.

Returning from Mr. Walpole's shortly before twelve to-night, I found Mary complaining very much of a headache, which she has had for two days; she became sick and fainted; during the fit, her whole body was quite rigid. On her recovery I went with her and Ellen into the dining-room. They both saw Mrs. Arnott and the taller figure, whom I take to be my mother, accompanied by the lesser female figure; all three were standing at the centre window. I went forward to the end of the table next the door, when Mary, on seeing the figures approach me, became so sick as to be obliged to go into the bed-room. Ellen went with her, and I returned to the parlour. A few minutes afterwards I went back to the dining-room and called Ellen. When she came in she said, "The taller figure and the angel Alicia have come forward to you; and Mrs. Arnott has put one hand upon your head, the other upon your chest. The other female figure stands by your left side. You are now very bright, and the canopy of light remains above your head. Mrs. Arnott held her hands upon you for about three minutes." Having kneeled involuntarily, Ellen said, "The canopy of light has now fallen over you with the stars. There, Mrs. Thew has just come in by the dining-room door. She comes forward to you; she looks and smiles graciously upon you; she now looks towards the bed-room where Mary is; and now again she looks and smiles upon you with a gracious and holy expression. The taller figure has now gone away to the parlour." Shortly afterwards I went into the parlour also; when Ellen saw both the other angels leave the dining-room, one on each side of me, and the light from them disappeared when I shut the parlour-door.

Next after the "Cases" comes a division of the work called "Conversations." These are designed to convey the author's notions as to the nature and uses of the various phenomena of Mesmerism, and to illustrate the principles of the science "in their relation to every branch of natural inquiry, and to society in all its ramifications." This is undoubtedly comprehensive enough, so much so, indeed, as to suggest the question, "Are not the author's hopes too sanguine, and his efforts too general?" After toiling through these "Conversations" for some pages, we have found nothing that elucidates the mysteries of Mesmerism; no new principles, no discoveries, no suggestions,—in short, nothing that we were promised; while, on the other hand, we have abundance of matter foreign to the subject; such as discourses on the *clip* of sheep; particulars of the weather; of cats running after their own tails; abuse of the bishops, and a hundred needless and (as in the last case) some unjustifiable things.

We wish heartily to see the truth prevail, and Mesmerism flourish, therefore we make no apology for giving to Mr. ARNOTT a word of advice, which if he, too, have the same end in view, we think he will see the propriety of adopting. To be conclusive, it is necessary a writer should be clear. Now, any thing more diffuse, obscure, and rambling than Mr. ARNOTT's "Conversations," which, we presume, form the argumentative portion of his book, it would be difficult to find throughout the compass of mesmeric literature. Let him prune away his manuscript freely before he goes to press with future numbers; let him connect more closely his reasoning; and, above all things, weed out all remarks on religious topics, and all censures of the religious sects, of which, in the parts before us, there is an unwarrantable and offensive abundance. In his Cases, too, it would be well if he exhibited greater caution, and took far less on trust, and without examination, than it is evident he now does. Objections, too, must be urged against his putting questions to his patients such as that to be found in page 33, where he tells a sleep-waker to "ask the angels whether JESUS CHRIST is the Son of GOD more than any other good man." [We protest against such questions as these, since there can be no proof that the party through whom the

question is put, and who returns the answer, does it through any other agency than the imagination. The evil and pernicious purpose to which credulous and wicked people may turn a reply such as here was given, makes the seeking of such information an act as injudicious as it is presumptuous.

To Booksellers.—*A stamped copy of* The Critic *sent regularly to any Bookseller, for his own use, at the cost of stamp and paper only, on prepayment of* half a year's subscription, at least (4*s.* 4*d.*), *which may be transmitted in penny postage stamps.*

Booksellers *and Keepers of Circulating Libraries are requested to communicate to* The Critic *the results of their experience as to books and classes of books most in demand, and other similar information. Books wanted to purchase inserted in the weekly list without charge.*

BOOKSELLERS' CIRCULAR.

BOOKSELLERS' PROVIDENT RETREAT.

A very numerously and fashionably attended *déjeûner à la fourchette* took place on Wednesday, at Abbott's Langley, on the occasion of laying the first stone of a building intended to be devoted to the purpose of forming a comfortable asylum for annuitants of the Booksellers' Provident Institution. This institution was established in 1837, and recently its prosperity has been such as to induce the committee to form the design of establishing a residence in the neighbourhood of London, where the annuitants of the society might enjoy those comforts and that retirement so desirable for those deserving members of the bookselling trade and their widows, who may be rendered incapable, at an advaced age, of providing for themselves.

This intention they have been at length enabled to carry into execution, owing to the munificent kindness of Mr. Dickenson, who gave the institution, for that purpose, a beautifully-situated piece of land, opposite the King's Langley station of the Birmingham Railway. A more delightful site could not be selected for the projected building, lying as it does in a highly-cultivated and picturesque district, and possessing the advantage of being so near London, almost within a few yards of one of the termini of the great northern artery of communication, the frequent passing of the trains on which, in such a rural district, will rather serve to remind the inmates of the asylum of the busy and anxious bustle from which they shall have escaped, than to unpleasantly interfere with the calm and quiet retirement of this asylum.

The building will be a very handsome specimen of the Tudor architecture, from a design by Mr. H. Cooper, and the cost of its erection will be defrayed by a fund especially contributed for that purpose by the members of the trade, and by many other persons favourable to the object; and as the fund increases, additions will be made from time to time of other buildings, in such order as they may be required.

The inmates of the Retreat will be selected from the Booksellers' Provident Institution, and every member of the association will be entitled to vote at their election, the management of their affairs being entirely placed under a committee annually chosen from amongst the members.

The day was peculiarly favourable for the performance of the ceremonial, and a very numerous party, graced by the presence of many of the fair sex, evidently enjoyed the rich and varied scenery in the neighbourhood.

At one o'clock a procession of the stewards was formed, who accompanied the Earl of Clarendon to the spot fixed on for the deposition of the foundation-stone, which was surrounded by a tasteful canopy for the accommodation of the ladies, where, as old Chaucer would say—

"Neither Phœbus' beams could to them thronge,
Nor Eolus' sharpe blaste could work them anie wronge."

At two o'clock the stone, which contained in a hollow space specimens of the various coins of the present reign, was placed in its position, and mortar applied with a silver trowel, in a most workmanlike manner, amidst deafening cheers, by Lord Clarendon, after which a prayer was read by the vicar of the parish, and the party proceeded to a spacious marquee, where a sumptuous repast was provided for them,

The Earl of Clarendon presiding. The noble chairman proposed, in eloquent terms, the usual toasts which the loyalty and patriotism of Englishmen claim precedence for on all public occasions; after which he again called for a bumper, and said that he was about to propose to the assembly a toast which he felt confident would receive the warmest approbation of every individual present, connected as it was so intimately with the purposes of the Booksellers' Provident Institution. That excellent institution was established in 1837, for the purpose of affording pecuniary relief to members of the trade, or their widows, who were overtaken by age or infirmity, without the means of providing sufficient comfort under such circumstances; and that institution had been since conducted in a manner which was so perfectly in accordance with the intentions of the founders, that it had attained a very deserved and high degree of prosperity. There had been no appeals in the newspapers in its favour, nor had its meetings been presided over by persons of high rank, yet, notwithstanding, it had been successful to such an extent as to obtain four or five hundred members, and a corresponding amount of subscriptions. The society felt the great advantage which they could confer if, in addition to pecuniary relief, they were also enabled to grant the comfort of a quiet retreat in the neighbourhood of London, where members of the society who received assistance might also have an asylum in their old days, in which they might enjoy those comforts and that quiet so essential to their condition, and that design was most benevolently assisted and encouraged by Mr. Dickenson, who gave for ever the piece of land on which they were then assembled, for the purpose of affording facilities for the erection of such an asylum, and it was now placed in the hands of trustees for that object. The building would be proceeded with at once, and he was happy to be able to state that it was to be in a style of architecture which, having in view the purposes for which it was designed, must be pronounced most appropriate and well-judged, and reflected great credit on the good taste and judgment of the architect, Mr. Cooper. It was to consist of seven houses of four rooms each, with every suitable convenience, so that each member would have an independent dwelling; and there were also two larger rooms in the plan, one to be devoted to the purposes of a committee-room, and another a hall for the assembly of the inmates, which hall was, he was happy to say, to be fitted up as a library. It was unnecessary to detain them with a description of the more minute arrangements, but they were all to be in strict accordance with proper economy and a due regard to the comfort of the inmates. The objects contemplated in this retreat were such as ought to command the sympathy, not only of those connected with the bookselling business, but of every class in life; for that trade was almost *sui generis*, and possessed the strongest claims on all, from the highest to the lowest in the land. When persons enjoyed the advantages that were derived from the extensive diffusion of enlightenment and civilization, they seldom thought of the great enterprise and risk which were required in order to produce that diffusion of knowledge—they seldom thought of the cost and anxiety which were required to carry it into effect—they seldom considered what a lottery was the business of publishing. They seldom considered how difficult it was to discover beforehand the intellectual taste of the public, or what might be called, perhaps, the caprices of public opinion, against the decision of which it was hopeless to appeal. He felt that the interests of the booksellers were identical with those of the public, and therefore he felt, that in aiding to confer this benefit on them, the public were conferring a benefit on themselves. They ought to recollect that the booksellers were the medium through which the principles of religion and patriotism were spread abroad. They ought not to forget that through their exertions knowledge was diffused amongst all classes, and their morals improved, whilst, their enlightenment was increased. He should, therefore, without further preface, give "Prosperity to the Booksellers' Provident Retreat."

The health of the noble chairman was then drunk, after which the health of Mr. Dickenson was most warmly received, and several other toasts having been proposed, the company separated, very much delighted, not only with the benevolent purpose which had called them together, but with the agreeable manner in which the day was spent. A sum of about 600*l.* towards the fund for erecting the building was subscribed before the party separated.

Sale of the Library of the late Duke of Sussex.—Last week the sale of the sixth and concluding portion of the library of the late Duke of Sussex was commenced by Messrs. Evans, at their auction-rooms in New Bond-street. Among the lots sold, the following was deserving of notice:—Lot 224. "Cathon," a rare book from the press of William Caxton. On the last leaf is the following: "Here fynyssheth this present book, whiche is sayd or called Cathon, translated oute of Frensshe in to Englysshe by William Caxton, in thabbay of Westmynstre, the yere of oure Lord MCCCCLXXXIII. and the fyrst yere of the regne of Kynge Rychard the thyrd, the xxiii day of decembre." This book was knocked down for 16*l.* 10*s.* Several of the books sold were interspersed with manuscript notes by the late duke, and fetched good prices.

LITERARY INTELLIGENCE.

Theatrical Affairs in Paris.—The suit by the Théâtre Français against Mdlle. Plessy, for breach of contract, came to a hearing before the Tribunal de Première Instance. An appli-

cation was made on the part of the defendant for a postponement, which was refused, and M. Marie opened the case on behalf of the plaintiff. In the course of his statement of the circumstances, which are already known to the public, he read three letters. The first was one from Mdlle. Plessy, dated 8th July last, and addressed to M. Desnoyers, the manager, stating that she was confined by illness; the second was a reply written by the secretary of the committee, M. Verteul, expressing regret at her indisposition, declining her proposal for the theatre to send a physician to certify her illness, as she was seven leagues from Paris without permission, contrary to the rules of the company, and informing her, that if she did not return in time to attend the rehearsal of the *Ecole des Vieillards*, the commissary royal would be obliged to apply to the minister to put in force the decree of the 15th of October, 1842. The third letter, which is without any date, is from Mdlle. Plessy. In this, which is addressed to her comrades, she entreats their forgiveness for the step she was taking, expresses her gratitude for the kindness and encouragement she had received from them in her youthful days, and affirms that she is willing to make any sacrifice to recover their good opinion, but that there was no reasoning against *sentimens intimes*. She offers, if they will receive her back again, to serve the theatre for eleven years instead of eight remaining of the present term of her engagement. M. Marie, after finishing these letters, stated that it was impossible for the theatre to comply with her proposal, and therefore called the Court to award 200,000f. as damages, or order the immediate deposit of 20,000f. until the suit was brought to a judgment. The Tribunal declared itself competent to entertain the suit, ordered Mdlle. Plessy to make a deposit of 6,000f., and postponed the hearing of the merits until after the vacation.

REGISTER OF NEW PUBLICATIONS,

From August 30 *to Sept.* 6.

NOTICE TO BOOKSELLERS.

A Register lies at THE CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* THE CRITIC, *and no charge will be made either for registration or for publication in* THE CRITIC. *Particulars forwarded* by letter *will be duly inserted.*

BOOKS WANTED TO PURCHASE.

No charge is made for insertion in this list. Apply to the Publisher of THE CRITIC, stating prices.

Vol. II. of Dr. Southwood Smith's Philosophy of Health.

Nos. 3, 5, 6, 7, 8 (in Vol. I.); 25 to 36 (or Vol. III.); and No. 39 (in Vol. IV.) of Imperial Magazine, edited by the late Samuel Drew; with or without plates.

GLEANINGS.

ORIGINAL AND SELECT.

THE QUEEN'S VISIT TO THE RHINE.—The expense of the fêtes given upon the occasion of the Queen's visit to the Rhine is stated in the German papers to amount to 5,000,000f. The musicians alone were paid 400,000f.

THE WHIRLWIND NEAR ROUEN.—ACADEMY OF SCIENCES.—SITTING OF AUGUST 25.—M. Arago gave, from letters which he had received from MM. de Breaute, Precisier, and Lecoq, an account of the blast of wind which on the 19th instant caused so much disaster near Rouen. The relation of M. Precisier being the most minute, and embracing nearly all of what has been communicated by the other correspondents of M. Arago, we shall confine ourselves to his account. M. Precisier states that the blast, or whirlwind, in question, had its origin at Houlme, a village two leagues from Rouen. Two violent winds, proceeding in contrary directions, having met, a cone, says he, was formed which descended from the clouds, with its summit towards the earth, and had a revolving motion of terrible rapidity. From its centre issued flashes of lightning, and it emitted a strong smell of sulphur. Some persons, who saw it advance with enormous speed, have assured M. Precisier that the black and red clouds moved vertically, driven backwards and forwards with prodigious force; they also heard a rolling noise, similar to that which precedes hail. The barometer fell suddenly from 756 to 740 millimètres, the temperature of the air became much elevated, and the whirlwind was preceded by a current of air so warm that some persons before a large fire felt it strongly. The meteor rushed eastward, overthrowing every thing it met with in its course; it passed through a forest without losing any of its power, snapping off or twisting the trees, and casting them right and left, and then struck a cotton factory four stories in height, and in a second demolished it, crushing the persons who were within its walls. The dwelling-houses which were in the immediate vicinity of this factory were but slightly injured, for the whirlwind did not take a direct course, but went in a zig-zag, and appeared to be attracted by the great masses of iron in the mahchinery of the factories. At the second factory that it attacked the third floor was removed in an instant, as if by aspiration, and some of the fragments were carried to a distance of several leagues. The third factory, in which there were nearly 200 persons at work, was demolished with the same rapidity as the other two. The meteor then continued its course towards Malaunay, devastating the country as it proceeded; but at Cleves its effect ceased. A violent wind, caused by this frightful perturbation at one point, blew from it towards all the environs, and was felt at an enormous distance. At La Chapelle, near Dieppe, a distance of nine leagues, a shepherd saw fall a plank of more than a metre in length; slates, portions of windows, cotton, and many other objects fell near the same spot. All the facts which were witnessed, says M. Precisier, prove the presence of electricity in this visitation. The bricks and stones of the buildings which were destroyed were burning hot, and many articles were carbonized on the outside. Some spindles were found to be magnetized, but M. Arago observed that this might have been the case before the disaster. The bodies of the victims presented no marks of external injury; they resembled those of persons struck by lightning. As to the light which was seen to issue from the centre of the meteor, no doubt of its being electric can be entertained, and it was visible at a great distance. In the neighbourhood of the disaster a family, who were about to sit down to dinner, suddenly saw the table uncovered, the plates and dishes danced in the air, and a frying-pan was driven upwards and forced into the ceiling, surrounded by a light, which rapidly disappeared.

Some pillars, and other remains of a Roman building, and two beautiful coins of the Emperors Antoninus and Domitian, have been discovered in High-street, Stamford.

IMPROVEMENTS, &c. OF PUBLIC EDIFICES.—Workmen are at present engaged in painting the outer iron gallery at the top of the cupola of St. Paul's cathedral; it is done in stone colour, and has a very good effect. At the British Museum workmen are employed in levelling the dead wall and antique gateway, &c. to throw the front open. The foundation has been laid of the new Money Order Office of the General Post. It is situate in Aldersgate-street, between the French Protestant church, and that of St. Botolph, Aldersgate. It is to be completed within six months.

A THING THAT OUGHT TO BE KNOWN.—The beech tree is said to be a non-conductor of lightning. So notorious is the fact, that the Indians, whenever the sky wears the appearance of a thunder-storm, leave their pursuits and take refuge under the nearest beech tree. In Tennessee the people consider it a complete protection. Dr. Becton, in a letter to Dr. Mitchell, states that the beech tree is never known to be struck by atmospheric electricity, while other trees are often shattered into splinters. May not a knowledge of this afford protection to many when exposed?—*American Paper.*

We have been assured on the best authority, that the absence the sun is attributed solely to the fact that, since he has acquired so much fame by his photogenic pictures, he has been keeping out of the way for fear he should be made President of the Royal Academy.—*Punch.*

FIGHTING A DUEL.—Napoleon, when he was told that a cannon ball had killed a sailor who had hid himself in a coil of rope in the hold of a man-of-war, observed, "A man can never avoid his fate;" a fact well illustrated by the following circumstance:—An Englishman, "brave as Julius Cæsar," challenged a Frenchman to mortal combat. Knowing John Bull to be a dead shot, the Frenchman, being the challenged party, and having the choice of place, time, and weapons, selected night, a large dark apartment, and pistols. The seconds were to remain outside and give the word, after which each was to fire when he pleased. "Fire!" cried the seconds, when the combatants had been locked in, and declared themselves "ready." But no sound was heard. Johnny Bull could find no mark for an aim; and his adversary hearing him groping about the room fired at random. John was safe enough now; and after searching every corner of the room in vain for any indication of the whereabouts of his antagonist, at length exclaimed,—"Come, I'm tired of this fun; besides, I'm satisfied;" and he accordingly groped his way to the fireplace, and fired up the mouth of the chimney. There was a shriek and a yell, and down came the Frenchman, dead as a door nail!—*American paper.*

POWER OF MONEY.—I glanced with some little apprehension at my boots, on having the fact brought to my recollection that it is customary to uncover the feet on entering a mosque; but this was soon relieved by my guide, who thrust a pair of slippers over them; and thus qualified, I walked in. As there were no more slippers to be had, my friend remained at the threshold; but we had not advanced many paces when he bethought himself of holding up a three-piastre piece; this overcame their scruples, and (booted as he was) they beckoned him to follow.—*Days and Nights in the East.*

ADVERTISEMENTS.

The following is the moderate scale of charges for Advertisement adopted by THE CRITIC.

For 6 lines and under..... 5s.
For every three lines above ..... 1s.

The volumes of THE CRITIC *neatly half-bound, as completed, for 4s. 6d. each, if the numbers be forwarded to the office. The stamped edition may be sent by post with the ends open, and a letter of advice should contain directions how it is to be returned.*

A portfolio, on a novel and convenient plan, for preserving the numbers of the current volume of THE CRITIC *may be had at the office, or by order, of any bookseller in the country, price 4s. 6d.*

THE CRITIC *may also be had in monthly parts, sewed in a wrapper price 1s. 6d. each.*

To Readers and Correspondents.

J. W., Monmouth.—*To the first question we are unable to give an answer; to the second the reply is, 5s.*

W. H. W.—*The Craig-Bouness. The MS. has been safely received, and will be used as soon as opportunity offers.*

S. S., Leeds.—*The request shall be attended to.*

B., Coleford.—*De Morgan's Arithmetic, 4s.; Woman's Mission, 3s. 6d.*

ERRATUM.—*In "Literary Gossip," page 359, col. 2, for* "canarets," *read* "canards."

ADVERTISEMENTS.

New Publications.

Now ready, Vol. I. post 8vo. cloth elegant, price 10s.; also Part IV. price 3s.

COSMOS; a General Survey of the Physical Phenomena of the Universe, by A. VON HUMBOLDT.

KAEMTZ'S COMPLETE COURSE of METEOROLOGY, translated by C. V. WALKER. Post 8vo. lettered, with 15 plates, 12s. 6d.

OWEN'S ODONTOGRAPHY, now complete. 2 vols. half Russia, gilt top, impl. 8vo. 6l.; and in 4to. on India paper, proofs, 10l. 10s.

RURAL ECONOMY in its relation with CHEMISTRY, PHYSICS, and METEOROLOGY, by J. B. BOUSSINGAULT. Second edition, carefully re-compared with the original, and all the tables recalculated, 8vo. lettered, 18s.

London: H. Baillière, 219, Regent-street.

SMALL BOOKS on GREAT SUBJECTS. This day is published, small 8vo. price 3s. 6d. No. IX. An INTRODUCTION to VEGETABLE PHYSIOLOGY.
W. Pickering, 177, Piccadilly.

THE WESTMINSTER REVIEW, No. LXXXVI. is now ready.—CONTENTS:

1. Shakespearian Criticism and Acting—Romeo and Juliet.
2. Schlosser's History of the Eighteenth Century.
3. Fresco Painting.
4. Sybil. By B. Disraeli, M.P.
5. Humboldt's Kosmos—Vestiges of the Natural History of Creation.
6. Popular Works on Natural History.
7. Railway Improvement.
8. Critical and Miscellaneous Notices.

Samuel Clarke, 13, Pall Mall East.

ROWLAND'S UNIQUE PREPARATIONS.

(Under the Patronage of the several Sovereigns and Courts of Europe, and universally preferred.)

ROWLAND'S MACASSAR OIL,

For the Growth, Preservation, and for Beautifying the Human Hair.—Price 3s. 6d.—7s. Family Bottles (equal to four small), 10s. 6d. and double that size, 21s. per bottle.

ROWLAND'S KALYDOR,

For improving and Beautifying the Skin and Complexion.—Price 4s. 6d. and 8s. 6d. per bottle, duty included.

ROWLAND'S ODONTO,

OR PEARL DENTIFRICE,

For the Teeth and Gums.—Price 2s. 9d. per box, duty included.

CAUTION.

SPURIOUS COMPOUNDS are frequently offered for sale, under the same names (some under the implied sanction of Royalty), the Labels, Bills, and Advertisements of the original articles are copied, and either a Fictitious Name, or the word "Genuine," is used in the place of "ROWLAND'S."

It is therefore imperative on purchasers to see that the word "ROWLAND'S" is on the wrapper of each article. For the protection of the public from fraud and imposition, the Hon. Commissioners of Stamps have directed the Proprietors' name and address, thus,—

A. ROWLAND & SON, 20, Hatton-garden,

to be engraved on the Government Stamp, which is affixed on the Kalydor and Odonto.

Sold by the Proprietors, and by Chemists and Perfumers.

*** All others are FRAUDULENT COUNTERFEITS!!!

GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY, 14, Waterloo-place, Pall-mall, London.

THE CHISHOLM, Chairman.
WILLIAM MORLEY, Esq. Deputy Chairman.

GREAT ADVANTAGES OFFERED TO POLICY HOLDERS BY THIS INSTITUTION.

A large and immediate accession of Assurances by the transfer of the Policies of the "Achilles British and Foreign Life Assurance Society."

PROFITS.—The whole of the profits divided annually among the members, after the payment of five annual premiums.

An ample guaranteed capital, in addition to the fund continually accumulating from premiums, fully sufficient to afford complete security.

CREDIT.—Credit given to members for half the amount of the first five annual premiums, without security.

Credit allowed to members for the whole of the first five annual premiums, on satisfactory security being given for their payment.

Transfers of Policies effected and registered (without charge).

LOANS.—Loans granted upon approved security.

Claims on Policies not subject to be litigated or disputed, except with the sanction, in each case, of a General Meeting of the Members. Loans granted upon approved security.

An extremely low rate of premium, without participation in the profits, but with the option, at any time within five years, of paying the difference between the reduced rates and the mutual assurance rates; and thus becoming members of the society, and entitled to a full participation in the profits.

Extract from the Reduced Scale of Rates, for an Assurance of 100l. for one year, seven years, and the whole term of Life.

Age.	Annual Premium.		
	One Year.	Seven Years.	Whole Life.

A Liberal Commission allowed to Solicitors and Agents.

THE CRITIC,
And Journal of Literature.

SATURDAY, SEPTEMBER 13, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

A VALHALLA.

TWELVE months have elapsed since THE CRITIC suggested the propriety of founding a Valhalla for England similar to that which has been erected by the patriotism of a petty monarch on the banks of the Danube. Although the subject has not been reverted to, it has not been forgotten. The English mind can only be acted upon by slow degrees. A great design must first be suggested to it, and then left for a season to take firm root there; detail and discussion too soon provoked being apt to choke the seed in its first budding. A really good project once started is seldom wholly lost sight of. It may startle at first, but when familiarised by contemplation, it grows into favour, and a desire for its adoption speedily follows approval. The proposition we made so long since has not been made wholly in vain. Correspondence from various quarters proves that it has been stirring in many minds, that thought has been busy upon it, that it has found favour, that there is a desire for its adoption, and a resolve to make some efforts for its execution. Since the period when the suggestion was started, there has been so great an enlargement of the circle of readers of THE CRITIC, that, in resuming its consideration, it will be necessary to repeat the substance of the scheme.

Probably few are ignorant that there stands now upon a height on the banks of the Danube an edifice erected by the King of Bavaria for the purpose of enshrining, as it were, the monuments of the most famous of the authors and artists of Germany. It is appropriately termed the Valhalla; it is visited by the people of all nations, who flock thither to pay homage to the genius of Germany.

We proposed that there should be erected a similar temple to the genius of Great Britain; similar, we mean, in its object, but as much larger in size, and more splendid, as are the power and wealth of the nation that has no such temple beyond that of the people who have erected their Valhalla.

And that such a work should not be dependent upon the caprice of Ministers or the votes of Parliament, we submit that it should be accomplished by public subscription—by a grand tribute of the whole nation, extending from the largest contributions of the rich to the coppers of the poor; the names of all the donors to be inscribed on parchment, and preserved in the temple as a record for posterity to learn who were the patriots by whom was erected an edifice in honour of the genius of their country. We cannot doubt that such a subscription for such a purpose would be cheerfully and bountifully made; that from the Queen down to her lowliest subject all would contribute according to their means, and that thus would be erected a monument worthy of our position among nations, worthy of our wealth, worthy of our civilization, and above all, worthy of the genius therein to be enshrined. It needs but that a beginning should be made by some persons of influence to insure success. A committee comprising the foremost names in rank and in fame might, without difficulty, be formed, if the preliminary labour would be undertaken by a few who feel an interest in the design and deem it practicable. THE CRITIC will gladly devote any needful portion of its columns to the work, if any will join us in its inception. We again throw out the design for the consideration of our readers. We ask them to give it their serious thought, to offer suggestions for its improvement or advancement, and to lend their aid in its accomplishment. All agree that it is a work that should be done; let their sincerity be tested by calling upon them to contribute their subscriptions to the doing of it. We believe that such a call would receive the heartiest response ever given to a national enterprise.

JOURNAL OF ENGLISH LITERATURE.

BIOGRAPHY.

Characteristic Traits and Domestic Life of Frederick William the Third, King of Prussia. By the Very Rev. R. F. EYLERT, D.D., Bishop in the Church of Prussia. Translated by Jonathan Birch. 8vo. London, 1845. Bell.

THE volume before us forms a companion to that styled *The Religious Life and Opinions of Frederick William the Third*, thus completing, with the exception of his legislative and military character (which the bishop cautiously avoids, as without his province), the portraiture of that most amiable and just of monarchs.

The affectionate manner in which Bishop EYLERT dwells upon every feature of his illustrious master, the exactness wherewith he has recorded the minutest act which illustrated some mental quality of the deceased king, and the earnestness which marks his relation, form the sincerest and finest of compliments to the memory of the dead, and at the same time an eloquent, though unintentional, testimony to the nobility of his own nature. He must indeed have been a good king, who could so have commanded the admiration and won the affections of a grave ecclesiastic; and he must have been a worthy servant, whose heart, overflowing with gratitude to a benefactor from whom he had nothing more to hope, does not cease to sing praises long after the ear to whose pleasure they might have ministered lay dull and cold in death.

In character there is one ruling virtue of activity, and another of passivity; nor is the last the least. Never, perhaps, did two minds exhibit these opposite qualities so eminently as those of FREDERICK the Great, and his grandnephew, FREDERICK WILLIAM the Third. The one, all fire and impetuosity, lived amid the excitement of the battle-field; and, finding his very repose in action, wrested from confederated sovereigns, single-handed and unaided, rich territories, which he formed into a powerful kingdom, at the expense of the lives of thousands of his fellow-mortals: the other, calm, slow, and contemplative, avoiding war, yet deficient neither in resolution nor energy, above passion and prejudice, yet alive to every emotion that does honour to humanity, lived happily only when he saw his subjects thriving and comfortable around him. If the first was necessary for the establishment of a dynasty, the last was surely best adapted to preserve it.

A portrait of the person and character of such a man as FREDERIC WILLIAM III. though drawn by the affectionate, perhaps, partial, hand of one whom he had benefitted, will not be without interest for our readers:—

> The King was much above the common height, and his limbs were finely proportioned. His bearing was erect and military—at the same time wholly unconstrained—and gracefully agreeing with his stature. His look, which partook of the serious and tranquil, was agreeable. His high forehead and unwrinkled brow indicated purity of mind—his full underlip firmness—and around his mouth hovered a mixture of good-nature and natural satire. His eyes were dark-blue—full of animation and kindness—generally contemplative, yet indicating at times deep thought and experienced sorrow. His countenance was stern, intellectual, reposed,—never vacant, or as if moved by suspicion,—but open, shrewd and truthful. When he chose to express satisfaction by a smile, benevolence marked his aspect: what might be termed condescension, was in him graciousness of mind, for his eye beamed with good-will to all mankind. Never did human countenance more justly mirror forth the inward feeling—it might be denominated a panorama of received impressions. Did discourse turn on the misfortunes or casualties of others, sympathy was directly seen in the peculiar movement of the features of his face, the shrug of his shoulders, and the remem-

brance-knot, stealthily made in his handkerchief. His gait was firm and measured,—and the movement of his hands singularly graceful. When young, his person was slim, and he never became corpulent; but in his 35th year, when he had reached the prime of manhood, he was considered to be, not only the most exalted, but the handsomest man in Prussia—a very chieftain. * * * * The King loved SIMPLICITY, even in respect of his own attire. His usual dress was a plain blue close coat, buttoned to the throat. Were he in the country—on the Peacock Island—or in retired Paretz, he then preferred the more commodious outer-coat. When he visited the Bohemian or other baths, he put aside all that could possibly indicate royalty, and then his general dress was a dark-olive coat, white waistcoat, grey trowsers, black silk neckcloth, round beaver hat, and light stick in hand. He was pleased when he could be a man amongst mankind,—then was he serene and buoyant, unconstrained and at ease—for he was delighted to escape from all that limited. With reluctance he cast aside the garments to which he was accustomed, and he continued to wear them to the very verge of unseemliness. Were the object in question a coat or cloak, it was always, "The old one is as yet good enough,"—neither would he separate himself from them, until his affectionate daughters, by dint of amiable solicitation, prevailed on their revered father to adopt the new apparel.

The frugality, suavity of manners, and equanimity of the King, with the careful economy of his time and wealth, are models for imitation to unformed and still plastic minds.

Frederick William spent the greater part of the day, particularly the forenoon, in his cabinet, where all was orderly, elegant, yet void of ornament. Potsdam was his favourite place of residence, and his abode there was the third story of the palace, on the side which adjoins the pleasure-garden and the long bridge over the Havel;—these apartments are comfortable but small, and far from lofty—not equalling the suites of many a wealthy private individual. The furniture in his study consisted of a high desk, at which he wrote standing—a bookcase full of the German classics,—a corner cupboard,—a common sofa,—a small looking-glass, and several cane-bottomed chairs:—on the walls hung ancient and modern representations of the Prussian army, and a copper-plate print of Christ Blessing the Children. His bed-room, which was remote from noise, was rather dark, and without decorations; containing only the usual washing apparatus—a simple camp-bedstead, such as every officer has—a cloak-horse—and a boot-jack. His bed was a hard mattrass and light covering; and on the small table by his bedside lay, together with a translation of Thomas à Kempis, various works of serious character. On the second floor the cheerful small saloon, hung with pictures, and its adjoining room, were alone in use; the rest, which were state apartments, being kept closed, except on extraordinary occasions.

The King, by his firm regularity, and simple living, preserved to advanced age his robust health;—everything was done by clock-work throughout the day, and he was best pleased when nothing occurred to disturb this uniformity. The whole was planned out, and every occupation had its time to a minute. All who were about him were so well tutored, that each one knew what he had to do, and when to do it.

He was moderate in every thing, particularly in respect of table enjoyments; the pleasures of the gourmand were therefore almost unknown to him,—nevertheless on court festivals, and when illustrious visitors were his guests, the royal table was richly served; and nothing *recherché* was omitted which the most refined epicure could desire in respect of elegance, variety, quality, and quantity. The King neither loved, nor would tolerate the superfluous:—in the circle of his family and usual guests, his table was only that of any opulent merchant; even then he partook not of all the dishes, choosing the plainest, and those thought most wholesome. He drank little wine, not more than two or three glasses; yet he was well pleased that his guests enjoyed themselves, for hardly was a glass empty, ere one of the numerous servants filled it again; but his example checked immoderation, and never was seen at court, even on the greatest festival, an inebriated man. When the Court Martial on the King's return to Berlin in 1809, after the unfortunate war of 1806, asked "whether he should order a quantity of champagne?" the answer was, "Not yet!—not before all my subjects—even the poorest—can afford to drink beer again."—He expressed himself well pleased when a fisherman, gardener, or any of the neighbouring country people, sent him cakes or other table fare. Of such presents he always partook; and when the surveyor of the kitchen named the giver, he would say, "very agreeable to me; must make amends; put me in mind thereof!" and the presenter was sure of receiving a return-present. Dinner was usually over in an hour and a half,—seldom lasting two hours; for supper the King took that which was light—generally milk—rarely a glass of wine. When he came to the crown, the Marshall proposed a more extended list of viands for the royal table, and received for answer, "Has my stomach become more capacious since I am King?—be it as it has been until now!"

Speaking of the King's character, the Bishop says:—

His character was real,—and from its decided truthfulness proceeded the King's other eminent qualities:—nature seemed to have organized him for that virtue of all virtues. In his manifold conflicts with men of all sorts and degrees during his long reign, he never intentionally deceived any one. His yes was veritably yes, and his no, final. His commands were self-evident axioms. If explanation were asked, he was liable to feel annoyed; when so, he would turn away with these words, "It explains itself!" Truth was his end and aim, and veracity the only means of obtaining his favour. It was impossible to stand before him without acutely feeling it—therefore have some foreigners admitted to audience said, "When he spoke and looked earnestly at us, we forgot all we purposed saying, and could with difficulty get out a few commonplace sentences." His rigid love of truth caused his dislike of flattery; truly he was pleased when his actions were justly judged of, and the purity of his intentions appreciated. He quickly remarked personal attachment—and men of tact who could worthily and politely say the agreeable, were not unacceptable to him—but the line of demarcation was most delicate, and a frown was seen on his brow if any thing said bordered on flattery—for he suspected wrong as soon as truth was violated.

The King was exceedingly partial to children, willingly joked with them, and enjoyed their waggery. It is a custom in Berlin for the street boys to get up comic scenes, and to improvise before the doors of persons to whom scandal attaches, or any particular event has lately happened. In 1827, when the king was recovering from a broken leg, a crowd of youngsters passing the palace as the King opened the window, tossed their caps in the air, and saluted him with the following doggrel:—

"Hail victor of the Rhine and Maine!
Our good King's leg is sound again."

Instead of being angry at their audacity, the King laughed heartily, and commanded them to be regaled in the court-yard with cake and fruit. This anecdote gives our author occasion to tell one of FREDERICK the Great, which we cannot forbear quoting.

When Frederick the Great rode through and about quiet Potsdam, on his old Mollwitz grey, he was often surrounded by a swarm of street urchins, with whom he sometimes joked. They called him "Papa Fritz," touched his horse, took hold of his stirrup, kissed his feet, and sang popular songs, one of which the old king was fond of hearing, "Victoria! with us is God, the haughty foe lies there." One Saturday afternoon they carried the matter so far, that Frederick, raising his crutch-handled cane, said, "Ragamuffins, get to school with ye!" but the youngsters shouted out, "Ha, ha! Papa Fritz don't know that there's no school on Saturday afternoons." Shortly after the Seven Years' War, the King was riding towards San-Souci; when near the Brandenburg gate, he remarked an old fruit-woman, who still retained her post; greeting her as heretofore, "Well, mother, how has the times used you?" "Why, pretty well; but where have you been so long?" "Don't she know that I have carried on the war for seven years?" "How should I know that; besides, what's that to me? Rabble fight and rabble slay, and rabble are friends another day." Frederick laughed, and said to General Ziethen, who was riding by his side, "We've regularly caught it! did you hear her?"

The following conversation, in the renowned gardens of Sans Souci, between Bishop EYLERT and FREDERICK WILLIAM, wherein the latter takes occasion to expatiate on and defend the character of his illustrious predecessor, FREDERICK the Great, is of historical importance; therefore (though we can ill afford the space it will occupy), in order that the reader may form a juster idea of that great warrior than he may hitherto have entertained, we transfer it to our columns:—

"Do you remember Frederick II.?" said his Majesty. "I recollect having seen the Great King in my boyhood—his large flaming eyes will never be forgotten by me." The King said,—"Yes, his eye was the mirror of his mind; and that mind was bright, full, and profound. He kept in advance of the age, and much of what he purposed and left behind in writing is *now* bearing fruit." I remarked,—"When one reads his works—namely, what he wrote on *The Rights of Man*, it would appear that his principles were milder and more general than his practice—in which severity and absolute power often shewed themselves." The King, fixing his eyes on me, continued,—"What you say I have often read and heard; nevertheless, 'tis a mis-

take, although it have the seeming air of truth. The difference between then and the present, must be taken into consideration; the individualities and regulations of that great man, though suited to his time, would be improper and not work now. Other times, other customs!—Every thing was more compact, sounder, and bolder then; we have become politer, genteeler, more flexible—whether for the better, I will not stop to examine; and where is the man who will dare the solution! As with every man, so has every age a peculiar blending of good and evil—light and shade;—the latter often to make the former more conspicuous. The miserable herd of dog-like lickspittles, who see in Frederick II. all perfection—no weaknesses—I abhor from my soul; unbounded praise and panegyric indicate inanity and empty-mindedness. The rising generation, who have seen little and experienced less, marvel at the unusual; whereas to the seriously thinking, staid man, who has correctly studied the annals of past times, and has gained experience with age, all seems to have proceeded according to the common order of things. I feel suspicious of the utterers of flattery. In them there is always want of discernment or purity of heart—often both! Doubtlessly many weaknesses and faults clave to Frederick, and the adage may be justly applied to him, 'Where there is much light there is much shade!' For he was, and remained, purely man. But those comprehend him least who—as you did just now—attribute to him a natural propensity for severity and despotism. No, no! the natural and real sentiments of his heart were pure love to mankind, and a lively sympathy, which often rose to strong emotion. He carried those feelings so deeply in his bosom, and found therein so cordial an element, that it was his unceasing desire to encourage and strengthen them. Thence his lively sensation for friendship, his love and tenderness towards his kin, and, notwithstanding the great difference of rank, his faithfulness and constancy towards his companions, and his love for music and its soft impressions; it is well known that on the flute he succeeded best in adagios; thence his decided inclination for the sciences and erudition, as well the depths of abstract philosophy as the joyous heights of poesy;—thence his love for animals, not forgetting his dogs;—thence his sympathy for retirement, and the eternal newness of nature. This spot, how sombre, solemn, and serene—yet how pleasant and consoling! How often did he pass the hours of evening here, strolling up and down, full of the noblest sentiments and sensations! He who so thought, felt, chose, and enjoyed with equanimity, must have been a stranger to the austerity of misanthropy. He was maltreated in his youth; yet did he never feel intimidation; his strong and eminent mind shielded him from fear. Nevertheless, harshness made him suspicious; and this suspicion, fed by the artifices, intrigues, and cabals, which those who were about the court of his choleric father had spun around him, his mother, sisters, and associates, became fixed, and therefore a prominent feature in his character. Approximated to, and daily viewing and estimating the higher and highest ranks from this gloomy side, may account for the severity, bordering on dislike, which he often displayed towards such in terms of bitterest sarcasm. *Not from inclination, but from principle*, was he stern, often harsh; being of opinion that fear, in most cases, namely, with the higher classes, effectuated more than love. Those, and more particularly the officials, he therefore kept in continual tension and fear; he looked on them with a distrustful eye, and was inexorable towards them whenever he discovered they had been guilty of dereliction of duty or injustice. On the other hand, he placed ready confidence in the common man, the citizen, and the peasant, but most of all in his brave soldiery; and he felt the loyal attachment of his people to be his greatest treasure. In one word, every thing about that potentate partook of the grandoise—all, the out-flowing of his firm principles. Yes, he was indeed a great man!—It was on this spot, sitting on this very bench, that I saw and spoke to him for the last time. His goodwill towards me, which on that occasion was expressed with the utmost tenderness, has been ever dear to me, and of lasting reminiscence. He examined me on such branches of learning and science as were then my study, particularly history and the mathematics. I was required to converse with him in the French language; and he drew from his pocket an edition of Lafontaine's Fables, fixing on the one I should translate to him. As it happened, I had construed it before to my tutor, consequently I did it fluently. Upon his praising my improvement, I informed him of my having previously translated it: his face brightened up, and patting me on the cheek he said,—'That's right, my dear Fritz;—always honest and honourable! Never seem to be what thou art not; but always more than thou appearest to be.' That admonition made an indelible impression on my heart, and though I disliked falsehood from my childhood, from that time on I have hated and detested all species of dissembling and lies. He particularly incited me to a perfect knowledge and fluency in the French language, as being the diplomatic language of the world, and thereto highly appropriate from its flexibility. Truly, on account of its pliancy, I speak it more correctly than the German; nevertheless, I like the German best.

"When Frederick permitted me to retire, he said, 'Mind, Fritz!—be something extraordinary *par excellence*. Great things are expected from thee. I am near the end of my career; my day's-work is all but finished. I fear that after my death matters will go pêle-mêle. There is everywhere enough of inflammable stuff, and the ruling princes, particularly those of France, feed the flame instead of calming it, or extirpating the cause. The masses of the people already shew themselves on the surface; when they break out, then is the devil loose—I fear that it will be thy lot to witness troublesome times. Qualify thyself—be prepared—be firm—and think of me. Keep vigilant guard over our house's honour and fame. Be guilty of no injustice; at the same time tolerate none!' Thus talking, we arrived at the extremity of Sans-Souci, where the Obelisk stands: 'Behold,' said he, 'how tapering, lofty, and aspiring, yet is it firmly erected and fixed, defying wind and storm. Yon structure says to thee, *Ma force est ma droiture*. The culminating point, the apex, crowns the whole; it bears not, but is borne by the beneath, more particularly by the invisible foundation. That foundation is, the people in unity. Always hold to them, in a manner, that they love thee and have confidence in thee; through them only canst thou prove strong and fortunate.' He then with steadfast eye measured me from head to foot—gave me his hand—kissed me—and dismissed me with these words, 'Never forget this hour!' I have not forgotten it, and at this moment he is before my soul as when he lived."

One more extract, of a nature different from the foregoing, and we conclude:—

THE KING AND THE BIRD-CATCHER.

A few years before his death, a dealer in singing-birds, from the Prussian part of the Harz mountains, came to Berlin, and called at the palace to express, in what he thought the best way, his thanks for the kindnesses which had been shewn his sons, who were soldiers, *viz.* by presenting to the King a so-called piping bullfinch, which, with enduring patience, he had taught to pipe the national air of "Hail! Frederick William," &c. *throughout*, and correctly—this being the only instance of perfect success. The King smiled, and ordered the bird-fancier to be shewn up, who, having placed the cage containing the interesting songster on the table, the bird, after some kindly words from its music-master, went through the practised air with all the solemnity of a cathedral priest, to the surprise and amusement of the King, whose delight increased when, on his saying "Da Capo," the bird piped the air again. To the question, "What's the price?" the pleased Papageno replied, "I won't take money for him; but if my dear King will accept the bird, and love him, the bare thought of his piping in the King's chamber will make me the happiest man of our Harz, and the first bird-catcher in the world." The King felt good-will towards the honest fellow, who stood before him unabashed in his linen jacket; and Timm, who had been summoned, received his Majesty's commands to have a room prepared for the bird-fancier in the adjoining wing of the palace, to shew him every hospitality, and to take care that he saw the sights of Berlin. At the same time Timm was instructed to find out what boon would be most acceptable to Papageno. For several days he remained in the palace, and was more than once summoned into the King's presence, who inquired minutely as to the localities of his part of the Harz, and was amazed with his sensible and frank replies. During this stay, Timm adroitly obtained such knowledge of his private circumstances and views as contented the King. When the time for the man's departure came, Timm franked him back by the diligence. Arrived at home, he found, to his utter astonishment, that the mortgage of 500 dollars on his house had been paid off by command of his Majesty. Thus was his unhoped-for but highest earthly desire accomplished, whilst he was enjoying the sights in Berlin.

It is long since we have read a book which has more interested us than this. The earnest, affectionate manner of the bishop, and his lively portraiture of one of the best of sovereigns, have a freshness, sincerity, and interest that commend the book to the heart; we therefore advise our readers to procure it, in full confidence that they will vindicate our judgment in this recommendation.

SCIENCE.

An Introduction to Vegetable Physiology, with References to the Works of De Candolle, Lindley, &c. 8vo. London, 1845. Pickering.

This volume is the ninth of the "Small Books on Great Subjects," issued by "a few well-wishers to knowledge"—a series already favourably known to our readers by the philosophical

works it has given to the public, and which from time to time have been noticed in these pages.

The author of this elementary treatise candidly avows that he makes no claim to originality on behalf of his book, which, indeed, is mainly a compilation from the works of M. De Candolle, Alphonse De Candolle, Professor Lindley, and others; his sole aim has been, by carefully selecting and combining his materials, to afford a clear idea of the nature and importance of Vegetable Physiology, and to justify the assertion made by the first-named of these naturalists, that "from the apparently humble functions of vegetable life we may raise our thoughts to the contemplation of the universal order that exists in the natural world."

In order to impress the reader the more vividly with the extreme beauty, wonderful organization, variety, and utility of plants, he has put an imaginary case of a person who, up to the period of manhood, had lived on some volcanic island, on which scarcely a moss might be found, being suddenly transported to a region of luxuriant vegetation, where his wonder would only be equalled by the delight such a scene must afford him. "Habit," he justly remarks, "has so familiarized us with these beautiful objects, that many of us forget to bestow a thought on them; and we eat our bread, wear our linen, or sail on the ocean in our majestic vessels, without a recollection of the corn, the flax, or the oak."

How many of us are born, pass through the term of mundane existence, and die without having felt to the full the beauty, harmony, and order which exists in the world around us. To a properly-tempered mind, one open to the influences of these qualities, there is not a subject more pregnant with interest than that offered by the vegetable kingdom. Compared with the dullard, of whom Wordsworth says, that

> A primrose on the river's brim
> A yellow primrose was to him;
> But it was nothing more—

how enviable is his condition! There is no plant, nor flower, but has a charm for him; there is a propriety in its very locale, and the uses, peculiarities, or associations appertaining to each afford to him subject for agreeable thought.

The author of this book has divided his subject into five parts. In the first he shews the structure and properties of plants, such as the cellular tissue, vessels, fibres, and skin; and their peculiarities, as extensibility, elasticity, and the power of imbibing moisture. In the second he treats of the nutrition of vegetables, and the organs by which this necessary function is performed. The third chapter is devoted to the growth and secretions of plants, with the beautiful physiology of these acts. In the fourth, the modes of re-production in plants is set forth. The fifth chapter contains a comparison of vegetable with animal physiology, one of the most interesting, curious, and instructive afforded in the whole range of the physical sciences. From this we make no apology for extracting the following passage on the

REPRODUCTION OF CERTAIN PLANTS COMPARED WITH INFUSORIA.

Perhaps, however, the most curious analogy between animal and vegetable organization is that which relates to the process of reproduction—which in some of the lowest tribes of animals approaches more nearly to identity with that of plants than in any other function. In several of the most minute of the infusoria, in which, nevertheless, small as they are, the patient investigation of Ehrenberg has discovered a series of stomachs, we meet with frequent examples of multiplication by the spontaneous division of the body of the parent into two or more parts. "Many species of *monads*, for instance, which are naturally of a globular shape, exhibit at a certain period of their development a slight circular groove round the middle of their bodies, which by degrees becoming deeper, changes their form to that of an hour-glass; and the middle part becoming still more contracted, they present the appearance of two balls united by a mere point. The monads in this state are seen swimming irregularly in the fluid; as if animated by two different volitions; and apparently for the purpose of tearing asunder the last connecting fibres, darting through the thickest of the crowd of surrounding animalcules; and the moment this slender ligament is broken, each is seen moving away from the other and beginning its independent existence." Now although we have not in the vegetable world any instance of this voluntary division, yet, in the all but spontaneous action, the reproduction of plants by the division of their parts bears a strong analogy to it; and in the cases to be further mentioned, the resemblance is still stronger. The Hydra, or fresh-water Polype, "is capable of indefinite multiplication by simple division. Thus, if it be cut asunder transversely, the part containing a head soon supplies itself with a tail; and the detached tail soon shoots forth a new head, with a new set of tentacula. If any of the tentacula, or any portion of one of them be cut off, the mutilation is soon repaired; and if the whole animal be divided into a great number of pieces, each fragment acquires, in a short time, all the parts which are wanting to render it a complete individual." In this same animal (the Hydra) which is thus capable of being increased by what would in a plant be *slips* or *cuttings*, the natural method of propagation is analogous to that of many plants—such as the duckweed: "At the earliest period at which the young of this animal is visible, it appears like a small tubercle, or bud, rising from the surface of the parent hydra; it grows in this situation, and remains attached for a considerable period; at first deriving its nourishment as well as receiving its mechanical support from the parent, . . . this mode of multiplication, in its first period, corresponds exactly with the production of a vegetable by buds; . . . although at a later stage, it differs from it in the complete detachment of the offspring from the parent." An instance of reproduction occurs in the sponges, which bears a near resemblance to the spontaneous fructification and bursting of the theca of many of the Cryptogamic plants. "The parts of the *Spongia panicea*, which are naturally transparent, contain at certain seasons a multitude of opaque yellow spots, visible to the naked eye, and which, when examined by a microscope, are found to consist of groups of ova, or more properly *gemmules*, since we cannot discover that they are furnished with any envelope. In the course of a few months these gemmules enlarge in size, each assuming an oval or pear-like shape, and are then seen projecting from the sides of the internal canals of the parent, to which they adhere by their narrow extremities. In process of time they become detached, one after the other, and are swept along by the currents of fluid, which are rapidly passing out of the larger orifices." "When two gemmules, in the course of their spreading on the surface of a watch-glass, come in contact with each other, their clear margins unite without the least interruption—in a few days we can detect no line of distinction between them, and they continue to grow as one animal. The same thing happens, according to the observations of Cavolini, to adult sponges, which, on coming into mutual contact, grow together, and form an inseparable union. In this species of animal grafting we again find an analogy between the constitution of zoophytes and that of plants."

We have all heard of wheat and other grain, inclosed in the cerecloths of mummies of the time of the Ptolemies, having preserved its vitality during three thousand years, and fructifying in our own climate; even yet more wonderful is the case of the animalcule, which, living in water, if deprived of that element dries to dust, and revives at a future period when water shall be supplied to it.

The power of vitality, so wonderfully conspicuous in the vegetable kingdom, which enables a seed to retain its vegetating power though dormant for many years, has a remarkable analogy with the revivification of some of the anamalcules. "The *Rotifer redivivus*, or wheel animalcule, can live only in water, and is commonly found in that which has remained stagnant for some time in the gutters of houses. But it may be deprived of this fluid, and reduced to perfect dryness, so that all the functions of life shall be completely suspended, yet without the destruction of the vital principle; for this atom of dust, after remaining for years in a dry state, may be revived in a few minutes by being again supplied with water."* Other anamalcules exhibit the same phenomenon; and the analogy is still further carried on by the fact well known to gardeners, that seeds which have been long kept, will vegetate more surely if soaked for some time in water before they are planted.

Every discovery, in whatever science, seems more and more clearly to point to simplicity of design and unity of purpose in nature:—Where the same course and method will accomplish a similar end, a different one seems never to be adopted. All the researches of modern physical science, though they may place new objects and new substances within our view, tend to lessen, not enlarge the list of elementary bodies;—and all investigations into the organized parts of creation teach us to refer more and more to a few simple principles, modified, indeed, by the nature and requirements of each species, but all pointing to the same law, which appears to prevail throughout the universe, that nothing shall be unnecessarily complicated.

From the chapter on "the Reproduction of Plants," we take the subjoined account of experiments to ascertain the cause why the plumules of plants invariably ascend, while the radicles descend.

* Roget, Anim. and Veget. Phys. vol. i. p. 62.

In whatever manner a seed may be placed in the ground, it invariably shoots forth its pumule in an ascending, and its radicle in a descending direction. Invert it as we may, the result will be the same; but on what vital energy within the plant the constancy of this fact depends, seems yet entirely uncertain. Whether it arise from the tendency of upper portions of plants to seek the light, or from any other cause, the reason is equally obscure, and we can hardly reckon on its being ascertained by the most minute investigation; it seems to belong to that class of phenomena in nature whose ultimate principles are too subtle for our grasp, and *appear* to depend on that *vitality* which we can indeed perceive most palpably in its effects, but whose cause is known only to the Creator: whether modern science will be permitted to approximate nearer to the truth on this and some few similar subjects must remain at least doubtful: at all events, we are not now in possession of any wholly satisfactory solution of the difficulty.

That gravity is an important agent in determining the difference between the directions taken by the root and stem, is shewn by an ingenious experiment of Mr. Knight. He placed some French beans on the circumference of two wheels, and so secured them that they could not be thrown off when a rapid rotatory motion was given to the wheels. One wheel was disposed horizontally, the other vertically, and both were kept in constant motion while the beans were germinating. The radicles of those beans which germinated on the vertical wheel extended themselves outwards, or from the centre, and the plumules inwards, or towards it. Those which were placed on the horizontal wheel pushed their radicles downwards and their plumules upwards: but the former were also inclined from and the latter towards the axis of the wheel. This inclination was found to be greater as the velocity of the wheel was increased. Now in the vertical wheel the effects of gravity were nullified; since the beans were constantly changing their position with respect to those parts which were alternately uppermost and lowermost, in each revolution. The only cause which could have produced the effects described must be the centrifugal force, which has here replaced the effects of gravity, compelling the root to grow outwards and the stem inwards, instead of downwards and upwards. The effect produced upon the horizontal wheel is evidently the result of the combined action of the forces—gravity inclining the root downwards, and the centrifugal force propelling it outwards; and the reverse with regard to the stem. Although it is plain that gravity is the efficient cause in establishing the directions of the stems and roots of plants, it is not so easy to understand the manner in which it produces opposite effects on these two organs. Various theories have been formed to account for this, and the most plausible is that which ascribes it to the different manners in which the newly-developed tissues are added to the root and stem. In the root the addition is almost entirely confined to the very extremity, while the stem continues to increase for some time through its whole length. Hence it is supposed that the soft materials continually deposited at the extremity of the root must ever be tending downwards from the effect of gravity alone.*

In the reflections with which the author concludes his book there is so much beauty—so high and holy a train of thought, that we cannot forbear gracing our pages with a part of them:—

Who can look on the principal constituents of plants, *i. e.* carbon, oxygen, hydrogen, and nitrogen, and contemplate their gradual transformation into vegetable albumen, and vegetable caseine, or on any of the elementary forms of the nitrogenized compounds, so absolutely essential, directly or indirectly, to animal life, without feeling that nothing stands alone in this world, but that "the chain holds on, and where it ends, unknown." And even should it also occur to the mind, that the same process ceases not with us, but that these human bodies, thus marvellously made and nourished, are, even the organs by which the high functions of the brain are performed, material and perishable, and that "we feed ourselves to feed the worms," and, being *dust*, return literally to that dust again; let us not pause on the threshold of the argument, where despondency might await us, but go boldly on through the portal, and calmly consider what deduction we may draw, by the simple light of reason, from this undeniable truth. We see that every thing around us here, when it has accomplished the end of its being, is not annihilated, but only transformed into some other state, in which it still continues to work out the will of Him who created it: every *material* thing *perfectly* fulfils its destined purpose; but Man has that within which assures him that here he neither *is* nor *does* all that the soul could be and perform, were it disencumbered of the body in its present grosser state. Has he not, then, the strongest reason to confide in Him who gave that body for good purposes here, that He will, at its dissolution, still make it subservient to his wise intentions, and after he separates it from its present union with the soul, will assuredly place his rational creature in a condition to be and to do all for which that creature was made? Man would then no longer be the exception to the rest of sentient beings; *their* wishes and desires are so arranged, that the means of their gratification are within their reach on earth; *we*, on the contrary, feel aspirations which never can be fully gratified here, and whose very existence foreshows a time when they *will* have their fruition. The moral consequence we may draw from this is almost too obvious to require notice. If we look forward to a state in which the body shall be so changed that its present enjoyments can exist no more, while those of the soul shall last for ever, how important is it that the Will, which triumphs over every thing that is material in us, should be so regulated, that when that state arrives, it may not long for those earthly pleasures which are gone to return no more, but may have already anticipated in hope the reality it shall then experience. The wise of old, though but dimly perceiving what is assured to us under the pledge and seal of God himself, could yet draw the right inference from those dim perceptions. When in the varied phases of the butterfly's frail life they saw prefigured their own future destiny, they could urge their disciples to purify the soul, and fit it for companionship with eternal Love. In the grain of wheat apparently perishing in the earth, but springing up in due season in a form "the same, and yet another," the Apostle found a similar correspondence with out lot: all can see the appropriateness and beauty of the comparison, may all likewise take to heart the Apostle's argument, and having this hope, may they continue "steadfast and immoveable," in all that is good, knowing beyond all doubt or cavil, that their labour shall not be in vain.

* Henslow's Prin. of Botany, p. 292.

Every one who has read the preceding works of this invaluable series will of course read this also; but to such as are unacquainted with the sound and sterling character of these books, and especially to all who, ignorant of the physiology of plants, desire to have their eyes opened to the beauties that surround them, or wish for fresh evidences of the power and beneficence of the Creator, we strongly recommend this unpretending, though comprehensive and popular work.

FICTION.

The Foster-Brother; a Tale of the War of Chiozza. Edited by Leigh Hunt. 3 vols. London. T. C. Newby.

This is a cleverly written historical romance by Mr. Thornton Hunt, a son of the graceful writer who here lends the attraction of his name to a work which, were it merely for its intrinsic merits, should have an extensive currency.

As an introduction for the book to the public, and to ensure for it, as far as may be, a favourable reception, the father has written a candid and critical preface, wherein he deals almost as disinterestedly by the author as if he had not been his own son. A nice discrimination of beauties and defects pervades this; censure and praise are dealt out indifferently, and the natural partiality of the parent is but seldom visible. A neatly-turned and conciliatory apology for what the editor considers defects in his son's work, especially excusing some things on the score of haste, is given in the following passage:—

I confess I think so well of *The Foster Brother* that I do not hesitate to mention a circumstance which might otherwise have told against it, at least with such as are accustomed to confound rapidity of execution with badness of it; and this is, that it was composed at hasty though earnest intervals, during a pressure of work already too much for the writer's health, and only carried to that extreme from a sense of duty.

The period in which the events took place, on which Mr. Hunt has founded his romance, is the fourteenth century, and the scene is laid for the most part in Venice, when the proud mistress of the seas was besieged by the allied forces, and the stern Genoese commander, Peter Doria, refusing to capitulate, swore to bridle the bronze horses of St. Mark with his own proud hand. A time so eventful as this—Venice in a state of siege, distracted by cabals within and with an implacable foe without, the stirring incidents of war, the popular feelings, and their results in eventful acts, all combine to afford picturesque and exciting subject-matter for a novel. And that out of these Mr. Hunt has produced a striking and successful work, we with pleasure admit. Perhaps the most obvious of the author's peculiarities displayed in the romance is the tact

with which he has throughout preserved the idiom and antique style of the Italian at the period when the events he describes took place. In few works of this nature are these unities so faithfully observed. The author must have thoroughly saturated his mind with the literature of that day, and indeed with the history of it also, since there is an air of authority and propriety stamped on the meanest accessory he has introduced. His descriptions are animated and life-like—sometimes perhaps too minute; his characters clearly drawn and thoroughly national, his plot is artfully constructed, and the interest is well sustained to the end.

As this is a novel we are justified in recommending to our readers, who we conclude will read it, we will not rob them of the charm of novelty by giving a sketch of the plot, but content ourselves with offering an extract or two, which shall convey to them a fair idea of Mr. HUNT'S manner and matter, and be an incentive to send to the library for the novel itself.

During the siege of Venice, the return of a cotton ship belonging to Aluise della Fornasi gave occasion for a bloody contest between the Genoese and Venetians. There is much spirit in the following description of

A SEA-FIGHT.

A ship belonging to Aluise dalle Fornasi, laden with cotton, approached the port of Malamocco, from Syria; and a crowd of people, swelled by those engaged in completing the works of barrier and fortification, and others who had come to the shore to see their progress, stood to witness the entry of one among the many ships that used to bring riches to the city; now, in times of war and trouble, a rare sight. But the ship was not alone: behind it were three others; they were Genoese war-galleys. The bold and fiery Aluise stood to see his ship chased. Two galleys that had been so hastily prepared were now all but unmanned, and were at a distant part of the lagune. Shouts arose to summon them; men ran hither and thither with loud cries; every body urged others to do something, as if helplessness were a mere weakness of his own. Amid the noise and tumult, the vessels neared the shore. Those in the cotton-ship were evidently on the alert: it suddenly turned, and awaited the approach of its pursuers: Giacomo Vendramini was preparing to fight. A loud shout arose on the shore; but the wind beat it back, and in the crash against the first of the Genoese galleys, Vendramini and his men heard it not. The watery joust was not in favour of the Venetian: the beak of his galley missed his foeman, whilst the Genoese came against his side with such force that the timbers crackled and started, and in an instant a stream of fighting men ran along the flat though narrow bridge of the beak. Six of them fell dead as they leaped on to the deck, but some behind succeeded in engaging the foremost of the Venetians hand to hand: a little space was made behind the boarders—more rushed in; and though one fell now and then under the shower of arrows which swept the prow of the galley, the number of the Genoese on board soon equalled that of the Venetians. Vendramini burned to signalize his young prowess, no less than to save the treasure of his friend and patron Aluise; and the Genoese felt all the force of his desires. But suddenly a shout arose behind him—the second galley had approached unobserved on his other bulwark, and already were a crowd of fresh swordsmen making havoc in his rear. Inch by inch he fought, as he was driven to the stern: some of his men were urged into the water by the press, which he in front could not resist; until, sinking with a mortal wound, he could no more head the resisters, and the crew yielded. A short time sufficed to carry their treasure, the profits of their voyage, into the Genoese galleys, with part of their cargo; a smoke rising from the hold spoke the fate to which the rest was doomed, as the Genoese, with shouts of scorn and triumph, rowed off from the burning ship. With desperate energy the disabled crew manned a few of their oars and pulled for the land. Black smoke and lurid flames rose from the wreck, as the bleeding mariners bore their dead captain on shore among the angered and shame-stricken multitude who had witnessed the fight in helpless impatience. Many and deep were the murmurs heard, that Vittor Pisani was in prison, because he had been conquered by the weather, while the citizens were left to be conquered by the more terrible Genoese. The report that Pietro Doria had dragged in the water at his galley's stern the flag of St. Mark, taken from Pisani, less shamed them than that rout before their eyes.

A picture of a different nature—one more after the character of the Dutch masters—is that of Rosa, the peasant girl, beloved by Alessandro Padovano, the *Foster-brother* of the novel, looking with satisfaction on a fishing-net, the work of her own hands:—

Rosa had just finished her net. A large part of it lay in a heap, while a portion was spread out upon the floor, and raised by two chairs, so as to shew the girl the work of her hands. She had spread out all that she had done since Alessandro had visited her after his so long absence. For some hours she had worked hard, that she might complete her task before dark; and as the last gleam of daylight shone upon the fruit of her industry, her grave face was not devoid of satisfaction. The symmetry of the lines as they crossed in forming the meshes, the newness and stoutness of the cord, the pleasure that it would give to old Pierotto, the use that he would make of it, were thoughts that pleased her. How the green and blue waters would dance and play in and out of the supple trellis! How the silvery scales of the fish would glisten! Poor things! their captivity would be fatal; yet are there worse sorrows than fatal thraldom. Thus much work, she bethought her, had been done in her solitude: the time might have been worse employed. Even life that is not as we wish it need not be fruitless of good; and if not fruitless of good, it is not without a happiness.

The release of Vittor Pisani from prison, unexpected by the populace who loved him, is effectively, and even dramatically told:—

Contarini again came forth, and, raising his voice, cried, "Venetians, the Senate desires to pleasure you in these times of our common trouble: Messer Vittor Pisani will lead you. He is free!"

Long and loud was the shout that burst upwards: a solid mass of sound, in which the words that made it—"Viva Pisani, Viva Contorini!"—could scarcely be heard. As the Doge again retired within the palace, a rush was made to it, and habitual respect for the abode of power could scarcely restrain the people from forcing their way up the great stairs. The loud buzz of voices was hushed. A man appeared on the stairs alone—a square-built man, in clothes of soberest hue, carelessly put on. He wore a grave and thoughtful countenance, like one who could bear all things with equal mind—triumph to the full as well as defeat. He came slowly and steadily down the stairs; but at the first glimpse of him the shouting renewed; it glanced hither and thither in the multitude, as those at a distance in the piazza knew what it was those in front saw; others filled up the intervals, until at last the whole city seemed shouting in chorus "Vittor Pisani!"

Pisani stopped before he descended the last few steps, and, stretching forward his hand, with the broad palm towards the people, he hushed the storm of welcome. As it died away towards the skirts of the multitude, his well-known ample voice came forth—"Venetians, you have mistaken: the only cry for Venetians is 'Viva San Marco!'"

Mr. HUNT has given evidence in this historical romance that he inherits the genius of his father. We hope that now he has entered upon the field of novel writing, his reception will be what it deserves to be—a warm and welcome one—and that we shall have frequent occasions to meet with him as a writer of fiction hereafter.

POETRY.

The Ballad Poetry of Ireland. Edited by CHARLES DUFFY. Dublin, Duffy.

IF we remember correctly, it was FLETCHER who said that "if a man were permitted to make all the ballads, he need not care who should make all the laws of a nation." This is strong praise for ballad poetry, but perhaps not more than character is entitled to. In tracing the history of a nation, the ballad forces itself on the attention, and even in its most crude and inelegant form it must not be looked upon as the least operating power which shapes and controls the genius of a people. Let us throw the laws in the balance against the ballads of a country, and thus explain FLETCHER'S observation. Legislative laws appeal to the understanding. They are authoritative, and compel men to keep in a given path. Ballads, on the other hand, have a language which is only understood by the heart. Unlike legislative law, the ballad *leads*, and the people *follow*, from a natural philosophic principles that whatever speaks to the affections receives a quicker reply than that which speaks to the understanding. Though SOLON should be forgotten, the Greek sailors will still remember some fragments of HOMER, and the collected ballads of PERCY will be read and sung around the rustic fireside, and in the workshop, when the wisdom of PEEL is not remembered.

Our information with regard to the ballad must necessarily be very contracted beyond the time of James I. because in the less extensive use of the printing press, the single sheets on

which songs and ballads were printed have for the most part been lost to the world. Still in the ballads since known, we can detect their unhealthy tendency, mingled with great beauties. Like Pandora's box, ballad poetry has at times had all manner of diseases, with just enough of redeeming grace to represent the *hope* of its final purification. Jacobite and anti-Jacobite used it for the stirring up of bitter animosities; CASTLEREAGH hired ballad-writers for his party purposes, and thus the dignity of poetry was sacrificed to the bickerings and jobbings of politics.

Mr. DUFFY has collected the ballads of his country to shew their nationality. "We possess," he remarks, "a popular poetry, less ancient and precious, but not less instinct with the *spirit of the country* than the venerable minstrelry of England and Scotland. Our Anglo-Irish ballads grew to be *national*, gradually and without effort." But what is this same nationality, that poetry should be called upon to perpetuate it? Does it not want that magnanimity which a more world-like extension of feeling undoubtedly possesses? Our reply is, that the ballad, when most worthy the title of nationality, is still cosmopolitan in feeling. LYSAGHT'S song of "Our Island" inspires a love of Irish freedom; but such kind of love is not limited by the boundary of a country. The song that utters a word for the freedom of a particular people, utters the same word for the freedom of every people. DIBDIN exulted that his songs were "considered an object of national consequence." But what did they teach? They taught "English" rights and "English" liberties, and the chorus, like a response to all good hearts, was "foreign" rights and "foreign" liberties. What poetry does for a country it does for the world.

We shall not make much extract from this collection of Irish ballads (although their excellence almost induces us to copy largely), because of the cheapness of the book, which every library should possess. Yet "The Woman of three Cows" is so fine a picture of many who instead of three cows possess houses and lands, that we transfer it to our pages.

THE WOMAN OF THREE COWS.

O, Woman of Three Cows, agragh! don't let your tongue thus rattle!
O, don't be saucy, don't be stiff, because you may have cattle.
I have seen—and, here's my hand to you, I only say what's true—
A many a one with twice your stock not half so proud as you.

Good luck to you, don't scorn the poor, and don't be their despiser,
For worldly wealth soon melts away, and cheats the very miser,
And Death soon strips the proudest wreath from haughty human brows;
Then don't be stiff, and don't be proud, good Woman of Three Cows!

See where Momonia's heroes lie, proud Owen More's descendants,
'Tis they that won the glorious name, and had the grand attendants!
If *they* were forced to bow to Fate, as every mortal bows,
Can *you* be proud, can *you* be stiff, my Woman of Three Cows!

The brave sons of the Lord of Clare, they left the land to mourning;
Movrone! for they were banished, with no hope of their returning—
Who knows in what abodes of want those youths were driven to house?
Yet *you* can give yourself these airs, O, Woman of Three Cows!

O, think of Donnell of the Ships, the Chief whom nothing daunted—
See how he fell in distant Spain, unchronicled, unchanted!
He sleeps, the great O'Sullivan, where thunder cannot rouse—
Then ask yourself, should *you* be proud, good Woman of Three Cows!

O'Ruark, Maguire, those souls of fire, whose names are shrined in story—
Think how their high achievements once made Erin's greatest glory—
Yet now their bones lie mouldering under weeds and cypress boughs,
And so, for all your pride, will yours, O, Woman of Three Cows!

Th' O'Carrolls also, famed when Fame was only for the boldest,
Rest in forgotten sepulchres with Erin's best and oldest;
Yet who so great as they of yore in battle or carouse?
Just think of that, and hide your head, good Woman of Three Cows!

Your neighbour's poor, and you, it seems, are big with vain ideas,
Because, *inagh!* you've got three cows, one more, I see, than *she* has;
That tongue of yours wags more at times than Charity allows,
But, if you're strong, be merciful, great Woman of Three Cows!

THE SUMMING UP.

Now, there you go! You still, of course, keep up your scornful bearing,
And I'm too poor to hinder you; but, by the cloak I'm wearing,
If I had but *four* cows myself, even though you were my spouse,
I'd thwack you well to cure your pride, my Woman of Three Cows!

We think Mr. DUFFY has done enough to convince certain mistaken critics that Ireland is not poor in ballad minstrelsy. There was no sectarian object in the collection of the ballads before us, which is a strong recommendation. "Whatever," says Mr. DUFFY, "could illustrate the character, passions, or opinions of any class of Irishmen, that we gladly adopted. Our business is to know each other. To learn how much is mutually to be loved, that we may love it; how much is mutually to be forgiven, that we may forgive it."

With such generous sensibility, a portion of the best ballads has been compiled, and such will have a great influence on Irish literature. Genuine poetry is likely to take the place of street and pothouse doggrel. The ballad, from its simplicity, is always a cultivator of pure poetic taste. Only to ill-judges and uneducated minds does this simplicity appear like "childish prattle." It required a magic rod to make the poor Irish emigrant say:—

And often in those grand old woods
I'll sit, and shut my eyes,
And my heart will travel back again
To the place where Mary lies.

If it required the genius of HOMER to write thus grandly:

The illustrious chief of Troy
Stretched his fond arms to seize his lovely boy;
The babe clung crying to his nurse's breast,
Scared at the glittering helm and nodding crest;

it required no less the genius of GERALD GRIFFIN to write in the artless language of love:—

Gille machree,
Sit down by me,
We now are joined and ne'er shall sever;
This hearth's our own
Our hearts are one
And peace is ours for ever!

When I was poor,
Your father's door
Was closed against your constant lover;
With care and pain,
I tried in vain
My fortunes to recover.
I said, 'To other lands I'll roam,
'Where Fate may smile on me, love;'
I said, 'Farewell, my own old home!'
And I said, 'Farewell to thee, love!'
Sing *Gille machree, &c.*

I might have said,
My mountain maid,
Come live with me, your own true lover;
I know a spot,
A silent cot,
Your friends can ne'er discover,
Where gently flows the waveless tide
By one small garden only;
Where the heron waves his wings so wide,
And the linnet sings so lonely!
Sing *Gille machree, &c.*

I might have said,
My mountain maid,
A father's right was never given
True hearts to curse
With tyrant force

That have been blest in heaven.
But then, I said, 'In after years,
When thoughts of home shall find her!
My love may mourn with secret tears
Her friends thus left behind her.'
Sing *Gille machree, &c.*

Oh, no, I said,
My own dear maid,
For me, though all forlorn, for ever,
That heart of thine
Shall ne'er repine
O'er slighted duty—never.
From home and thee though wandering far
A dreary fate be mine, love;
I'd rather live in endless war
Than buy my peace with thine, love.
Sing *Gille machree, &c.*

Far, far away,
By night and day,
I toiled to win a golden treasure;
And golden gains
Repaid my pains
In fair and shining measure.
I sought again my native land,
Thy father welcomed me, love;
I poured my gold into his hand,
And my guerdon found in thee, love;
Sing *Gille machree*
Sit down by me,
We now are joined, and ne'er shall sever;
This hearth's our own,
Our hearts are one,
And peace is ours for ever.

Had we space, we could trace step by step the influence which good ballads have had in moulding the poetic genius of all countries—Germany and England especially. We cannot but hope that Mr. DUFFY may be the unconscious instrument in modelling some future poet of Ireland. We know of nothing more likely than the advent of a great poet in a land so beautiful in scenery, and among a people so sensitive and energetic.

PERIODICALS AND SERIALS.

The Westminster Review.—This is an unusually good number of not the least practically *useful* of the quarterlies. The first article, called "Shaksperian Criticism and Acting: Romeo and Juliet," contains some deserved strictures upon the loose and superficial criticisms which have been made upon this most beautiful play, and the erroneous impressions, on the part of actors as well as critics, of the poet's "mode of conceiving and method of combining the leading elements of tragedy." The next is a review of "Schlosser's History of the Eighteenth Century," which contains some fine writing, and is marked by the bringing of a comprehensive knowledge of men and things, during the period treated of, to bear upon the history under notice. The third article is upon "Fresco Painting." It goes freely into the history of the art, examines into its value, which it does not rate very high, and offers some judicious remarks and suggestions upon the three successive national competitions in Westminster. Next comes a notice of "Sybil," in which Mr. D'Israeli gets (and we confess not without deserving it) a somewhat rough handling. The fifth article is one of great interest—a review of "Humboldt's Kosmos; and Vestiges of the Natural History of Creation." A vast fund of learning is brought to bear on these works. The reviewer gives continually evidence of a penetrating and sifting mind; his remarks are sagacious and truthful, and his objections well founded. He places the work of the German philosopher high above that of the Englishman. The sixth article is a light and agreeably written one on "Popular Works on Natural History," which affords some interesting anecdotes, and pays a justly-merited compliment to the memory of the late Mr. Loudon, and his deserts as a naturalist. The last article, "On Railway Improvement," is, to our taste, the least satisfactory in the number. It is too discursive to be effective, and too visionary in its suggestions to be sound and valuable.

George Cruickshank's Table-Book.—The number for this month is scarcely up to the average of preceding numbers. Nevertheless it contains some very humorous illustrations, and a good story or two, among the *best* of which is "The Enthusiast in Anatomy," by BALZAC D'ANOIS. "A Legend of the Rhine" is continued, and is as full of grotesque fun as ever.

The Travellers' Magazine, No. IV.—The contents of this number are—"My first Pilgrimage and last Tour;" "Random Recollections of New South Wales," which have at least a colouring of nature to recommend them; "The Syro-Egyptian Society of London;" "Travellers' Tales;" "Scrip Song;" and "Angelique, or the Yachtsman Magnetized." It is a number of full average merit.

The Philathenic Literary Magazine.—This is a new sixpenny monthly periodical. It seems to address itself especially to Mechanics' Institutions and the young men in houses of business, though of course it holds out temptations to all classes of supporters. It will comprise original articles on the literature of the time, historical and biographical essays, and reviews of new books. There is variety, and a fair share of merit in the articles offered in this first number; the best are, perhaps, "An Essay on Burns," and "The Supremacy of the Press." The last sets out with an apostrophe of a nature so transcendent as to be fairly beyond our comprehension. The writer, however, sobers down as he proceeds, and, when the phrenzy of inspiration has left him, writes pleasantly, and produces an agreeable paper.

The Balloon, or Aerostatic Magazine. No. II.—The title of this periodical sufficiently explains its nature. The present number contains all the information on this subject the past month has afforded, with some useful papers on the science of Aerostation.

Dolman's Magazine continues to be valuable as the exponent of the views of the English Roman Catholics, as well as for its intrinsic merit. The present number contains the conclusion of the articles upon "Pictorial Art in its Christian Devolopment," which is an earnest protest against the paganism and naturalism of so many of the Italian painters. The subject, however, is too vast to be disposed of in a few articles; and the moral history of art, as we should term it, yet remains to be written. The individuality of this magazine is illustrated in the indignant denial of the doctrines put forth by Lord CLIFFORD and Mr. J. O'CONNELL, that the opinions of the Roman Catholic bishops were conclusive upon the Catholic laity, with reference to the Irish education question. A new feature in this number is, the collection of intelligence relating to the Roman Catholic religion in all parts of the world, which cannot fail to be welcome to its readers.

The Cabinet History of England is brought down in the 9th volume to the account of the gunpowder plot. When completed, this will be the best popular history we possess.

The Ecclesiologist.—We have received No. 5 of the new Series, published by Rivingtons. The fault of the old series is still, we think, here—we mean, too great a tendency to overrate the religious usefulness of certain forms, because the effects of such forms can be well described by a vivid imagination, and also somewhat too much of veneration to the *altar*, which we believe borders upon, and must degenerate into, superstitious substitution of the ideal for the actual. But we value too much the services such a publication as this is calculated to do in the preservation of existing architecture, and still more in the destruction of that anti-Christian distinction between the rich and poor, which is too prevalent throughout our present church arrangements, not to wish it may attain a wide circulation.

From *Simmonds' Colonial Magazine*, which contains the usual amount of matter interesting to all connected with our colonies, we learn that an attempt will be shortly made by the "Nova Scotia baronets" to assert the validity of the charter under which they were created by James I. and Charles I. and to carry out the objects of those charters by a systematic colonization in British North America. The "Contributions towards the Geography of Africa," by James Macqueen, and a reprint of the "Report of the Committee appointed by the General Assembly of Newfoundland, upon the Newfoundland Fisheries," and "A Description of the Murichi, or Ita Palm of Guiana," may be mentioned as valuable papers in this number. From a notice of the population and trade of Canada, we extract the following account of spearing fish upon Lake Erie:—

"The fishermen being previously prepared with a small house, from four to six or eight feet square, mounted on runners, to make its removal easy, and so constructed as to exclude all light except what comes up from the ice below, arms himself with an ordinary fish-spear, an axe, and an assortment of small decoy fish, and proceeds to some part of the bay where the water is from three to six feet deep, cuts a hole in the ice, adjusts his house directly over it, and with his spear in one hand, and the line attached to the decoy fish in the other, awaits the coming of his prey. Every object in the water is seen with entire distinctness, though, from the exclusion of light in the house above, the fisherman is invisible to the fish beneath. The decoy is simply a small wooden fish, loaded sufficiently with lead to cause it to float naturally, and which, by drawing upon the line attached, is made to imitate the motions of a fish playing in the water. Sometimes the fish comes up slowly, as if suspicious that the decoy was not exactly what it appeared, and passes near by, as

if to make a more accurate observation. It is then he is struck with unerring aim. At other times a streak is seen to flash across the opening, a quick jerk is felt upon the line, and away goes the decoy, beyond recovery. If, however, the line is not broken, the fish usually returns more slowly, as if to ascertain the cause of his disappointment—he is then easily captured."

JOURNAL OF FRENCH LITERATURE.

The Miller of Angibault. By GEORGE SAND. 3 vols. 1845.

THIS last work of Madame DUDEVANT has fairly taken us by surprise; and we at once admit, that neither from its style nor from its subject should we have recognised the author. Instead of the free-thinking, infidel, and loose writer, whom we have too frequently encountered under the *pseudonyme* of GEORGE SAND, we have here a healthy, honest, nature-loving, and unaffected novelist, telling her simple tale of country life without exaggeration or false colouring; laying bare the secrets of an uncorrupted female heart, without maudlin sentimentality or unwomanly coarseness, and avoiding all display of those extreme opinions in religion and morals, which render many works of undeniable talent inadmissible in families. Praise must ever be a pleasant task to the critic, who feared that he should be condemned to silence, or compelled to blame; and thus the *Miller of Angibault* comes before us with a double welcome. No one can lament more honestly than ourselves, that so large an amount of the literary talent of France must ever remain unappreciated by the English public, from the fact of its irreverence and licentiousness. The independence of mind which suggests only a corruption of morals is somewhat like the emancipation experienced by a felon, who exchanges the prison-cell of the city for the brand and fetter of the gallies—a more blighting and long-enduring bondage.

It may, perhaps, be objected to us as critics, that we deal out blame sparingly, and are ever prompt to praise; but our readers must remember that, in reviewing the literature of another country, we are not condemned, like our coadjutors in the English portion of the journal, to give some notice of every work which comes to hand, however slender may be its merits; we seek only to offer to the notice of our friends such books as possess a claim to attention; and thus we occasionally labour through dozens of volumes, and reap only a scanty harvest—*ex nihilo nihil fit.*

The whole action of the tale now under notice is confined to a small isolated village and its immediate neighbourhood. The Baroness de Blanchemont, a young and beautiful woman, the widow of a month, is its heroine. She has been the victim of what is denominated in France "a marriage of reason," and which, in nine cases out of ten, is the most unreasonable arrangement in the world. The fair baroness is an example of this fact. United, when a mere girl, to her own cousin, a *blasé* man of fashion, twice her own age, a spendthrift and a profligate, she most unexpectedly finds herself, upon his demise, reduced from a state of affluence to comparative poverty; her only remaining earthly possession beng the ruinous old Château de Blanchemont, and the small estate upon which it stands. She has one child, a boy of four years of age, to whom she is tenderly attached, and who will, as she anticipates, inherit the property of his grandfather; but, meanwhile, she is anxious to convert the wreck of her fortune into money, to enable her to support and educate him. With this laudable intention she at once leaves Paris for the obscure hamlet which bears her name, and which she has never seen; but she does not quit the scenes of her splendour heart-whole, having become attached to "a man of the people," who has neither name, nor rank, nor wealth, to render him a fitting match for the high-born baroness, and who, with a self-abnegation which is, unfortunately, seldom to be met with in real life, refuses the hand which she promises to bestow upon him at the close of her widowhood, because he considers her to be still too rich to render the happiness of their married life feasible. In order not to destroy the probability of this proud resolution, however, we must mention that Henry Lémon is the son of a man who had become very wealthy in trade, and who had sent his only child to college, with all the advantages which gold could secure to him; but on the death of his father, Henry discovers that the fortune which devolves to him has been built up upon fraud and dishonesty; when he calls around him all who have been the sufferers either in purse or person, and ransoms his parent's memory with his own ruin. Madame de Blanchemont accidentally encounters him at the bedside of a dying child; and the acquaintance which is there formed ripens, as we have already stated, into a deep attachment. Nevertheless, true to his principles, Lémon takes his leave of the baroness before she quits Paris, with the firm intention of never seeing her again; and the young widow, heart-sick and desolate, starts upon her melancholy pilgrimage, accompanied by her child, and attended by two trusty servants. Arrived within five or six leagues of Blanchemont, no one in the little inn, at which the baroness halts for the night, can give her any information as to the situation of the château; all know it by name, but none have ever visited its neighbourhood; and the delicate Parisian finds herself as thoroughly *désorientée* within a day's journey of her paternal home, as though she had just dropped from the clouds. In this dilemma, it suddenly strikes the ostler that there is a man at that moment in the stable-yard who is familiar with the country for leagues round; and he, accordingly, with the permission of Madame de Blanchemont, goes in quest of—

THE HERO.

The specimen of country growth who presented himself to Marcella was five feet eight inches tall; a remarkable height in that neighbourhood, where the inhabitants are generally small in stature. He was proportionably stout, well-made, free from awkwardness, and very good-looking. The young girls called him the handsome miller; and this epithet was as applicable as the tall miller, his usual appellation by the other sex. When, with the back of his sleeve he wiped away the flour which generally covered his face, he exhibited a rich brown complexion, regular features, strongly developed, like his limbs, black and finely-cut eyes, dazzling teeth, and long masses of chesnut hair, undulating and crisped, like those of a man of great muscular strength, and forming a luxuriant framework to his broad and well-shaped forehead, which revealed more good humour and good sense than quickness of intellect. He was dressed in a purple blouse, with pantaloons of grey linen; short stockings, coarse shoes, well furnished with nails, and carried in his hand a heavy crab stick, fashioned into a sort of bludgeon.

This formidable individual becomes thenceforward the good angel of Madame de Blanchemont; he acts as her guide to the castle; and is ultimately the means of saving the wreck of her fortune, which is coveted by M. Bricolin, the land-steward or middle man of the baron, who has grown rich upon his master's ruin. The poor young widow, on reaching the hamlet, sees the crumbling, but still stately walls of her family castle, floated by the red and glaring tiles of the new château, as the purse-proud *parvenu* has christened his comfortless but extensive house; and is compelled to accept his proffered hospitality during the settlement of her affairs. The following picture is admirably and graphically drawn.

AN INTERIOR.

The domestic arrangements were precisely on a par with those without. Economy, combined with apathy, delayed every improvement, and deferred the moment when the inmates could enjoy the luxury which they desired and might have commanded, but which they did not yet dare to exhibit. The dark and smoky room into which the baroness was first introduced was the most inconvenient and uncleanly throughout the house. It was at once kitchen, dining-hall, and parlour. The poultry had access to it through the open door; the care of chasing them out again being one of the incessant occupations of the farmer's wife, as though the anger and violence excited by their pertinacious intrusion had been necessary to her love of perpetual tyranny and restlessness. It was here that the labourers came at all hours to report their operations; and as their muddy feet and free-and-easy habits must inevitably have destroyed every thing in the shape of clean floors and decent furniture, nothing was to be seen on any side but straw-bottomed chairs and wooden benches standing upon the bare flags, which were uselessly swept about ten times a day. The flies, which were free of the place, and the fire, which was constantly burning in the wide chimney, decorated with cooking-hooks of all dimensions, made the place almost unbearable during the summer months. Nevertheless, this was the common sitting-room of the family; and when Madame de Blanchemont was shewn into an adjoining apartment, she saw at once that this species of drawing-room had never yet been used, although furnished a year previously. It was ornamented with the vulgar pretension of an inn parlour. The printed cotton curtains of glaring co-

lours fell from gilt cornices conceived in the vilest taste. The chimney decorations were similarly selected. A very expensive stand, intended for the coffee apparatus, had its legs of gilt bronze still enveloped in paper and string. The furniture was protected by cases of red and white cheque, beneath which the cushions of worsted damask were destined to wear out without once seeing the light; and as in farm-houses they have not yet learnt the distinction between a sitting-room and a sleeping-chamber, two mahogany bedsteads, still uncurtained, were placed with their feet towards the window, one on each side the door of entrance.

M. Bricolin was a man of about fifty, robust, and with regular features; but obesity had so invaded his dwarfed limbs, as is always the case with wealthy agriculturists, who pass their time in the open air, generally on horseback, and live an active although not a laborious life, with just fatigue enough to keep up the exuberance of their health and the vigour of their appetite. Thanks to the stimulants of pure air and continual exercise, they support for a time without inconvenience a daily excess of diet; but although in the fields they are clothed almost like the peasantry, it is impossible to confound the two together, even at a first glance. While the peasant is always slight, well-proportioned, and of a ruddy complexion, which is not without its own beauty, the prosperous farmer, from the age of forty, becomes afflicted with a large stomach, a heavy gait, and a vinous tint, which vulgarizes and deteriorates the finest organisation.

Madame de Blanchemont finds her position so unendurable in the "new château," that she determines on endeavouring to occupy a couple of apartments, which had been arranged in one of the turrets of the stately old castle for the convenience of the baron during his occasional visits to the estate to raise money; and accordingly, much to the annoyance of Bricolin, who fears to suffer her out of his sight until he has become the proprietor of Blanchemont, she takes possession of these dreary rooms, with her child and his maid.

A MIDNIGHT ADVENTURE.

Fatigued by her journey, the baroness slid softly into bed beside her sleeping boy, and, drawing the curtains close, fell into a light slumber, without thinking of the ghosts which were indispensable to the old building, when suddenly an incomprehensible noise caused her to listen in some agitation. The sound was like that of a body passing to and fro behind the door of her room, with a pertinacity and an awkwardness equally remarkable. The touch was too abrupt and too unintelligent to be that of a human hand endeavouring to find the lock in the dark; and still, as the noise did not resemble that which would have been made by rats, Marcella knew not what to conjecture. It was possible, she thought, that one of the farm servants might sleep in the old castle, who, being intoxicated, had mistaken his room, and was endeavouring to find his way by feeling along the walls; when, remembering that she had not removed the key, which was on the outside of the door, she rose from her bed with the intention of repairing this omission so soon as the intruder should have passed on. The noise, however, still continued, and Marcella did not dare to open the door for the purpose, lest, on shewing herself, she should be subjected to the insult of some drunken clown. Her suspense began to be distressing, when suddenly the uncertain hand moved more resolutely and scratched against the door so sharply, that the baroness thought she could detect the claws of a cat; and smiling at her own agitation, she determined to admit the intruder, or to drive it away. Scarcely, however, had she turned the handle of the lock, which she did with some precaution, when the door was violently thrust against her, and she saw a tall female figure standing upon the threshold. * * The stranger crossed the floor precipitately and approached the window, which, after considerable difficulty, she succeeded in opening; the weakness of her emaciated hands and the length of her nails rendering the attempt painful. When her purpose was accomplished, she leaned out, and in a carefully-suppressed voice she called "Paul!" * * This lamentable cry having awakened no echo in the silence of the night, she sank upon the stone window-seat and remained silent, appearing to be waiting resignedly for a reply. At the end of about ten minutes she rose and called again, still in a low voice, as though she were summoning a lover who was concealed among the brushwood in the moat, and were fearful of alarming any of the inmates of the farm.

For more than an hour the ill-fated creature continued thus; at one time calling "Paul!" and at another waiting with extraordinary patience and resignation. The moon fell full upon her haggard face and bent body. There seemed to be a vague feeling of happiness in her vain hope; and she appeared to deceive herself into the belief that he whom she summoned was near, that she heard his voice, and that he answered her appeal; and again, as the delusion wore away, she renewed it by once more calling upon the name of the absent one.

The baroness felt her heart bleed as she watched her movements; eagerly did she long to know the origin of her madness, hoping that thus she might be enabled to relieve a suffering so bitter; but maniacs of this description never have power to explain their state; and it is impossible to ascertain whether they are wholly absorbed by the idea which destroys them, or if the action of thought is occasionally suspended.

When the unfortunate girl ultimately left the window, she commenced walking slowly to and fro in the chamber. She no longer appeared to be thinking of her lover; and her face, of which the muscles were powerfully contracted, resembled that of an old alchemist lost in pursuit of the philosopher's stone. This monotonous march continued for a sufficient space of time to become extremely fatiguing to Madame de Blanchemont, who dared not venture either to return to her bed, or to leave her son while she awakened Fanchon. At length the mad woman appeared to have decided on her line of action; and, ascending the stairs which led to an upper story, she established herself once more at a window, at intervals calling upon Paul, and at others traversing the room slowly, while awaiting his arrival. * * * Marcella at last fell asleep to the sound of the regular footfalls of the maniac, which she heard above her head, shaking the joists of the old castle.

This miserable creature proves to be the elder daughter of the Bricolins, who, having bestowed her affections upon a peasant, had disappointed the ambition of her *parvenu* parents. Enraged at her want of pride, and resolved to prevent what, in his rising fortunes, he saw fit to consider as a *misalliance*, the farmer caused the young man to be drawn for the army, where, within a year, he lost his life; and this fact, abruptly and triumphantly announced to his betrothed bride by her stern mother, had at once bereaved the poor girl of her senses. Harmless, and self-centred, she wandered about the neighbourhood day and night, never visiting the farm save to purloin food, with which she fled into the woods or among the ruins of the old castle; but this quiescent state of mind was not to endure for ever. On one occasion she experienced a severe fall which confined her to her bed, whither she was carried while insensible; and, during her convalescence, a glimmering of lucidity gradually awoke amid the darkness of her mind a thirst for vengeance upon the iron-hearted parents who had destroyed her, and who, still unwarned, were endeavouring to prevent the marriage of her younger and favourite sister with the miller of Anjibault, as equally unworthy the daughter of a landed proprietor, who hoped to be, at no distant day, thanks to the misfortunes and necessities of the baroness, the master of Blanchemont. He ultimately, for reasons which we cannot detail here, succeeds in this attempt, by purchasing the castle and its dependencies for a sum considerably below their value, on their being suddenly offered to him upon those advantageous terms by the lady herself. The whole plot of the story is admirably interwoven; and while the handsome miller figures throughout as its Jupiter, Madame de Blanchemont most gracefully enacts its good genius, and succeeds in securing her own happiness by bringing her peasant-lover to reason, and that of her rustic friend by securing for him the hand of Bricolin's pretty daughter Rose. With a couple of extracts calculated to display the talent and power of Madame DUDEVANT, we shall conclude our notice.

A VILLAGE FETE.

The maniac slept throughout the day. She was suffering from fever, as she had indeed been for the last twelve years; but her present state of weakness led those about her to hope for a favourable result. The doctor, who had been sent for from a neighbouring town, considered her no worse, mentally, than she had long been. Rose, consoled by these assurances, and restored to the gay instincts of youth, dressed herself slowly, and with great care. She endeavoured to adorn her person with simplicity, in order not to alarm her lover by appearing to make a display of her riches, and yet becomingly, that he might admire her. She therefore invented the most ingenious combinations, and succeeded in making herself a type of modest beauty. * * After the mass, Rose cleverly possessed herself of the arm of her grandmother, as, by so doing, she hoped to escape during the day from the watchfulness of Madame Bricolin and her assembled relatives.

Under the old trees in the *place*, commanding a beautiful view of the surrounding country, a crowd of pretty girls were collected round the fiddlers, who, placed two by two on their trestles, at no great distance from each other, were labouring hard with

arms and lungs, the one party jealous of the prowess of the other, and all working zealously and independently in his own way according to his respective ability, without regard to key or measure, and totally indifferent to the abominable discord thus collectively produced. In the midst of this musical chaos, each quadrille resolutely maintained its position, never confounding the particular instruments which had been hired by its dancers with those which were squeaking or groaning two paces off, and never missing time amid the confusion, thanks to habit and a correct ear. The arbours were loud with equally heterogeneous noises; from some issued boisterous songs, from others came the accents of vigorous courtship; some were pledging healths under the green boughs, and some were threatening violence; and all this confusion was overlooked by two native *gendarmes*, who walked amid the crowd with an air of paternal benignity, and sufficed by their presence to keep the peace among a simple population, which, however loud in words, seldom came to blows.

The compact circle which had formed about the dancers became still more dense when the charming Rose took her place as the partner of the tall miller. They were the handsomest couple at the fête, and the lightest and most active of all the votaries of Terpsichore.

Meanwhile the maniac escapes from the house, and twilight arrives without witnessing her return. Little surprise is, however, excited by so common an occurrence, and gradually the guests take their departure, leaving the farmer and his wife the only tenants of the cheerless drawing-room of the new château.

A MANIAC'S REVENGE.

M. and Madame Bricolin had talked together for a long time in the kitchen. The farmer had resumed his pitcher, which he filled from time to time from an enormous jar that he tilted with a shaking hand, and whence he drew a provision of frothy wine of a violet colour. This was his nightcap, the strongest wine of his vintage; a detestable beverage, but preferred by the natives of the province to every other liquor in the world.

Several times his wife, seeing that neither the delight of being the proprietor of Blanchemont, nor the pleasant dreams of his worldly success, had any longer sufficient power to light up his dull eye, or to unclose his discoloured lips, had entreated him to seek his bed. "Presently—I am just going—here I am," were his only answers; but he never left his chair. At length, having satisfied herself that Rose was asleep, Madame Bricolin, who was fairly worn out, went to rest, still vainly urging her husband to follow her. He had no longer, however, the strength to stir; nor did he hear her summons. Completely drunk, and prostrated, like a man who has sought to sober himself suddenly, and then fully taken his revenge, the farmer, with one hand on the pitcher and his head leaning over the table, snored energetically an accompaniment to the deep-breathing and weary slumber of his wife in the next room.

An hour had scarcely elapsed when M. Bricolin felt suffocated and fainting. He had some trouble in rising from his chair. It appeared to him as though his lungs required air, that his smarting eyes had lost their power of vision, and that he was struck with apoplexy. The fear of death gave him strength to stagger to the door, which opened into the farm-yard; the candle had just burnt down in its tin socket.

Having succeeded in opening the door, and reaching the bottom of the steps without falling, the farmer gazed around him vacantly, without understanding the nature of any of the objects by which he was surrounded. An extraordinary glare which filled the yard obliged him to screen his face with his hand, for the abrupt transition from the dark room to this bright light renewed his sensation of faintness. Ultimately, when the air had in some degree dissipated the fumes of the wine, the species of vertigo which he had experienced was succeeded by a convulsive shiver, which was at first purely mechanical and physical, but which soon became the result of an uncontrollable terror: two huge bursts of flame forcing their way through clouds of smoke, were issuing from the roof of the barn.

Bricolin thought that he was under the influence of a bad dream; he rubbed his eyes and shook himself, but still the wreaths of flame rose nearer to heaven, and spread with frightful rapidity on all sides. Vainly did he strive to cry "*Fire!*" his tongue was paralyzed, and his throat parched. He endeavoured to return to the house, from which he was distant only a few steps, but he could not find his way. He saw, on his right, torrents of flame bursting from the stables; on his left another body of fire crowning the towers of the old castle; and before him his own house illuminated within by a fantastic light; and the door, which he had left open behind him, vomiting forth billows of smoke like the mouth of a forge. All the outbuildings of Blanchemont were the prey of a conflagration very skilfully organized. The fire had been laid in more than a dozen different places, and the most appalling feature of this frightful scene was the death-like silence which pervaded the whole place. Bricolin, destitute alike of strength and energy, contemplated in solitude this work of destruction of which no other inhabitant of the farm was yet aware. All its inmates had passed from the deep slumber of fatigue, or the deathlike sleep of intoxication, into the suffocating inertness produced by the smoke-laden atmosphere. The crackling of the fire alone began to make itself audible, and the tiles to fall with a harsh noise upon the pavement. Not a shriek, not a groan replied to these awful sounds. It seemed as though the conflagration had nothing more to destroy than empty buildings and lifeless bodies. M. Bricolin wrung his hands, and still remained mute and motionless, as if, weighed down by nightmare, he had vainly made internal efforts to arouse himself.

At length a piercing scream was heard, and Bricolin, as if delivered from the spell under which he had laboured, answered by a savage howl to this cry of human terror. * * * Soon nothing was to be seen but scattered masses of blackened fragments, the soil inundated with water, which looked like a lake of ink, and a crowd of workmen, exhausted, dripping, scorched, and wearing the semblance of spectres, but who were nevertheless called upon to make fresh exertions. The fire had just caught a small isolated chapel, situated between the farm and the old castle.

This new accident appeared incomprehensible, for the building had hitherto remained intact; and if any portion of the burning timber had fallen upon it, during the first violence of the fire, it must long before have ignited the stacks of dry peas with which it was filled. The flames, nevertheless, issued from the interior, as though some merciless hand had boldly, under the eyes of all the crowd collected on the spot, resolved to destroy the only edifice still standing upon the property. A circle was formed round the chapel, and the pumps were preparing to act, when M. Bricolin, who had approached the arched doorway, drew back horror-stricken, and fell into the arms of one of his labourers. This chapel, which had formerly been attached to the old castle, still exhibited some fine remains of Gothic sculpture; but the decay of so ancient a construction rendered it impossible that it should long resist the action of a dense body of heat. Flames gushed from the widows, and the delicately-sculptured ornaments began to fall in fragments with a crashing sound, when the half-opened door was suddenly flung back by some one within. In another moment the horrified spectators saw the maniac come forth, carrying in one hand a lantern, and in the the other a wisp of burning straw. She was departing quickly, after having completed her work of destruction; and walked through the crowd with a stately step, and her eyes bent upon the earth, seeing nothing around her, but gloating in silence over her long-meditated and fearfully-executed revenge. A too zealous gendarme seized her by the arm, when for the first time she became aware that the eyes of many were upon her, and, dashing the blazing straw into the face of her captor, in order to compel him to remove his grasp, the mad woman, with a gesture of furious hate, bounded away, and rushed back into the chapel, as if to conceal herself, muttering, as she did so, a string of incoherent curses. An attempt was made to follow her, but none dared do so. She passed through the flames with the swiftness of a salamander, and bounded up the little spiral staircase which led to the roof. There she shewed herself at a small window, and she was discovered to be exciting the fire, which soon surrounded her on all sides. The pumps were directed to the roof, but it was in vain; the water ran off, scarcely penetrating to the interior, where the fire was raging. Thus it was evident that the unfortunate maniac, placed above the whole body of heat, must be burning slowly, and suffering the most frightful torture. She did not, however, appear to feel it, for she was heard singing the air of a dance to which she had been partial in her youth, which she had probably often danced with her lover, and which had recurred to her memory at the moment when she was about to expire. She did not utter a single groan. Deaf to the screams and entreaties of her mother, who was wringing her arms in agony, and with difficulty restrained from an attempt to rescue her, she still sang on, until, as she once more looked from the window for the last time, and recognised her father, she suddenly exclaimed, "Ah! M. Bricolin, this is a pleasant day for you!" These were her last words. When the fire was at length extinguished, her blackened and calcined bones were found upon the pavement of the chapel.

LITERARY GOSSIP IN PARIS.

(*From our Correspondent.*)

I THOUGHT that I had sent you an account of a tolerably singular autograph a week or two back, when I translated the gallant distich of Robespierre; but I have now to acquaint you with the discovery of another infinitely more remarkable. An amateur antiquary, and collector of ancient chronicles and documents of interest, was, a few days ago, at Liége, in the house of a person of similar tastes, when he stumbled upon an au-

thenticated list of the numerous wives of a certain M. Hansac, a wealthy inhabitant of Antwerp, in the handwriting of his cousin-german Madame Poelmann, who drew it up for the edification and amusement of Count Duhan de Martigny, a noble of Lorraine, then resident at Nivelles. As some of your readers may be as curious as M. de Martigny to see this list, I shall transcribe it.

M. Hansac, of Antwerp, had thirteen wives. The first was the widow of an Italian artist, who became his bride at the age of 70, and died ten months afterwards.

The second was the widow of a notary, whom he also married in Italy. She only bore his name for thirteen months.

The third was Mdlle. Canot, the daughter of an advocate at Antwerp. She bore him three children, who, as well as their mother, died within four years of the marriage.

The fourth was Mdlle. Polis, of Malines, who was his wife only ten months.

The fifth was a young lady named Pelle, the daughter of a merchant of Lille, who died at the end of the second year.

The sixth, who was Madame Hansac, only ten months, had been Mdlle. Loise, of Malines.

The seventh was the daughter of an apothecary, residing at Brussels, near St. Gudule, of whose name we are ignorant; she and her two children were dead three years afterwards.

The eighth was Mdlle. Veters, of Antwerp. She became the mother of one child and died.

The ninth was the daughter of a high-born gentleman of Antwerp, Mdlle. de Stebert. She bore four children, and in the fifth year of her marriage she died, having previously buried all her offspring.

The tenth was the daughter of the Baron de Dimmes, of Ghent, and expired at the end of the nineteenth month of her marriage.

The eleventh was Mdlle. Vilgasse, of Bruges, who lived only thirteen months after her union.

The twelfth, who was the daughter of a physician at Brussels, named Hesete, did not live eight months; her father made a *post mortem* examination from suspicion of poison; but no trace of foul play was discovered.

Finally, M. Hansac bestowed himself, for the thirteenth time, upon Madame Mulard, of Tiers, in Brabant, whose father was the commandant of the town. This poor lady, feeling symptoms of indisposition, and remembering the fate of her twelve predecessors, at once quitted her husband's roof, and retired to a convent (where she was still living when Madame Poelmann wrote the letter containing these extraordinary facts), upon a pension accorded to her by the deserted benedict.

Madame Poelmann facetiously adds, by way of *post scriptum*, that as her worthy cousin had been a great traveller, and had resided for a considerable time in the Levant, it is possible that he may have had other wives with whom she was unacquainted. One thing at least is certain—that the history of the pertinacious M. Hansac verifies two of our national apothegms—that "Truth is sometimes stranger than fiction," and that "Nothing is a warning to women."

Peace be to the manes of the Belgian Bluebeard!

I must now pass "from gay to grave," and inform you of a melancholy occurrence, which has created a great sensation in the fashionable world. The Baron Achille de Maynard, a young man of fine fortune, only 25 years of age, who, about three weeks ago, married the daughter of the Count d'Espagne, threw himself from the top of one of the towers of Notre Dame, and was killed on the spot. No hope is possible that the fatal event was the effect of accident, as in his pocket were found a coil of new rope and a piece of soap, evidently intended to be applied to a deadly purpose, should his attempt to destroy himself at the cathedral be thwarted. It is a singular fact that such was nearly the case; for, on applying to the guardian for admission to the tower, the man objected to allow him to do so while he was alone, alleging that such were his orders, the number of suicides which had taken place having alarmed the authorities. To this announcement the baron made a laughing rejoinder, assuring the *custodier* that he was not yet weary of his life, and at the same time declaring that he was ready to place himself under the protection of any guide whom he might see fit to give him; upon which the official pointed out the way, and rang the bell which is habitually answered by a man who conducts strangers to the tower. This functionary, however, chancing to be absent from his post, the baron unhappily encountered no obstacle to his melancholy purpose, and of the result I have already informed you.

M. de Maynard was the author of two volumes of poems, and had for the last few years been an occasional contributor to both the *Gazette de France* and *La Nation*.

All Paris is lost in wonder and in conjecture; but no tangible or even probable cause can be assigned for the desperate act.

JOURNAL OF ITALIAN, SPANISH, AND PORTUGUESE LITERATURE.

Il Conte Ugolino della Gherardesca e i Ghibellini di Pisa. Romanzo Storico, di GIOVANNI ROSINI.

To say that the modern Italian literature is equally rich and important with that of France or Germany, would be absurd. But it is scarcely less so to pass it over with the slight notice which it obtains among us. If there be no longer a DANTE, a PETRARCA, or an ARIOSTO, modern times have seen poets of no small merit, and the mantle of DAVILA and GUICCIARDINI has fallen upon SISMONDI and his fellows. But as Italy took the lead in romance at the revival of literature, and under the guidance of BOCCACCIO, BANDELLO, and others, gave laws to the novelists of all lands, so now, under a new dynasty, she has become a not unworthy disciple of the *Ariosto of the North*. Compared with French romance, that of Italy is marked by a calm and strict adherence to nature; we meet with fewer of those monsters of crime which startle us in every page of French fiction; there is less exaggeration, less straining after effect, a far purer tone of morals, and a deeper search after truth. A romance, therefore, of ROSINI may seem tame and poor to the reader accustomed to look at vice through the Claude Lorraine glasses of EUGENE SUE or FREDERIC SOULIE, but it is not, therefore, the less worthy of his attention, nor will he regret the time which he bestows in examining it.

Professor ROSINI, occupied on his great work, *The History of Italian Painting illustrated by its Monuments*, had, during his hours of leisure, found time to add another historical romance to those by which he was already so favourably known; and having not sufficient leisure to attend himself to its publication, he gave it into the care of his friend M. PEROTTI, under whose auspices it now appears. The subject is one which required no small daring as well as no mean skill; to take a theme which had been already treated by DANTE was to any writer, much more to an Italian, an attempt which would not admit of mediocrity; but Professor ROSINI has regarded his subject in the right point of view, and has made the catastrophe of Ugolino the briefest portion of his narrative. The tale opens heavily; it describes the situation of the Pisan republic just before the tremendous battle of Melloria, in which the Genoese gave so severe a shock to the rising power of Pisa; it introduces us to the families of the Visconti and the Lancia, to the celebrated Count Ugolino himself, to the Archbishop Ruggieri, to the Count di Montefeltro, and other personages already familiar to our ears in the verses of DANTE.

At the period at which the tale commences, the preparations were making for the sailing of the Pisan flotilla, and the Guelfs and Ghibellines, who divided the city, were offering up contrary prayers, the former for its success, the latter for its destruction. Ugolino, who, as "captain of the people," was the chief military authority, and who therefore commanded the fleets as well as the armies of the republic, was of a Ghibelline family, and had been himself in the early part of his life an ardent Ghibelline; but afterwards, intriguing with the Guelfs, he was banished, and only returned to Pisa by reason of his numerous and powerful friends. After this, though he had no more dealings openly with the Guelfs, he was always suspected to be devoted to that party; and the overthrow of the Pisan fleet was anxiously looked for by the Pisan Ghibellines as the means of destroying the power and popularity of Ugolino. Yet this great man must not be considered as a mere partisan. It was by his exertions that the Guelfic League, into which Florence, Pistoja, Lucca, Genoa, and many other cities, had entered, and into which arrangements had been made for the reception of himself and his family, was dispersed. The object of the league was the destruction of the Ghibelline city of Pisa; and Ugolino, though a Guelf in heart, was sufficiently a patriot to prefer his country to his party. And here, perhaps, it may be well to quote the brief account given by ROSINI of the origin of these two parties:—

THE GUELFS AND THE GHIBELLINES.

It was in Florence, in the year 1215, that the fatal discord arose, which under the name, first of Guelfs and Ghibellines, and then of Neri and Bianchi, so long distracted the whole of Italy, and gave origin to the most cruel wars and the most fearful crimes which ever stained her annals. One Buondelmonte, a man of a noble and powerful family, had engaged himself by a

contract of marriage to a lady of the Amidei, a family as noble and powerful as his own. Struck, however, with the greater loveliness of a daughter of the house of Donati, he broke through his engagement and married this latter. The Amidei swore to be revenged, and on Easter Sunday they attacked Buondelmonte as he went on horseback to the church of St. Stephen, and slew him. His death at once divided the city into two parties; and as of the hostile families, that of Buondelmonte had the greatest following, it happened that their party took the lead, and assumed the name of Guelfs, from Guelfo, Duke of Bavaria,—not so much because they claimed any connection with that magnate, but because, in the disputes which were then rife between the papacy and the empire, they, like Guelfo, who fought against the emperor Conrad, took part with the papacy; while, on the other hand, the partisans of Conrad, who had been brought up in a castle called Guibelingh, or Waillingen, were from that circumstance in his life called Ghibellines. Afterwards, when private interests gave place to public ones, the family of the Uberti, of which the great Varinata was a member, declared itself head of the Amidei or Ghibelline faction.

The narrative of ROSINI proceeds to shew that between Ubaldino dei Ubaldini, the nephew of the Archbishop Ruggieri, and Bianca dei Visconti, the niece of the Count Ugolino, there had been for some time an attachment, which was looked on favourably by the heads of both families; but the course of this true love is rendered, as usual, rough, by the advent of Federigo dei Lancia, with his lovely niece, Ginevra, in whom centre at once all the affections of Ubaldino. This contrariety occupies much of the books, and drags languidly on through many chapters. At length, while the fleet is yet away, and all minds are anxiously occupied with the anticipated event of the battle, the news is brought in a way, and at a time, altogether unexpected. The following is a fine picture:—

PISA AFTER THE BATTLE.

Those who had whiled away the evening in the dance at the palace of the Visconti, and those who had accompanied Montefeltro to the Lion's-gate, had scarcely passed through their first slumber, when the whole city was unexpectedly awakened by the mournful tolling of the death-bell from the steeples of all the churches.

The deep booming of the bronze bell which summons aid when any part of the city is on fire, and the loud tocsin of the martello tower, certain herald of misfortune, were nothing in comparison of the terror that these numerous knells occasioned. All the inhabitants, leaping from their beds, and opening their windows, listened attentively to discover what could have occurred, and as it sometimes happens that those objects nearest to our eyes are not the easiest to be discerned, so few or none on this occasion could imagine what kind of misfortune had overtaken the city.

The sun had scarcely risen, the streets were empty, so that there was no means of making inquiries; but the uncertainty was soon over, and the terror and anguish redoubled when the brethren of the religious orders, wrapped in garments of penitence, paced in long order from their chapels along the streets, crying as they went, "Pray for the souls of your fathers and children dead in battle." This new and unlooked-for mode of announcing a great disaster had been devised by the archbishop to turn the minds of the faithful to heaven. After the first loose had been given to grief, the inquiries commenced, which had no success. No one could give information, for no one really knew any particulars; the only thing certain known was, that the battle had been adverse, and the disaster immense. Little by little, however, clues began to be given, and a few particulars ascertained, but no general account of the engagement, no reports as to the number and names of the slain.

And thus slowly, mournfully, and in the greatest impatience which can fill the human heart, passed away that whole day without a single report, a single messenger, a single relic of the battle appearing in Pisa, to afford to those suffering from suspense the miserable comfort (for even this is something in so great a disaster) to see with their own eyes and hear with their own ears one who was present and was saved. * * * Sorrow and terror, with the same fatal uncertainty, continued all the night—all the night long was there a confused wandering about the quays and landing places, until the moon shed her last rays from the distant horizon. Then only, and then not for long, weariness overcame grief, and when the morning broke all was quiet and sad repose, and solitude and deep silence.

When the particulars of the battle were publicly known, and it was ascertained that half of the Pisan fleet had been destroyed, but that the remaining half was approaching them safe, and, though much damaged, capable of repair, the mind of the people began to recover its tone, and when they found how carefully Ugolino laboured to remedy the mischief which had been done, how sedulously and benevolently he supplied the wants of the wounded and the families of the slain, his popularity increased to a greater height than before the misfortune, and he was finally elected *potestà* as well as *capitano del popolo*, and thus united in himself the supreme civil as well as the supreme military authority.

Thus the Pisans, in the ardour of their gratitude, forgot the principles of their own constitution, which not only contemplated the perpetual severance of the civil and military, as of the legislative and executive authorities; but also that which required a foreigner to be *capitano del popolo*, lest he should make himself a party in the state, and thus render it incapable of dismissing him in case of need.

In the mean time the activity and prudence of Ugolino gradually restored safety and tranquillity to the city; but scarcely had its effects begun to be felt, when a new danger menaced the very existence of the Pisan republic. This was the Guelphic league, to which we have already adverted, and the manner in which Ghirardeschi accomplished his object of drawing away Florence from the confederacy was worthy of his fame and character. Raising by way of loan on the estates of the Visconti the sum of 6,000 Venetian florins of gold, he bribed each of the six priors, as they were called, who were at the head of the Florentine government, with 1,000; but as in those days letters of credit were unknown, it was necessary to transport the gold itself from Pisa to Florence. A lay brother of a Dominican monastery was chosen by Ugolino to be his confidant and companion on this occasion; by his means the negotiation was secretly carried on and the money obtained from a Jew named Barnabas; in the saddle of his horse it was sewed, to go safely to Florence, and he was employed to be the bearer thereof to the priors. But alas! for human precautions; on the way, Fra Bonifazio fell a little in the rear of his companions, and at Malmantill, he and Ugolino's house steward were seized upon by banditti and carried into the mountains. It was the Robin Hood of Italy, that Ghino di Sacco immortalized by DANTE, into whose hands they had fallen, and he having been once cured of some disorder by the skill of the lay brother, let them go without ransom and with but little delay. But a very interesting episode is that in which the reader is conducted into the castle of Ghino, and familiarized with the robber-life of Italy in the thirteenth century. As soon as Fra Bonifazio arrived in Florence, he was despatched with the florins, slightly bent, and put into bottles of choice Vernaccia; nor are we informed that the flavour of the wine was at all injured by the golden mixture. Saltarello, however, a spy employed by the Lancia family, and who, by means of a bear and a couple of monkeys, passed unquestioned everywhere, had made himself acquainted with all the proceedings of the lay brother. Watching him from the house of one prior of Florence, to the convent where Ugolino was lodged, and then to another prior, he met the friar, by accident, as it appeared, and so violently and closely embraced him that he broke the bottle of Vernaccia, and wine and money both made an unexpected appearance.

Ugolino, however, succeded in his object, and on his return to Pisa became as absolute as though he had been a Roman emperor. His popularity began to fail, and his repeated exactions of money, as well as his banishing all the Ghibelline families of rank, at last drove the people into rebellion. His fall was however *immediately* occasioned by his slaying with his own hand Ubaldino dei Ubaldini, the nephew of the Archbishop Ruggieri.

THE ARCHBISHOP RUGGIERI.

The news of this death soon reached the archbishop; his secretary, as soon as he heard of it, appeared stupified, but having examined and re-examined the messenger, and ascertained that not a few had seen the body, he felt it to be his duty, though uncalled, to enter into the prelate's chamber to inform him of this melancholy event. The archbishop was reciting his breviary; when the secretary appeared, he lifted up his eyes, but made a motion with his hand not to be interrupted.

"But it is a matter of importance," said the secretary.

"Great?" demanded the prelate.

"Great indeed," replied the other, sighing and holding down his head.

At these words Ruggieri placed a mark in his breviary, closed the book and placed it on the table before him, then, manifesting in his countenance how great an anxiety the perturbed air of his secretary caused him, he motioned him to proceed.

The young man, in his utter confusion, knew not how to begin. He spoke hesitatingly of the tyranny of Ugolino, a thing unusual *with him;* of the hatred the people bore to their ruler; of the sorrow prevailing among all good men, so that the Count Anselmo, Ugolino's own nephew, had found it necessary to remonstrate with him.

"Well, well," interrupted the archbishop, impatiently.

Proceeding as well as he could, and dilating on the wound which Ugolino had inflicted on his nephew Anselmo with his dagger, he hardly knew, nor could imagine, how to carry on his tale so far as to say that "Ubaldino—"

"Ubaldino?"

"Was with the Count Anselmo."

"And what did he do?"

"But having made up their minds—"

"What had he to do with it?"

"In short, he—"

"Well?"

"Ugolino—"

"Well—Ugolino—"

"Ugolino, with his own hand—killed him."

On hearing these last words, Ruggieri gave one bound from his seat and stood upright, and for a few moments, with his left hand on the table and his right pressed on his forehead, remained mute and motionless. Then, opening wide his eyes, and deadly pale in countenance, he struck so violently on the table, that the secretary, who had always seen him grave and tranquil, was alarmed at his emotion. For a few minutes more he stood silent, and then, his natural colour returning and his aspect becoming once more calm, he coolly demanded for what purpose such a wild fable was related to him?

"Fable!" said the astonished secretary.

"Yes, fable—and under pain of disgrace, I command you to go and deny it everywhere."

These last words were accompanied by a gesture that he would be left alone; and when the door was closed, those eyes, which had hitherto been only open to penetrate the hearts of men, now for the first time gave a free course to tears; but these tears were not tears of mere sorrow, but of fury. He had measured with the rapidity of a lightning-flash the possibility of vengeance, and having found it, he became calm again.

The junction of the archbishop with the heads of the Ghibelline families, the bad success of the short civil war in which Ugolino plunged his country, fill up the remainder of the work; and it closes with the imprisonment of Ugolino in the Torre della Muda.

The noise of hammers driving the bolts through the gates found a melancholy echo in the heart of the count. He saw the keys thrown into the Arno. But after the verses of Alighieri, who could be so rash as to conduct the reader into that sepulchre of the living?

THE TOURIST.

[All the world travels now-a-days. Great, therefore, will be the utility of a periodical to which every Tourist may communicate such of his experiences as to routes, sights, conveyances, inns, expenses, and the other economies of travelling, as may serve his fellow-tourists. To this design we propose to devote a distinct department of THE CRITIC, and we invite communications of the class described relative to travelling both abroad and at home.]

SKETCH OF A TOUR IN THE TYROL.

(*Continued from page* 383.)

AFTER resting at this village (Fend) for the night, the tourist should procure a guide, and ascend still further up the valley. In half an hour he will reach Rofnerhof, two houses at the very head of the valley. We expected to get a guide here, but all the men were absent. We, however, went forward alone to see the great glacier. We followed the right path for about half an hour, when we ought to have left the path and ascended the mountain on our right by the side of a torrent; but instead of doing this, we still followed the path, which led us too low down the side of the mountain, and which ended at last among rough rocks and precipices; we, however, persevered in going forward, hoping that as the path had taken us there, by persevering we should find the passage improve. It grew however worse, and, after passing round the sides of some awful precipices with great difficulty, on account of the slippery footing, we at last got completely entangled; to advance further was impossible, and to retrace our steps extremely dangerous. We were, however, compelled to do the latter for a short distance, and then, after several unsuccessful attempts and many hair-breadth escapes in scrambling over loose gravel and slippery rocks, we succeeded in scaling the top of the rocks higher up the mountain, and got on better ground. There was a very deep gorge below us, into which we must have fallen had we lost our footing. In this gorge, in one place, the river forced its way under a bed of snow, which had apparently fallen in an avalanche some time before. We walked back until we came again to the torrent, having lost an hour by following that treacherous path. I have given this account, that the future tourist may take warning and avoid getting into the same difficulties. We then ascended the mountain, at first walking by the side of the torrent, and then turning a little to the left; and, after a heavy climb of one hour, we reached the top of a ridge about 9,000 feet above the sea. Here we had a splended mountain view, including several glaciers, or parts of the great glacier called Vernagtferner, the most extensive one in the Tyrol. We could see on the right the Wildspitz (11,600 feet) and the Wild Eispitz, and on the left the Fenarlspitz. We then descended and returned to Fend, where we arrived at 12 o'clock, and were agreeably surprised to see set before us soup made of goat's milk and bread, and some *Mehlspeisen*, for we had anticipated a very long walk before getting any thing to eat. The women we saw this day wore a large blue, conical, grenadier-looking cap of wool, and blue petticoats; many of the women we saw working hay in the Oetzthal wore very clean white or blue aprons, and, at the lower part of the valley, instead of the heavy wool caps, conical black hats like those of the men.

The tourist, having viewed the sublime scenery at the head of the valley, may return to Innsbruck by the route he came. He will be able to reach Sölden on the evening of the same day he ascended to the head of the valley. The next day he may dine at Umhausen, and will reach Silz early in the evening, where he may stay all night or advance further down the Innthal, as he feels ability or inclination. We reached Telfs on the same day we left Sölden, walking the whole distance, nearly forty miles. He may join the *Stellwagen* next morning for Innsbruck. Thick, handsome, and expensive fur caps are worn by many of the women in the Innthal, and of which they seem not a little self-satisfied. The next excursion the tourist may make from Innsbruck may be over the Stelvio. This passage of the Alps, for sublimity of scenery, can hardly be excelled by any other part of the whole chain, and, as a work of art, the road far surpasses any other over the Alps, and in altitude exceeds the Simplon by about 2,300 feet, and the Great St. Bernard by 1,000 feet. It may be crossed over in a carriage, but the pedestrian can alone properly enjoy the sublimity of its scenery. He may, however, take the benefit of the *Stellwagen* in proceeding up the Innthal; it stops for the passengers to dine at Silz; but if he should happen to arrive there on a fast-day, as was the case with us, he will not be allowed any meat; we had for dinner soup, potatoes, and eggs, sallad and pudding. He may so travel as far as Landeck, passing Imst, where the Imst Spitz is a fine object; it is a regular, sharp-pointed cone. He will afterwards pass Mils and the castle of Kronberg. The road is in many parts supported by a wall, and carried along the edge of precipices, out of which it is cut, and the scenery is very picturesque. He will arrive at Landeck about 8 in the evening; and early on the following morning he may take an *Einspännig* to Reid, one post, nine miles and a half. He will continue his advance up the valley, which is narrow all the way to Prutz, where a small plain is formed. The view here is very fine.

In approaching near this place he will pass under the precipices where the Tyrolese destroyed 10,000 French and Bavarians by letting the rocks fall down upon them. A little before reaching Reid, a very fine view may be had up the Innthal, with the statue of St. John Nepomuck in the foreground. At Reid he should commence his march on foot, and continue his route up the valley, still narrow and picturesque, with a fine mountain behind him, covered with snow. In about two hours he will reach Pfunds, and soon after enter the celebrated pass of the Finstermünz, a magnificent defile. The entrance to it, where there is a bridge over the Inn, and some old houses, is very narrow; the precipices on both sides are high, and approach very near together, having a fine effect. From here is a steep ascent by a road carried, at a great expense, along the side of the mountain, and part of it is covered by a strong roof, to protect it from falling rocks, and over the top of this roof runs a small mountain torrent. At the point where the road turns abruptly to the left, is a magnificent view, and the river Inn (here very small) running at the bottom of the gorge, and of a beautiful bluish-green colour, contrasted with the high and precipitous mountains, which approach close to it, has a very pretty effect. In the middle of the narrow part of the pass, after turning to the left, and leaving the banks of the Inn, stands a new fortress, commenced by Francis I. in 1834, and finished by Ferdinand I. in 1840, as appears from the inscription upon it. It completely commands the pass, and is built close against the rock, with a torrent between it and the road, except the middle part of it, which stands out over a bridge to the road, and which is intended for large guns. In looking back at the pass, when through it, it appears like a cleft in the mountain. The tourist will probably arrive about one o'clock at Nauders, a small town

about eighteen miles from Reid. Here he should dine, and may there wait for the *Stellwagen*, in which he will reach Mals in the evening. He will pass near the source of the Adige, and three small lakes formed by it, and over a barren and uninteresting country. If clear, he may have a fine distant view of the Orteler Spitz. Next morning he may take an *Einspännig*, and have a very beautiful drive to Prad, along a fine valley, with splendid views, and the infant Adige running below him, through level meadows, the sides of the valley being well cultivated, having several fine old castles, and numerous villages and churches, and bounded by lofty mountains, with their summits covered with snow. He will cross the valley to Prad by a *chaussée* over a very level plain. From Prad he must set out on foot to climb the pass of the Stelvio. We left Prad for this purpose at twenty minutes past eight o'clock on the morning of the 23rd of September. There had been a heavy fall of snow on the mountains during the preceding night; we found it had fallen about fourteen inches deep on the Stelvio. In two hours we reached Trafoi, a very small village, the road several times crossing the stream.

We observed the village of Stelvio on the right, perched high above us. The first view of the snowy mountain and beautiful glacier which unexpectedly burst upon us, close before us, with the contrast of the dark firs below the pure white, fresh-fallen snow of the mountain, yet with some of the snow of the preceding night still hanging on the branches of the trees, was very striking and impressive. At Trafoi we had some bread and wine in a snug room well heated by a stove. We rested here about half an hour, and then commenced the steep part of the ascent, wading through the snow, which grew thicker as we advanced, until we met a snow-plough half-way up, which cleared the road for us. The heat of the sun's rays, as they fell unobstructed through a clear atmosphere upon, and were reflected from the dazzling white snow through which we were wading, was intense; it was, indeed, for a while, perfectly scorching, and burnt the skin off our faces. We had a fine view of the Madatsch glacier, close before us, on the opposite side of the gorge just beneath us. The views at different points of the road were very magnificent, and increased in grandeur as we ascended, until we reached the summit of the pass, from which the view was inexpressibly sublime. The giant Orteler (14,400 feet high) rising immediately from the deep, dark gorge below, stood in full view in front of us in all his splendour, his head and minor peaks covered with snow of a dazzling brilliancy, and also low down on his side the snow was resting, of a beautiful whiteness, and glaciers were hanging upon him. We could see down the valley we had ascended as far as the valley of the Adige, and the magnificent mountains which inclose these valleys were spread out before us. The ever-changing forms of the flying mists, as they passed over the mountains, had an effect at once grand and beautiful. The road is a wonderful work, and a triumph of engineering art. Near the top are a number of galleries for sheltering the road from the avalanches. They are formed of very strong wooden frame-work, covered with wood at the top and open in front. These galleries, on this side of the pass, if united, would perhaps measure a mile and a half or two miles in length. The line of road near the top becomes very zigzag, on account of the very steep ascent it has there to surmount. The summit of the pass is 9,272 feet above the sea. Here there is a house of refuge, the highest permanent habitation in Europe. The view of the Swiss mountains from this is splendid. The frontier line between Tyrol and Lombardy is marked by an obelisk near the house. At half-past three we reached Santa Maria, a post-house and custom-house on the Italian side, a short distance from the summit. Here we rested half an hour, and had our passports examined. We then descended at a quick pace, and having passed a deserted hospice and small chapel near a lake, and some very zigzag terraces, built up to support the road, we reached the first of the eight stone galleries, built of great strength, to protect the road. They are arched, and have walls of great thickness (4 to 6 feet); yet notwithstanding all the protection they can give to the road, it is frequently broken down by falling rocks, &c. and requires a great annual expenditure to keep it in repair. The stone galleries are in all about half a mile in length, and are situate in a savage-looking, rocky, and barren gorge, called Sponda Lunga, down which we walked for a considerable distance, seeing the source of the Adda.

We arrived at the town of Bormio about seven in the evening. The Stelvio road was completed in 1824, by the Austrians, for a passage into Lombardy. The distance from Prad to Bormio is about thirty-five miles. The tourist, having reached Bormio (where he may procure some excellent honey in small wooden boxes), may continue his progress down the valley of the Adda, very narrow and picturesque, and in about three hours and a half he will arrive at Bolledore, a post-house in the Valteline, where he may procure Strachino cheese and grapes very cheap. The valley here begins to open and Indian corn to be cultivated, and as you proceed further down, much Indian corn and millet, or buck-wheat, &c. are to be seen on the level part of the valley, and on the north side the slopes are covered with vines to the height of perhaps 1,000 feet above the river, and snow is seen on the tops of the mountains above. This valley contains a great number of churches, with steeples in the Italian style; we counted thirteen churches, all seen together from one point of the road, scattered over the valley. Several small towns will be passed, poor-looking places, and four or five old castles, one large one built square, with a tower at each corner, and a high keep in the middle. Near Tirano, the whole breadth of the valley is cultivated as vineyards; the vines are trained in festoons, from one stool to another, somewhat after the manner in which raspberries are sometimes trained. When we saw them, small dark grapes were hanging from them in plentiful bunches. This valley (the Valteline) is very fine and rich; millet is grown under the vines. The peasants were very busy with their harvest, the men wearing red waistcoats, and the women red stockings; they are a darker-looking and smaller race than the Tyrolese. The tourist will arrive at the town of Tirano, about twenty-four miles from Bormio, early in the evening, and may there halt for the night. On the following morning he may resume his progress down the valley, which he will find to present a similar character to what it bore on the preceding afternoon. The men we saw during this day's walk wore low hats with broad brims, long red waistcoats, and coats with long broad skirts, and the houses were all of the Italian character, with low gabels and flat roofs. We found fruit very plentiful and cheap in this valley. The tourist will, about the middle of the day, reach Sondrio, the capital city of the Valteline, and seventeen miles from Tirano, and will find the Albergo Nuovo della Madelena a very good inn. He had better take a carriage here to carry him to Morbegno; he will perhaps meet with a party who will join him. The valley below Sondrio becomes very marshy. He may pass the night at Morbegno, where he may procure a carriage in the morning to take him as far as Colico, on the banks of the lake of Como, and about two hours' drive. The valley all the way between these two places is very swampy and unhealthy. At the foot of the Valteline he will see the castle built by the Spaniards. From Colico he may walk by the side of the beautiful lake of Como to Varenna, which will occupy about four hours; or, if he wish to cut short his tour in the Tyrol here, he may proceed at once over the Splugen into Switzerland. We were favoured with a splendid view of the head of the lake. The tops of the moutains, nearly 8,000 feet above the level of the lake, were covered with snow, and the mist that was hanging upon them greatly increased the grandeur of the view.

(To be continued.)

ART.

CASTING OF THE WELLINGTON STATUE.

On Saturday afternoon a number of scientific and literary gentlemen, together with several ladies, witnessed the casting of seventeen tons of metal at the *atelier* of Mr. Wyatt, Dudley-grove, Paddington. The bronze casting was for the fore-part of the colossal horse intended for the Wellington statue at the West-end. The hinder part has already been cast, and is now in progress of being finished. The immense body of metal was occasionally seen through the iron door of a huge furnace; it was intensely brilliant, and perfectly fluid. A deep "run" led from the door of the furnace, and conveyed the liquid metal to a large pit wherein the model was deposited. At a given signal an aperture in the front of the furnace was opened, and a hollow noise like that from a volcano was heard. The metal then in a complete state of fusion glided forth like a stream of lava, hissing and spitting as it went along to the model-pit. A thick whitish smoke, like that from burning arsenic, and nearly as mephitic, entirely filled the *atelier*, to the roof, making it dark—a darkness which might be felt below, while the red burning river of metal continued to send forth an almost insupportable heat. In about half an hour the whole seventeen tons had run into the pit in a continuous even flow, giving indication that all was right below. It will take five weeks before the mass can be sufficiently fixed and cool—a period of considerable excitement and suspense to the artist. It is curious that the two principal workmen employed on the occasion are Frenchmen, chosen by Mr. Wyatt for their knowledge in bronze casting. They are two hearty fellows, and stirred up the liquid metal with perfect *nonchalance*, apparently heedless about its having originally been cannon taken from the armies of their country in order to form a statue of Wellington. The coincidence afforded subject for remark among the ladies and gentlemen present.

The Frescoes for the Houses of Parliament.—The first essays in actual decoration will take place in the waiting-room of the House of Lords; and in a portion of the House of

Commons, to be painted entirely by Mr. Dyce. The other artists are Messrs. J. R. Herbert, A.R.A.; Severn, and Tenniel. Mr. Maclise was among the number to whom a commission was proposed, but he is understood to have declined it.

WESTMINSTER HALL.—The Cartoon and Fresco Exhibition closed on the 29th of last month. The influx of visitors has not, by any means, been equal to that upon the occasion of the first exhibition, though quite as numerous as last year. The hall was daily thronged with a crowd of persons of all grades; but since the opening of the exhibition, there has been no complaint of misconduct; on the contrary, the works are examined with interest, and evidently visited for their own sake. Thus, among the many thousands who have visited the hall it cannot be doubted that thousands have departed more or less instructed.

RECEIPTS AT WESTMINSTER HALL.—The receipts for admission to the Cartoon Exhibition in 1843, amounted to 2,472*l.* In 1844, those of the two exhibitions, at Westminster and in King-street, were 1,259*l.*; and up to the 28th of July last the amount yielded by the present exhibition is 638*l.* 8s. 6d. The estimates and expenses of Government for the present year contain a few items of interest connected with art:—

Paid on account of the Expenses of the Commission for the purpose of inquiring whether advantage might not be taken of the Rebuilding of the Houses of Parliament for the purpose of Promoting and Encouraging the Fine Arts . .	£ 750	0	0
The Expense incurred for fitting up Premises in St. James's-street for Exhibition of Works of Art, and also in fitting up Westminster Hall for Exhibition of Sculpture and Fresco Paintings .	1,123	16	10
To W. Essex, for an Enamel Portrait of her Majesty, sent as a Present to the Pacha of Egypt .	36	15	0
To A. Bryant, for a Portrait of Speaker Boyle, for the Official Residence of the Speaker of the House of Commons	26	5	0
For the Purchase of Messrs. Smith's Collection of Prints of the Early German Masters . .	2,830	0	0

THE LIST OF THE COMMISSIONERS OF FINE ARTS receives an accession to its number in the name of Lord Willoughby d'Eresby.

MUSIC.

CALCUTTA CATHEDRAL ORGAN.

A trial of the capacities of this fine instrument took place on Wednesday at Guildhall, in the presence of the Lord Mayor and a numerous company. Mr. Thomas Adams presided, and gave, as he usually does, several extraordinary instances of his skilfulness as an extemporaneous player, disclosing the greatest fertility of fancy, and the most varied erudition. The powers of the instrument were fairly tested under his hands, for he took occasion to exemplify, as far as the opportunity served, the individual beauties of the solo stops, as well as the best effects of combination. The great organ is rich and broad, but the lack of brightness in the mixtures is occasionally felt, a defect—if defect it may be called—peculiar to the "school" in which the instrument has been erected. The miscellaneous selection performed by Mr. Adams consisted of extracts from Winter, Sebastian Bach, Haydn, Mozart, and Handel; and the occasional airs which were thus introduced were submitted to the audience under the most captivating circumstances of delicacy and expression.

PUBLIC AMUSEMENTS.

COLOSSEUM.—Though this is the least favourable season of the year for places of amusement, it gave us pleasure to find, on the occasion of a late visit, that this, the most intellectual of the exhibitions of the metropolis,—we believe we may say without extravagance, of the world,—continues to attract a large concourse of visitors. It is an evidence, in the present depopulated condition of town, that the superlative merits of this place of entertainment are becoming more widely known than heretofore they have been. We can, most conscientiously, recommend every reader of this journal to visit the Colosseum, in full confidence that he who does so will bear testimony to the fact that we have been fully justified in the encomiums we have from time to time bestowed on it. An alteration of the hours for the morning and evening exhibitions has been made, which, for the information of our readers, we may state, is now—for the morning exhibition, from ten till five; and for the evening, from seven to half-past ten.

ROYAL POLYTECHNIC INSTITUTION.—In addition to the very great number of model-carriages and machinery connected with railways and with steam-power and propulsion, locomotive engines, &c. in the museum of this excellent institution, the directors have procured the model of a novel invention recently brought from America, which is exceedingly ingenious, and calculated to be of much service in enabling trains to ascend acclivities, or steep gradients on railroads. It has an Archimedean screw between the axles of the carriage, which comes in contact when required, with a series of friction-rollers placed between the rails, and by the means of this contrivance the carriage and train attached to it are forced up the incline. This apparatus, which is certainly worthy the inspection of scientific men, draws a very numerous company daily, who seem highly pleased with its performance. Doctor Bachoffner continues his admirable lectures on Natural Philosophy, and by his agreeable and comprehensive delivery rivets the attention of his auditors, and leaves nothing wanting. Numerous amusements of all sorts are daily and nightly in operation, including the celebrated young diver and swimmer Captain Stevens's son, the dissolving views, &c. There is also a most splendid collection of tropical fruits which we cannot pass over in silence; they are such beautiful copies from nature as to deceive numbers of the visitors. Our limited space will not allow our doing to these the justice they merit; but among them we may mention the bread-fruit, guava, pomegranate, citron, lime, papaw, plantain, banyan, shadock, &c. &c.

ROYAL ADELAIDE GALLERY.—We are glad to find the spirited proprietor of the above gallery of arts and sciences continues to enjoy so fair a share of public patronage, the favourable result of judicious management. After a concert very ably supported throughout, we were gratified on hearing another lecture from the New Zealand chief, Pahea-Range, in which he introduced much new matter, together with a very intelligible chart of the islands on which he resided, describing the territories of the different tribes, with the localities of several of the battles he was engaged in. Few Englishmen have met with such remarkable adventures as this chief; still fewer have become so immediately associated with savages, and certainly he appears to have spared no exertions to acquaint himself thoroughly with their manners and customs. Mr. J. Russell continues to "throw out his hints," and give "sketches of character," which have the great merit of being true to nature; most of his hints, too, are well worthy acceptance. Pilbrow's Atmospheric Railway Carriage has lost none of its attractions, either as a subject of science or curiosity. We have not space to mention the many other deserving exhibitions and performances, but recommend our readers to visit the Gallery.

ORIGINAL CONTRIBUTIONS.

THE following beautiful translation, from the pen of a Wrangler at Cambridge, will be read with interest:—

THE SOLILOQUY OF MARCO.

[In Manzoni's tragedy *Il Conte di Carmagnola*, translated from the Italian, Marco, a Venetian senator, the Count's intimate friend, is confidentially informed by the Council of Ten that an order has been despatched recalling Carmagnola from the command of the army, with a view to his trial for alleged treasonable designs against the state. He is then induced to sign a paper, pledging himself to impart to no one the secret which has been thus communicated to him. His weakness of mind, infirmity of purpose, and treachery to his friend occasion a soliloquy, of which the following is a free translation.]

A villain I—the die already cast—
Virtue's broad line irrevocably pass'd—
Tempted and fallen—ere this morning's light
How little knew I mine own soul aright!
Oh! what a secret have I learnt this day;
And could I then my trusting friend betray?
Mark yon assassin lure him to the snare—
Yon flashing blade, yet whisper not "beware?"
I *might* have saved my friend—he now must bleed—
And heav'n, which I invoked, shall watch the deed.
This hand hath sign'd his doom; if blood be spilt,
I am the damning cause—be mine the guilt.
What have I done? why fear'd? had I forgot
That life is oft preserved when virtue 's not?
Whence, then, this treacherous oath, and whence this fear?
Were these grey hairs, or was my friend most dear?
All-seeing God! vouchsafe thine high control;
Purge Thou my mental eye—lay bare my soul,
That I may know what caused this abject state,
Whether 'twas dulness, cowardice, or fate.
When thou, my friend, shalt see (how deep the shame!),
Mid yon vile signatures, thy Marco's name—
That *he* invites thee—doubt shall yield to joy—
Mistrust to faith—O God! 'tis I destroy;

Yet spoke they not of mercy—such, forsooth,
As reckless power awards to naked truth.
Mercy to him! 'twas named because this heart
Sought noble pretext for its treacherous part;
Fear had done much, perchance without avail—
Mercy's brief mention turned the trembling scale;
Fool did I trust, but villain did I not,
Or reason's rule or virtue's was forgot.
To each these traitors have his part assigned
By the dark guilt inherent in his mind—
To this the wreathed smile—to that the steel—
The third in brutal threats enured to deal;
My part to make the tragic game complete,
Was base submission and most vile deceit;
And I sustain it—baser far than they
Whom, whilst I scorn, I fear to disobey.
I sought him out—was dazzled by his fame—
His lofty genius and commanding name.
Oh! wherefore thought I not what onerous woes
Strict ties of friendship with the great impose?
Why did I seek up Fame's rude height to toil,
Partake the danger and divide the spoil?
My proffered hand he grasped, and now betray'd—
Beset by foes—that hand withdraws its aid.
Waking, he seeks his friend, and where am I?
One look of quiet scorn—he turns to die.
What have I done? nought yet; yon fatal scroll
Bears a deep oath—'tis graven on my soul;
Yet if that oath were wrongful, Conscience' voice
Bids me abjure it—such be then my choice.
A vast abyss yawns darkly 'neath mine eyes.
One step, and I am lost; then hold, be wise;
Is there no *middle* course, my friend—mine oath?
One word of warning shall destroy us both.
'Twas a mere threat perchance—perchance 'twas true.
The dreadful truth breaks flashing on my view;
No righteous council left. Mid your dark spell,
Dissembling knaves, one thing at least is well;
Yourselves have shaped the course that I shall go;
Yours be the obloquy, be mine the woe.
Nought will I do—enslaved and fettered still,
To your vile keeping I submit my will.
Land of my birth, adieu! I ask no more
Than speedy death ere tidings from thy shore.
Here—urgent dangers mock my ling'ring stay,
And heaven's especial grace ordains my way;
I may not die for thee, most cherish'd lot,
And all thy pride and fame avail me not.
Integrity and friendship once were mine,
Both these I yield—rare offerings—at thy shrine;
Do thou benignant teach me to control
The deep misgivings of a guilty soul!* H. B.

CRITIC OF TRADES, INVENTIONS, ETC.

Every person feels the want of an *honest* informant to direct him where the best commodities of all kinds are to be purchased. New inventions for use or ornament are daily produced, which would be cordially welcomed if their merits were made known. An advertisement alone cannot be trusted. An impartial reporter is wanted in whom the public can confide. This department of THE CRITIC will endeavour to fulfil that duty. To aid the design, correspondents are requested to inform our readers of any new production for use or ornament they may try and prove, of the places where the best commodities of any kind are to be procured, and so forth. Of course no anonymous communication will be attended to.]

At the sitting of the Academy of Sciences, at Paris, on Monday, the 1st inst. M. Laborde read a description of a new electrical telegraph, the signals of which are made by sounds. There is nothing very novel in this modification, and we may offer nearly the same remark relative to a system of electrical telegraph presented by M. Garnier, which, however, has one remarkable feature, viz. a double dial-plate for letters or signals, arranged in such a way as to prevent some of the confusion that exists in the present system. M. Garnier has also laid before the Academy a modification of Watts' dynometer, for indicating at every instant the degree of force developed by the steam-engine, the tension of the steam in the cylinder, and the degree of vacuum produced by the condenser of each point of the march of the piston. Up to the present time the dynometer has had only one spring compressed by the tension of the steam, and distended by the effect of the vacuum, and in such a way that the two opposite actions soon destroyed its efficacy. M. Garnier places two springs, each acting by compression, and in such a manner that the paper upon which the curves of tension, &c. are marked, may slide easily, and denote clearly the successive figures.

A paper was received from M. Dujardin, announcing what he conceives to be an important improvement in electro-magnetic machines. Instead of causing a horse-shoe magnet to turn above a horse-shoe of soft iron, he, on the contrary, gives the motion to the soft iron affixed to one side of an axis, whilst a piece of lead is placed on the other side. In this way the iron is sometimes near and sometimes distant from the magnet, and the result is two currents more powerful than with the ordinary machine.

M. Petit de Maurienne presented a copy of his report to the Minister of the Interior, on his mode of ventilation of hospitals and prisons, by means of metallic wire gauze applied to openings in the walls. This system of ventilation does not, however, appear to us to be very new. Of all the systems of ventilation that we have seen, that which struck us as being the best was the plan proposed by Mr. Wroughton, and which consists of a mercurial valve acting upon a spring, and opening a portion of a window in such a way that the room will always remain at the temperature desired, and the foul air be replaced at every instant by a supply of pure air from without. Mr. Wroughton's plan, which we have seen at work, is indeed but an extension of the principle of the mercurial self-acting valve of Dr. Arnott's stove, but the application of it to the purposes of ventilation is a very meritorious one, and we could wish to see it adopted in the hospitals and in the theatres also, in which the system of ventilation is so imperfect that there is no medium between a blast of cold air from without and the noxious emanations within. There is, in fact, nothing more destructive to health than to remain for two or three hours in one of the public theatres, alternately exposed to the suffocating and poisonous heat of the gas, and the thousand pourings out from the lungs and pores of the multitude, and the rush of cold air from the opened doors, which are, in fact, the only effective means of ventilation now used; whereas, if the system of which we speak were adopted, there would be no necessity for this rush of cold air, and the atmosphere would always be pure.

M. Arago again alluded to the important discovery made by M. Ebelmen, of the means of producing an artificial quartz. It appears that, by a slight modification of his process, M. Ebelmen has succeeded in producing the hydrophane, a very rare variety of quartz, which becomes transparent when placed in water. This modification consists simply in leaving a little more of the chloruret of silicium in the silicic ether exposed to slow evaporation by the prolonged contact with damp air. If the ether be placed in contact with a small quantity of creosote, it coagulates, and gives a quartz of rather a yellow colour, which is not the hydrophane.

Dr. Leuret, one of the physicians of Bicêtre, communicated to the Academy an improvement that he has made in the construction of the instrument by which insane persons who refuse to take food have it administered to them by force. By M. Leuret's improvement this tube is made so flexible that there is no longer the least danger in its use.

ACCIDENTS ON RAILWAYS.—The model of a very simple but ingenious contrivance for the purpose of enabling the guards of a train to instantly communicate with the engine driver, in case of any danger being perceived, was exhibited on Saturday evening at the Bristol terminus of the Bristol and Birmingham line, by its inventor, Mr. J. K. Williams, the superintendent of the line. The machine consists of a large box, having on its top a large and sonorous bell, which is struck like the bell of a clock. Within this box is a piece of clock-work, precisely similar to that of an alarum, and a red lamp for foggy weather or night; and from the box, which is intended to be affixed to the nearest carriage to the engine, ropes proceed over the roofs of the various carriages to the guard's box, who, upon perceiving any signal of danger or obstruction on the lines, has only to pull the cord, and the large bell is instantly rung, and the red lamp shewn, if at night; or a large board with the word "stop" upon it flies up. So that the engine-driver's attention is attracted both by sight and sound to the impending danger. The model was highly approved of by scientific persons who viewed it, and is to be shewn to Mr. Hudson, on Wednesday next, on the occasion of his visiting Bristol.

STUTTGARDT.—The era of miracles being over, we had still to look for that of wonders, in the supposition that Arkwright or Watt, &c. &c. have not fully succeeded in giving their time the name of "an age of wonders."—A Wurtemberg lieutenant-colonel, M. Von Hamel, has *invented a horse*, of full size, of the self-acting principle,—a mechanical horse,—for the benefit of the living animal of the same species, which, the world knows, has so long been forced to submit to the maltreatment of unskilful pupils in the art of horsemanship. The honourable gentleman has certainly acted on the views of the Humane Society for the Prevention of Cruelty to Animals. The German papers say, what noise would inventive England have made, if she had made that invaluable invention! *Tempus et laborem perdidit*, M. von Hamel. Finally, the great invention is out: the novel creator of the horse has surpassed all mechanism in the world; but has

* It must be confessed that there is nothing which corresponds to the two last lines in the Italian.

not said if his horse also exhibits the obstinate feats and tricks of a living horse, which is commonly made so ungovernable by them.

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

TO THE EDITOR OF THE CRITIC.

SIR,—As I conceive the most efficient means of furthering the investigation, and promoting the interests of Mesmerism, is to bring before the public a body of facts illustrative of the practical utility of the science, I beg to forward for your perusal and that of your readers, the following little incident, which, though of almost every-day occurrence amongst practisers of the art, is nevertheless peculiarly interesting, as exhibiting the extreme simplicity of the agent employed, its easy applicability, and the readiness with which it might at all times and in all places be employed in a certain class of cases. Having yesterday taken advantage of the present very beautiful weather to enjoy a day's trout-fishing, I repaired to Wellow, a village six miles from this place. At the conclusion of my day's sport, I called at the cottage of old Mrs. Francis, whose family I had long known. I there found that her eldest daughter (Mrs. Swift) was suffering acutely from rheumatism in the head and shoulders; indeed, so great was her agony, that (as she informed me) she had had no sleep for a whole week; the pain was almost intolerable, brought about, as she thought, by great exertion and exposure in leazing (gleaning); she had tried various remedies, but to no purpose, and was seriously afraid that she should lose her sight (a similar occurrence having taken place in the village to a man, apparently from the same cause). I told her I thought she would derive benefit from being mesmerised. She had never heard of the term before, but expressed herself ready to try any thing which would relieve her; but when I informed her that the operation would be the sending of her into a sleep, she said, then it would be of no use my trying, as it was impossible she could sleep, the pain in her head being too violent to permit it. I requested her to hold out her right arm as well as she could, and after I had made about twenty or thirty passes down it from the shoulder, she declared that the pain there was almost entirely gone. I then sat in front of her, and by my fixed gaze endeavoured to send her to sleep; this I effected in three or four minutes. Having got her into this condition, I made a number of appropriate passes over the head and down the person; this I continued for about five minutes, and then woke her up, when she informed me that the pains were entirely gone, and that she was perfectly well; she said that the sleep which she then had was exceedingly pleasant, and the first she had enjoyed for a week. She thanked me most heartily for curing her, and hoped she should have no return of her disorder. I requested her, however, in the event of any further attack, to come to my residence, and I would again mesmerise her.

Here, then, was a case in which, by a process to be understood and practised by any one, a painful malady—one which caused ceaseless suffering and sleepless nights for a week—was removed (at least for a time), in a few minutes, without expense, pain, or any inconvenience whatever. Surely such a fact as this speaks volumes in favour of Mesmerism, and ought of itself to silence those shallow twaddlers who can see nothing in the science but fraud, deception, and folly.

I am, Sir, yours, &c.

T. W. SAUNDERS.

Ivy Cottage, Bath, Sept. 10, 1845.

BOOKSELLERS' CIRCULAR.

BOOKSELLERS' PROVIDENT RETREAT.

WE were so anxious to convey to our readers last week early information of the leading particulars of the laying the first stone of this most humane and excellent institution, that we overlooked in our haste some details of interest, which we therefore now subjoin:—

The style of the architecture accords entirely with our idea of what is most suitable in itself and agreeable to English landscape. The design, in the Tudor line, is by Mr. H. Cooper, and does credit to his ability and taste; this, the first distinct elevation, consisting of seven comfortable domestic dwellings (with every conveniency), a central hall on the ground-floor, 18 feet 6 in. by 17 feet; and a committee-room above, a common sitting-room, 12 feet 1½ in. by 12 feet, and a kitchen 11 feet by 10 feet 3 in. Plots of garden will be laid out for the inmates; and should it be required in the progress of time, there is sufficient space in the endowment of Mr. Dickenson to permit of the building of similar abodes for from thirty to forty additional members. The estimated cost of the "present commencement" is 2,600*l.*; and it is most satisfactory to state, that though the sum required to complete the design was, when the company met, deficient by no less than 600*l.* or 700*l.*, it was amply sufficient when they left, only a few hours later.

Much of this gratifying result must, we think, be attributed to the manner in which the Earl of Clarendon discharged the duties of president throughout the day. Every thing being prepared, his lordship deposited, in the usual way, a crystal bottle, in which silver and copper coins of the current date were inclosed, and also the following scroll, previously read aloud by Mr. Ives, the secretary, commemorating the event:—

"The foundation-stone of the Booksellers' Provident Retreat was laid by the Right Hon. the Earl of Clarendon, G.C.B. P.C. on Wednesday, September 3, 1845. This Retreat, to be erected upon ground presented by John Dickenson, esq. is intended as a comfortable asylum for aged and infirm members and the widows of members of the Booksellers' Provident Institution.

LIST OF THE COMMITTEE FOR 1845.

James Nisbet, esq. 21, Berners-street, Chairman.
Thomas Brown, esq. 39, Paternoster-row, Treasurer.
Cosmo Orme, esq. 15, Bryanstone-square.
Bevis E. Green, esq. 39, Paternoster-row.
Ant. K. Newman, esq. 33, Leadenhall-street.
Thos. Kelly, esq. Ald. 17, Paternoster-row,
Edmund Hodgson, esq. 192, Fleet-street,
James M. Richardson, esq. 23, Cornhill,
R. Marshall, esq. 4, Stationers'-hall-court,
} Trustees.

Messrs. Robert Baldock, 85, High Holborn; James Bigg, 53, Parliament-street; George Copland, 17, Paternoster-row; Geo. Greenland, 38, Poultry; John Hearne, 81, Strand; George Lawford, 6, Saville-passage; Sampson Low, 42, Lamb's Conduit-street; Frederick Malcolm, 8, Leadenhall-street; Charles Reader, 39, Paternoster-row; Thomas Rodd, 39, Great Newport-street; Thomas Sanderson, 2, Amen Corner; William Sharp, 39, Paternoster-row; Thomas B. Sharpe, 15, Skinner-street; Alfred Taylor, 187, Piccadilly; Henry Wix, 65, St. Paul's Churchyard.

Auditors.—Messrs. Jas. Eden, 39, Paternoster-row; John Morris Jones, 8, Paternoster-row; Samuel Sharwood, jun. 120, Aldersgate-street.

Honorary Secretary.—Mr. Samuel Ives, 14, Paternoster-row.

W. H. Cooper, esq. Architect. Mr. William Trego, Builder."

The reading of the subscription-list by Mr. Hodgson naturally excited enthusiastic plaudits, and the presence of some of the most liberal friends of the asylum, connected with "the trade" (and convincing proofs of not being forgotten by others who could not attend), gave much additional *éclât* to the meeting. But whilst we offer this tribute to the house of Messrs. Longman, nearly every member of which was at the table, to Alderman Kelly, and to all who have distinguished themselves in this good cause, we trust we shall not be thought to overstep our province, if we earnestly exhort others who have not yet joined in the support of these institutions, to lose no time in doing themselves that service and honour. In our humble opinion, there is not one assistant in the London trade who ought not to avail himself of this auspicious institution, and not one principal whose bounden duty it is not to afford it a liberal aid. In those who are most exposed to fall into the need of such help for old age or disease, it is inexcusable to neglect the provision; and in those most removed from the chance of such misfortune, "'twere good to do so much for charity."

TO THE EDITOR OF THE CRITIC.

SIR,—In pages 339 and 367 of THE CRITIC you truly remark that "a very inconvenient mode of publishing has of late grown into favour. The plan is, where a work consists of more than a single volume, not to bring it out entire, but to publish the several volumes at intervals."

Allow me to add two instances of this kind to those already referred to in the pages of THE CRITIC.

The 5th vol. of the *Diary and Letters of Mdlle. D'Arblay* was published in 1842 by Mr. Colburn, who still continues to advertise the 6th vol. to be in the press.

A more flagrant instance occurs in the *Biographical Dictionary* of the Society for the Diffusion of Useful Knowledge, the 7th part of which was published in 1844 (comprehending only the letter A), at which point it would appear to have stopped in the

issue of its quarterly parts. When this work numbers on its committee so many eminent literary men, added to Lord Brougham as its chairman, the public would naturally feel confident that a sufficient guarantee was thereby afforded them for its completion, particularly when undertaken under the auspices of a society like that of the Society for the Diffusion of Useful Knowledge. Should there, however, be no intention on the part of the committee to proceed with this work, the very least that they can do is to offer any subscriber to return his imperfect work, for which he shall be repaid on its receipt at the society's publishers.

The independent course pursued by THE CRITIC will, I am convinced, insure the insertion of this letter from a constant subscriber. I am, Sir, your obedient servant,

L. L. H.

P.S.—Allow me to point out an error in pp. 342, 343 of THE CRITIC, which has been copied from the *Gentleman's Magazine*. The memoir of Mr. Mitchell was not borrowed from the *Quarterly Review*, but from the *Classical Museum*, vol. iii. p. 213.

TO THE EDITOR OF THE CRITIC.

SIR,—I took leave some time since to suggest that you should state your advertising terms, and that they should be on a moderate scale, in order that you might *double* or *treble* your advertisements. I am glad to see an increase of advertisements in the modern class of books, and hope to find that followed by those of the "olden time." THE CRITIC is read with increased interest in these parts. We are gratified by your notices of such sales as the library of the Duke of Sussex, and we rejoice to hear that there are still purchasers of the labours of WILLIAM CAXTON. Your account of the Booksellers' Provident Retreat was quite a *treat* to us, but what may we not expect when we have such men as DICKENS and DICKENSON among us. We know many of those worthy bibliopolists contributors to and receivers from the fund, whose ancestors have

Pored
Upon a huge romantic tome,
Imprinted at the antique dome
Of Caxton or De Worde.

We trust that the antiques and the moderns may unite for the benefit of all. I am, Sir, yours obediently,

Brighton, Sept. 6. ANTIQUARIUS.

LITERARY INTELLIGENCE.

THE TOMB OF CHAUCER.

PUBLIC attention has been invited, through a letter in the *Times* of Saturday, to the dilapidated condition of the tomb of CHAUCER in Westminster Abbey. It appears that such is its present condition, that it is only by means of a tracing in chalk over the letters that the inscription can be deciphered. Sharing equally with the writer the wish that something should be done towards renovating the present monument, or procuring a new one, we gladly give place to some of his remarks, in the hope that eventually the subject will be taken up by persons of leisure and influence, and that the name of the Father of English Poetry will still hang upon the walls of the Minster, as it has a place in the hearts of all who set a value on British Literature.

"Few persons are aware," says the writer, "when loitering through Poets'-corner, that they are treading over the ashes of one whose memory ought to be respected by all his countrymen; and foreigners visiting England must feel surprise in viewing the ruinous appearance of the grave of our oldest English poet. Were the tomb only repaired in some degree, that is, cleaned, and a slab of marble inserted in the wall, with the old inscription, which is extant, cut neatly upon it, this would be something, and might be done at but a trifling cost. Many would subscribe to such a good work, and if it were done publicly, more than enough would soon be raised. The shilling of the admiring peasant or artisan should be accepted for such a purpose with the larger donation of the more affluent, but still poet-loving individual.

"The tomb of Edmund Spenser was restored by private subscription in 1778. Shall we feel less alive than our forefathers seventy years ago, to the claims which these fathers of verse have upon our loving and respectful memory? The tomb of the great father of poetry was erected by N. Brigham, who, in the year 1556, 'in the name of the Muses,' placed the present inscription (now by the hand of all-devouring time rendered almost illegible). Let us then entertain a hope that very shortly, in these days of light and knowledge, some respect will be shewn to the mighty dead, and that the author of the *Canterbury Tales* will not be suffered to lie in a spot unmarked, and with scarcely his name discernible, except to some inquiring antiquary. Let us in this imitate the excellent feelings of our continental neighbours, who treasure up with the most sacred love the tombs, inscriptions, &c. relating to their poets and statesmen. Let us then be able, when walking through the beautiful Minster, to point our children to the place where repose the ashes of our great English poet, whose lovely tale of the patience of Griselda has often drawn tears from our eyes."

We should rejoice to see a subscription raised as suggested by the correspondent of the *Times*, and would give such a movement all the assistance it may be in our power to render.

SALE OF RARE AND COSTLY BOOKS—THE MOST SPLENDID MISSAL IN ENGLAND.—A sale by auction held a short time since, by Messrs. Evans, the well-known book auctioneers of Bond-street, of a portion of the library of a nobleman, consisting of many rare and curious books. The sale excited an unusual degree of interest, in consequence of there being included in the sale one of the most splendid missals extant, with other books of costly value. It was entitled "Officium Christeferæ Virginis Mariæ secundum Usum Ecclesiæ Parisienses," a manuscript of the sixteenth century, in vellum. This most beautiful volume is written in Roman characters, the paintings being most exquisitely finished, and the borders ornamented in the best style, with the devices and the mottoes of the family for whom it was executed. This *bijou* formerly belonged to Mr. Edwards, and was by far the most elegant and delicate of the illuminated offices he was ever able to procure. Dr. Dibden has given a very elaborate description of this gem, which is also noticed by Decameron, vol. i. p. 180-1, as matchless. The bidding for this rare gem was most spirited, and eventually it was knocked down for 135*l.* to Mr. Rodd, as was understood, for the British Museum. The Pentateuch (Tindal's version), newly corrected and amended by W. T. The last leaf inlaid, but a very fine copy, with plates, 1534, extremely rare, sold for the large sum of 121*l.* The Psalter, translated into English metre by Archbishop Parker, very rare, imprinted by J. Day, 1557, sold for 20*l.* The New Testament, in Englyshe and in Latin of Erasmus, imprynted by W. Powell, 1549, sold for 40*l.* The sale lasted three days, and realized a large sum of money.

THE GRAVE OF SIR WALTER SCOTT.—We are happy to learn that a monument at Dryburgh Abbey, to the memory of Sir Walter Scott, will be immediately commenced. Various obstructions and delays have occurred to interfere with this pious and patriotic duty, contemplated shortly after the death of the great minstrel. Sir Francis Chantrey had promised a design, but died ere he carried his intention into effect. Mr. Allan Cunningham, the friend and assistant of Chantrey, knowing what was proposed, drew a sketch of a monument; and it is a melancholy and interesting fact, that the last letter ever penned by "honest Allan" was one transmitting this sketch to Mr. Cadell, Edinburgh. The same day that he sent off his design for the tomb of Scott, Mr. Cunningham suddenly died, and followed his illustrious friends, the poet and the sculptor, to the grave. After a delay of thirteen years, the original object, however, will be attained, and beautiful as is the poet's tomb at St. Mary's Isle (where nature has decorated the Gothic ruins with a profuse and picturesque variety of foliage, and the murmurs of the Tweed are heard in the distance), the spot will be rendered still more impressive by this external commemoration, the offering of gratitude and affection, combined with those higher and more solemn feelings which consecrate the grave of genius.—*Inverness Courier.*

A correspondent informs us that the Rev. Doctor Joseph Wolff has taken up his residence at Malines, and has accepted the chaplaincy of the English Protestant Chapel there.—*Brussels Gazette.*

REGISTER OF NEW PUBLICATIONS,

From Sept. 6 to Sept. 13.

NOTICE TO BOOKSELLERS.

A Register lies at THE CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* THE CRITIC, *and no charge will be made either for registration or for publication in* THE CRITIC. *Particulars forwarded* by letter *will be duly inserted.*

Vols. I. III. IV. and VI. History of Modern Europe, in letters from a nobleman to his son.
All the Vols. of Dobb's Universal History, exclusive of Vols. VII. and VIII.
Affection's Gift to a Beloved Godchild.
Treasures of Thought.
Manual of Astronomy.

GLEANINGS.

ORIGINAL AND SELECT.

PRESENT FROM THE EMPEROR OF RUSSIA.—Through the medium of the Russian Ambassador, Baron Brunow, his Imperial Majesty has recently sent to Mr. W. Snow Harris, of Plymouth, a handsome porcelain vase, in token of the great estimation his Majesty entertains of Mr. Harris's ability in the construction of lightning conductors for shipping. The vase is a superior specimen of Russian skill, and is reported to have been made in a native manufactory under the especial care of the Royal Family. It stands twenty inches high, and is nineteen inches diameter at the mouth. The body is of a very rich blue; the base is of burnished gold, and bears the following inscription:—

To W. Snow Harris, esq.
From H.I.M. Nicholas Pawlowitch,
Emperor of all the Russias,
January, 1845.

The pedestal is of burnished gold and blue; the bowl and handles of elaborately figured burnished and dead gold, tastefully mingled; and on one side of the body, between the handles, is a very clever and appropriate marine painting, representing in the centre a ship in full sail, on the left a landing-place, and to the right fishing-boats, &c. The execution of the painting shews the advance of art in the north. The selection of this specimen of native Russian skill, as a fitting compliment for the acknowledgment of English talent, is highly creditable to the taste and discrimination of the Emperor of Russia, and must be most gratifying to the feelings of our ingenious countryman.

ROMAN ANTIQUITIES.—The journals mention the discovery of a Roman theatre and temple, and many coins, vases, images, Samian vessels, &c. of much antiquarian interest, in the department of Nievre.

A STRONG BREEZE AMONG THE HOLY FRIARS.—A student belonging to the Convent of St. Augustine (one of the wealthiest monasteries) was sentenced last week to two months' imprisonment, by the Judicial Court of Police, for having given a severe thrashing to the prior or abbot of his convent. It is fortunate for the culprit it did not happen in a country where the convents exercise their own jurisdiction, otherwise he would have fared much worse.

READERS.—Coleridge divided readers into four classes; the first compared to an hour-glass, their reading being as the sand, it runs in and runs out, and leaves not a vestige behind. A second class, he said, resembled a sponge, which imbibes every thing, and returns it in nearly the same state, only a little dirtier. A third class he likened to a jelly-bag, which allows all that is pure to pass away, and retains only the refuse and the dregs. The fourth class he compared to the diamond miners in Golconda, who, casting aside all that is worthless, preserve only the pure gem.

To Readers and Correspondents.

J. A. (Subscription Library), Accrington.—*We should recommend as the best for the purpose "Knight's Pictorial History of England."*
A Reader of THE CRITIC.—*We are unable to give the required information. Astrology is a subject quite without the limits of our reading.*
E. C.—*We agree with our correspondent as to the indelicacy and coarseness of the extracts he has taken from the last number of the* Athenæum; *but in his zeal to hold up for censure the improprieties he points out, he has overlooked the fact that, by the insertion of his letter containing the indelicacies, we should ourselves give currency to what is objectionable and in the worst taste, and therefore guilty of the offence he condemns in the* Athenæum.

ADVERTISEMENTS.

THE GREAT GERMAN ROMANCE!

Just Published, price 1s. 6d. Part 78 of "The Novel Newspaper," containing a translation (from the original German) of

THE JEW.—A Romance of the Fifteenth Century. By C. SPINDLER, author of "The Invalide," &c.—"The peculiar situation of the Jews at this period is clearly portrayed in this interesting work, which abounds with incidents and characters amply sufficient to set up five common novelists in their trade."

Lately published in "The Novel Newspaper," uniform with the above,

THE INVALIDE; or, Pictures of the French Revolution. By the author of "The Jew." Complete, price 1s. 4d.

THE ROSE OF THISTLE ISLE. By Mrs. CARLEN. Complete, 1s. 4d.

THE SALAMANDER, a Naval Romance. By EUGENE SUE. Complete, 9d.

The NOVEL NEWSPAPER SERIES is published in Parts, 8vo. each containing one or more complete works, without the slightest abridgment, and forms a Standard Library Edition of the most popular Novels, Romances, and Tales, by the most esteemed authors giving for One Shilling Works originally published at a Guinea-and-a-half!

The series now extends to 78 parts, and includes the best productions of the most distinguished British, American, and Continental writers. Amongst the former will be found the *chefs-d'œuvres* of Scott, Goldsmith, Defoe, Smollett, Godwin, Mackenzie, Miss Porter, Mrs. Brunton, Miss Lee, Mrs. Radcliffe, Mrs. Helme, Mrs. Charlotte Smith, &c.; and amongst the latter, those of Cooper, Carlen, Bird, Dana, Brockden, Brown, Clavers, Fay, Fouqué, Hoffman, Kennedy, Longfellow, Marmontel, Neale, Paulding, Sedgwick, Simms, Spindler, Sue, Thompson-Tuckerman, Willis, &c.

Each work is complete in a neat wrapper, at prices varying from 6d. to 1s. 6d. each. Parts 1 to 77 may also be had in 17 vols. handsomely bound in cloth, 5s. per volume. Catalogues forwarded, on receipt of a postage stamp, to any part of the kingdom.

COOPER'S NOVELS, complete in One Volume, handsomely bound in cloth, price 8s. 6d.

The Pilot,	Last of the Mohicans,	Red Rover,
The Spy,	Lionel Lincoln,	Water Witch,
The Pioneers,	The Prairie,	Imagination.

Printed from the original text, and without the slightest abridgment.

London: Bruce and Wyld, 84, Farringdon-street; Watson, Edinburgh; Macleod, Glasgow; Le Messurier, Dublin; Philip, Liverpool; Heywood, Manchester; and sold by all Booksellers.

BORROW a RAZOR!!! "Go a borrowing, go a sorrowing," is an old lady's adage, and may be true with reference to gold or silver, but it is not true as regards Steel Razors, and ought not to influence gentlemen, either young or old.

The DIAMOND-EDGE UNPOLISHED RAZORS* at 2s., 2s. 6d.; and ivory 3s. 6d. each; and JOHN TEETGEN'S LONDON RAZOR STROP (Philosophical) of 1845, at 1s. to 6s. each, are submitted for trial on LOAN. The proprietor,

JOHN TEETGEN, 10, OPPOSITE BISHOPSGATE CHURCH,

hopes that this offer will be embraced by all who do not shave as they can and should do, viz. quite clean, and with a sense of pleasurable relief; those who from painful experience may be doubtful of this being effected, are entreated to give J. T. the benefit of the doubt; try his Razors, be astonished and delighted.

The RAMBLER POCKET DRESSING CASE, 7 inches long, 3½ wide, and 1¼ deep, contains Strop, Razor, and Comb; Tooth, Nail, Shaving, and Hair Brushes. 15s. 4d. complete.

* Made by bonded contract (20 years) solely for J. T. Beware of imitations!—There are some!

THE CRITIC,
And Journal of Literature.

SATURDAY, SEPTEMBER 20, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

JOURNAL OF ENGLISH LITERATURE.

BIOGRAPHY.

Letters of the Marchioness Broglio Solari, one of the Maids of Honour to the Princess Lamballe, containing a Sketch of her Life and Recollections of celebrated Characters. London, 1845. Pickering.

THESE letters form a disjointed and imperfect autobiography of the lady whose name they bear. On sitting down to them, misled by her statement *in the introduction* that she had lived much in the society of the most illustrious statesmen and diplomatists of Europe, whom she names, we thought that, with the opportunities she professes to have enjoyed, she had gathered a variety of useful and valuable matter, and that we might even hope for something of historical value from her pen. Our disappointment in this particular was complete; for there is scarcely a single paragraph of worth concerning them or the times they moved in; and the little that incidentally relates to them is unauthentic, and may only be relied on so far as it is corroborated by other evidence.

It is to *herself* these letters are mainly devoted; and the vicissitudes of her life, her adventures, and the scenes in which she mingled, rival in strangeness and variety those of Miss Cunigund and the old woman—the pope's daughter, in that text-book of optimists, *Candide* by VOLTAIRE. The Marchioness was the daughter of GEORGE AUGUSTUS HYDE (a son of Lord HYDE CLARENDON, by a Polish Princess named SCHAVORINSKA) and the Countess BRANIZKY, sister to STANISLAUS PONIATOWSKI, King of Poland. Mr. HYDE was then resident at the court of AUGUSTUS III. and carried on an illicit amour with the Countess BRANIZKY, who, in the event of a divorce from her husband, had promised to marry him. This ended in the Countess leaving her country on the excuse of ill health, and coming to London, where she was delivered of a daughter—the writer of the letters—who was privately baptized by one PLUNKET, an Irish priest, then a dependant of the Duke of NORFOLK, and placed in the charge of a Polish Jew, named HYAMS, whose wife had an infant of the same age. On the return of the Countess to Poland, she found Mr. HYDE had been assassinated; and for some unaccountable reason we are told that the Countess was never afterwards able to obtain any direct knowledge of the child she had left in England.

The Jew in whose hands our authoress had been placed, finding his wife sickly, sent her infant and the subject of this memoir away to be suckled. The Jew's child died, "and the mother not being at that time in a state to receive the news of her loss, and having requested that her child might be brought to her, the nurse (by the Jew's order) produced the infant of the countess," and presented it to her as her own; nor did HYAMS ever undeceive his wife (who went to the grave in the belief that it was her own child she had nursed), or inform the authoress herself of it till a few months previous to his death.

While living with the Jew as his daughter, the future marchioness had the good fortune to secure, by her musical abilities, the patronage of Lady MARY DUNCAN, who induced some noblemen, among whom was the Duke of NORFOLK, to contribute to her education. The duke sent her to France, where she embraced the Catholic religion. Being a pupil of SACCHINI'S, the musician, proud of her talents, introduced her to the ill-fated Princess LAMBALLE, with whom, in after-years, she became on the most intimate terms. SACCHINI next brought to her an Englishman named PLOMER, a handsome, captivating man, who passed much of his time with *Egalité* ORLEANS and other profligate French noblemen. With this *hopeful*, who afterwards proved a complete adventurer, she fell violently in love; and, at the very time when she well knew the good Princess LAMBALLE was meditating how to provide for her, she planned a secret marriage, and eloped with him from the convent in which she had been placed. The ceremony was performed in the convent, in the presence, we are told, of two persons, whose names are unknown, and whom she never saw before nor since! So much for the proof of this marriage! Here commence her troubles. Up to this time the world had been all sunshine for her; thenceforward she had to endure its frowns.

The marriage proved an unhappy one. The husband, who had represented himself as the son of a member of the English Parliament, turned out a liar and impostor, and the duped wife at length "determined to leave him and come to England, as the idea of returning to Paris chilled her very soul with self-reproach." To enable herself to do this, she went to a jeweller's, intending to dispose of her diamonds, but found to her chagrin that her husband had forestalled her by selling to this very jeweller the diamonds, and replacing them with false ones. We transcribe her own remarks on this occasion:—

Judge, my dear friend, what must have been my sensations on such a discovery! after what I had suffered, and the forlorn situation I was then in; in an unknown world—unprotected—without friends; a wife without a husband—a mother, childless; and all my capital *a box of false jewels!* A pretty capital to begin the world with! The feelings of my mind can be much better felt than described; and even *now*, after so many years, I cannot look back but with horror on the conduct of him who precipitated me into an unfathomable sea of misfortunes. How I envied the stars in the sky—the feathered creation—the fishes under water—the worms in the earth, as they in a certain degree were not subjected to human depravity. * * My husband endeavoured to make every atonement (as far as words could admit of) for what had passed, with a most sacred promise that "if I would return to live with him, and forget the wrongs he had caused me to suffer, his future life should bespeak his gratitude." I could only reply with my tears, and they did not flow sufficiently to relieve the anguish of my heart; but the situation I then found myself likely to be exposed to, from the cruel circumstances my own folly had thrown me into, without a friend in whom I could confide (having never received any answer to the letters I had written to my supposed parents), had so powerful an influence on my mind, that I complied with his wishes, and as soon as I was able to bear the motion of the sea, we returned to France.

Shortly after this rupture and reconcilement, PLOMER abandoned her in childbed, friendless and destitute of resources, in an obscure village; and it subsequently turned out that he had been previously married to a woman by whom he had a family, and who harassed him by continual demands for money. Upon her recovery, after experiencing the most humane and considerate treatment of the people of the village, she found that a gold chain and diamond ring, which had been given her by her benefactress, the Princess LAMBALLE, formed all the valuables she had in the world; these she converted into money, which enabled her to reach London, where, after an introduction to Dr. ARNOLD, she was engaged by COLMAN the Elder as an actress at the Haymarket Theatre. Her first appearance on the stage was as *Euphrosyne* in MILTON'S *Comus*, and her success so great that she was sought and engaged by DALY, the manager of the Dublin Theatre, to appear on the Irish stage. This man fell in love with her, and because she thwarted his inclinations, did all he could to harass and annoy her. She tells of him the following anecdote:—

THE MANAGER AND THE ACTOR.

There was the part of a Roman senator in a play that was to be performed. The actor came to the rehearsal in a little bob wig, and had to shew the hairdresser how to make him another like it. He went into the wardrobe to order also a tunic, and the tailor not understanding him, he informed him it was "something like a petticoat." Mr. Daly coming in, and overhearing the order given, exclaimed, "What, Sir, do you mean to *revolution* Dublin by coming on the stage in a petticoat and a blackamoor's hat? I *insist*, Sir, on your putting on a rich embroidered suit of velvet, and a full-bottomed powdered wig."—"That's the senator's dress, Sir," replied the actor; "there were no such dresses worn at the time of the Romans."—"So much the worse," said Daly; "and besides, what's that to *me?* I am the manager, Sir, and ought to know best how to dress my actors as I think proper. Do you hear that, Sir?"—"Yes,

Sir, I do; but there is also another circumstance which it is necessary to observe, that as I am to enter Rome in triumph—" "And who hinders you? Why, Sir, you think yourself in one of the little towns in England. I am the manager of all the theatres out of his Majesty's dominions in Ireland."—"Yes, Sir," said the actor, "I don't doubt all you say; but it will also be necessary that you should order the painter to prepare the scene of the Capitol."—"Why, Sir, are you not in the *capital* of Ireland, Sir?"—"Yes, Sir; but if every thing is not in character—"—"Take care that you know *your character* to-morrow night, that's what I wish; that the bottles of whisky may not fly about your ears and ruin my velvet suit the night of your performance."

Being released from her Irish engagement, she returned to London, having met during her stay in Dublin, the Irish friar who had married her. He informed her that the Princess Lamballe was daily expectvd in England; and a few weeks afterwards our authoress joined her benefactress, the princess, at Bath. By the latter it would saem she was intrusted with a mission to the royal family of France, then beset by the wretches who eventually murdered them, which she faithfully executed. After describing the scenes in which she took part up to this period, her letters break off suddenly, and the sequel of her history is supplied by the editor of the work; it is briefly as follows:

From various documents in the possession of a friend, it appears that she rendered some important services to the royal family at Paris during the revolution in 1791. She had offered to watch (with her servant) the apartment of the Princess Lamballe in the Pavilion of Flora (into which combustibles had been thrown), to discover, if possible, the perpetrators of this outrage; and whilst the princess was expressing her fears of allowing her to be engaged in a service so dangerous, a crowd of ruffians rushed into the apartment, and the marchioness received a wound in the hand from a sabre, in warding off a blow aimed at her head. She fainted, and was conveyed to the upper part of the palace, and afterwards sent off to England, but was ere long recalled to Paris, where she was an eye-witness of many of the revolutionary meetings and scenes of horror, an account of which she afterwards published. The unhappy queen, Marie-Antoinette, intrusted her with letters, to be delivered to various members of her own family, resident at different continental courts. Before her departure, she kissed the queen's hands, and that of the Princess Elizabeth, and received their blessing and good wishes. This was her last interview with the royal family.

When the queen and the Princess Elizabeth had quitted the apartment, the Princess Lamballe, who remained with the marchioness, said, "Now we are alone, I will tell you what her Majesty has commanded me to signify to you in her name; that *you are provided for for life*, and that she intends appointing you to the first vacancy which shall occur at court. In this mission you are not to write to any one. No one is to be made acquainted with your object. You are not to leave Paris in your own carriage. I am also directed by her Majesty to place on your neck this watch." This was a beautiful gold watch, with chain and seals. The Princess Lamballe also presented her with a beautiful pocket-book, the covers of which were of gold enamelled, with the word "Souvenir," in diamonds, on one side, and the princess's own initials. The names of her Majesty and the Princess Elizabeth were written on the first page, in their own handwriting. It contained also a cheque on a banker at Milan. The marchioness started on this mission August 2, 1792. On reaching Naples, she heard of the fate of the royal family, and the murder of the Princess Lamballe; and knowing that she had now lost every thing she possessed through the liberality of the unfortunate queen and princess, and that she could be of no further service to them, she did not return to France till after her second marriage with the Marquis Solari, several years afterwards. The letters of introduction given to her by the royal family, and the confidential position in which she had been placed, gained her many friends; and, by occasionally getting up concerts, &c. which were patronized by the nobility, she obtained a respectable income for some years. While at Venice, she became acquainted with the family of the Marquis Solari, a Venetian (father of her second husband), who treated her as one of his own family; and, when about forty-four years of age, became the wife of his son, Anthony Broglio Solari, being married at Venice, October 2nd, 1799, and lived with him at Venice, and his country-seat at Treviso, as she states, "in ease and splendour for many years," the marquis having a handsome income, and holding a lucrative situation under the Venetian government, which he long enjoyed, until the downfal of that government. He is described as "a highly talented man, of very portly figure, rather above the common height;" and appears to have been strongly attached to her, and she always spoke of him most affectionately. With him, in his official capacity as ambassador from Venice, she was presented to most of the courts of Europe. At length, Napoleon Buonaparte (under whom also the marquis held some office) upset the Venetian Republic, and suspecting the Solaris of corresponding with some influential characters in England, deposed the marquis, confiscated his property about the year 1812, and afterwards banished the marchioness from Venice, and she was obliged to become a teacher in languages and music, in both of which she excelled. The marquis died in great poverty at Venice in 1828; Napoleon having, amongst other depredations, seized the funds of the Venetian post-office (in which the marquis had a large sum invested), which was not a government concern, but a private chartered company, called "Veneta Carreria," or the "Company of Venetian Couriers," in which shares were bought and sold. The marchioness ultimately succeeded (after the death of her husband, through repeated petitions, and the kind intercession of Prince Esterhazy) in obtaining from Austria a pension of about 3s. per diem, and returned to England in January, 1820, being shipwrecked in the port of Boulogne. On her arrival in London, she took a residence in Air-street, Piccadilly, and, after a short time commenced again giving lessons in music and languages, and thus supported herself, with trifling remittances from her husband (who never came to England), which of course ceased at his death. She resided in different parts of London till her decease (with the exception of a visit to some relations in America, in 1835 and 1836), being greatly assisted by kind friends, presents having been made her by the queen and many of the nobility,—and employed herself of late years principally in writing and reading, being in the habit of noting down her opinions on politics, and whatever came under her notice.

She quietly breathed her last on Sunday morning, 7th of January, 1844, at a very advanced age.

Such is the eventful history of the Marchioness Broglio Solari.

Now that she is dead, and her ear cannot be shocked with the undisguised truth—for truth, though wholesome, is often unwelcome—we do not scruple to say that she was a woman of great weaknesses and inordinate vanity; one who supposed herself of far greater consequence than she really was. During the early part of her life she appears to have acted wholly from impulse, and dearly did she pay for the experience her thoughtlessness procured her. In her old age her sin of exaggeration appears to have grown and strengthened; her delight has been to dwell upon the past, to magnify its events, and heighten its colouring. The marchioness has drawn herself in *profile* instead of full feature; nor is the outline always clear. There is so much of mystery, such an air of improbability, and such an evident distortion of facts throughout her narrative, that small reliance can be placed on the best of it. We copy one or two anecdotes she has given us of distinguished individuals with whom she has conversed.

CANOVA.

Canova having been commissioned by an English nobleman to make a statue like the "Hebe," which he had just finished, the block from which he had chiselled the same was of a most beautiful piece of Grecian marble, *white* as the snow itself, until he had chiselled one of the legs, when, behold! a *large black vein* unexpectedly made its appearance (which naturally very much diminished both its value and beauty), forming something like a garter below the knee, or, as if the leg had been broken. Canova (not for the value of the price of the statue, being naturally very disinterested, but having been limited to time as to the delivery of the same) felt so *completely mortified* that he left his study, and, as we were upon very friendly terms, came to breakfast, where he found us engaged in a musical morning party, with the late beautiful Duchess of L——, &c. When the concert and refreshments were over, he invited our party to visit his study, which was a treat not generally granted, in which were a considerable number of ancient Grecian female statues, most of which had either collars, beads, or a kind of string round their necks. He accounted for this by saying, that most of these statues had been originally deprived of their heads, which (when the Romans conquered Greece) had been *sawed off*, and those of their empresses, mothers, daughters, and other relatives placed in their stead, as a mark of respect and veneration to their own kindred, and to cover the joined heads, the statuaries had thought proper to hide the same, by putting on the above ornaments; consequently we *have* seen "modern heads upon ancient shoulders."

Canova when at Vienna, and in the zenith of his celebrity, courted and fêted by all distinguished for birth, rank, or talent, being one day at Prince Rezzonico's, was asked why he appeared so low-spirited; "I do not know," said he, "what is the reason; but when I am in my *studio* at Rome, working all day long, with my paper cap on my head, and my apron round my waist, I

feel my lungs expand, my heart at ease, my spirits light as air, and my vigour increased by contemplating the surrounding objects. These delicious sensations keep the body and mind in harmony with each other. Since I have been here, though I have certainly met with nothing but what has been calculated to flatter, in the highest degree, my *amour propre*, I am nevertheless like the unfruitful soil of the north, sterile in genius, in health, and in spirits, and feel as if I had the seven mortal sins on my shoulders."

The following is her description of TALLEYRAND, that prince of diplomatists, who, under three dynasties and through the Revolution, continued with admirable tact to preserve his head, while those of his compeers fell thick and fast around him :—

The Catholic ex-bishop of Antun is now acknowledged a French dubbed prince by the revolutionary sword, and confirmed by the manarchical sword of justice, which too often is raised *over* the head, instead of *taking off*, to purify a polluted body; however, it will not be unacceptable to readers to form their own judgment on the *real* character of such men in office, from the following anecdote :—

After having been the most humble slave of democracy, under the banners of the Directory, and the complete tool of Barras, when the Pope was present at one of the private fêtes given by Napoleon at the Thuilleries, this *most holy* ex-bishop, in the presence of all the company, threw himself at the feet of Pius XII. and there remaining, *kissing his feet* (to the great amusement and edification of the Imperial Court) for more than twenty minutes. Is not this a man of "all trades," and perfectly calculated to serve as a model for the credulous !

* * * * *

"*Weathercocks*" are time and tide serving beings. I like to see every man in his station. The priest at the altar, and the lawyer at the bar.

Mother Church has produced *many* statesmen, but *few*, very few, *fit* for the state. The one I mention here is, however, an exception to the general rule.

Talleyrand's mother was the queen's (Marie Antoinette) chambermaid. The Duke of Orleans (Egalité) said aloud while he (Talleyrand) was kneeling in prayer (when Bishop of Antun) "Maurice, don't do that, or you'll make me laugh at your hypocrisy."

Talleyrand having requested some favour at Court of Madame de Staël, which was granted, he, in return, procured an order for her banishment from France.

Here we take our leave of a book, which though it may afford some amusement, in consequence of its defect in the evidence of authenticity, we cannot recommend to our readers.

FICTION.

The Ruling Passion. A Novel. London, 1845. Newby. THE novel reader of the present day, who is familiar also with the fictions of the early part of the eighteenth century, when RICHARDSON, FIELDING, and SMOLLETT gave to the world their entertaining works, must frequently contrast the merits of the modern against the older writers, and lament that the comparison is greatly in disfavour of the authors in our own times. From the period of DE FOE down to MACKENZIE, it was considered essential to have an ingeniously reticulated plot, abundance of incident, a free transfusion of passion, some humour, some pathos, and, throughout, a careful and close imitation of the colouring of nature. The result of this has been, that—as man is always the same, fashion only varying—their works, reflecting truthfully the human heart, will survive and be read with interest so long as English literature shall exist. To construct a novel such as theirs, is obviously a work of time, and of no small labour; hence FIELDING, the most industrious and prolific of this class of writers, produced, at most, not more than seven during a life devoted to the pen. Your modern novelist, however, despises the observances thought indispensable by his predecessors; his genius will not be restrained by such inconveniences; a flimsy plot, a sprinkling of weak sentiment, a few smart dialogues, and an affectation of fashion suffice him, and he throws off his novels by twos and threes in a season. And where lies the sin of this? Where, indeed, but in the public? Were the literary taste but controllable—could it be directed to other and better channels—we should have fewer, indeed, but far better novels (which is what we wish) than have of late years issued from the press. The novel before us is not one we can recommend. The most we can say in its favour is that it is "well got-up." If the author had any share in this, he is welcome to divide the honour with his publisher. Certainly he has failed most signally in his own department. His story is weak and pointless; his dialogue deficient in spirit; his portraiture of character unmarked; there is neither satire nor sagacity in his remarks, and his attempts at the sentimental and reflective are almost always ridiculous. To give an outline of the story would be to profitlessly encumber our columns. We extract, however, a passage selected at random, which will corroborate what we have said of the reflective portions of the novel—a finer specimen of rigmarole, and the would-be-fine, we have met with nowhere but in this work.

Which of all our bounded earthly feelings (except the sublimer virtue of patriotism) is so rare as friendship—true friendship? for truly in the whole circle of human merits, there is not one that must not be ready to welcome and wait upon it ere it deigns to take up its residence in the heart. More unalloyed, more disinterested, are its gifts than even those of its fairer sister. Yes, while pains and torments, and all extreme sentiments are the unresting boasts of love-soothing sympathy, and calm are the joys of friendship—and the congeniality so indispensable, and so wonderfully distinguishing it from love. Hence the proverb, "that you shall know a man by his particular friend;" but how misguiding would be such conclusions applied to love's wild vagaries? Where shall we see ought so incongruous as the compacts of that motley court—the sagest delighting to choose the silliest—the refined linked to all that is coarse—the aspiring soul sighing its adoration to all that is humblest in intellect—but the little deity is infantine and blind, and the blindness is oftener in the mind than in the eyes. Yet is true friendship as exclusive as true love. Like Timon of Athens, the man who flatters himself upon a number of friends will find he has embraced only shadows. "A friend loveth at all times," saith the wise man, inferring the singleness of the gift. The son of Sirach recommends "but one counsellor of a thousand"—and the wisest inspired author that ever bequeathed the treasury of his thoughts to an astonished world, gives the same advice in the words of the Countess of Roussillon to her son, "Love all—trust a few—keep thy friend under thine own life's key." Flimsy natures sporting in the world's sunshine may rejoice in the delusion of a troop of friends; the test that would undeceive them may never come—their connecting bond being the balance of power to give and to receive; they glance not beyond the contracted pale that environs self—out upon such an usurpation of friendships's sacred name! Its gift is guided by desert.

At the close of the *first* chapter the author, withholding a description of Dora's former residence, the Woodlands, for the commencement of the *second*, tells the reader he must "be patient—patient—should he have proceeded thus far; but he will find that virtue still heavier taxed should he chance to pursue the narrative." There is more of sly meaning and truth in this than in any remark making pretensions to originality in the novel.

POETRY.

German Ballads, Songs, &c. London, 1845. Burns. Is there any reader of THE CRITIC going a journey by sea or land; is there any who at home would relax from the anxieties and harassments of business, and drink a refreshing draught from the fountain of beauty, let him lay out half-a-crown in the charming little volume before us. This forms one of Mr. BURNS's admirable series, "The Fireside Library;" an undertaking which, so far as it has gone, is calculated to effect more real and lasting good than all the books issued by the Society for the Diffusion of Useful Knowledge during the past ten years. It is copiously illustrated with superior woodcuts, from finely-conceived designs by our best artists. The poetry consists of translations from SCHILLER, UHLAND, BURGER, GOETHE, KORNER, FOUQUE, BECKER, CHAMISSO, and others, with some original contributions. Among the former we may specify "The Diver" "My Father-land," "Fridolin," "The Wild Huntsman," "The Fight with the Dragon," "The Lyre and the Sword;" all of which are respectably, and most of them cleverly, rendered into English verse. Most of them are newly executed. The translation of SCHILLER's spirited and graphic poem, "The Diver," is inferior to that by Sir BULWER LYTTON, so well known through the medium of *Blackwood's Magazine*. If this be feebler

than it should be, that of "Fridolin" is the happiest we have yet seen; nor is the translation of the "Fight with the Dragon," that stirring and exquisite poem! surpassed by any in our language.

The space available in this number does not admit of our indulging as freely in extract from this entertaining little volume as its merits would justify; we must, however, make room for a sweet poem by UHLAND (with whose works British readers are less familiar than they ought to be), which is replete with choicely selected and natural imagery, of a touching sentiment and a mournful beauty.

THE MOWER'S MAIDEN.

"Good morrow to thee, Mary! right early art thou laden!
Love hath not made thee slothful, thou true and steadfast maiden!
Ay, if in three brief days, methinks, thy task of work be done,
I shall no longer have the heart to part thee from my son."

It was a wealthy farmer spake, it was a maiden listened:
Oh, how her loving bosom swelled, and how her full eye glistened!
New life is in her limbs, her hand outdoes her comrades all,
See how she wields the scythe, and see how fast the full crops fall!

And when the noon grows sultry, and the weary peasants wend
To sleep in pleasant thickets, and o'er cooling streams to bend;
Still are the humming-bees at work beneath that burning sky,
And Mary, diligent as they, works on unceasingly.

The sun hath sunk, the evening bell gives gentle summons home;
"Enough," her neighbours cry, "enough! come, Mary, prithee come!"
Shepherds, and flocks, and husbandmen, pass homeward through the dew,
But Mary only whets her scythe and goes to work anew.

And now the dews are thickening, the moon and stars are bright,
Sweet are the new-mown furrows, and sweet the songs of night;
But Mary lies not down to rest, and stands not still to hear,
The rustling of her ceaseless scythe is music to her ear.

Even thus from morn till evening, even thus from eve to morn,
She toils, by strong love nourished, by happy hope upborne;
Till when the third day's sun arose, the labour was complete,
And there stood Mary weeping, for joy so strange and sweet.

"Good morrow to thee, Mary! How now?—the task is done!
Lo, for such matchless industry, rich guerdon shall be won;
But for the wedding—nay indeed—my words were only jest;
How foolish and how credulous we find a lover's breast!"

He spake and went his way, and there the hapless maid stood still,
Her weary limbs they shook, they sank, her heart grew stiff and chill;
Speech, sense, and feeling, like a cloud, did from her spirit pass,
And there they found her lying upon the new-mown grass!

And thus a dumb and death-like life for years the maiden led,
A drop of fragrant honey was all her daily bread.
Oh, make her grave in pleasant shades, where softest flow'rets grow,
For such a loving heart as hers is seldom found below!

EDUCATION.

A History of England from the Invasion by the Romans to the Accession of Queen Victoria. By the Rev. GEORGE AYLIFFE POOLE. Vol. II. London, 1845. James Burns. THIS volume concludes the history undertaken by Mr. POOLE. Without making pretensions to extraordinary research or the presentment of new facts, this is a work we are justified in recommending as the cleverest and most succinct, though compressed, History of England that has been compiled for educational purposes since the time of GOLDSMITH.

RELIGION.

Memorials of Missionary Life in Nova Scotia. By CHARLES CHURCHILL, Wesleyan Missionary. London, 1845. Mason. THIS book is intended to convey to the subscribers to the Wesleyan Missionary Society some information concerning the localities, progress, and minutiæ of the missionary stations in Nova Scotia and its vicinity. It is the object of its author to contribute towards the collection of missionary "personal experiences" not only as to the state of district Wesleyan associations, but also as to remarkable instances of conversion, denominational piety, sectional zeal, and the like. These columns are very unfitted for the discussion of such matters, and therefore we forbear to say very much upon this head, or to quote at all from such portions of Mr. CHURCHILL'S Memorials as relate thereto. The members of the Wesleyan sect will find the religious anecdotes and events here recorded quite equal to the average of such "Recollections." One remark often made, but never satisfactorily answered, may be here repeated, namely, that the miraculous instances narrated by dissenting missionaries and ministers of special manifestations of the spirit, are nearly all the instances of young, weak-minded, excitable women. The world, including all who are not of the denomination to which such instances appertain, takes a note of so singular a fact, and draws its invariable conclusion accordingly. Mr. CHURCHILL'S note-book is no exception to the general rule; his saints, three or four in number, are young girls of hysterical, nervous, or poetical temperament, and their conduct and language is charged with a devotion of the most imaginative description. The other parts of the volume contain some statistics of the progress of the Wesleyan missions, which will be interesting to the subscribers, but uninteresting to the general reader, as well as some more readable accounts of what befel the author in his character of traveller rather than of missionary. One or two of these are worthy to be extracted. The first occurs in the course of a journey from Guysborough to Charlotte Town, the capital of Prince Edward's Island:—

The sun had now burst out with surprising strength, so that on the second day's journey the distant forests had a delicate shade of the lightest green, and on the following day they were sufficiently clothed to relieve the eye with a beautiful variety of shades, from the lightest to the deepest hue; while from every grove a thousand welcome notes of wild songsters seemed to join in chorus to say—"The winter is passed, the rains are over and gone, and the time of the singing of birds is come."

But it is not the singing of birds only—these digressions of ours are like concentric rings on the smooth lake, which even the dip of a swallow will occasion, each succeeding one leads wider from the centre, and so with us—the singing of birds reminds us of another transatlantic peculiarity, the music of the frogs. The term itself may perhaps provoke a smile, but still the frogs are worthy of the provincial designation they have obtained, they are the nightingales of Nova Scotia. I have heard them with all the variety of sounds, and the succession of cadences, so remarkable in the music of the Eolian harp—nor is there any thing overdrawn in this simile—the softness of the flageolet, and the shrillness and clearness of a whistle, might both be adduced as illustrations; but no language can convey a correct idea. Sometimes on approaching the swamp where the concert is held, if in a wheeled vehicle, when the noise of the wheels is heard, a chirp or two like the note of a bird is heard, and this operates as an alarm—in a moment all is still. Then if the auditor will stay his progress and listen, he will be amply repaid—one single note, with a vibration in the sound similar to that which would be produced by putting a small pea into a flageolet will be heard, low in tone, but distinct and musical, in a second or two this will be followed by a higher note, perfectly according in harmony, then another and another until you have successively solo, duet, trio, quartette, and full chorus. The deep hoarse note of the bull frog occasionally heard like the sound produced by twanging with the finger the thick string of the violoncello.

I shall again ask the indulgence of the reader while I refer to another matter, which properly belongs to this place, because its novelty at the time was connected with the same journey, and though not of the pleasing character, as a peculiarity, it is not less worthy of notice. I allude to the plague of the mosquito. On returning from Picton to Truro in the stage, after a weary day's journey, we arrived in the latter place late in the evening, and as our party occupied the whole vehicle, to avoid the necessity of hastening our journey in the heat of the day, we proposed to make a very early start the following morning; accordingly we were on our journey as early as half-past two A.M. It was a mild moist summer's morning, in the third week of June, and our conversation appeared to turn naturally upon the subject of mosquito invasion, for our road lay through a level swampy country, the very place for the insect's wildest ravages. One of our little company had been narrating his sufferings in Newfoundland on one occasion from the same cause, and his account had its effect upon me to make me dread

the impending storm, but in this instance my imagination had not outstripped the reality. As day dawned, the Philistines were upon us, our enemies were numerous and they were lively. I had never felt their sting before, but the recollection of that morning does not fade; had there been on their part as on ours, a simultaneous annual convention, surely we had arrived at the very time of business. For nearly six hours our conversation was restricted to notes of exclamation; cloud after cloud of the invaders entered the open stage; our hands were incessantly employed; our foreheads, faces, head and hands, every accessible part, was assailed without mercy; it was no bloodless war; putting our foes to flight was no conquest; neutrality was impossible, and we were compelled to the encounter until the violence of the attack abated on our reaching higher ground. Our friend from Newfoundland hesitated not to admit his former experience was imperfect, and I was so thoroughly tired, that I tied my head over with a handkerchief, and sank on the rough mail bags at our feet, to seek some relief in broken and disturbed slumbers.

One of the most interesting chapters in the book contains an account of the natural productions of the scene of the missionary's labours. After describing the immense plenty and variety of the summer wild fruits, he proceeds:—

It is almost impossible to form an estimate of the immense quantity of the common blueberry found in a favourable season; I have passed over barrens of vast extent, where thousands of acres would never be touched by the hand of the gatherer; in some parts of the province a day is set apart, a large party collected to go in company to gather the fruit, which, when gathered, is dried in the sun, and used through the winter as a substitute for the Zante currant, but without the pleasant flavour of that fruit; it has, however, a flavour peculiarly its own. In the township of Aylesford, there is a place called Carriboo Bog, apparently the residuum of a former lake, it is surrounded by the wild forest, and is computed to be a thousand acres in extent; this is a perfect level, and is entirely covered with the bushes which bear the blueberry. I have seen in this place, through which the post road directly runs, above one hundred vehicles of all descriptions in the road, and, I suppose, from three to four hundred persons dispersed through the bushes, gathering the fruit. They generally take with them materials for their dinner and tea, and spend the day upon the ground, returning to their homes in the evening loaded with the fruit. Similar excursions, though generally on a much smaller scale, are planned throughout the whole country, and it is to the lover of nature, and especially to those who "look from nature up to nature's God," an innocent and pleasant recreation.

The gathering of May flowers is an earlier task, which demands a moment's notice; it is one which supplies as rich a treat to the smell, as the other to the taste.

The May flower (*epigæa repens*) is to Nova Scotia what the rose is to England, and the shamrock to Ireland; it is its national, or rather its provincial emblem, and is, I believe, confined chiefly to this province, not being found either in Canada or the United States. Like the snowdrop in England, its modest and lovely flower is the first herald of winter's departure and the approach of spring. In the last week or two of April, visitors to sylvan scenes may be seen bringing home a few solitary specimens of the promised bouquet, but immediately after this, especially after the first warm rains of spring, they may be found in all wild lands, and being eagerly looked for by all, are seen as the general decoration of almost every parlour-table in the province. It is a beautiful small flower, most frequently white, but sometimes blushing through every intermediate shade, till it reaches the hue of the rose; it grows close to the ground; like the violet, it is covered almost with its own leaves, but may be detected almost by its rich perfume. It is not the only specimen of wild flower which surprised us with its odour, after all that has been written to prove that the feathered tribes of America are songless, and its flowers destitute of fragrance. The white water-lily (*nymphæa alba odorata*) is found on the fresh-water lakes in the month of September; these are about the size of the dahlia, equally full of petals, sitting on the surface of the water, surrounded by a corollary of green; and a very few of them suffice to fill a drawing-room with an odoriferous perfume.

We have space only for one more extract, containing a reminiscence of the last of the native Indian tribes.

The tribe now alone resident in the province is known as the Micmac Tribe, in number about two hundred and fifty families, or about one thousand souls. Their moral position is very different from that of many of their red brethren in Canada among the Chippeways, inasmuch as almost every attempt to improve their social and moral condition has failed; they are universally attached to the Roman Catholic form of religion externally, and this has either operated as a barrier, or effectually nullified the efforts if made, to bring them under the influence of experimental religion.

The endeavours which have been made among the Canadian tribes of Indians to improve their social condition have been very successful; whole villages being found in the western parts of that province, where they not only live in houses, and are under the influence of Christian principles, but are learning the useful arts, as well as becoming successfully acquainted with agricultural pursuits. It is not so in this province; in very few instances, indeed, have any attempts to induce them to forsake their nomade or wandering habits been successful. I remember in crossing Gold River, between Chester and Lunenburg, passing by a few cottages, surrounded by a small patch of cultivated ground; this was a small settlement of Indians, but the only instance I have heard of. They chiefly dwell in the common wigwam, the frame-work being made of a few poles disposed in a circular form, meeting at the top in a conical shape, and covered with birch bark. In the summer they remove to the neighbourhood of towns or villages, a number of wigwams form an encampment, generally on the borders of a stream, or the shores of a harbour, their canoes drawn upon the beach, their children basking in the sun. They earn a scanty subistence by weaving baskets, ingeniously inwrought with withs stained in different colours by dyes procured from native stores; these they offer for sale from house to house. In the winter they retire into the forest, where they sustain life through that inclement season chiefly by hunting and fishing, again to return in the spring, seeking charity from the white man, or offering ingenious manufactures for a small compensation. Only a few years back there were but few instances in which they were not the slaves of the accursed fire-waters, which they called backtawitch; miserable instances of their depraved habits in this respect, both among males and females, were continually falling before the observation of every passer-by in the public streets; but lately the priests have followed the praiseworthy example of one of their own order at home, and the temperance medal and the crucifix are often seen hanging side by side round the necks of many of these wild children of the forest.

JOURNAL OF FRENCH LITERATURE.

The Women's War. By Alexander Dumas. Vols. I. II. and III.

The indefatigable M. Dumas is again before us, and although only the three first volumes of this, his new work, have yet appeared, we hasten to introduce them to our readers. The system now so generally adopted by French writers, of bringing out their fictions in fragments, is an unpleasant one to the reader, and an unfair one to the critic, who is thus called upon either to leave a book unnoticed until it has ceased to be a novelty, or to advance opinions and form judgments prematurely, from the imperfect opportunity afforded to him. In the present case, the circumstance is perhaps the less important, that from the purely historical nature of the book, its matter throughout may be fairly guessed, from its commencement; and consequently it need be commented upon simply as regards its manner. This, we do not hesitate to define as graceful, flowing, and agreeable. The tale is based upon the feud between Anna of Austria and the Princesses of the House of Condé, during the boyhood of Louis XIV., that everlasting hero of French fiction-writers. If Henry IV. be known as the King of the People, so truly may Louis XIV. be classed as the King of the Novelists. So far, however, as we have seen *The Women's War*, he is a perfectly subordinate character, greatly to the advantage of the story, which is rich in historical names and traditionary events.

The heroine of the tale is a young, beautiful, and energetic Viscountess de Cambes, who, when the novel opens, is travelling in male attire to the court of the Princesses of Condé, at Chantilly, from her own estates, which she has visited to raise money for their use, attended only by one male domestic. Here is her portrait, as sketched by M. Dumas.

A DISGUISED BEAUTY.

Leaning from the window of the ion was a young man, of sixteen or eighteen, dressed in black, with full ruffles at his wrists, as was the fashion of the day; a shirt of finely embroidered cambric was ostentatiously displayed at the breast of his close coat, and fell in large folds upon his *haut-de-chausse*, which was elaborately ornamented with ribbons; his small, elegant, and dimpled hand, shewing high blood, was impatiently clutching his gloves, which were worked upon the seams; a grey beaver, pressed down on one side by the weight of a magnificent blue

feather, shaded the long, gold-tinged auburn hair which surrounded his oval face, his fair complexion, ruby lips, and black eye-brows.

This adventurous heroine (who is first lady in waiting to the princess), during her sojourn at the inn in question, detects a party of men, evidently commanded by a person of consequence, forming an ambush near a small villa buried in trees, which she ascertains from the host to be inhabited only by a young widow and her maid, who live in the most jealous retirement. Surmising from the movements of the concealed party that they are awaiting the advent of some guest to the house in question, and judging from their arms that their intention is hostile; detecting also, with true female instinct, that the visitor must be a lover, and the mystery attending the inhabitant of the villa by no means impervious, she resolves to save the victim; and accordingly accosts from the window a young and handsome cavalier, whom on his appearance soon after twilight, she suspects to be the favoured individual. Grateful for the warning, the new-comer at once abandons his intention of visiting the villa, and takes up his abode for the night at the inn, declaring that the Viscount de Cambes, for thus does our heroine announce herself, has probably saved his life, the leader of the party being, as he has reason to apprehend, no other than the Duke of Epernon himself.

The stranger, in his turn, declares his name and quality. He is the Baron de Canolles, captain in Navailles, and consequently in the service of the Queen-Regent, at that moment enjoying the leave of absence granted to him by the duke, at the request of his mistress, the celebrated Nanon de Lartigues. For what purpose it had been sought, the twilight visit of the baron to the lady's villa at once explains.

Startled by the identity of her new acquaintance, whom the pretty viscountess knows full well by reputation, her only anxiety is to rid herself of his society, but this proves to be no easy task. Fascinated, he knows not wherefore, by the boy-traveller, the gay baron, the essence of whose existence is intrigue, resolves to revenge himself upon his first disappointment, by passing the evening in the society of the viscount, who is driven to absolute rudeness in order to disembarrass himself of his proffered friendship. Half angry and half suspicious, he at length retires, but only to have his suspicions verified by the sudden departure of M. de Cambes in the night, and by finding upon the staircase a small and delicately-embroidered glove, dropped by the latter in his hasty flight. The fair masquerader does not, however, by any means escape scatheless from her self-constituted enemy; for the remarkable personal beauty, the high-bred grace, and it may be also the brilliant reputation of the Baron de Canolles, have sadly disturbed her equanimity. Nevertheless, she determines never to see him again; and the resolution was a prudent one, for was he not at once the political enemy of her royal mistresses, and the greatest *roué* at the court of the Queen-Regent?

The baron, however, has decided otherwise from the moment in which he possesses himself of the glove; and he accordingly no sooner ascertains that the young viscount and his retainer have taken the road towards Paris, than he orders his horse and follows them. We will precede him.

A NIGHT-JOURNEY.

The moon was rising when the viscount, followed by his faithful Pompey, left the inn.

For the space of a quarter of an hour the young man remained buried in thought; and the travellers had advanced about six miles upon their way, when he suddenly turned towards his attendant, who was a pace or two in his rear, exclaiming,

"Pompey, do you chance to have my right-hand glove?"

"Not than I am aware of, Monsieur," was the reply.

"What are you doing to your valise?"

"I am looking to see that it is well fastened, and tightening the straps, that there may be no sound. The sound of gold is fatal, Sir, and may bring us into trouble, particularly in the night."

"You do well, Pompey," said his master, "and I am glad to see you so careful and prudent."

"They are qualities natural to an old soldier, my lord viscount, and are quite compatible with courage; nevertheless, as courage is not temerity, I confess that I regret the absence of M. Richon; for 20,000 livres are an anxious charge, above all in such stormy times as ours."

"What you remark is very sensible, Pompey," said the young man, "and I am quite of your opinion."

"I will even venture to add," pursued the retainer, encouraged by the approbation of his auditor, "that it is imprudent to run the risk that we are doing. Let us halt an instant, if you please, that I may examine my pistols."

"Well, Pompey?"

"They are all right, and any one who might venture to attack us would not be to be envied. Hey!—what!—What do I see yonder?"

"Where?"

"In front of us, about a hundred paces to the right; look, in this direction."

"I see something white."

"White!" exclaimed Pompey, "white! some of the buff-coated gentry, perhaps. I am very much inclined, upon my honour, to get under cover of the hedge upon our left; in military phrase, this movement is called forming an intrenchment; let us intrench ourselves, my lord viscount."

"If yonder figures are clad in buff coats, Pompey, they must be king's troops, and the soldiers of the king do not rifle travellers."

"Undeceive yourself, my lord viscount, undeceive yourself; one hears of nothing on the contrary, but robbers who adopt his Majesty's uniform in order to commit a thousand villanies, each more damnable than the other; and lately, at Bourdeaux, two light horsemen were broken on the wheel, for—I think that I recognise the uniform of the light horse, my lord."

"Their dress is blue, Pompey, and what we see is white."

"Yes; but they often throw a *blouse* over their uniform; the wretches who were executed at Bourdeaux had done so. How they are gesticulating! They are menacing us! Those are their tactics, you see Sir; they form an ambush beside the road, and at a certain distance, with their carbines at their wrists, they compel travellers to deliver up their purses."

"But my good Pompey," said the young cavalier, who although terribly frightened still preserved his presence of mind; "if they menace us from a distance with their carbines, do the same with yours."

"Yes; but they don't see me," said the valiant attendant, "and therefore my demonstration would be useless."

"If they do not see you, they cannot threaten you, I should imagine," observed the viscount.

"You understand nothing of warfare," replied Pompey, losing his temper. "My lord, let us be prudent."

"Certainly; that is what I should wish. Nevertheless, the figures appear to be motionless."

"They scent their prey. Let us wait."

The travellers, fortunately for them, did not wait long. In a few moments the moon passing from behind a black cloud, whose edges she fringed with silver, lit up with extreme brilliancy, about fifty paces from the two horsemen, half-a-dozen shirts bleaching behind a hedge. The viscount burst into a hearty laugh, and quickened the pace of his horse; he was followed up closely by Pompey, who exclaimed sententiously, "How fortunate that I did not act upon my first inspiration! I was about to send a ball that way; and I should have looked like a second Don Quixote. See, my lord, how serviceable is one's prudence and experience of war!"

In this timid manner do the disguised lady and her trembling squire pursue their journey, until they are overtaken by Canolles, who, still affecting to be deceived by the masquerade of the viscountess, makes no small progress in her good graces by affording her a safe escort on her way, until he is suddenly met by a courier, with a summons to the court.

As we cannot, of course, venture to give any analysis of an incomplete plot, we will simply select for extract some of the most striking passages in the book, which never fails in interest throughout the whole of the three volumes, and first, *place aux dames!* Here is a masterly sketch of the celebrated and extraordinary

NANON DE LARTIQUES.

Nanon, whatever her enemies may have said or written, and among the number of her enemies must be included most of the historians who have made her their subject, was, at this time, a charming creature of 25 or 26 years old; short in stature, dark in complexion, but with a graceful and elastic carriage, with a rich and lively bloom, with eyes of a deep black, whose limpid cornea became prismatic like those of a cat, and reflected every light upon which they fell. Gay on the surface, laughter-loving by nature, Nanon was nevertheless far from frittering away her mind upon all those caprices and futilities which embroider with mad arabasques the web of silk and gold of which the life of a spoiled beauty is ordinarily woven; on the contrary, the gravest deliberations, calmly and resolutely weighed in her mutinous little head, took an aspect full at once of seduction and lucidity, when imparted in her sweet and earnest voice, and strong Gascon accent. No one could have guessed on the rosy mask, or the

fine and joyous features, that beneath this look full of voluptuous promise and ardent feeling, there existed the indefatigable perseverance, the unconquerable tenacity, and the depth of thought of a statesman. Nevertheless, such were the qualities, or the defects of Nanon, according as the medal was examined on its face or its reverse. Such was the calculating spirit, such was the ambitious heart, to which a person full of elegance served as the envelope.

Nanon was from Agen. The Duke of Epernon, the son of that inseparable friend of Henry IV. who was in his carriage at the moment when he was stricken by the knife of Ravaillac, and over whom brooded suspicions which resounded even to Catherine of Medicis, the Duke of Epernon, named governor of Guienne, where his haughtiness, his insolence and his exactions had caused him to be universally execrated, had remarked this little plebeian, the daughter of an obscure advocate. He paid his court to her, and had great trouble in triumphing over her principles, nor did he succeed, until she had long defended her virtue with the ability of a great tactician, who is resolved to make the victor feel all the price of his conquest. But, as the ransom of her reputation, now lost for ever, Nanon had deprived the duke of both power and liberty. When she had been for six months the companion of the governor of Guienne, she it was who in reality governed that fine province, repaying with usury to those who had wronged or mortified her the losses and the affronts which she had received. A queen by chance, she became a tyrant by calculation, foreseeing with her subtle intelligence, that she must compensate by extortion for the probable brevity of her reign.

In consequence, she possessed herself of every thing, engrossed every thing; money, influence, and honours. She was rich, bestowed places, and received the visits of Mazarin and the first nobles of the court. Combining with admirable address the several elements which she controlled, she made them work together in a manner at once useful to her interests and profitable to her fortune. Every service which Nanon conferred had its stated price. A step in the army or an appointment in the magistrature had each its tariff. Nanon caused rank and employment to be granted, but both were paid for either in the current coin of the realm, or by a rich present; so that, while depriving herself of a fragment of power in favour of another person, she regained it in a fresh shape, yielding up authority, but retaining the money which is its nerve.

This circumstance will explain the duration of her reign; for men, in their hatred, hesitate to overthrow an enemy who still possesses a resource. What is required by vengeance is a total ruin, a complete prostration. The people would expel with regret a tyrant who would carry away their gold, and laugh as he walked off; and Nanon de Lartiques possessed two millions.

Thus she lived in a sort of security above the volcano which unceasingly grumbled around her; she had felt the popular detestation rise like a tide, swell, and threaten with its billows the power of M. de Epernon; who, driven from Bourdeaux in a day of anger, had carried away Nanon with him, as the boat follows the vessel. Nanon bent beneath the storm, certain to rise again when the tempest had passed over. She had taken M. de Mazarin for her model, and the humble scholar practised afar off the policy of the cunning and supple Italian.

The cardinal remarked this woman, who grew great and rich through the same means which had made of him a minister possessed of fifty millions. He admired the little Gascon; he did more, he suffered her to continue the same line of conduct; later, perhaps, we shall know wherefore. Despite all this, and although a few persons who declared themselves to be well informed, affirmed that she corresponded clandestinely with M. de Mazarin, little was said of the political intrigues of the beautiful Nanon. Canolles himself, who, being young, rich, and handsome, could not understand why any one should care to be involved in such intrigues, did not know what to think upon the subject. As to those of an amorous nature, Nanon, whether, being engaged in graver pursuits, she deferred them to a future period, or whether the report of the passion with which she had inspired M. d'Epernon absorbed all rumours of her secondary *liasons*, certain it is that her enemies themselves had not been prodigal of scandal towards her; and Canolles might, with some reason, believe, in his national and personal self-love, that before his arrival she had been invincible. Whether, indeed, the baron had called forth the first ardour of a heart which had hitherto been inaccessible to every thing but ambition, or that prudence had taught his predecessors discretion, certain it was that Nanon, as a mistress, must be a charming woman, and that Nanon offended must be a formidable enemy.

This is truly the way in which history, blended with fiction, should be written. It is peculiarly the province of the traditionary novel to lay bare the small and hidden springs which act upon the vast machine of social government. Events which, in the stately pages of the chronicler, appear at once inconsistent and inexplicable, find their solution under the more searching pen of the novelist. When we are permitted to handle and inspect the tools, we begin to understand how the work was effected; and it is in this point that the French fiction-writers excel—they make a free use of their national history, but they never either abuse or falsify it; and in almost every case the pages which are read simply for amusement, and cast aside only to be forgotten, have been the produce of laborious research and careful study, and may be accepted as authority on the subject of which they treat.

Here is a picture of the Court of Chantilly, which appears to us to be admirable.

THE COURT OF THE CONDES.

Under the beautiful avenues of chesnut-trees, powdered over with a snow-fall of flowers, on the grassy lawns which extend to the blue lakes, a swarm of persons were in perpetual movement, laughing, talking, and singing. Here and there, among the tall shrubs, a few individuals might be detected, half buried amid the masses of foliage, busied in devouring the pages of the *Cleopatra* of M. la Calprenède, or the *Astrea* of M. d'Urfé, or the *Grand Cyrus* of Mdlle. de Scudéry; from within the arbours of woodbine and clematis came the sound of lutes, and the voices of invisible vocalists; and, finally, in the great avenue which led to the palace, a courier might be seen at intervals passing rapidly along to deliver an order. During this time, upon the terrace, three women, attired in satin, and followed at a distance by several silent and respectful equeries, were walking gravely, with gestures full of majestic ceremony. In the centre a lady of noble appearance, despite her fifty-seven years, was declaiming authoritatively on state affairs; on her right a young woman extremely stiff and sombrely dressed, listened with a frown to the learned theories of her neighbour; while, on her left, another elderly female, the most stiff and starched of the three, because she was of less illustrious rank, stalked, listened, and meditated, at the same time.

The lady in the centre was the dowager princess, the mother of the conqueror of Rocroy, of Nordlingen, and of Lens, whom the public, since he had been persecuted, and that the persecution had conducted him to Vincennes, called the Great Condé, a name which posterity has secured to him. This lady, on whose features might still be traced the remains of that beauty which caused her to be the last, and perhaps the most idolized mistress of Henry IV., had just been wounded at once in her affections as a mother, and in her pride as a princess, by *facchino Italiano*, who was called Mazarini when he was the servant of Cardinal Bentivoglio, but who had become his Eminence the Cardinal Mazarin since he had been the lover of Anne of Austria, and the first minister of the kingdom of France.

He it was who had dared to imprison Condé, and to exile to Chantilly the mother and the wife of the noble prisoner. The lady on the right was Clara Clemence de Maillé, Princess of Condé, who, by an aristocratic fashion of the time, was called simply the princess, to signify that the wife of the head of the Condé family was the first princess of the blood royal—the princess *par excellence*. She had always been proud, but since her persecution her pride had grown with her wrongs, and she had become haughty. In fact, condemned to play a secondary part while the prince was at liberty, the prison of her husband had elevated her to the position of a heroine; she had become more desolate than a widow; and her son, the Duke d'Enghien, who had nearly attained his seventh year, more interesting than an orphan. All eyes were upon her; and had it not been from a dread of ridicule, she would have worn weeds. Since the exile forced by Anne of Austria upon these two mourning ladies, their loud outcries had been exchanged for dull threatenings; they were oppressed, and were about to become rebellious. The princess, a Themistocles in a mob cap, had her Miltiades in petticoats; and the laurels of Madame de Longueville, for a brief interval the queen of Paris, robbed her of her sleep. The duenna on the left was the Marchioness de Tourville, who was afraid to write novels, but who composed politics. She had not made war in person, but her husband, who was a good soldier, had been wounded at Rochelle and killed at Fribourg. The result was, that, as the heiress of his patrimonial property, she considered that she had also inherited his military genius. Since she had joined the princesses at Chantilly, she had already drawn up three plans for a campaign, which had successively excited the admiration of the ladies of the household, and which had been, not abandoned, but simply deferred, until the moment when the sword should be drawn and the scabbard flung away. She did not dare to assume the uniform of her husband, although she sometimes longed to do so; but she possessed his sword suspended in her chamber, at the head of her bed, and occasionally, when she was alone, she drew it with a very martial air. Chantilly, despite its festal look, might then actually be compared to nothing more than a vast barrack; and if any one had searched

carefully, powder would have been found in the cellars and bayonets in the attics.

The three ladies, in their gloomy promenade, moved at each turn which they made towards the principal gate of the palace, and appeared to watch for the arrival of some important messenger. Already the princess-dowager had several times repeated, as she shook her head and sighed,

"We shall fail, my daughter—we shall be humbled."

"Great glory must be purchased at some sacrifice," remarked Madame de Tourville, without relaxing her angular rigidity; "there is no victory without a battle."

"If we fail—if we are overcome," said the young princess, "we will revenge ourselves."

"Madame," replied the dowager, "if we fail it will be God who overcomes the prince; would you revenge yourself on God?"

The young princess bent her head before the superb humility of her mother-in-law, and these three personages, thus saluting each other and offering up a mutual incense, were no bad representatives of a bishop assisted by two deacons, who take their Maker as a pretext for the homage which they pay each other.

"Neither M. de Turenne nor M. de Larochefoucault, nor M. de Bouillon," murmured the dowager; "all fails at once."

"Nor money," answered Madame de Tourville.

"On whom can we depend," exclaimed the princess, "if Clara herself forgets us?"

"Who says, daughter, that Madame de Cambes forgets you?"

"She does not return."

"Perhaps she has been prevented from so doing; the roads are guarded by the troops of M. de Saint Aignon, as you know."

"She might at least write."

* * * * * * *

"And all this," resumed Madame de Tourville, "is the fault of M. Lenet—of M. Peter Lenet," she repeated affectedly; "of that obstinate counseller whom you persist in keeping, and who is good for nothing but to thwart all our projects. If he had not rejected my second plan, which had for its design, if you remember, to carry by surprise the castle of Vayres, the island of St. George, and the fort of Blaye, we should now have Bourdeaux in a state of siege, and Bourdeaux would be compelled to capitulate."

"I should prefer, with all deference to your highnesses, that it should offer itself voluntarily," said from behind Madame de Tourville, a voice whose respectful accent was not free from a tinge of irony. "A town which capitulates yields to force, and makes no engagements; a town which offers itself is obliged to adhere to the fortunes of those to whom it has freely pledged its allegiance."

The three ladies turned and perceived Peter Lenet, who, while they were walking towards the great entrance of the castle, upon which their looks were constantly fixed, had left the château by a small door opening upon the terrace, and had approached them in the rear.

What Madame de Tourville had declared was partly true. Peter Lenet, the counsellor of the prince, a cold, grave, and learned man, was commissioned by the prisoner to overlook both friends and enemies; and it must be confessed that he had much more trouble in preventing the friends of the prince from compromising his cause than in combating the evil intentions of his enemies. But, clever and cunning as a lawyer, accustomed to the cavils and the tricks of the palace, he generally triumphed either by some well-conceived countermine or by some immovable inertness. It was, besides, at Chantilly itself that he fought his most resolute battles. The self-love of Madame Tourville, the impatience of the princess, and the aristocratic inflexibility of the dowager, were quite a match for the craft of Mazarin, the pride of Anne of Austria, and the indecision of the parliament.

Lenet, intrusted with the correspondence by the princes, had imposed upon himself as a law never to divulge any intelligence to the princesses until their knowledge of it could be turned to a useful purpose; and he himself also decided upon the fitting moment; for feminine diplomacy not being always very mysteriously conducted, many of his plans had thus been divulged by his friends to his enemies.

* * * * * *

Two cavaliers sprang to the ground, and one of them throwing to the other, who appeared to be his lacquey, the bridle of his horse, which was bathed in sweat, ran rather than walked towards the princesses, who came to meet him.

"Clara!" exclaimed the princess.

"Yes, your highness. Madam, accept my humble respects;" and, bending upon one knee, the young man endeavoured to raise the hand of the princess to his lips.

"To my arms, dear viscountess! to my arms!" cried Madame de Condé, compelling her to rise.

After having suffered himself to be embraced with every possible domonstration of respect by the princess, the cavalier turned towards the dowager lady and saluted her profoundly.

"Quick! speak, dear Clara," said the latter. * * Lenet turned with a smile towards Madame de Cambes. "Now is the moment, Madam," he said, "to prove to their highnesses that you have thought of every thing."

"What do you mean, Lenet?"

"He means, Madam, that I am happy enough to be enabled to offer you a small sum, which I have had some trouble to obtain from my tenants; the offering is a very poor one, but it was all that I was able to effect—twenty thousand livres," continued the viscountess, casting down her eyes and hesitating through shame at tendering so small a sum to the two first ladies in the kingdom after the queen."

"Twenty thousand livres!" exclaimed the two princesses.

"Why, it is a fortune in such times as these," said the dowager.

"Our dear Clara!" continued the princess; "how shall we ever repay her?"

"Your highness must decide hereafter."

"And where is this money?" asked Madame de Tourville.

"In the chamber of her highness, where my servant, Pompey, received my orders to convey it."

"Lenet," said the princess, "you will remember that we owe this sum to Madame de Cambes."

"I have already made an entry of it," said Lenet, drawing out and displaying his tablets, where, dated as received on that day, the twenty thousand livres of the viscountess figured at the foot of a column of similar obligations, whose total would have somewhat alarmed the princesses if they had taken the trouble to add it up.

Our space warns us to conclude, which we do reluctantly; for the scenes in the work are so life-like, the characters so cleverly individualized, and so consistently sustained, and the interest so artistically supported, that we could with ease have selected a score of extracts quite equal to those which we have given. We take our leave therefore of *The Women's War* with congratulations to the author on the production of one of the best works of fiction-history which we have met with throughout our critical career, and an assurance that we shall anxiously look for its conclusion.

LITERARY GOSSIP IN PARIS.

(From our Correspondent.)
